THE fall meeting of the American Oriental Society took place at New Haven on the afternoon of October 27, in the Yale Divinity School. It was held under circumstances to some extent depressing and dampening. Those who in the morning trudged through the town to see some of the sights of the ancient University must have been not a little drenched and dispirited. It was, therefore, the more reassuring when the Vice-President, Dr. Hayes Ward, called the meeting to order, to find the room comfortably filled by about twenty-five people, among whom several ladies were noticed. The Society was unpleasantly surprised to hear read a letter from Prof. Whitney, its time-honored President, in which he excused himself from attending on account of sickness; adding that he had not been compelled to do so (when in the country) in a period of thirty-eight years. After the reading of the minutes of the last meeting and the transaction of sundry other business, several interesting letters and communications were read, among them one from China on seven inscriptions containing magical prayers and formulas dating from the eleventh and twelfth centuries; and one from Mr. Protaba Chandra Roy of Calcutta, in relation to his publication, for gratuitous distribution, of the Indian classics, together with an English translation thereof. A letter was also read from Mr. Dodge of the Beirut Syrian-Protestant College, announcing the founding of an archæological department for Arabic, etc., at that institution.

The first speaker of the day was Prof. Isaac H. Hall of the Metropolitan Museum in this city, on the Nestorian tablet found some two hundred and sixty years ago in China. The inscription dates from the year 781 A.D., and contains Chinese and Syriac writing. Prof. Hall based his remarks on a new squeeze of the inscription, now the property of the Bible Society in New York, which sets at rest the doubts that have been expressed as to the names of the seventy teachers of the Gospel mentioned in the Syriac portion of the inscription. Prof. Hall then read a second paper on a copy of an old Syriac MS. recently received from the East, containing the chronicles of Mâr Jau Allâhâ and Rabban Saumâ, General-Bishop. It gives an interesting account of the travels of these two Syrians, between the years 1288 and 1318. From a geographical point of view they must be of considerable importance, especially those of Rabban Saumâ, who extended his journey to Rome (where he saw the Pope), Genoa, and Paris (where he visited the King of France). Prof. Hall remarked that these chronicles are held in high esteem by the Nestorians of our day, and exhibited several numbers of a periodical published at Urmiah (Persia), in which these travels have appeared, translated into modern Syriac.

Part of a lengthy communication from Mr. Jewett of Beirut and Cairo was next read by Prof. Toy of Harvard University, on a collection of Arabic proverbs made by himself among the natives. Not a few of them are witty, and show a keen insight into human relations, *e. g.*, "The ass went to borrow horns and came back without ears," "Eat what suits you, and wear what suits other people," "A monkey is, in his mother's eyes, a gazelle," etc. A paper was presented from Prof. Bloomfield on two hymns in the Atharvaveda, which, although already published by Prof. Weber of Berlin, have been, until now, inadequately understood and translated. According to Prof. Bloomfield, the one (the first of the second book) treats of counter-incantations, the other (the 128th of the sixth book) is a hymn in praise of the weather prophet and weather maker.

The succeeding paper, by Prof. Hopkins of Bryn Mawr, was undoubtedly the most interesting of the day's series. It was entitled, "Woman in India as Portrayed in the Mahâbhârata." Prof. Hopkins (who read only a part of his essay) advised a clear distinction between the earlier times and those portrayed in the Mahâbhârata. In the former, girls had considerable freedom in India, but in the time of the Mahâbhârata all this was changed. The character of woman as pictured in the earlier writings shows us a higher form than that which we gain from the Greek classics. The aphorisms in regard to women are complimentary, but quite otherwise in the later epic books. Prof. Hopkins is inclined to make, also, a topographical distinction. He finds that there were parts of India in which it was customary to buy women, but that an element coming from another part of the land worked against this custom. Women sometimes took part in war; and a mother had as absolute a control over her son, whom she could sell, as the father. Polyandry is unknown in India; but Prof. Hopkins adduced some cases of women marrying more than one man. In all these cases, however, the men were *brothers*. (This is the form of polyandry called by Mr. McLennan "Tibetan polyandry." Prof. Robertson Smith, in 'Kinship and Marriage in Early Arabia,' p. 122, *seq.*, has found traces of this custom elsewhere.)

Mr. A. B. W. Jackson of Columbia College read an essay on "The Similes from the Realms of Nature in the Avesta"; after which Prof. Hall spoke for the third time, on a Syriac calendar from Mardin, containing the feasts and fasts for the whole ecclesiastical year. The Society then listened to a paper by Gen. Carrington, U. S. A., on the integrity and harmony of the Bible in reference to the genealogical records it gives of the first inhabitants of the earth. The last two papers of the day were by Dr. Morris Jastrow, jr., of the University of Pennsylvania, on an As-

syrian name bûdû-êl, which Dr. Jastrow has found not to be the equivalent of the Biblical Pedahel, as is generally accepted, but to stand for ĕbed-êl; and on the results to be obtained for the science of Assyriology from a study of the Samaritan language. The lateness of the hour prevented the Society from hearing the whole of this last paper, which opened up quite new fields of research. The Society then adjourned to meet in Boston on the second Wednesday of May next.

In the evening the members of the Society were entertained at a reception tendered them by President Dwight of Yale University, at which Oriental philology was laid aside for a pleasant hour of social intercourse.

RICHARD J. H. GOTTHEIL.

LONDON LITERARY GOSSIP.

LONDON, October 21.

FOR the moment, politics are in a state of expectancy. What will the Unionist-Liberals do with the Government? What will Lord Randolph do with his programme? What will Lord Salisbury do with Lord Randolph? What will the Czar do with Bulgaria? What will the Lord Mayor and the city police do with the Socialist demonstration? These are questions which politicians are more or less indolently asking, and for which they are content to wait for an answer from time. In default of graver matters, gossip has occupied itself with a silly canard and a great scandal. The silly canard is the fabricated home-rule scheme of the Government, borrowed, it is said, from Mr. Chamberlain, and assented to by Lord Hartington, of four Provincial Councils for Ireland. The scheme is not Mr. Chamberlain's, and Lord Hartington never assented to it, for the simple reason that the Government never entertained it, still less submitted it to him. Mr. Chamberlain's scheme, which was considered in Mr. Gladstone's Cabinet, last but one, proposed a single National Council for Ireland. It was rejected by one vote, in which Lord Hartington, with all the peers in the Cabinet, were the majority; Mr. Gladstone, with the remainder of his colleagues, all commoners, forming the minority. The scandal is the unauthorized publication of Lord Charles Beresford's somewhat alarming memorandum on the subject of the navy. A former theft was traced, I am told, to a single room in the Admiralty occupied by fewer than half-a-dozen persons. It is now believed that inquiry has still further narrowed the circle of possible guilt, and that a hand will presently be put on the shoulder of the offender. These breaches of confidence have been discreditably frequent under successive governments. Some of the great public offices—especially the Treasury, the Foreign Office, the War Office, and the Admiralty—are "clerked," if I may use the expression, by young men of birth and fashion, much in request in society, of small incomes and large expenditure. Their salaries must be supplemented somehow or other, and there are newspapers to buy what they have to sell. Such, at any rate, is the current explanation of a too frequent phenomenon.

While politics are dull or scandalous — two things which may go together — literature is meanwhile showing signs of activity and even of combativeness. The two great quarterlies, as it is still the fashion to call the *Edinburgh* and the *Quarterly* proper, have long since ceased to be powers in criticism. Mr. Disraeli compared them, at a period when they were vying with each other in opposition to reform, to the boots and chambermaid of rival posting houses, who, hating each other, yet expressed the common dislike of the Blue Boar and the Red Lion to railways. An eminent poet, fortunately still living, was the proud possessor of two tame geese, unhappily dead, whom he named *Edinburgh* and *Quarterly*—injurious nicknames, he used to explain, inasmuch as the birds turned out to be quite intelligent creatures. This was irreverent jesting. There is still, no doubt, a good deal of admirable writing in these two periodicals, but as regards political discussion and literary criticism, they are in some degree superseded by the daily, weekly, and monthly press, and as regards essays, properly so called, by such works as the biographies and monographs contained in series like those edited by Mr. John Morley, Mr. Andrew Lang, and others. Just now, however, the *Quarterly* has succeeded in getting itself talked about in the old fashion. The article in the current number, on Mr. Edmond Gosse's lectures on "English Literature from Shakspere to Pope," recalls after its fashion the old slashing days, when the mind of Keats, "that fiery particle," allowed itself to be snuffed out by an article; when a Scotch reviewer unwittingly made the literary fortune of an English bard, afterwards known as Lord Byron, and when Gifford and Hookham Frere and others waged war with the Cockney and Lake schools, in the persons of Leigh Hunt, Charles Lamb, Hazlitt, Coleridge, and Wordsworth.

If the accusations made against Mr. Gosse are true, he is convicted of a degree of ignorance and effrontery, of an ignorance not nakedly displaying itself, but dressing itself up with a false assumption of knowledge, which makes his book an offence against morals as well as against Literature and scholarship. In a hasty compilation, got together by a Grub Street hack on starvation wages, at the bidding of some Curll of the trade, the blunders attributed to Mr. Gosse would be heinous. But Mr. Gosse is not a bookseller's hack. He is the Clarke Reader in English literature in Trinity College, Cambridge. He succeeded in that post Mr. Leslie Stephen, one of the most thorough and self-exacting of English scholars and thinkers. It is Mr. Gosse's province as a College Reader, not simply to amuse with entertaining discourse those who come to him, but to give them an example of conscientious and scrupulous research, and of sober and well-considered criticism. If the *Quarterly Review* be correct, Mr. Gosse is so ignorant of the chronology of English literature as to be necessarily an incompetent judge of its growth and development, and cannot have even seen some of the great works which he affects to criticise, for he thinks that the "Arcadia" of Sidney and "Oceana" of Harrington are poems. Mr. Gosse, as the police reports say, reserves his defence, protesting that he has a perfect answer to the case against him, and may be considered as at present under remand.*

The writer of the article in the *Quarterly Review*, which has been erroneously attributed to Mr. Alfred Austen, is understood to be Mr. J. Churton Collins, the author of some essays on Bolingbroke and Voltaire which have recently been reprinted in a separate volume from the *Quarterly Review*. Mr. Murray, almost alone among the great publishing houses in London, has certain writers who may be said to belong to his staff of authors, and who are ready, on conditions honorable to themselves and liberal on his part, to undertake book work for him as others undertake newspaper work or magazine work. Mr. Churton Collins began his career in London as a tutor in one of those great cramming institutions which the system of army, civil service, and Indian examinations has called into existence to supplement or supersede the university. In his indignation against Mr. Gosse there is something of the virtuous anger of the crammer with a man who has got up his subject insufficiently; and in his attacks on the daily and weekly critics who have praised Mr. Gosse's book, there is a flavor of the contempt which in other days he may have felt for civil-service examiners who allowed an impostor to scrape through. But Mr. Collins, indoing justice to an individual offender, claims credit for striking at a vicious system. There is a venal "ring," he asserts, in the literary world, a mutual selling of praise among a fraternity of writers who alternate the character of authors and of critics, and who review each other on the "claw me, claw thee" system. The accusation is based upon the notoriety of personal friendships and of literary and journalistic association; but I do not believe that it has any other basis. There is, of course, a certain amount of human nature even in critics, and a Brutus-like impartiality is not always to be expected. But, as a rule, personal friends are not allowed to review each other's books; and at the worst, the state of things is better than that which prevailed at the beginning of the century, when the tomahawk and the scalping-knife were the instruments of criticism, when Maginn and Christopher North could not acknowledge good poetry or even reputable morality in an antagonist, not to go back to an earlier period, when, as Prior, I think, says, an author's change of political opinion deprived a second edition of a volume of poems of merits which the first possessed.

Among works which are looked forward to with some interest just now, the promised 'Letters of Mr. Abraham Hayward' hold a conspicuous place. They are not likely to go over the same ground as that covered by the Greville memoirs. Mr. Charles Greville, as Clerk of the Council, was thrown into the political society of both parties, and, as a man of birth and of the world, was intimate with Whig and Tory leaders, was often their confidant, and more frequently perhaps their rather obtrusive and fussy adviser. Now and then, no doubt, he had disagreeable encounters and had to submit to rude rebuffs, as when the late Lord Derby, probably the most wantonly insolent man of modern society, explained a failure to recognize him outside the Council Chamber on the plea that no one could be expected to remember the face of the footman who opens the door to him. Some of his (Greville's) personal and political criticisms bear traces of incidents such as this.

Mr. Abraham Hayward, though he took sides in politics, was a man of letters and of society rather than of politics. If the word could be deprived, as I fear it cannot, of its dishonorable connotation, he might best be described as a parasite. He was an upright parasite. He was a diner-out in town, an invited entertainer at the great country houses, where, in the fashionable intelligence, he counted among the entertained. He purchased admission into the society of well-born and wealthy persons, of great ladies and great nobles, by cultivating the faculty of conversation and anecdote. He did not make any unworthy concessions. He neither servilely flattered nor basely reviled. But he liked the graces and cultivated manners of well-born persons, the combined simplicity and dignity of the country life of the hall and castle, the access to people who knew things at first hand; and he paid for the right of entry by interesting and amusing his hosts and fellow-guests. His writings, which were chiefly those of comment and anecdote, were in a certain sense parasitical like himself. His life-long feud with Mr. Disraeli dated from a very early period of their careers.

* Mr. Gosse's answer may be read in the *Athenæum* of October 23.—ED. NATION.

He never forgave—perhaps it was not likely that he should do so—Disraeli's having called him "the louse of literature." Ought I, imitating Burns, to say l———se, or may the word be printed in full? A crawling and creeping gait and a very dingy and apparently unwashed countenance gave a personal appropriateness to the phrase, which had its literary fitness also. Mr. Hayward resented with some bitterness the fact that the services which he thought that he rendered to the Liberal party, as a sort of missionary of their principles in society, were never rewarded. He was, it is true, with utter inappropriateness, being a barrister without practice, made a Queen's Counsel. But this rose had its thorns; for, resenting the bestowal of a silk gown upon a mere man of letters, the Benchers of his Inn refused to admit him among them, and their refusal was confirmed by a legal decision. Sir William Harcourt, the most black-balled man in London, has been the subject of a similar slight, not on the ground of professional immutability, but of personal unpopularity. As Mr. Abraham Hayward was in the habit of severely condemning the scandalous indiscretions of the Greville memoirs, it may be assumed that his letters will be free from painful or unbecoming disclosures.

Sir Francis Doyle, following the example of the late Sir Henry Taylor, has not been content to let his recollections be *mémoires d'outre-tombe*. He has given his 'Reminiscences and Opinions' to the world while he is still living to defend, explain, or correct them. The circumstances under which this pleasantly garrulous volume of the last of the old Tories sees the light illustrates the blunders of booksellers—a subject to which a volume might be devoted. Sir Francis Doyle, who is a genuine poet of the heroic and manly school, a poet of English courage and achievement, was anxious to publish a collected edition of his poems. The eminent publisher to whom he addressed himself declined the venture. Poetry was a drug in the market. Sir Francis offered the manuscript of his 'Reminiscences and Opinions' in payment of the cost of publication. The offer was accepted, and the poems were published. But when the manuscript of the 'Reminiscences' was delivered and read, it was politely declined. The publisher expected to lose by the poems. The misjudging bookseller has now the mortification of seeing the rejected volume one of the most generally demanded books of the season; and it is to be hoped that the naturally sensitive *amour propre* of the poet author is soothed—guineas soothing the wound that honor feels. L. L.

RENAN'S ABBESS OF JOUARRE.

PARIS, October 19, 1886.

J. J. ROUSSEAU speaks, in his 'Confessions,' of a Venetian girl who said to him: "Have done with women and study mathematics." The same advice was given to M. Renan, but it was not followed in time. It is a great pity that he wrote the "Abbesse de Jouarre." We can say now, as people said of Corneille—

"Après Agésilas,
Hélas!
Mais après Attila,
Holà!"

After the "Prêtre de Nemi" and "1802" we were on the point of saying "hélas"; we can now boldly say "holà." Renan feels, himself, that it is time for him to stop. "The work which I now offer to the public," he says in the preface to the "Abbesse de Jouarre," "is probably the only one of this series which I shall execute [he alludes to a series of dramas which are in his imagination]. I have still a great work of religious history to write. I foresee the possibility of finishing it. I will no longer allow myself any diversion."

It is necessary to say so—the last productions of M. Renan are not only very objectionable in themselves, but have contributed to throw much discredit on the serious part of his historical and literary labors. Many people have asked themselves after reading them, "Why! is this the man who pretends to explain to us the mysteries and the origin of Christianity? Is this levity, this frivolity, this absence of any deep morality, this intellectual and moral Epicureanism, this dilettanteism, compatible with the austere duties of the historian and of the commentator and interpreter of the Old and New Testaments?" One of our wittiest writers has condensed this sentiment into a sharp *bon mot*, which has gone all round Paris. During the rehearsals of "1802," a piece composed for the birthday of Victor Hugo, Renan, who is courtesy itself, made flattering remarks to one of the actresses of the French Theatre; and during the representation, when, as usual, all the writers and journalists of Paris were discussing the piece during the *entr' actes*, the writer I allude to said gayly: "I see what it is, Renan is going to spend . . . the money he made out of the 'Life of Jesus.'"

The criticism was in one sense absolutely false, as Renan has always led, and leads now, the most virtuous life; it was just in another sense, if you think of the intellectual capital which had been acquired, by long years of labor, by the author of the 'Life of Jesus.' The last works of Renan have, so to speak, undermined his first works; his 'Life of Jesus' reads more now like a sort of religious novel; the Epicurean has damaged the moralist, the sceptic has damaged the critic. Renan is like a potter who breaks the vases which he has carefully made; he makes idols and turns them into clay, he takes clay and makes new idols. He can be a patriot, he can be cosmopolitan, he celebrates matter, he celebrates thought. His "all is in all" philosophy is disappointing, after all; and we are obliged, in the end, to admire his style more than his thoughts—he is essentially an "artifex."

In the "Abbesse de Jouarre" Renan celebrates love, material love; he ceases to be a disciple of Plato, he gives us to understand that Platonic love is a comedy, a mere concession to the artificial laws of human society. It is a mere preface, which can be as long as you like when you have a lifetime before you, but which becomes terribly short when death is near and threatening. The drama begins in the time of the Terror. The old Collège du Plessis, in the neighborhood of the Collège de France, has been turned into a prison. We see on a bench two men, the *Marquis D'Arcy*, the *Comte de la Ferté;* groups of men and women go to and fro. They are all condemned, they hear in the distance the Revolutionary "Ça ira." *La Ferté* says to *D'Arcy:* "What I find insupportable is to die for a race of monkeys. . . . This is all odious and stupid. Do you hear all these drunken men? They imagine that they are conquering armies with bravadoes. One might think we were in Naples. Is it not grotesque?" "Yes," answers *D'Arcy*, "if it be not admirable." *D'Arcy* is a partisan of the "new ideas," a "liberal." Like so many gentlemen of his time, he has only been left a little behind, and he finds it almost natural, at the foot of the guillotine. "As for myself," says he sententiously, "I am always with those who aspire after the unknown. Justice is before us, not behind us." We would remark here that such language is anachronistic: no gentleman, in 1793, ever aspired after the unknown; we do that now, in 1886. The sententious *D'Arcy* has so much influence over *La Ferté* that the latter finally tells him: "Thank you, very dear friend. To-morrow, in the fatal cart, I will sit next to you. You shall be my priest. I renounce all hatred; thanks to you, I can now weep." *D'Arcy* does not content himself with preaching before dying: "I should like," he says, "to live all my life over again in one hour; I should like to see before me all those whom I have loved." At this very moment enters the *Abbesse de Jouarre*, the only woman whom *D'Arcy* has loved. They recognize each other, but the Abbess says to him, "Let us act as if we were dead; we shall be dead in twelve hours." She goes out and retires to her cell. *D'Arcy* explains to his friend that the Abbey of Jouarre was given to her when she was only fifteen; he loved her, and lost her, and now he has found her, but too late.

The second act opens in the cell of *Julie*, the Abbess. Her monologue would not and could not be borne on the stage. She reviews her past life, she is conscious of having accomplished her duties. Fancy an Abbess in 1793, in the prisons of the Terror, saying quietly: "I have wished the amelioration of the fate of humanity. I have served well the nation towards whom my birth had assigned me duties. Descending, as I do, from those who founded France, I have kept her traditions, and the first of all was fidelity to my oath. I have respected the rule which existing institutions imposed upon me." She does not repent having followed "the movement of the philosophical ideas" when it became evident to her that the acknowledged faith was on many points not tenable. She is not a believer, she has played a part, has played it well, and intends playing it to the end. She has renounced faith, but not the forms of faith. She confesses having loved once, she is proud of it. "Excellent man!" she exclaims, referring to *D'Arcy*, "what a proof did he not give me a moment ago of the loftiness of his soul. He might have troubled my last hours! . . . To-morrow, however, he will die with me." At this thought she shudders and begins to cry.

She has no remorse, she has regrets. Which is better—remorse or regret? She has sacrificed all, even love, to an abstract duty. She kneels down. At this instant the door opens. *D'Arcy* has corrupted the jailer and enters her cell. Here comes the great scene of the piece—what Francisque Sarcey calls *la scène à faire*, and which, in this case, many will call *la scène à ne pas faire*. For *D'Arcy* has but one idea, he wants to give his last hours to love; what he could not obtain during many years he will have now. "Men exist no more for us, we are alone in the world. . . . Our love, dear *Julie*, will be without a future . . . there is no to-morrow for it. . . . What right have men over us now? We are quit with them. Shame on the man who only sees in love the passing pleasure, without thinking of its sacred consequences! Poor friend! That which would have been the happiness of our lives, if the laws we respected had not interdicted it, will be refused us. The fruit of our love will die with us. . . ." I suppress phrases and words which are really too difficult to translate, and perhaps I have already translated too much, for it is hardly possible to imagine anything more grossly repulsive than the proposition which *D'Arcy* makes to the Abbess. The solemnity of the hour, the approaching death, this Abbess "jam pallida morte futurâ"—all the circumstances seem to preclude what M. Renan would have us consider as the natural and almost necessary consequence of the situation which he has imagined. In his preface he says: "I often imagine that, if humanity acquired the conviction that the world was coming to an end in two or three days, love would burst forth everywhere with a sort of frenzy. It is what happened with the martyrs of the primitive

church. The last night that they spent together in prison witnessed scenes which the rigorists disapproved." There is much more in this vein, which I pass over.

The poor Abbess does not at once understand this philosophy, but *D'Arcy* delivers a sort of lecture to her. "What is the soul without the body? What are our senses if they are not in communion with the rest of the universe? Good is the end of the world, and love is the intense expression of good. Everything in nature says to us: 'Love each other.'" The discourses of *D'Arcy* are all in this vein; never has a lover been so cold, so pedantic. The Professor in the "Monde où l'on s'ennuie," who flirts with all the ladies, is delightful in comparison with this *D'Arcy*. We are surprised at the emotion of the Abbess; she might go to sleep while hearing these tiresome developments on death and life and love. And in truth she does not feel much emotion. She says: "I am not weak. I have always in my life taken the hardest and most heroic part." She does so this time again, and *D'Arcy* is satisfied.

Is it necessary to go any further? It is difficult after this to go on, but I will do so rapidly. When the cart of the guillotine arrives, *D'Arcy's* name is called, the Abbess is not called. A friend has obtained her pardon, an officer of the Republican army called *La Fresnais*, who has brought to Paris the news of a victory. *D'Arcy* dies, and *Julie* cannot die; she tries to strangle herself with her veil, but she is saved, and in the last two acts we find her living quietly under an assumed name, with a child, her own child. She meets *La Fresnais*, who has continued in love with her; she tells him the secret of her love for *D'Arcy*, of the birth of her child; and this hero, who is very kind, as all heroes are, marries her. We might finish by saying, like the old *Contes:* "Ils furent heureux, et eurent beaucoup d'enfants." The last acts are uncommonly dull, and all the interest is centred in the first two acts. After the night passed in the prison there is really nothing to do but to draw the curtain. If there could be an excuse for writing this second act, it would only be in the fact that the hero and heroine are killed immediately afterwards. The disappearance of *D'Arcy* is a satisfaction, but the persistence of the Abbess is a very disagreeable surprise. Her marriage with another man seems, comparatively speaking, very natural.

Correspondence.

THE ANDOVER HYPOTHESIS.

To the Editor of The Nation:

Sir: I see that your correspondent, L. F. Parker, questions, in the *Nation* of October 14, the accuracy of your statement that "Congregationalists believe that those who have never known the teachings of Christ are as badly off after death as those who, having known them here, neglected or refused to order their lives in accordance with them," and attempts to correct you by quoting from a sermon of Dr. Withrow the words, "Some pagans have gladly walked in the light, and *all* may, can do so. It is *not* the doctrine of the Church that the entire mass of the pagans have gone down to endless impenitence and death"; and by asserting as his own opinion that "it is the belief, doubtless, of intelligent Congregationalists that, helpful as a knowledge of the historic Christ and his words may be in building character pleasing to God and to all who love moral good, it is not *essential* to it."

As the controversy started over this subject is, indeed, "likely to continue for some time, it is important," as your correspondent says, "that its vital points should be understood"; and the only way to get at the vital points of the position of the Congregationalist body is to go not to individual sermons, but to the authorized statement of its official representatives.

What is that statement? At a meeting of its National Conference in 1865, held in Boston, it declared almost unanimously its adherence to the old Puritan confession of faith based on the Westminster Confession, and first adopted in this country in 1648; and this Confession declares that "Others not elected cannot be saved; much less can men not professing the Christian religion be saved *in any other way whatsoever, be they never so diligent to frame their lives according to the light of nature and the law of that religion they do profess;* and to assert and maintain that they may is very pernicious and to be detested." "Works done by unregenerate men, although, for the matter of them, they may be things which God commands and of good use both to themselves and others, yet because they proceed not from a heart purified by faith, nor are done in a right manner, according to the word, nor to a right end, the glory of God, they are therefore sinful, and cannot please God, nor make a man meet to receive grace from God" (chap. x, sec. 4; chap. xvi, sec. 7).

With regard to whether those "not saved" by framing their lives "according to the light of nature and the law of that religion they do profess" are as badly off as those who, having known Christ, have neglected or rejected him, it divides all sin into two kinds, original and actual: original sin being that received from our first parents, whose guilt "was imputed and a corrupted nature conveyed to all their posterity," "whereby they are utterly indisposed, disabled, and made opposite to all good, and wholly inclined to all evil"; and actual sin, that which men themselves commit. And it declares "Every sin, *both original and actual*, being a transgression of the righteous law of God and contrary thereto, doth in its own nature bring guilt upon the sinner, whereby *he is bound over to the wrath of God and curse of the law, and so made subject to death, with all miseries, spiritual, temporal, and eternal*" (chap. vi, secs. 3, 4, 6).

This Confession, after being adopted in Boston, was, to give it additional solemnity, readopted the next day by the members of the Conference, on a visit to Plymouth, in the old burial-ground, over the ashes of its first adherents, and also reaffirmed at another meeting of the Conference, held several years later at the West; and, as it has never been repudiated or its first adoption rescinded, it must now be held, if ecclesiastical bodies are to be regarded as bound by the common laws of veracity, as expressing its present belief, and of course as confirming the statement of the *Nation*. Dr. Withrow's lighthouses along the coast of heathen lands are manifestly of no avail in making their inhabitants less "badly off," if framing their lives according to them has nothing to do with saving them from their inherited subjection to death, "with all its miseries, spiritual, temporal, and eternal." K.

Hartford, Ct., October 25, 1886.

To the Editor of The Nation:

Sir: Apropos of your note touching Dante's scruple as to the fate of the heathen, it may not be out of place to call attention to a still older authority, where the same problem is presented, and, what is much more, solved in a truly heroic fashion; one, too, that leaves no great room for improvement even at the hands of the Andover theologians. In Matthew 25:31-46 we read that when the Son of Man shall come in glory with the holy angels, He shall gather all the heathen (*πάντα τὰ ἔθνη*) before His throne, and, having parted them like sheep and goats to right and left, shall invite those on the right to partake of the joys of His kingdom, and dismiss those on the left into the damnation of the devil. The principle of this tremendous division is then declared to be a very simple one: Humanity, Love. "I hungered and ye gave me (not) food; I thirsted and ye gave me (not) drink." Astounded, the sheep (goats) ask *when?* The King answers: "Verily, I say to you, so far as ye did (not) to one of *these my brethren*, even the least, ye did (not) to me."

In understanding this picture everything depends on the italicized phrase. Who are *these my brethren?* Clearly neither sheep nor goats, for the expression is used, in addressing each class, to denote some beings distinct from the class addressed. The explanation is very simple: *These my brethren* are the *Christians*. They encircle the throne of the King, and hence are pointed out by the demonstrative *these*; they are His associates in the kingdom and in the Judgment. They are *not* themselves *being judged* at all. In fact, the idea of Christ judging Christians, as to their final doom, is little short of grotesque.

It may seem that the principle of division has been stated too broadly: not humanity or love in general, but towards the Christian community, grounds a title to heirship in the kingdom. And this criticism is just; but the limitation lies not in the nature of the case, still less in the spirit of Christ's teaching, but in the *view* of the writer. This latter was a Jewish Christian, and we may readily forgive him if the term "neighbor" was not in his mind filled up with all the fulness of meaning that Christ poured into it. It is for those whom the Spirit has guided into all truth to strengthen at its weak points the early Jewish Christian conception.

It is most noteworthy that no question of belief or unbelief, of "historic" or "essential" Christ, of dogma of any kind, is raised. Absolutely the only test applied is that of love to fellow-man. And this glorious thought, even in its rude form a veritable Koh-i-noor, has been shining upon us unheeded these 1,800 years! And now a cloud of dust is thrown up at the discovery of a grain of corn—the Andover hypothesis! Could there be a sadder commentary on the progress of humanity?

William Benjamin Smith.

Columbia, Mo., October 24, 1886.

THE "DIVINE INSTITUTION" IN MASSACHUSETTS.

To the Editor of The Nation:

Sir: The bill of sale of a slave in Connecticut, given in the last number of the *Nation*, suggests that your readers may be interested in some documents in my possession. I have a bill of sale of a slave to one of my ancestors, dated thirteen years before the one furnished by your correspondent, and differing slightly from it in the wording. Here it is:

"Know all men by these Presents that I Eleazer Moses of Salem in the County of Essex & Province of the Mass'ts, New Eng'd, Mariner—for & in consideration of the sum of One Hundred & Twenty Pounds old Tenor, to me in hand before the ensealing hereof well & truly paid by James Jeffry of Salem in the County afores'd, Shopkeeper, the Receipt whereof I do hereby acknowledge, & myself therewith satisfied, contented & paid,—Have bargained & sold, & do by these presents bargain & sell, sett over & confirm unto ye said James Jeffry, his exec'rs, admin'rs or assignes, one Negro man servant known by the name of Peter, w'ch I brought with me from Surinam the last Fall past.—To have & to hold said Negro Peter dureing his natural life, unto the said James Jeffry, his heirs, exec'rs, adm'rs or assignes.—And further I the said Eleazer Moses for myself, my heirs, exec'rs & admin'rs, do covenant & engage the above Demised Premises unto the said James Jeffry, his heirs, exec'rs & admin'rs against the Lawful Claims &

Demands of any Person whatsoever for Ever hereafter to Warrant, Secure & Defend.—

"In Witness whereof I have hereunto set my hand & seal this 4th day of April Anno Dom. 1745. (Signed) ELEAZER MOSES.

"Signed, Sealed & Delivered in presence of J. Stacey, John Grey."

It never occurred to me, till suggested by your correspondent's letter, that I had any cause for shame or regret in the possession of the above document. In the exciting days when the cloud of war was rising with ominous aspect, I used it in argument with some of my neighbors, who held up their hands in holy horror at the sin of slavery, as an evidence that our own skirts were not unstained; and I have preserved it among my family records as a curiosity which I have no wish to keep out of sight.

Another document in my possession, of much older date, contains evidence which is applicable in a similar way to a subject that is still full of living interest. Among a great mass of old family papers I found many years since a single copy of the Boston *News-Letter* bearing date "From Monday, Aug. 12, to Monday, Aug. 19, 1706." The *News-Letter* was the first newspaper published on this continent, and was begun in 1704, and for fifteen years was the sole representative of periodical literature in America.

Let me give you some extracts from its columns. The following are items of news from different quarters:

"Piscataqua, Aug. 15th. On Saturday last the sculking Indian enemy killed a man at Dover."

"Hartford, Aug. 5th. The Towns in the County of Hampshire being greatly infested by the sculking Indian enemy, we are just sending out fifty men with dogs who are to divide into small parties and range the woods on both sides the River, in hopes to discover and annoy the enemy."

It seems, therefore, that when the Connecticut River was the Western Frontier, the settlers dealt with the Indians in as summary a manner as the frontiersmen are forced to do to-day. And that they were sanctioned in so doing by public authority is proved by the following extract from the same paper:

"Boston.—An Act passed by the Great and General Court or Assembly of this Province on Wednesday the 7th Current for encouraging the Prosecution of the Indian enemy.—Granting the following reward or premium—(over and above the stated wages to such as are under pay,—and the benefit of Plunder and all Indian women and children Prisoners, under 12 years of age) to every Company, Troop, Party or Person singly who shall Kill or take any male Indian enemy or Rebel capable of bearing Arms or above the age of 12 years—

Viz.—To the Regular Detached Forces under pay —Ten pounds pr Head.

To Volunteers actually in the service and under pay—Twenty pounds pr Head.

To Volunteers without pay or subsistence, Fifty Pounds pr Head.

To any Company, Troop or Party, issuing forth upon an alarm to the relief of any Town or Garrison attacked,—Thirty Pounds pr Head."

Let these facts be borne in mind by those who are so ready to condemn the cruelty and wickedness of modern Indian warfare. I will not moralize upon them, but simply offer them for the consideration of those who are interested.

H. W. S. CLEVELAND.

MINNEAPOLIS, October 23, 1886.

PERIODICITY OF EARTHQUAKE SHOCKS.

TO THE EDITOR OF THE NATION:

SIR: The coincidence of earthquake shocks in Greece and South Carolina during the last week of August has been much commented upon. On September 26, 27, and 28 there was a like coincidence, shocks of more or less severity being reported from Asia Minor, Germany, South Carolina, and Central America. Again, on October 22 and 23 the same phenomenon recurs, a shock which was felt very widely in the Southern States occurring almost simultaneously with one in Greece. Other instances of like character have been recorded repeatedly within a few months past.

The "mountain making" referred to in the *Nation* for September 9 as holding the first place among the causes of earthquakes, appears to exert itself, at present, at intervals of about twenty-six days over a very wide section of the earth's surface.—Yours truly, M. A. VEEDER.

LYONS, N. Y., October 25, 1886.

[The more conservative opinion of seismologists in regard to lunar control of shocks may, we believe, be fairly represented as follows: No one entering on the problem allows himself to be prejudiced either in favor of or against the moon's action in the case; it is not a question of preference one way or the other. He may simply ask, first, by the inductive method, whether the hour and date of the occurrence of earthquakes, as recorded through a long period of time, shows maxima and minima in sympathy with lunar periods, diurnal, semi-monthly, and monthly. This investigation was made by Perrey of Dijon for about 10,000 earthquakes, and only a faint accord with lunar periods was discovered. It has been tried by others—more recently by Forel for the carefully observed Swiss earthquakes, without finding clear connection between the effect and the suggested cause. Statistics, therefore, show that while there may be and very likely is, in some cases, a certain control exerted by the differential action of lunar attraction, it is a faint control, which in the great majority of cases is overpowered by other controls.

The question may also be attacked deductively by examining the accurately determinable value of the lunar differential pull, and from this it appears that the pull is very small compared to gravity; that the diurnal tidal deformation of the earth must be very small on account of the quick changes in the direction and value of the pull on the rapidly turning and relatively rigid earth, which therefore has not time to change its form significantly; and that the semi-monthly or monthly inequality of lunar attraction may be of more importance by reason of its slower change of values. Finally, on examining the geographic distribution of earthquakes, it is seen that they are not most frequent in the equatorial belt, where the earth tides would be strongest, and that they are not even regularly distributed in longitude, but are distinctly connected with the purely telluric phenomena of volcanic outbursts, and of those general disturbances to which the name mountain-building (orogenic) is often given. If, then, the distribution in time fails to show distinct lunar control, if the lunar deforming force be suspiciously small, and if the distribution in place point decisively to a terrestrial control, the moon cannot figure as a first cause of earthquakes.

On the other hand, the long-advocated idea that the moon may touch off a mechanism that has been wound up, so to speak, by telluric forces, is certainly an attractive one, especially in view of George Darwin's tidal studies, and Taylor's extension of them in regard to the origin of mountain chains (*American Journal of Science*, October, 1885), which show how great an influence the moon has exerted on the earth; but although attractive, and to a certain extent plausible, it cannot at present be said to point to the chief determinant of the time of earthquake shocks. Remarkable approximate coincidences are known in great number; indeed, in just about the same number as the non-coincidences. Moreover, the argument from approximate coincidence should be employed with great caution. Bode's law of planetary distances, Élie de Beaumont's theory of parallel mountain chains, Owen's hypotheses about great circles of geographic forms and disturbances, and the perennial belief in the moon's control of the weather, are notorious illustrations of how far the argument may be carried, and of the unsatisfactory conclusions to which it leads.—ED. NATION.]

A PARALLEL IN SOVEREIGNTY.

TO THE EDITOR OF THE NATION:

SIR: I found in Cedrenus, the other day, a passage which mildly illustrates the prerogative right of monarchs and legislatures to make anything they please a legal tender—that "incident of sovereignty" which, as Mr. McMurtrie justly argues, was properly vouched in by the Supreme Court of the United States in order to show what the framers of the Constitution meant, if they really left that tremendous power not openly expressed, but hidden away, like another Guy Fawkes, in one of its secret passages. Writing of that brave but graceless villain in purple, Nicephorus II. (A. D. 963-969), Cedrenus says (I translate literally):

"He depreciated the coinage, having invented the *tartaron* coin, as it is called; and as thenceforward there were two kinds of coinage, he exacted the heavier in the levy of public taxes, but in disbursements was lavish with the light coin. And although it was in accordance with law and custom that every emperor's mintage should have currency on terms of equal value (unless it were depreciated in weight), he ordained that his own should have the precedence, having forced down the mintages of the others. From this cause he inflicted no small damage on his subjects in brokerage charges, as they are called, and (what was the worst result from such a cause), while the public administration was kept hard pressed, the value of commodities in the markets did not get any boom" (Cedrenus: Bekker's ed., vol. ii, p. 369).

Nicephorus, it will be seen, had two kinds of money, one for the Government and another for the people. We had the same state of affairs under our reign of greenbacks. Nicephorus debased his money by only a fraction of its intrinsic value. We debased our money into no intrinsic value at all. Nicephorus, in the levy of public taxes, called for hard money, which he had not tampered with. In the levy of duties on imports we, too, discredited our greenbacks by calling for gold. Nicephorus, in his disbursements, gave a forced circulation to his debased coin by making them a legal tender. We gave a forced circulation to our bills of credit by making them a legal tender. Nicephorus was lavish with his light coins. Our Government was lavish with its greenbacks.

Though Nicephorus was a paragon of financial prudery as compared with the devisers of our legal-tender policy, the historian does not seem to think very highly of him or of his economics. Cedrenus says that the people lost money in exchanging bad money for good; that the Government was not really relieved by the knavish expedient of sweating its own coin; and that the trade of the country was deranged by the derangement of its currency. If the framers of the

Constitution did really mean, as we are now taught, that this execrable "incident of sovereignty" should be secreted in that instrument, like a stowaway in a ship, ready to save (or scuttle) it in times of storm, then I can only say that they were more cunning and less wise than has been commonly supposed.

W.

WASHINGTON, November 2, 1886.

AT GETTYSBURG AND AFTER.

TO THE EDITOR OF THE NATION:

SIR: As I was in the battle of Gettysburg on Culp's Hill, and have made a study of it both on the ground and otherwise since, perhaps you will allow me a word or two concerning your remarks given on page 335 of your issue of last week.

"Had Ewell's corps attacked with its whole strength soon after Longstreet," it would have found the whole of the Twelfth in position, partly entrenched and awaiting it; and one may well believe that the punishment inflicted upon Ewell's corps would have been much more severe than that which it did receive. And, further, it seems quite doubtful if Ewell could have put in his whole corps at once, or at least to any advantage. When one is on the ground, and considers the lay of the land, and especially the relation of Wolf's Hill to that part of the field, the matter seems plain.

Again, as to what happened after Gettysburg, if anybody supposes that the Union army "was too much shaken to deliver a counterblow at its adversary," he is entirely mistaken as to the facts. I will not ask space to rehearse them, but will only say that the Twelfth corps, though it had lost some men, was sound, strong, and wholly unshaken; that the Sixth corps was in practically perfect condition, having lost (except possibly Shaler's brigade) but a very few hundred men; that the Fifth corps, though it had lost severely, was still in nearly complete form; that except Buford the cavalry was ready for its full duty; and that except the First corps, and in less degree the Third and Second, and a part of the Eleventh corps, the whole army was unshaken. The matter was not with the army, which was capable of having captured or dispersed the whole of Lee's army before Saturday night. The matter was with those who had charge of the army, and who were as incapable of swinging it against him and threshing his army to pieces, as a man is unable to thresh grain with a full-grown oak. As to Falling Waters, if the story only could be told as it really was!—for it is far worse than the other. A good division officer was set to be a general, and he was tenfold overweighted. Perhaps it is useless to write these things, but if you only knew the facts, I think your remarks would have been different.—Very respectfully,

JESSE H. JONES,
Late Capt. Company "I," 60th N. Y. V.

NORTH ABINGTON, MASS., October 28, 1886.

WOMEN vs. AMERICANS AS COMPOSERS.

TO THE EDITOR OF THE NATION:

SIR: In a letter on "Women as Composers," in the last number of the *Nation*, Prof. Riehl is quoted as saying, after referring to the fact that conservatories of music have been open to women for nearly a century:

"Women, thus far, have not yet composed a great poetical work, a great drama or epic, nor any great musical work such as a symphony, an oratorio, or a grand opera of any lasting effect. They have, indeed, composed sweet songs, but even those are but exceptional. This fact seems to prove that women's capacity does not lie in this direction."

I wonder how many people there are to whom it occurs to measure the validity of this "proof" by seeing whether the statement would not continue to be literally true if the word *Americans* were substituted for *women*. The conclusion may or may not be just; but I think that when one reflects upon the rareness of great poets or dramatists or composers, and upon the multitude of favoring circumstances which go to the stimulating and ripening of native genius, and for the want of which it is so likely to remain latent or unknown, one will be slow to decide, from the experience of a single century, that either Americans or women can never be great in music.

F. F.

BALTIMORE, October 29, 1886.

Notes.

D. APPLETON & Co. will be the American publishers of Francis Darwin's biography of his eminent father.

A rapid outline of American history, 'The Nation in a Nutshell,' by Geo. Makepeace Towle; 'Sketches of Western Life,' by Harvey Rice, of Cleveland, Ohio; 'How Shall My Child be Taught?' by Mrs. Louisa Parsons Hopkins; and 'The Monarch of Dreams,' a story by T. W. Higginson, are the latest announcements of Lee & Shepard, Boston.

Ginn & Co. will hereafter publish Myer's 'Ancient History' (heretofore on the list of Harper & Bros.) in connection with his volumes of mediæval and modern history. Mr. W. Collar's edition of Eysenbach's German Grammar is in the printer's hands.

Thomas Whittaker has nearly ready the 'Life of Christ in the World,' sermons by the Rev. Arthur Brooks.

'A Banker of Bankersville,' by Maurice Thompson, will shortly be issued by Cassell & Co.

'The Book of the Tile Club,' a holiday volume, with text by F. Hopkinson Smith and Edward Strahan, and adorned pictorially after the fashion of the Club, will be published by Houghton, Mifflin & Co. They have also nearly ready 'The Old Garden,' a little book of poetry by Mrs. Margaret Deland.

Subscriptions are invited to a 'History of the New York Academy of Sciences, 1817-1886,' in preparation by Herman Le Roy Fairchild, Recording Secretary. It will make a handsome octavo volume of about 140 pages, illustrated with portraits of the five presidents of the Society and of other officers, and with engravings of buildings. The price will be $2.50. Prof. Fairchild's address is 102 E. 32d St.

The three latest issues in the Bohn Library (Scribner & Welford) are the second volume of Didron's 'Christian Iconography'; John Foster's 'Essay on the Improvement of Time,' with notes on sermons and sundry discourses; and S. Mendel's translation (not very close or artistic) of Hauff's 'Tales.'

'The Newcomes,' in the taking little red-backed series now issuing by J. B. Lippincott Co., has just appeared, in two volumes.

The special attention given to ancient history in our preparatory and other schools has warranted the publication of that part of Miss Sheldon's admirable 'Studies in General History' (D. C. Heath & Co.) which treats of ancient history, in a volume by itself. It fills, with the index, 255 pages, and it needs no further commendation to any person who is familiar with the remarkable merits of the parent work. We will only add one thing, that this method, like every method of original and independent excellence, calls for teachers of skill and thoughtfulness above the average.

Prof. G. Stanley Hall, in the preface to Hall and Mansfield's 'Hints toward a Select and Descriptive Bibliography of Education, arranged by topics and indexed by authors' (Boston: D. C. Heath & Co.), disarms criticism of the plan and execution of the work by acknowledging sundry imperfections. As in so many instances, the authors' public are likely to be thankful for what they get, without complaint of shortcomings. We shall imitate this public, while regretting the typographical defectiveness which stares from every page. We refer particularly to the way in which German and French titles (the only foreign, except one or two Italian) are disfigured. Take these examples: (p. 24) "der *er*wigen wahren Menschen-Erziehung"; (p. 27) "aus seine*m* Werken"; (p. 28) 'Émil; ou, *sur* l'éducation' (for 'Émile; ou De l'éducation'); (p. 29) "Ueber *der* wirksamsten Mittel," "Schiften" (for "Schriften"); (p. 193) "l*e* preparation pedagogique"; (p. 203) "l*a* paupérisme dans les universites"; (p. 216) "Theoretisces" (for "Theoretisches"); (p. 252) "l'enseignement comercial" (for "commercial"); (p. 150) "d'agr*e*gation," "langues *e*trangi*è*res," "Litterature française dans les Facultés de [des] lettres," etc. The index, we are sorry to say, follows with Chinese fidelity the errors of the text, giving therefore two entries, to "Dume*r*nil" and "Dumes*u*il," where one and the same person is intended (Dumesnil). Want of knowledge likewise gives two entries to J. J. Rousseau because he chanced to be mentioned without his initials. Pressensé is entered under D (De Pressensé), etc.

As a chronicle of New England pioneer life, Ethan Allen Crawford's 'History of the White Mountains' must always rank as a classic. Its quaint style—Crawford using the pen of his wife Lucy—and its anecdotes of hardship and stirring adventure lead the reader irresistibly on from the opening sentence: "Hannah Hanes was born in Brimfield, Mass., August 3, 1744, and at an early age she experienced religion, at the age of seventeen, I think she told me," etc. The work was originally published in 1845, and it was high time there should be a second edition. This has now been published, without note or comment, by Mr. Henry W. Ripley (Portland: Brown Thurston & Co.). A photographic copy of Harding's portrait of the elder Crawford, and sundry engravings after photographs of White Mountain scenery, enhance the value of this reprint.

Like the five preceding volumes in his "Olden-Time Series" (Ticknor & Co.), Mr. Henry M. Brooks's 'Literary Curiosities' embraces many matters classifiable under other rubrics. In point of entertainment it is quite up to the level. On page 71 an old Jo is given in two versions, of 1791 and 1834, the first ascribing it to an anonymous clergyman unhappily married, the second to Dean Swift in the character of a cynical bachelor. Amusing are some pre-Adamite attempts at etymologizing, as (1786), "Origin of the word Dun"—from "one Joe Dun, a famous bailiff of the town of Lincoln"; and (1823), "going snacks," from "a noted body searcher," named Snacks, at the time of the London plague. A latter-day experiment in education was anticipated in 1790 in Boston, when the School Committee added to the list of books to be used in the Reading Schools—a list beginning with the Bible—"the newspapers, occasionally." The contemporary account of 'Eliza Wharton, the Coquette,' alias Elizabeth Whitman, is reproduced at some length. In time for the approaching Harvard anniversary festivities is the recalling of a public letter from President Willard, in 1791, disavowing the alleged use of an abridged Gibbon's 'Decline and Fall' as a text-book in a Christian college.

Mr. Percy Fitzgerald is an industrious book maker, and not more felicitous in the discovery of excellent subjects than careless in handling

them. We noted not long ago that he was preparing the 'Book-Fancier,' a volume on the romance of book-collecting, and it is now advertised that he has written the 'Lives of the Sheridans'—a book which one of the most gifted of the family, the Hon. Mrs. Norton, announced that she had in preparation nearly twenty-five years ago.

Albert Smith's name is not as well remembered as it deserves to be, and those who have read his amusing 'Adventures of Mr. Ledbury' will be glad to see an announcement of a new edition in two volumes, with three hitherto uncollected chapters, and the twenty-one etchings by Leech which illustrated it in *Bentley's Miscellany*.

Dr. Nicholas Murray Butler of Columbia College is to have charge of a supplement to *Science*, appearing with every fourth number, and devoted to education and pedagogics. These numbers, as they will furnish a complete educational journal, with its proper pagination, can be had separately by subscribers.

Some very striking heliotype views of the ruin caused by the Charleston earthquake, and several graphic private letters from that city and from Summerville, in the midst of the terror, will be found in the *American Architect*, Boston, for October 30 (Gelatine edition).

One could wish a wider circulation for Mr. R. R. Bowker's very agreeable "Memories among English Librarians," begun in the *Library Journal* for October. In the same number, Mr. J. L. Whitney prints an enlarged list of illustrations and plans of library buildings in the Boston Public Library. It fills more than eight pages in double columns. We ought to have mentioned that the previous number of the *Journal* contained, among the Milwaukee Proceedings, Mr. Thorvald Solberg's valuable historical paper on international copyright in Congress, 1837–1886, to which is added a bibliography of bills, reports, petitions, etc. A separate limited print has been made of this paper, but not commercially.

Libraries or individuals having incomplete sets or volumes of the *Liberator* (Boston, 1831–1865), or even a few odd numbers only, are requested to communicate with Mr. F. J. Garrison, Roxbury, Mass.

We read in the report of the Librarian of the Redwood Library, Newport, R. I.: "The necessity for rebinding is, in fact, one which increases year by year. The present mania for cheap books has seriously affected the manufacture of books intended to be permanent. Not only is the paper poorer, but the work is so carelessly done that many books now need to be rebound almost before the gloss has worn from the surface of the covers. As some of the publishers bind at present, it is a question whether it would not be a saving in cost to a library to purchase the work in sheets, and have it suitably bound at a regular book-bindery, or even whether it is worth while to buy their books at all."

The index to American local history which has been undertaken by the Boston Public Library is continued in the latest Bulletin through the letter M.

The second issue of the year-book of the Library of the University of Norway (*Universitets-Bibliothekets Aarbog*) for 1885, is a well-printed volume of nearly 200 pages, all but eighteen being occupied by a catalogue of the accessions, to the end of the fiscal year 1885. The increase was 7,400 volumes, making the grand total of the library—exclusive of the duplicates, and the collections of music, engravings, etc.—256,578 books, 1,373 manuscripts, and 567 maps; twenty-five per cent. greater than it was in 1876. The accessions are divided into four divisions. The first contains the books printed in Norway during 1884—the special catalogue of these being required by the copyright law of 1882, which also enacted that copies of every book printed in the country must be sent to the library; the second, the additions to Norwegian literature from other sources and of earlier dates; the third, the foreign accessions, including Danish, Swedish, and Icelandic books, and the fourth the manuscripts. The librarian reports 51,706 works used; of these 26,483 were loaned out, and 25,223 consulted in the reading-room, among the latter being 108 manuscripts. Besides, 5,662 works were asked for, which were either not in the library, or at the time loaned out. Twenty-three works were borrowed for the use of readers from other libraries, mainly from the Danish library at Copenhagen. The alphabetical catalogue of authors is steadily kept up to date. The Storthing has been requested to appropriate for the introduction of electric light into the reading-room, which contains 2,500 works of reference.

The most important paper in the October *Antiquary* is Part IV. of Prof. J. F. Hodgetts's series on the Scandinavian elements in the English race. The picture here presented in detail of the political life and institutions of the Scandinavians is remarkably similar to the brief and general description in the 'Germania' of Tacitus. It is a pity that Mr. Hodgetts does not state from what sources he draws his information, how far his account rests upon the direct descriptions of the Sagas, and how far it is a matter of inference from later authorities. As it stands, the description of the All-ting here given affords the best commentary to the 11th and 12th chapters of the 'Germania' which we have ever seen. The same remark applies to other parts of the paper. We cannot think, however, that Stonehenge can possibly be referred to the Anglo-Saxon period, being erected for the purposes of the Ting. In another article, Mr. J. H. Round continues his assault upon Mr. Freeman—"Is Mr. Freeman accurate?" He succeeds, as in his former article, in convicting Mr. Freeman, not merely of *error*, from which, as he says, no one can be free, but of *inaccuracy* in certain points. Two of these cases, at least, are of considerable importance, and one of them—in relation to a Roman gateway at Colchester, a favorite class of subjects with Mr. Freeman—is incredible, seeing that the misstatement was uttered after he had made a perambulation of the walls in company with the members of the Archæological Institute. No doubt omniscience is Mr. Freeman's foible, as it was Macaulay's, but we do not think that even such instances of carelessness as Mr. Round detects can seriously detract from his reputation as on the whole the most widely and most minutely learned of English historians.

In *L'Art* for October 1 (Macmillan) G. Dargenty repeats the national estimate of Gros, the historical painter of the First Empire, with the aid of several engravings from his works, where photographs from the canvas would have done more justice to the artist and his critics and given greater satisfaction to the patrons of *L'Art*.

Nearly half of that portion of the last number of the *Vierteljahrsschrift der Astronomischen Gesellschaft*, in which are printed the reviews of current astronomy, is devoted to the work of American astronomers, the papers noticed being those of Prof. Arthur Searle of Harvard College on the zodiacal light, of Prof. Todd of Amherst on his researches, theoretical and practical, relating to a trans-Neptunian planet, and of Prof. Edward C. Pickering of Cambridge relative to Sir William Herschel's observations of variable stars.

With Part 42 of the 'Allgemeine Naturkunde' (B. Westermann & Co.) the story of the earth is concluded. In the chapter on coral reefs and atolls, the origin of the latter as imagined by Darwin is implicitly accepted, though subsequent modifications of his theory are referred to without being described. Parts 43-50 are ethnological, dealing with the inhabitants of the South Sea, who are depicted with the greatest fidelity to nature in black and white and in color after photographs. Illustrations of weapons, implements, ornaments, stuffs, etc., etc., also abound.

From the same firm we have continuations (Parts 11-13) of the illustrated 'Geschichte der Deutschen Kunst,' in which we pass from German architecture to German sculpture again; of the 'Kulturgeschichte des Deutschen Volkes' (Part 3), rich in curious pictorial examples of costumes, occupations, amusements, knightly contests, punishments, domestic living, portraits, and fac similes of mandates, title-pages of books, etc., etc.—the wood-engravings being liberally supplemented with chromo-lithographs; finally, of Richard Andrees's 'Allgemeiner Handatlas' (Parts 3, 4) in which the double maps of England and the Austrian Tyrol are especially striking, though Sicily and Sardinia, Scandinavia, Baden, Hungary, Greece, Ireland, and Scotland are also worthy of mention. The coloring of this atlas is singularly delicate.

So long as the Masoretic text of the Bible "must go," it is well that the critics should be taught how to get rid of it in a decent and orderly way. This lesson may be learned by reading and rereading the Prolegomena to Dr. Cornell's work on the Book of Ezekiel ('Das Buch des Propheten Ezechiel;' Leipzig, 1886; pp. 515). Concluding, with Lagarde, that all the existing MSS. of the Hebrew Bible were made from texts originally derived from one copy, and that a not particularly correct one, and that the text of the Book of Ezekiel is specially corrupt, our author has, to remedy this defect, examined and used all the important MSS. of the Septuagint and of the Ethiopic version; has examined all the citations of the Church fathers, of what is extant of Aquila, Symmachus, and Theodotion; has collated the Targum and the Peshito, and has drawn some slight help from the Coptic, Armenian, and Arabic translations. The variations from the *textus receptus* were then used as sparingly as the author considered necessary, much of the change consisting in the removal of glosses, so called. On the basis of this critical material Dr. Cornell furnishes a new text, unpointed, with a translation and commentary. It is, however, not to the latter that we desire to draw attention, but to the Prolegomena—to the method rather than to the results.

—In the review of the Comte de Paris's 'Gettysburg,' in the *Nation* of October 21, we inadvertently attributed to the editor, Col. J. P. Nicholson, the opinion that the battle of Gettysburg was "as decisive in its character and far-reaching results as the battle of Waterloo." This expression occurs in the *publishers'* preface, and should have been credited to them and not to the *editor*. We regret the mistake.

—The most noticeable article in the November *Harper's* is Mr. George P. Lathrop's account of "The Literary Movement in New York." The portraits that illustrate the paper, of which several are very good, are those of our contemporaries; but the text includes in its scope the literary New York of the past. The treatment is exhaustive. Indeed, the writer seems to have had in mind as a model that recent general survey which Mr. Stedman, by an infelicitous accident, entitled "The Twilight of the Poets"; and Mr. Lathrop has succeeded so well in imitating the encyclopædic method of his senior that he has given us a kind of "Twilight of the New York Literati." To what end is this laborious cataloguing of names that cruelly provoke from some dark corner of our memory the old couplet of Dr. Holmes?—

"Whose wide renown beyond their own abode
Extends for miles—along the Harlaem road."

New York literature has had an illustrious past, and has now a busy present, in whose annals are some justly distinguished names. Why not be content with this, instead of pulling a drag-net to catch all the little fishes in our stream, and invading the precincts of neighboring States into the bargain? Why need we claim Mark Twain and Charles Dudley Warner from Hartford? or Joaquin Miller from the West merely because he once alighted in the city for a season? If every one who visits here, or has ever even been domiciled here, is a citizen, how eminent we should be! No; New York has a metropolitan literature of great variety, with much cleverness and some freshness, and a group of men who display great energy of production. There is poetry and prose; comedy, drama, and epic; criticism and fiction. It is a city of magazines, publishing houses, and clubs. But now that city life is not so necessary as it was in old days to cultivation both in writer and reader, it is perhaps best not to look for a town movement in literature; perhaps we shall find only a town activity in bookmaking and magazine-writing. But beyond all this, the prominence given to insignificant work, and the seeming willingness of the younger writers to pose before the public, are signs of evil tendency; literature loses its dignity, and becomes hardly more than a chapter of journalism, when it is treated in the highly self-conscious, wide-advertising, critically futile style of which this paper is an example. The worst of it is that the literary men who know better, yield to it with so amiable a surrender. In the rest of the number there is a pleasantly gossipy article by Mme. Adam, "How I Formed My Salon"; some nature sketching by Mr. Gibson; and an account of distributive coöperation in England.

—The *Century* has sent out advance sheets of the first chapters of the Life of Lincoln which is to be begun in the next issue of the magazine. These contain an account of the ancestors of Lincoln, and of his own frontier boyhood and youth, and the social conditions in which he grew up. The founder of the race is believed to have been a Norfolk Lincoln, who settled in Hingham, Massachusetts, about 1638. The line is traced through Quaker blood in Pennsylvania to the Virginia branch in the person of Abraham Lincoln, the President's grandfather, who, probably in consequence of family relations with the Boones, was the Kentucky pioneer. The Lincolns seem to have been people of means, and this last-mentioned pioneer was a man of large acres. It would thus appear that the illiteracy and poverty of Lincoln's early years mark only the temporary decadence of a strong and intelligent race under the pressure of border hardships. What these hardships were is admirably told, with a fulness of fact and incident, a comprehensive brevity of statement and illustration, which augur well for the literary workmanship of the future chapters. The frankness and plainness of the narrative of these years, which were traversed by Lamon, are proof that the writers aim to be simply truthful; and the picture they afford of Lincoln's boyhood is strikingly vivid, and stands out almost hard in its clearness. The mental curiosity and the moral temperament of the boy are visible in his habits and acts, and anecdotes exhibit his peculiar sensibility to suffering, his habitual helpfulness to all sorts of people amid all varieties of circumstances, his equability, enterprise, and sense. The illustrations are abundant and include all kinds of interesting things, from facsimiles of land warrants and marriage entries to sites of the old cabins, drawings of them from memory, and the massacre of the grandfather by an Indian "of terrible aspect" done by the imagination. On the whole there is every sign in this first instalment of a noble chapter of American history told man-fashion.

—'What I Believe,' reprinted from the English edition, and translated by Constantine Popoff (New York: W. S. Gottsberger), makes the fifth form in which Count Leo Tolstoi's essay on his religious convictions can now be enjoyed by people who are given to comparing the ways of translators. In common with the French version, 'Ma Religion,' and the rival English version published by Kegan Paul, Trench & Co., in the volume entitled 'Christ's Christianity,' it has the advantage of being made directly from the Russian. Each one of these three editions contains variations not found in the others. This may be owing to their having been based on different manuscripts, from which sentences were unintentionally omitted, or to like omissions on the part of the translators This matter cannot be settled by reference to the Russian text, unfortunately, since publication is prohibited in Russia, and the Geneva publisher says: "My publication of Tolstoi is really abbreviated. I left by side all the text of the Bible. Different subjects are treated in his work twice. I left them away." Still, it is sufficiently full to confirm the two English versions and the French one on points where they differ from the American version through the French. The French one seems to have been made more conscientiously, as a whole, than is usually the case when the Gallic mind undertakes to reproduce Slavic ideas; but even this cannot prevent misapprehension on the part of the second translator, which must always render direct translations preferable. Two instances which occur within a few lines of each other on pp. 48, 49 of the American version known as 'My Religion,' will suffice to illustrate this point. "And in the inner world of the human soul, the law is as absolute as it was for the hearers on Galilee, more absolute, more clear, more immutable. . . . Of Jesus a disciple may now say with greater confidence than they of Galilee," etc. Mr. Popoff gives the passage thus: "There is a law in the heart of each man as immutable as the law of Galileo. . . . It is with greater confidence than even Galileo that the follower of Christ can say, in defiance of all the temptations around him," etc. The other English direct translation reads: "That this is so is a law of the human soul as immutable as the law of Galileo, nay, yet more immutable, more clear and complete. . . . The disciples of Christ can say in answer to all temptations and threats even with greater certainty than Galileo. . . ." The Russian says: "For the inner world of man, the law of Christ is still more absolute, immutable, and clear than the well-known law of Galileo for the physical world; . . . so that the follower of Christ's doctrine can say to those who threaten and pursue him, with even more confidence than Galileo," etc. And, finally, the French runs: "Et dans le monde intérieur de l'âme humaine, c'est une loi aussi absolue que la loi de Galilée, encore plus absolue, plus claire et plus immuable. . . . Un disciple de Jésus peut dire avec plus d'assurance que Galilée, en depit de péripéties souvent douloureuses et malgré les menaces." On the whole, Kegan Paul, Trench & Co.'s edition would seem to be the most desirable. It is more smoothly rendered than Mr. Popoff's, it seems to be as faithful to the original as his, and it possesses one advantage over all other editions, namely, that it contains, in addition, 'How I Came to Believe' ('A Confession,' in the original), which forms an introductory essay, and a condensation of two other manuscripts, interesting to those who desire to understand fully the workings of Count Tolstoi's mind in this direction.

—Mr. Bonar, in his recent 'Malthus and his Work' (see *Nation*, No. 1060), rendered a valuable service to the general thinking public, as well as to students of economics, by making both the Malthusian doctrine itself and the history of its origin and reception more accessible than they had hitherto been. Those who find the size of Malthus's great work somewhat formidable may obtain in Mr. Bonar's book a condensed statement of its contents, an impartial consideration of some of the most prominent criticisms that have been levelled against it, and much interesting and important information about Malthus himself and about his other writings. Those whose interest in the subject has been stimulated by Mr. Bonar's book, will especially welcome the appearance of a German monograph which presents an acute, impartial, and very readable discussion of the views held by the chief Socialistic writers upon the doctrine of Malthus. We refer to Dr. Heinrich Soetbeer's 'Die Stellung der Sozialisten zur Malthus'schen Bevölkerungslehre' (Berlin, 1886), a paper which well deserved the prize awarded to it by the University of Göttingen. The author has the rare merit of not only knowing the exact meaning of the Malthusian doctrine, but never losing sight of this exact meaning. The main part of the book is preceded by an introduction, containing a concise statement of the doctrine, a brief mention of the forerunners of Malthus, and a very brief survey of the opinions of some prominent modern economists. The writer then examines successively the views of William Godwin and of Robert Owen's disciple Thompson; of the French Socialists, especially Fourier, Blanc, and Proudhon; of the German Socialists, who occupy 68 pages out of the 112 which the book contains; and, finally, of Henry George. Dr. Soetbeer recognizes the remarkable literary merits of Mr. George, and then proceeds to expose the utter shallowness of his views on the subject of population. As regards the Socialist writers in general, it appears that the majority of them acknowledge, either explicitly or implicitly, the truth of the general doctrine of Malthus, although, with one or two conspicuous exceptions, they heartily detest its founder and imagine they have overthrown his position. The author accords the most quiet and impartial treatment to all the subjects of his criticism; even the grossest errors seldom call forth anything harsher than a gently humorous dismissal. One cannot fail to be impressed with a sense of the strength and depth of a work which has so withstood the attacks of three generations of opponents that a thoroughly fair-minded critic like Soetbeer can endorse only one important objection which has been made against its teaching, and this relating not to the main doctrine, but to a question of practical policy arising under it.

—The evidence of the wisdom of the Trustees of the James Lick Trust in locating their great observatory on the summit of Mount Hamilton, California, continues to accumulate. The astronomer who first visited the site of the projected observatory, Mr. S. W. Burnham of Chicago, remained upon the mountain during a period of two months, making the most delicate astronomical tests of the atmospherical conditions, and found during the period August 17 to October 16 inclusive forty-two first-class nights, seven medium nights, and eleven cloudy and foggy nights. There was not in the whole time a single poor night when it was clear. This was in 1879. Prof. Holden, now Director of the Observatory, visited the mountain in the autumn of 1881, and found during the period October 20 to November 9 fourteen nights which were perfectly clear, with at least average conditions of vision, and one of them was exceptionally fine. A year later Prof. Todd, who conducted the observations of the transit of Venus, remaining upon the mountain

from November 21 to December 21, found four nights totally cloudy, fourteen partly cloudy, six clear with good "seeing," and seven clear with exceptionally fine conditions of vision. During the past summer Prof. Comstock, an astronomer familiar with the average atmospheric conditions at Eastern observatories, remained at the observatory from July 24 to August 23, for the purpose of making a preliminary study of the character and performance of the new meridian circle. His report upon the conditions of vision from the summit of the mountain is not less enthusiastic than that of the astronomers who have preceded him; and he found during the period above mentioned that there was no night upon which meridian observations would have been impossible, and but three upon which clouds would have appreciably interfered with observing. The average "seeing" during that period he estimates at four on a scale in which five would represent absolutely perfect conditions. The rapid progress which the Lick Trustees are now making towards the completion of the observatory, justifies the expectation that within a year regular observations may be begun.

RECENT NOVELS.

Princess. By M. G. McClelland. Henry Holt & Co.

A Playwright's Daughter. By Mrs. Annie Edwardes. Harper's Handy Series.

My Friend Jim. By W. E. Norris. Macmillan & Co.

A Wicked Girl. By Mary Cecil Hay. Harper's Handy Series.

Gloria Victis. By Ossip Schubin. From the German, by Mary Maxwell. W. S. Gottsberger.

Aphrodite. By Ernest Eckstein. From the German, by Mary J. Safford. W. S. Gottsberger.

Pepita Ximinez. From the Spanish of Juan Valera. D. Appleton & Co.

The Buchholz Family. By Julius Stinde. Translated from the forty-ninth edition of the German, by L. Dora Schmitz. London: George Bell & Sons; New York: Chas. Scribner's Sons.

A GENUINE surprise awaits the reader on the last page of Miss McClelland's 'Princess.' All the way through he has been conscious that the writer is inclined to treat her not altogether sympathetic subject in a tentative way, which is highly suggestive of a moral see-saw. When the catastrophe inevitable in that form of diversion is reached at last, after much clever balancing, the surprise consists in finding that ideal morality is left, as usual, high and helpless in the air. The other end of the beam, being decidedly overweighted with the hero, the heroine, her loveliness, and her heart burdened with scruples, lands naturally and comfortably on the earth. There could be no possible objection to this very commonplace ending, if the author had only professed from the first to relate a plain tale, photographed conscientiously from real life. But this is precisely what she did not profess, until her mind misgave her that it would not conduce to the success of the book if the lovers were to be left to mourn apart the existence of logic and lofty ideals in this prosaic century. The struggle between this conviction and the elevated sentiments which she would prefer to advocate, if expediency would permit, is painfully apparent, and mars the sense of unity and calm strength with which alone such a topic can be successfully treated. There are more people who share charming Pocahontas Mason's prejudice against divorced people than the writer seems to imagine, though at first she attributes this and all other old-fashioned virtues to the survivors of the ancient Virginia families, and to one Northern family. Hence, her hero, who, married or single, always looks much more than he means, and makes love to every pretty woman, does not excite the reader's sympathy, when Pocahontas, indignant at his duplicity in courting her before he is divorced, and at his audacity in trying, as a divorced man, to marry her, refuses him. That the Princess should reject a noble suitor, and eventually marry this dishonorable man, simply because he indulges in some pining of the cut-and-dried novel type, not only is a disappointment in an artistic sense, but contains a covert plea for divorce on the slightest of grounds. The really touching and dramatic scene between the divorced parents, over the deathbed of their child, while the new husband waits impatiently in the parlor, is a waste of good material in a bad cause, since it leads to nothing, and merely serves to remove a possible obstacle to the hero's second marriage. Novels "with a purpose" are a mistake unless they handle the subject, generally an unpleasant one, with an unflinching boldness commensurate with their importance. Half-heartedness is out of place, and it is the characteristic quality of 'Princess.'

If an old favorite like Mrs. Annie Edwardes sees fit to indulge in so hasty and uneven a bit of writing as 'A Playwright's Daughter,' she must take the consequences. According to her theory, as here set forth, an English father plus a Russian mother equals an irresistibly charming and thoroughly Russian daughter, Tania by name, whose wit and grace of manner no other nation could produce. But the Russian girl as depicted by Russian writers is a very different character. As a matter of fact, Tania is nothing but the American girl, as depicted in English fiction under the most favorable circumstances, with one important difference, viz.: that if any American girl were to take the liberties with etiquette which Tania allows herself, it would not be designated as "fascinating," but by some of the adjectives which are specially reserved for ill-bred visitors from the Western hemisphere. To make the inconsistency still more glaring, Tania is constantly referring to the strict propriety of her own conduct, which she has been drilled into during her school life on the Continent, as compared with the terribly lax ways of English girls. There were great possibilities in this girl of seventeen, but the author, after having made her commit various solecisms and fall in love with the wrong man, as usual, not only declines to extricate her from the dilemma, but ruthlessly kills her that very night. One regrets her death, because it is quite uncalled for on any hypothesis, except the one that the author had wearied of her subject.

No book has recently presented so good an opportunity to compare old methods with new as Mr. W. E. Norris's sketch, 'My Friend Jim.' The subject is practically the same, so far as it goes, with the one developed at much greater length by Thackeray in 'Vanity Fair.' The careers of Becky Sharp and Hilda Turner are identical in scope. Jim is not unlike Rawdon Crawley, but, more fortunate, he escapes the latter's fate and does not wed his Becky. The man who assumes the second part of that rôle takes matters much as Rawdon did; there are several to take the part awarded to Lord Steyne; there is even the suggestion of a murder towards the last, and a neglected little son, although Hilda, unlike Becky, does not even pretend to sew on a tiny shirt for him long after he has grown up, in order to exhibit her maternal devotion. Still, the parallel holds good, so far as that isolated section of Thackeray's work is concerned. This is unfortunate in some respects. It makes Mr. Norris's work seem more superficial, more inadequate than it would if it could be read with no afterthought. Mr. Norris's stage is small, his characters few, his treatment graceful, as usual, but more than usually shallow—so much so, that he gives no specimens of his heroine's fascinations, though she rises, by reason of them and of her supreme selfishness alone, to the very apex of social rank. If this is a correct picture of the English society of the present day, there is no moral, except that whatever Mr. Norris touches, however slightly, is sure to afford pleasant reading.

It is not usual to assign the rôle of background to the nominal heroine of a novel, but that is the wise course which Mary Cecil Hay has adopted in the story completed on her death-bed, 'A Wicked Girl.' It would have been difficult to draw an interesting portrait of the pretty and angelically amiable young person in detail. She would have seemed insipid, since her only claim to attention is the absolute absence in her composition of the sense of right and wrong, even to the point of murder when her jealousy is aroused. As a dark and mysterious background to the other characters, and revealed chiefly in hints, she is effective. The part of the heroine accordingly falls to her sister, who sustains it with great spirit, from the day that she undertakes the investigation of the Wicked Girl's first crime, through a courtship by another acute investigator, and a personal experience of the young person's methods, to the customary dispensation of poetical justice on the last page. Like other works from the same hand, it furnishes agreeable reading for an idle hour, though the superficial treatment of the really ingenious leading idea destroys all claims to greatness or to permanent literary value.

The second volume of Ossip Schubin's (Lola Kuerschner) *catalogue raisonnée* of the Austrian nobility, which bears the ambitious title 'Gloria Victis,' forms no exception to the rule that sequels are a literary mistake. The indomitable pride of that nobility forms her patriotic theme, but, according to her own showing, the majority of its members marry into the shopkeeping class which they scorn, and have criminal dealings with rascally adventurers. If she had been content to tell even such a discreditable tale in a straightforward manner, assigning to her nominal hero and heroine the prominence which is their right, and bringing the whole of the story within the covers of one volume, success of some degree might have crowned her efforts. But she attempts both too much and too little. Due subordination of the characters and incidents is not preserved; all the actors are treated on exactly the same plane. They resemble a group of figures by Lucas Kranach, where each individual defends his right to the foreground; or a company of actors ranged before the footlights at the end of a comedy, and all endeavoring to speak at least one word of the "tag." And tag it is throughout, the history of each person who is introduced being narrated with exactly the same amount of circumstantiality, without regard to the relation which he or she bears to the story. The translation seems to be well done, but the mistake of rendering *Flieder* by elder flowers appears as usual. Elder flowers are not cultivated in Paris for ornament, nor do they come on the first of May. Lilacs meet all the requirements, and leave *Holunder* to stand for elder.

There is no fault to be found with the manner in which the well-worn machinery of omens, goddesses, pirates, flower-girls, revellers, the talented sculptor of plebeian birth, the patrician maiden more beautiful than Venus herself, and the chorus of citizens, works in Ernest Eckstein's romance of ancient Greece, to which he has given the attractive title of 'Aphrodite.' Everything is perfectly planned and executed, but it remains a machine-made product. The spirit of the age is not present in that all-pervading and subtlest

form which alone affords an excuse for an historical romance, and which alone can insure its immortality. The reader is left cold and unmoved —an unpardonable fault—in the most forcible scenes, and does not feel that he has really come to know and love the clearly delineated characters. The Grecian temple of wood which serves for a church in many a village of New England awakens no emotions of art or beauty in the soul, such as the original fane of marble evoked even in untutored hearts. The author has not himself penetrated deeply enough into the spirit and homes of the people whom he seeks to portray, to produce more than a passing illusion on the mind of the reader. The translation reads smoothly.

"One of the jewels of literary Spain" is what a Spanish critic has pronounced the most popular book of recent years in that language, Don Juan Valera's novel, 'Pepita Ximinez.' In the special introduction which the author has prepared for this translation he styles it "the least insipid of the products of my unfruitful genius," thereby providing an explanation in addition to the one which he alleges for the extreme popularity of the book. Insipid is the exact word which applies to most novels of the modern Spanish school, if there be sufficient substance to merit that designation. Even Señor Valera's other books, which necessarily contain the same elements, to a certain degree, since they are inseparable from the Spanish character, do not possess the same claims to attention. 'Las Ilusiones del Dr. Faustino,' his most pretentious novel, which turns on the (in Spanish) almost inevitable pivot of the love of an uncle and niece, and their ineffectual struggles to overcome this specially attractive phase of the tender passion, is much inferior to the work under consideration. The plot is of the simplest, but it covers ground which is thoroughly familiar to many besides Pepita and her lover, who have traversed at least a corner of it at some period of their lives. Young Don Luis, the only child of a wealthy country gentleman, returns to his native town on a farewell visit to his father, previously to taking priest's orders, and going as a missionary to the East. As to his vocation the devout and handsome young fellow has not the slightest doubt until he meets Pepita Ximinez, whom his father, in company with many others, is courting. Pepita is exquisitely drawn. Her womanly charm is so tangible that it unites with the young theologian's devoutness to lend a perfume of spring and flowers to the few and simple incidents. Even her manner of forcing Don Luis to avow his love at last does not seem unwomanly, under the peculiar circumstances, since she is evidently right in thinking that the priesthood is not the place for him. He immediately proves the justice of her argument by committing nearly all the capital sins in one day. The skill with which this situation is led up to, the profound but not cumbrous analysis of his own heart which the young man commits to writing in his letters to the priestly uncle who has brought him up, his struggles and Pepita's against what they regard as sacrilege, and the warmth and breadth of feeling which breathes from every page—these distinguish the story above others not dissimilar. Of the two indispensable elements of romance in a Southern land where the Roman Catholic faith prevails, love and religion, there is no better exponent than 'Pepita Ximinez.' The Introduction is of great interest. The translation gives an excellent idea of the original, though there are places where more simplicity of diction could have been employed to advantage. Here and there, too, little characteristic touches are omitted. It is well that this book, famous in all Spanish-speaking lands, has at last been presented to English readers in something approaching an adequate form, since the mutilated translation published in England under another title did not do justice to the delicacy of style which, as the author himself says, forms its principal charm.

German critics are a little inclined to attribute the phenomenal popularity of 'The Buchholz Family' to the praise of Prince Bismarck, and to the attention which it has attracted abroad. This is hardly fair and not at all probable, since Germany is not given to accepting the dicta of strangers on any point. The high price of novels in Germany also tends to keep sales low, even with a popular work. Yet this series of letters from a middle-class, typically German *Hausfrau*, who is utterly devoid of sentiment, poetry, of any feeling save jealousy, of even instinct save the maternal one, has passed into its fiftieth edition. It is not so remarkable when examined with a little more attention. The tendency in Germany, even more than in America, has been in the past to select subjects for literary treatment from the two extremes of the social scale. The books which have made a reputation have all depicted either the aristocracy or the peasantry. As the peasant did not peruse the literature which affected him, to any great extent, his opinion of the sketches cannot be known. When the same writers, nearly all belonging to the middle classes, attempted to picture the nobility, it is to be feared that the nobility smiled—if it ever saw the attempts. At all events, neither noble nor peasant recognized his own portrait as sufficiently faithful to inspire him with a desire to possess a copy for himself, to the number of many thousands. The truth is, that the great success of these brief sketches of middle-class people and their ways, drawn by one of themselves, is due to the fact that they have been recognized as perfect likenesses by the people who unconsciously sat for them. Not that they make a personal application to their own case, but they recognize the likeness to their neighbors, which does not impeach the truthfulness of the portrait, but merely adds a zest to their enjoyment in contemplating it. More than this, Dr. Stinde has made his Wilhelmine Buchholz so vitally feminine in her petty traits that she will appeal to the heart of many a woman in other ranks of society, who would, nevertheless, consider this German woman "common." Common she certainly is; but the way, for instance, in which she breaks off and renews her connection with the hated Bergfeldt family, is not unknown in other lands and circles. The other actors possess the same vital quality, though they are limited to casual exhibitions of it, in subordination to Wilhelmine. As a whole, they present a perfectly real but depressing class of the community, which is wholly wrapped up in its own petty interests, which has no ambition to elevate itself in any way—which, indeed, seems unconscious that there is anything higher than itself and its unintelligent ways, except when some member of the circle, like Emil Bergfeldt, chances to recall the fact by marrying a little more money than it is accustomed to. Frau Bergfeldt has not an idea beyond snubbing or conciliating her dearest female friends, who are also her natural enemies, and getting her daughters married; yet her native mother wit enables her to say things which are clever enough and droll enough to appeal to highly cultivated readers, if the latter will take the small trouble of adjusting the focus to their own vision. The translation is very good, though phrases occur on almost every page where a more literal rendering would produce an equally spirited effect, and would contain more of the full flavor of the original.

BLUE-BEARD.

Gilles de Rais, Maréchal de France, dit Barbebleue (1404-1440). Par l'Abbé Eugène Bossard. D'après les Documents inédits réunis par M. René de Maulde. Paris: H. Champion. 1886. 8vo, pp. 426, clx.

In the fifteenth century the two most picturesque figures are Joan of Arc and Gilles de Rais, and fate threw them together, for De Rais was placed in charge of Joan on her expedition for the relief of Orleans, and remained by her side until the repulse at the Porte St. Honoré. In death, also, they were, in some sense, not divided, for Joan was burned for sorcery in 1431 and Gilles in 1440. Here, however, the comparison ends; for Joan is enshrined in French tradition as little short of a saint, while Gilles is regarded in his native Britanny as the original of the monster Bluebeard. We are not sufficiently versed in the dubious science of folk-lore to decide whether the Abbé Bossard has made out his case that the Marshal's career is really the source of the nursery tale, but he has undoubtedly shown that, to the Breton peasant, the two personages are one, dissimilar as were the crimes of the real and of the fictitious monster.

Gilles de Rais was born of the noblest parentage, and inherited ample possessions, increased by his marriage with the heiress Catherine de Thouars, rendering him one of the wealthiest men in France. In the troublous times of the English wars he threw himself eagerly into the desperate cause of Charles VII., and his conspicuous gallantry was rewarded, at the age of twenty-five, with the high dignity of Marshal of France. He was not only a *preux chevalier*, but a man of education and culture. Chance allusions show that in his library he had St. Augustin's 'City of God,' Ovid's 'Metamorphoses,' Valerius Maximus, and Suetonius; and one of the reasons given for his loving an Italian adventurer was the choice Latinity of the latter's conversation. Of music and the drama he was also passionately fond. With such advantages and accomplishments, it is not easy to set bounds to the career open to him in the war of liberation which finally expelled the English from France.

Nevertheless, in 1432 or 1433 he withdrew from active life to his estates, and seemingly devoted himself to dazzling the multitude with a display of regal magnificence. In Orleans, during four months in 1435, he is reported to have squandered 80,000 gold crowns, and to support his prodigality he was forced to sell one splendid fief after another. His family, alarmed, procured royal letters interdicting him from making contracts, but Jean V., Duke of Britanny, forbade the publication of the letters within his dominions, and continued to take advantage of his spendthrift vassal's necessities by purchasing his properties.

The reckless noble, however, in these sales reserved a right of redemption in six years. He had become infatuated with alchemy, and, in daily expectation of mastering the grand arcanum, he was ever on the threshold of illimitable wealth and power. Now alchemy was almost invariably connected with necromancy. The aid of demons was requisite to enable the adept to penetrate the occult secrets of nature, and Gilles was ever on the watch for an expert who could control or placate the malignant spirits to the fulfilment of his desires. He was consequently the dupe of a succession of charlatans, and nothing in the history of magic is more instructive than the simplicity of his own relation of the credulity with which he accepted the excuses of his quick-witted deceivers for their failures. They could always at will evoke demons and obtain responses when alone, but when he was present the familiar spirits obstinately refused to appear, or to accept the written compacts, signed with his blood, which he vainly sought to transmit to them. To win the favor of a demon

named Barron, he offered him the hand, the heart, the eyes, and the blood of a child; but even this was fruitless. The popular impression respecting him was that he killed pregnant women, and children, in order with their blood to write conjurations, and Monstrelet informs us that he confessed to eight score such murders; but on his trial the only instance of necromantic bloodshed was this single case.

His crimes, in fact, were of a darker hue. There are some subjects so repulsive that one hesitates even to allude to them To minister to his depraved appetites, children were brought to him, who were promptly put to death to secure secrecy; and he found a delirious delight in watching their death-agonies, which he skilfully prolonged by mangling them with his own hand. In the present age we might hesitate to admit such possibilities in human nature but for remembering the passionate eagerness with which the Roman Senators and matrons watched criminals torn limb from limb by the beasts in the arena, and the voluptuous excitement which Tiberius and Nero and Claudius found in witnessing human suffering. It is consoling to reflect that such survival becomes rarer in the development of the race, although the crowds which still gather to witness a hanging, show that the brutish instincts are not yet extinct.

The Church alone could assail a man who stood at the head of the baronage of Britanny, and who was allied with all the most powerful feudatories. Fortunately it was the interest of both Church and State to destroy him, for Jean de Malestroit, Bishop of Nantes, as well as Duke Jean, had been a purchaser of his lands, and both might well desire to see him out of the way. In the summer of 1440 the Bishop commenced a secret inquest against him; but though his purveyors had been enticing children from all the land, so well had his hideous secrets been kept that nothing but vague conjectures could be elicited against him. In September, however, he was arrested with his confidential retainers, from whom it was easy, by means of torture, to obtain the requisite avowals. The trial was as remarkable as any of the other incidents in the culprit's career. At first he haughtily refused to acknowledge the jurisdiction of the Bishop and inquisitor, and insulted them in the grossest terms. Then, suddenly, in the interval between October 13 and 15, he submitted, and became as anxious as his prosecutors to publish the fullest confession of his iniquities. His character, in fact, affords a curious subject for the psychological student. He was a devout son of the Church, regular in its observances, and extremely solicitous about his salvation. In all his projected compacts with Satan he had carefully inserted a clause that he should not suffer in body or soul. He repeatedly proposed to wipe out his sins by a pilgrimage to the Holy Sepulchre. After his confession, when he had nothing further to hope on earth, he exhorted the crowd to hold fast to the Church and to pay her the highest honor; he had always done so himself, but for which he believed that, in view of his crimes, Satan would have strangled him and carried him off, body and soul. We can only conjecture that, seeing conviction inevitable, he impulsively rushed to the end in the full belief that, through the ministrations of the Church, his sins would be forgiven; and thenceforth he manifested the most profound assurance that he should pass at once to the great joys of Paradise without even the probation of Purgatory.

When sentenced, as a heretic and murderer, to be hanged and burned, he made but two requests —one that the clergy of Nantes, on the day of execution, should make a solemn procession to pray God to keep him assured of salvation; the other that two of his servants, condemned to die, should suffer with him, that he might set them the example of a good death, and that their salvation might not be imperilled by anger through supposing that he was to escape. Both prayers were granted, and the morrow saw the extraordinary spectacle of the whole population of Nantes, who had been clamoring for his blood, marching through the streets, singing and praying God for him. On the road to the gallows and stake he assured his servants that, as soon as their souls left their bodies, they should all meet in Paradise, and all three made a most edifying end. His body was not permitted to be consumed in the flames, and was honored with a magnificent funeral in the Carmelite church, where lay the dukes and all that was most illustrious in Britanny; but to this day the peasant who approaches at dusk his ruined castles of Tiffauges or Machecoul, crosses himself and crouches past with bated breath.

Such is the dramatic story which the Abbé Bossard has treated from documents which, though consulted by former historians, now for the first time see the light. His work is a model of all which such a book ought not to be. A subject requiring treatment of the severest dignity and reticence has been adorned with false rhetoric and padded out with platitudes, in addition to occasional careless inaccuracy. In spite of the tragedy which he relates, there is one passage which irresistibly impels a smile, when the fact that the Church punished relentlessly the invocation of demons forces him to pause and argue that the swindles of the Marshal's necromancers were probably real. Fortunately, the unaffected learning of his collaborator, M. Maulde, who supplies the interesting documents printed in the appendix, furnishes a corrective of the Abbé's one-sided performance.

The Memorial History of Hartford County, Connecticut, 1633–1884. Edited by J. Hammond Trumbull, LL.D. 2 vols. Boston: Edward L. Osgood. 1886.

THIS coöperative history bears a close external resemblance to the same class of works issued under Mr. Justin Winsor's editorship, such as the 'Memorial History of Boston' and the 'Narrative and Critical History of America.' It is handsomely printed, and is abundantly illustrated with maps, views, portraits, and facsimiles. Its readability varies not only with the theme and the writer, but with the scheme, which in the second volume consists of an alphabetical treatment of the towns of the county, while the first volume is given up to broad discussions—of the geology, aborigines, settlement, organization, etc., down to prominent business men. The genealogical data which we are accustomed to expect in the ordinary county history are here wanting, except in connection with the account of Windsor.

The small territory under review had less than the highest claims to be so copiously and sumptuously commemorated. Other parts of New England have a much better title to distinction—other parts even of Connecticut, though in Hartford County the first beginning of civil government was made, in the spring of 1636. The settlement along the river towns by the dissatisfied emigrants from the Bay colony has all the historic significance for the county at large which belongs to New England's growth and development. Considered in itself, as a protest against the interference with individual liberty arising from the theocratic constitution of the Puritan State, the new plantation does not possess much importance, seeing that the ascendancy of liberal political and theological ideas has been less marked in Connecticut than in Massachusetts. Nevertheless, the story of their relations is part of the necessary reading of any student of the rise of either commonwealth, and is told in a very attractive manner by the Rev. I. N. Tarbox, the coryphæus of the associated writers, among whom Miss Mary K. Talcott has also a prominent part. In our brief comments we shall confine ourselves rather to matters curious than polemical.

Jonathan Edwards and Noah Webster stand near the head of the famous natives of Hartford County, among whom, besides Wolcotts and Ellsworths, were also John Fitch, inventor of the steamboat; Samuel Colt, inventor of the revolver; Sylvester Graham, of dietetic notoriety; Elihu Burritt; J. G. Percival, the poet; Mrs. Emma Willard, best remembered by her "Rocked in the Cradle of the Deep," etc. Among the founders were ancestors of Aaron Burr, Horatio Seymour, Henry Ward Beecher, and Gen. Grant. A noticeably large number of immigrants have lent lustre to the county, particularly in the domain of letters, from John Trumbull and Joel Barlow to "Peter Parley," Mrs. Stowe, and "Mark Twain." Dr. Horace Wells, over whom the ether controversy is again revived, came from Hartford, Vt.; and apropos of the medical profession, Dr. Wainwright gives some entertaining particulars. He is unable to decide whether the "opening Kellies child" recompensed to Dr. Rosseter in 1662-3 by the Court was an antemortem or post-mortem operation; if the latter, then it was the first recorded autopsy in New England. Physicians were formally invited to settle, like clergymen. "Dr. Primus," an ex-slave and assistant of Dr. Wolcott, acquired a reputation for skill worthy of his master; and much later, 1850-53, a clergyman's sister, "Miss Doctor Lucy," proved a homœopathic practitioner of ability, though without diploma or regular medical training. In Hartford County, by the way, was formed the first homœopathic medical society in the State.

Tobacco has been grown in the county ever since its settlement, and the local crop is fifteen per cent. of the State's total. It was early made the subject of "protection," and "any person who should 'drink' any tobacco, except such as was grown within the liberties, was fined five pounds." But seven years later (1647):

"No person under twenty shall take tobacco, unless he is already used to it, or can bring certificate of a physician that it is useful to him. . . . No man shall take tobacco publically in the street, nor in the fields or woods, unless on a journey of ten miles, or at the ordinary time of repast called dinner, or if it be not then taken, yet not above once in the day at most, and then not in company with any other," etc.

The Rev. Nathan Strong's "earlier ministry was complicated by business transactions of a rather questionable and embarrassing character," he having bankrupted himself, in short, in a distillery traffic, and only by courtesy being spared a lodging in jail for debt. The jail in Hartford, we observe, in passing, was on the same square with the stocks, the whipping-post, and the meeting-house of the first congregation. In 1774 the prisoners in Trumbull Street jail petitioned for an extension of the jail limits, because the abominable state of the roads kept the charitable from having ready access to them.

Schools do not cut much of a figure in this chronicle. The libraries, however, are noteworthy in number, excellence, and correlation (or concerted differentiation) in growth and use. The industrial and financial chapters and sections possess a high degree of interest. An amusing incident relates to one-day brass clocks. The inventor, Chauncey Jerome, in 1842 sent Epaphroditus Peck to England to introduce them there:

"Mr. Peck found the cheapness and small size of his clocks the greatest obstacle to their sale, dealers thinking these a sufficient proof of their worthlessness. The British Government, suspecting the low valuation which was put upon

them at the custom-house to be fraudulent, confiscated the first cargo, paying therefor, in accordance with the custom-house regulations, the importer's valuation with 10 per cent. addition. Mr. Jerome, well pleased to sell his clocks by the cargo, sent another load, which was seized on the same terms. A third cargo was allowed to pass, and, after much trouble, was sold in small quantities."

The axes made in the town of Collins, to the number of 15,000,000, "are known and used all over the world." In Manchester are made the best American silks.

In the insurance business Hartford leads the country, and has been the seat of many extraordinary experiments. There was the American Temperance Life Insurance Co., which virtually involved taking the pledge. There was the Live Stock Insurance Co., which came to a disastrous end by reason of the opportunities for fraud, and of which nothing remains but "experience." A pattern for the engraved seal, in the possession of a director who sunk $10,000, "is proudly pointed to by its owner as the second costliest picture ever in Hartford." There was, even as late as 1855, a business of slave and coolie insurance, which suffered from causes like those which wrecked the Live Stock Co. It shows the mutability of earthly things that, being told of the reorganization of the damaged Charter Oak Life Insurance Co., with Geo. M. Bartholomew president and C. E. Willard secretary, we are assured that "under their able and upright management several millions have been returned to policyholders, and the final dissolution retarded far longer than was once thought possible." The subscription-book business, in which Hartford is preëminent, also invites a few words here, but we must conclude.

Memorials of Washington and of Mary, his Mother, and Martha, his Wife. From Letters and Papers of Robert Cary and James Sharples. By James Walter, Retired Major 4th Lanc. Art., etc., etc. Charles Scribner's Sons. Pp. 362.

THIS book, valuable in itself, but aggravating on account of its lack of order, is issued doubtless to call attention to a most interesting collection of portraits now making the tour of the United States for exhibition and possible purchase. It seems that James Sharples, whose pastel portraits of distinguished Americans about the years 1795–1798 are treasured for their evident faithfulness, was sent over to America by Robert Cary, who was the English agent, friend, and admirer of Washington. The artist was commissioned to paint a portrait of the President, and he performed his task well, by securing two portraits of Washington from life, as well as one of Mrs. Washington. Incidentally he made a few sketches of other American ladies and brought these back to England, unfinished. He was also probably intrusted with a torn and disfigured canvas—being the portrait of Washington's mother, painted by an English officer named Middleton—to see what could be done by the restorers in London.

Sharples's widow seems to have retained all of these pictures after his death, and to have sold them to Robert Cary or his brother. Mary Washington's portrait was restored by Edward Bird, R.A., and Maclise renovated and finished the female heads. How much the present pictures owe to the later brushes cannot be told, probably; and yet, if the original sketches reached such a stage as would have allowed Sharples to finish them from memory in England, it may be conceded that Bird or Maclise had ground enough for faithful work.

We may, then, cheerfully acknowledge the real value of the Washington pictures, the more readily because the autotypes bear out the story. The portraits are not only good, but they are satisfying to the imagination—more so, perhaps, than Stuart's or any other likeness of Washington. For example, contrast this portrait of Mary Washington with the one in Mr. Lossing's recent book. It is dimly shadowed forth in this book that these pictures can be bought. If so, Congress ought to attend to this affair promptly, recognizing that they are invaluable and that their possession is a national enrichment. The pedigree of the pictures seems to be well established, since they have always remained in some branch of the Cary family. They have been known as existent by many Americans, they have been seen in their English custody by many eminent connoisseurs, and they have twice been exhibited in this country.

We regret exceedingly that the labor of preparing this history has not fallen into better hands. Evidently the letters of Sharples, printed consecutively and in their integrity, would be a precious chapter in the memoirs of the period. The story of the Carys and their relation with Washington would be readable. The testimonies here copied to the value of the portraits are appropriate and worthy of preservation. But all is obscured and almost lost in the hands of the present editor. We hope some one who can tell a straightforward story will yet have access to these treasures.

The name of Sharples or Sharpless recalls the fact that many of his pastel drawings—the artist's originals, so to speak, from which he worked—were preserved "down South." A large number of them were cut from their frames, and the prized bundle buried, owing to the fear of an inroad of troops during the Rebellion. When recovered it was found that there were the frames inscribed with names, but no one had thought to mark the pictures. Identification was thus only conjectural, and though many were so recovered, a very considerable number were not. For some years the portrait of the wife of Judge Cushing figured as Martha Washington, the critics accepting a youthful matron of thirty in place of one of nearly seventy years.

We can only add that the autotypes are charming, and fully justify every would-be purchaser of the book in disregarding the text, and in finding the value of his money in the illustrations and in such facts as he can dig out for himself.

Skat: the German Game of Cards. B. Westermann & Co.

AT Coblenz, where the Moselle River empties into the Rhine, the yellow floods of the tributary are for miles distinguishable from the blue-green waters of the "coupe des nations," as Lamartine calls the German river. Similarly, German social life, with its pastimes and characteristics, remains a distinct feature in this cosmopolitan city of New York, into which the stream of immigration empties its floods of Germans year after year. They become Americans soon enough, politically, commercially, industrially; and Karl, Heinrich, and Hans are Charley, Harry, and John before they have mastered the language into which they are so eager to translate their names. But the best of them, the well educated and gentlemanly, with no anarchist bent or other disqualification, do not *socially* enter into the American life, as a rule, for a generation. Neither do Americans take cognizance of the real social characteristics of their new brethren in politics. Of course, the well-to-do of both nationalities meet on a footing of social equality at receptions, parties, and balls; but who finds social pleasure where there is as little occasion for asserting one's individuality as there is elbow-room? A large number of Americans attend the Liederkranz balls and can be met at the homes of wealthy Germans. But these, in a great measure, have long ago divested themselves of the really characteristic home *agréments* of the Fatherland, and care little to do missionary work in opening up to Americans a vista of the hearth-pleasures and the intimate social life of the German household. Indubitably the German *Gemüth* does lend a charm to the enjoyment of life in the home circle, for there can be nothing more thoroughly enjoyable than a German *Polterabend*, Sylvester-night amusements, and the *Julklapp* at the Christmas tree—which latter, as well as Moltke, has conquered even the hereditary enemy. We do not, of course, refer to the loud-mouthed *Gemüthlichkeit* of the ordinary and extraordinary *Kneipgenie*, which the average American is too apt to consider the characteristic of the German.

The late Friedrich Kapp, indeed, was inclined to advise his countrymen to shuffle off as soon as possible the German coil, and become Americans on landing here. One may be allowed to think, however, that the flavor of foreignness which an educated German diffuses in American homes is far from disagreeable to equally well-bred Americans, and that, meeting as social peers, either should assimilate what is best in the other—that the yellow Moselle should merge in the blue Rhine and vice versa—because nobody is so perfect, individual or nation, as not to find something worth learning from another. If, as Goethe maintained, mastering a foreign language doubles one's individuality, how much more valuable would be the full knowledge of another *Volksseele*, as it manifests itself in its most intimate social life.

To come to our point, the card game of Skat is a feature of great magnitude in German social life, at the fireside, and in the *Stammkneipe*, in whose dingy circumference his Excellency, the Privy Councillor, the Professor of Pehlevi, the General of the Army, and the merchant prince, as well as the *dii minorum gentium*, meet at their *Stammtisch* for a game of Skat. While this country is given up to lawn-tennis and other English sports, the great German community have so far not exerted themselves to bring their favorite pastime before the Americans, and the little pamphlet whose title we give above, is, we believe, the first attempt in this direction, and consequently possesses greater importance and significance than its slender size would betoken. Skat is a power in German life. Even Wilhelmine Buchholz became one of its devotees at the first sitting, albeit in the uncongenial company of her son-in-law and his doctor friend, who explained its principles to her, withholding, however, as she asserts, the best tricks and slyest devices for their own advantage. But winning a Grando without four Matadors sweetens for her the dire confession that the card devil had secured a new victim.

A Budget of Letters from Japan. By A. C. Maclay. A. C. Armstrong & Son.

WHETHER to take the advice of one's friends or enemies as to the publication of a book, is a question to be pondered. A true friend in such a time of need is hard to find, for the flattering relative or acquaintance is likely to be more of an enemy than a heartless critic. Judicial impartiality, most needed by a new author, is a commodity difficult to obtain, and is not usually wanted by those who need it. The truthful critic, though following a noble calling, is rarely appreciated by the public or by those criticised.

Mr. Maclay went out to Japan in 1873, at the age of twenty, and became a teacher in the schools of Japan at Hirosaki, Tokio, and Kioto, and returned home when but twenty-four. He

had opportunities to see much of Japanese life and scenery. He wrote many letters while abroad, and from his accumulated epistolary matter compiled the staple of his book. He submitted his manuscript to "impartial readers," who advised him to print. He says he threw out "all matter that had been dwelt upon to any extent by other writers upon Japan," and seems to believe that he offers us "fresh material upon this subject." Readers of the scores of books on Japan, published during the last two decades, will hardly agree with the author. He has threshed out old straw, and the good grain set forth is slight in quantity and unattractive in quality. His grammar is defective on many pages; his slang is abundant; he does not know how to spell, and apparently how to pronounce, Japanese names. His geography is sometimes topsy-turvy: he locates the chief orange-producing province of the empire several hundred miles away, and confounds it with one of the four great islands. His slovenliness, for a teacher, is unpardonable. He assaults voluminously "Mills and other infidel authors." He luxuriates in the vice of callow authors, in their first appearance in a book, of impaling his enemies, and of ventilating pretty much all the subjects upon which he holds opinions. Nearly one-half of this book, which purports to treat of Japan, is taken up with discussions on cosmogony, woman suffrage, British manners and customs, and the theology and expediency of missions. This is hardly fair to the purchaser, who asks for fact and gets sermons.

Apart from these defects, the reader who wishes an easily written account of life inside Japan will enjoy the pictures of school ways and works, of the peculiarities of native schoolboys, of the old feudalism, now extinct, of the popular drinking and smoking customs, and narratives of pleasant journeys. The conversational or epistolary style puts one at comfort immediately, and the whole budget can be read during an evening. Good print, binding, and index are noticeable. The illustrations number over two dozen, and among the hackneyed subjects are a few of fresh interest.

The Names of Those Persons who Subscribed towards the Defence of this Country at the Time of the Spanish Armada, 1588, and the Amounts Each Contributed. With Historical Introduction by T. C. Noble, and Index. London: Alfred Russell Smith. 1886. 8vo, pp. xxxv and 92.

THE list of names here printed is from a "scarce quarto tract of 1798, issued by Leigh & Sotheby, York Street, Covent Garden." It contains 2,416 names, belonging to 36 counties, and gives an aggregate of nearly £75,000. Its authenticity appears to be well established. One of the proofs is given here in full, in the shape of a requisition by the Queen for a *loane* upon Thomas Lawley, a part of which reads: "Wherfore, we require you to pay to our use the sume of Twenty-fyve Pounds to such p'son, as by our Lieutennt of that county shal be named to you by his hand wryting." On this document is a receipt of Apr. 19, 1589, signed by E. Leighton, and a further endorsement, "Salopp, Quinto Maii. 1590. Repayed unto his assignes by Killigrew," while the printed list contains the name of Thomas Lawley for £25, paid April 19. It will be seen that this contribution was not a free gift, as one would suppose from the title-page, but what the historians call a "forced loan," levied the year after the invasion, to defray the extraordinary expenses of the defence; and that, being a loan, it was promptly repaid the next year. We find, on looking over the list, that the largest number paid twenty-five pounds; there were some thirties, forties, and fifties, and a few of a hundred pounds, which is, we believe, the largest sum contributed. The city of London, by the way, is not contained in this list, having made a special loan of £54,000.

BOOKS OF THE WEEK.

MESSRS. HENRY HOLT & CO.'S NEW EDUCATIONAL CATALOGUE will be sent free to any applicant. 29 West 23d St., New York.

NOW READY.

Book I. FANTINE,

In the superb new illustrated edition of

Victor Hugo's Masterpiece,

LES MISÉRABLES.

With nearly 400 illustrations from designs by De Neuville, Bayard, Morin, Valnay, and other eminent French artists. To be published in five volumes. Royal octavo, cloth, uncut edges, each, $3.00.

This new edition of 'Les Misérables' is the first to present to English Readers the greatest work of the greatest modern French writer in a form befitting its grandeur and beauty. It is printed by De Vinne & Co., the well-known printers of "The Century Magazine," and no pains have been spared to make it as perfect as possible.

The remaining four books will follow during the month.

GEORGE ROUTLEDGE & SONS,
9 Lafayette Place, New York.

All the Standard French Novels and Classics,

in half mor. binding, with the author's portrait inserted, at $1.75 a volume. Also other choice and rare books at very attractive prices. Send for Catalogue to

DUPRAT & CO.,
5 East 17th St., New York.

READ

The Volcano Under the City.

A graphic history of the great New York Riots of 1863 (about the only episode of the Civil War not heretofore written up), in which over 1,400 men were killed, and an analysis of the same elements, which still underlie the daily life of every considerable American city. A book of vital importance and interest *to-day*.

Ready Saturday, Oct. 30, in bookstores or mailed by the publishers,

FORDS, HOWARD & HULBERT, NEW YORK.

F. W. CHRISTERN,

39 West Twenty-third Street, New York,
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

THE MORAVIAN RAG DOLL,

to quote a prominent writer, "is the most Christian-looking doll I have ever seen; my children are delighted with it." $3 post-paid. "DOLLS," Box 185, Bethlehem, Pa.

Herald Building, Boston, Mass.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 11, 1886.

The Week.

THE distinguished courtesy with which the State of Massachusetts and Harvard College greeted the President on Monday, ought to serve as a lesson in good manners to the Blaine and Butler press. Massachusetts, speaking through her Republican Governor, said to him as he stepped from the railway train: "Her people are expectant with cordiality and abundant regard to express to you, so far as may be within their power, their profound respect for your very honorable and exalted station, and their high appreciation of your eminent ability, your stanch integrity, and your patriotic devotion to the welfare of the nation"; and later at the alumni banquet, in responding to the toast of "The Commonwealth of Massachusetts," the Governor repeated his tribute with increased emphasis, saying: "So we welcome the more heartily the Chief Magistrate who has honored us by his presence—an able, honest man, who has the respect of all; and let me say, that whatever efforts he may make for the liberties of the people, for the purification of politics and the public service, he will find himself supported by all who believe in the principles of the founders of Harvard and the fathers of this State." Mr. Lowell's eloquent tribute in recognition of "courage, strength of purpose, and fidelity to duty," was in the same vein, and its enthusiastic reception by the audience showed that this notable gathering was in cordial sympathy with it. Of the audience, the London correspondent of the *Tribune*, who was present, says: "I never saw such an audience. There sat 1,500 men of an intellectual eminence that might be matched elsewhere, but perhaps never has been. Every one save one on the platform was a Harvard graduate, and Harvard had set her stamp on their fine faces. Nobody who looked into them would ever again scoff at culture. They are men who have succeeded in life, and whose lives are so many ornaments to the community."

Praise so warm and appreciative from an orator and an audience like these ought to enable the President to regard with easy contempt the "flood of silly, mean, and cowardly lies" which he truthfully says certain newspapers have constantly poured, not only upon him, but upon the ladies of his household. There has been nothing like this in the annals of American journalism. The two worst offenders have been the *Sun* and the *Tribune* of this city. A new style of journalism has been developed by them, consisting of imaginary conversations between the President and the members of his family or official household, for which in vulgar impertinence it would be difficult to find a parallel. There has been, in all their treatment since he came into office, not only an absolute refusal to recognize his most valuable public services, but an equally absolute refusal to accord to him the respect due to his high office. They have never forgiven him for being elected.

The Jeffersonian wing of the Democratic party is consoling itself with the hope that the President will be persuaded by the elections to abandon civil-service reform and its Mugwump disciples, and at last order that "clean sweep." They go so far as to argue that a part of the George party is composed of "cold-toed" Democrats who are disgusted with the President's failure to sympathize with their needs. This is a new case of "hoping till hope creates from its own wreck the thing it contemplates." We are sorry for the Jeffersonians, but there is really no basis for their hopes. The elections, whatever else they mean, have no bearing against the President's policy, and we are entirely confident that they will have no influence upon him in regard to its enforcement. His policy is so peculiarly personal that its popular strength can have no adequate test until he himself is a candidate. He was a strong candidate in 1884, not because he was a Democrat, but because he had been a faithful, upright, and progressive public officer. He is stronger to-day than he was then, for the same reason, and it is unnecessary to say that the Democratic party does not of itself represent before the people the principles and policy for which his name has become synonymous.

The Southern Democratic press treats the election results very sensibly. The Montgomery *Advertiser*, perhaps the most prominent journal of its party in Alabama, says, regarding the pretence of the Democratic spoilsmen that the President's civil-service reform policy has been rebuked, "The truth is, the result of Tuesday's election is no rebuke at all." It points out that ever since parties were organized, the rule has been that in off years the House went against a new President, so that for the party which elects the President to retain the House at the next succeeding election is in the nature of an exception, and only happens when the Administration is unusually strong and satisfactory. The *Advertiser* also calls attention to the fact that the Democrats fared worst in Virginia, "where a clean sweep has been made and the old spoils system flourishes in all its pristine strength and beauty," while they did best in New England, "where civil-service reform has been most strictly adhered to." Its conclusion is, that the fact that the Democrats retain control of the House by even a small majority "is rather a boom for civil-service reform." The Selma *Times*, another leading Democratic paper of Alabama, takes the same view. It points out that the defections were largest in those districts where changes had been made in conformity to the spoils idea in politics, and says: "The danger there is to good government in considering the party as banded together merely as a crowd of office-seekers, has been made plain by the results of Tuesday's contest, and the reform sentiment has taken in consequence a distinct step forward."

The Indianapolis *Sentinel*, the Democratic organ at the Indiana State capital, went crazy over the defeat of its party in the State last week. Under the headings, "Cleveland's Reward; He is Indeed Hopeless Who Hath Lost His Golden Opportunity; Civil-Service Rot and the Imposition of Protective-Tariff Folly Have Nearly Swamped Us in a Pool of Condescension and Deceit," it said:

> "We have no hesitancy in laying at Mr. Cleveland's door responsibility for the misfortune which has overtaken the party in the losses of Congressmen it sustained last Tuesday. We may look upon the result as a rebuke. The un-American policy he has pursued in dealing with the party and the partisans that elected him to office, is the direct cause of the apathy of the party in so many sections of the country. He has done all he could to destroy the party organization. He has chilled the honorable ambition of young men and grievously abused the old leaders. Mr. Cleveland must either prove himself a Democrat in the remaining years of his Administration, or prepare to meet emphatic repudiation by his party."

The sooner the *Sentinel* and other spoils organs give up this kind of criticism, the sooner they will be rescued from their own folly. It is notorious that in no State in the Union, except perhaps in Maryland, are the Democrats so given over to the spoils doctrine as in Indiana, and in no State have the Democratic leaders involved President Cleveland in so serious inconsistencies in the appointment of Federal officers (again excepting Maryland) as in Indiana. In fact, the offices there have been largely placed at their disposal to be apportioned as the bosses decreed. If therefore a party is strengthened by official pap and patronage, the Democratic party should be very strong in Indiana. That the Democrats have failed to carry the State ticket there after giving Cleveland 6,427 majority in 1884, should be attributed to their failure to assist the President in carrying out his views of reform, and to the undoubted loss on this account of the Independent vote that went with them against Blaine two years ago. The Minnesota Democrats have almost carried their State, with a majority of over 30,000 against them in 1884, on a platform squarely approving the President's position on the civil service. The platform of the Indiana Democrats, on which they have travelled to defeat, gave the President the briefest and most formal commendation possible, and then went into an elaborate and ostentatious panegyric of Hendricks. The *Sentinel* will satisfy a national curiosity if it will indicate a single defeated Democratic candidate in Indiana who made civil-service reform one of his planks during his canvass.

Turning to the other States, what do we see? Why, the Republican plurality in Massachusetts cut down to figures which show that with Cleveland as the Democratic candidate in 1888 against Blaine, the odds would be in favor of Cleveland getting its electoral vote. New Hampshire is so close that there is probably no election by the people. Rhode Island is in such complete revolt against a corrupt and rotten Republican Machine that her position in 1888 may fairly be called doubtful. In the West, Minnesota, which gave Blaine 33,000 majority, has barely been saved to the Republicans. Colorado, which cast its electoral vote for Blaine, is now strongly Democratic, and California, which gave Blaine over 8,000 majority, is

probably Democratic. Indiana alone seems to have broken away from the Democratic column. According to the vote of Tuesday week, the electoral college would stand as follows:

Dem.		*Rep.*		*Doubtful.*	
Alabama	10	Illinois	22	California	8
Arkansas	7	Indiana	15	New Hamps'e.	4
Colorado	3	Iowa	13	Rhode Island.	4
Connecticut	6	Kansas	9		16
Delaware	3	Maine	6		
Florida	4	Massachusetts	14		
Georgia	12	Michigan	13		
Kentucky	13	Minnesota	7		
Louisiana	8	Nebraska	5		
Maryland	8	Nevada	3		
Mississippi	9	Ohio	23		
Missouri	16	Oregon	3		
New Jersey	9	Pennsylvania.	30		
New York	36	Vermont	4		
N'th Carolina.	11	Wisconsin	11		
S'th Carolina.	9		178		
Tennessee	12				
Texas	13				
Virginia	12				
West Virginia	6				
	207				

The full size of the electoral college is 401, and only 201 votes are required to elect. It will be seen that all of the doubtful States could be given to the Republicans, and still they would not have enough to elect their candidate.

The independent voter is far more generally abroad in the land than is shown even by the many independent organizations that spring up in such a campaign as that of 1884. This has been proved in several ways by the recent elections, but in none more conclusively than by the changes in the Congressional representation. How widespread these changes are, may be seen from a comparison between the new House of Representatives and the present one. Such a comparison shows that in one California district a Republican is elected in place of a Democrat, and in another this result has been reversed; in one Connecticut district a Democrat is elected in place of a Republican; in four Illinois districts, Republicans are elected in place of Democrats; in three Massachusetts districts, Democrats are elected in place of Republicans, and in one a Republican displaces a Democrat; in three Indiana districts, Republicans are elected in place of Democrats; in two Iowa districts, Republicans are elected in place of Democrats; in two Kentucky districts, Republicans are elected in place of Democrats and in one a Democrat displaces a Republican; in Michigan two Republicans are elected in the place of Democrats; in Minnesota three Democrats are elected in place of Republicans; in Nebraska one Democrat displaces a Republican, and there is the same change in New Hampshire; in New Jersey one Republican takes the place of a Democrat; in New York four Republicans take the place of Democrats and two Democrats take the place of Republicans; in North Carolina two Republicans and one Labor candidate take the place of Democrats; in Pennsylvania two Democrats take the place of Republicans, and one Republican takes the place of a Democrat; in South Carolina one Democrat takes the place of a Republican, as happens also in Tennessee; in Virginia four Republicans and one Labor candidate take the place of Democrats, and in Wisconsin two Democrats are displaced by a Republican and a Labor candidate. Of course there have been various causes for these changes, but the changes in themselves show the willingness of voters to test each candidacy on its merits instead of gliding along in the old party ruts.

According to the latest election returns the next United States Senate will consist of 39 Republicans, 34 Democrats, and 1 Readjuster, leaving New Jersey and Indiana out of consideration as still doubtful. Even if the Legislatures in both these States elect Democratic Senators, the Republicans will have a majority if Mr. Riddleberger votes with them; otherwise there will be a tie. There are still a few unsettled Representative districts, but, counting the fusion candidates in Michigan as Democrats, the division of the next House will vary but slightly from this: Democrats 166, Republicans 155, Labor 3. In view of the chaotic condition of party politics, it is interesting to note the vote of the House of Representatives on Presidential candidates should the people fail to elect in 1888; for the House elected on Tuesday week would vote for President in such a case. The Constitution provides that, if no person has a majority of all the electoral votes, then the House of Representatives shall choose a President from one of the three candidates who received the highest number of these votes. The vote of the House is in such cases taken by States, and a majority of all the States is necessary; if the House fails to elect by the 4th of March following, the Vice-President becomes President, as in the case of a death or other vacancy. According to the latest returns, there will be a tie in the representation of two States—New Hampshire and Rhode Island—with Colorado still in doubt. In eighteen of the remaining States the Republicans have a majority of the Representatives, and in seventeen the Democrats. This would give the Republicans a majority of one on the vote for President, but two less than a majority of all the States. As the choice of the new Vice-President would fall on the Senate, that body, which, as stated above, will be Republican, would have the final decision in the matter, and would elect a Vice-President "from the two highest numbers on the list."

Mr. Jehu Baker, who succeeds Mr. Morrison as representative in the Belleville, Ill., district, is a gentleman of high character, a lawyer by profession, a philosopher rather than a man of affairs, an old-time Republican, and not a Chinese-wall protectionist by any means. He will undoubtedly act with his party on the tariff question, but if his party were in power, he would belong to the tariff-reform branch of it, and would vote for such a bill as the Morrison bill of the last session without the smallest doubt, if the question were presented to him unconnected with party interests. Mr. Baker was a member of Congress once during the war, and was subsequently Minister to one of the South American republics.

Judge Charles S. Bradley, the Democratic candidate, who had a plurality but not the required majority for Congress in the Second Rhode Island District, is certain to be elected at the second trial. He is one of the ablest and most highly honored men in the State. He was at one time Chief Justice of its Supreme Court, and has been during recent years a lecturer in Harvard Law School. He is a man of unusual oratorical gifts and fine presence, and, though sixty-six years old, is as vigorous mentally and physically as a man of fifty. He made his canvass squarely upon civil-service and revenue reform, heartily commending President Cleveland's policy as patriotic and wise, and as the only one upon which the Democratic party could hope to build a successful future. Judge Bradley is certain to be heard from in Congress. He is the first Democrat to go there from Rhode Island that we can recall, and his election is likely to mark an epoch in the political history of the State. It is one of many signs that the old Republican Machine organization there is falling to pieces from sheer rottenness. The last elections foreshadow a popular uprising which will lead to a new Constitution, with an extension of the suffrage and a consequent emancipation from corrupt pocket-borough politics.

When Mr. Roosevelt expresses in the *Times* his heartiest thanks to Judge Smith, Judge Patterson, and Mr. Robert G. McCord "for the loyalty with which they supported him," we presume not over one person in a hundred will know whom he means, as these gentlemen are not known in politics by these high-sounding titles. The persons he has in mind, let us explain, are "Sol" Smith, "Jake" Patterson, "Bob" McCord. Any one who wants to know, however, what Mr. Roosevelt really thinks of them and the "other gentlemen in control of the Republican organization," should read his article on city politics in the current number of the *Century* magazine. It luckily did not appear till the day before election, or we fear he would have been absolutely unable to thank either of the two judges or Mr. Robert G. McCord.

No man with a heart can read the story of Mr. Allen Thorndike Rice's election experience with Capt. "Mike" Cregan without moist eyes. It is set forth in all its pathos by Mr. Robert Ray Hamilton as follows:

> "I am perfectly willing to state, and have you refer to me as authority, that Mr. Rice paid a liberal assessment to Mr. Cregan, and, at Cregan's earnest request, the night before election, gave him an additional contribution; that Mr. Cregan in my presence pledged himself to run Mr. Rice squarely and give him every Republican vote in his district, and pretended to be greatly hurt at the suspicions that were implied as to his good faith. I was informed by other gentlemen that he had in the most solemn manner asserted his intention to give Mr. Rice every vote he could. In Mr. Rice's interest I took measures to have a Republican at every poll to watch Mr. Cregan's men, and had others to patrol the district. They reported at intervals, and whenever possible obtained samples of ballots and sent them in with the report. Cregan's men began to run Spinola in two or three districts early in the morning, and later in the day there were but few election districts east of Third Avenue where they were not pushing Spinola as far as possible. I have no doubt that enough votes to elect Mr. Rice were lost by this treachery."

This statement lets two cats out of the bag at once. It shows in the first place that Mr. Rice paid two "assessments" in return for the Republican nomination for Congress, and it shows in the second place that Mike, like the true "boy" that he is, put them both in his pocket and worked in the interest of Mr. Rice's opponent. We have heard nothing like it since Jay Gould intrusted his check for $50,000 to Johnny O'Brien.

Some of our readers will remember that on the Wednesday before election Mike made a plaintive protest to a reporter of the *Tribune* against the assertions of the *Evening Post* that he or any other "boy" would sell out the Republican ticket on election day if he got a chance. Mike said: "Now even if we were disposed to do so, I would like to have the *Evening Post* or anybody else tell us how we are going to do it." That very evening the opportunity that Mike was looking for came. Mr. Allen Thorndike Rice proved the ram in the thicket. Judge Fancher declined to stand as the Republican candidate in the Tenth District, and unsuspecting Mr. Rice was nominated in his place. Mr. Rice had read in the *Tribune* that the "boys" were good men and true Republicans, and when Mike asked him for first one and then another assessment, showing all the time genuine grief at the Mugwump doubts of his good faith, he paid both. We should like to have seen Mike's confidential wink to himself as he contemplated this beautiful spectacle of childlike innocence. We trust that Mr. Rice will tell the whole story in an editorial in his sensational monthly newspaper, giving the exact amount of each assessment, describing Mike's general demeanor, and reporting, as far as possible, his language during the interviews, and ending with the proofs of his treachery, together with such letters and telegrams as may have passed between them, and the opinion of Gill, M. P., on the whole affair.

Aside from the tariff aspect of the elections, there are others which are far from encouraging to the Blaine people. They cuddled the George movement in this city at the expense of the Republican candidates for Mayor and Court of Appeals Judge, and while they succeeded in making an impressive labor demonstration, their treatment of Daniels and Roosevelt has opened the eyes of a good many hitherto stanch Republicans to the truth as to what Blaineism really is. They have also allowed it to appear that even with the George movement in the field the Democrats have again carried New York State, as they did in 1884 and in 1885. This fact will be brought up to them whenever they press the claims of Blaine for a renomination, and it will be an ugly one to explain away. The treatment of Daniels and Roosevelt has surely increased the number of anti-Blaine Republicans. Mr. George's extreme free-trade views make him an impossible labor candidate for the Presidency, and there is no other man who can hold his following together in anything like its present numbers. Then, too, there are New Jersey and Connecticut more strongly Democratic than ever.

The *Times* is perfectly just in its censure of the *Tribune* for waiting till F. S. Gibbs was defeated before saying a word against him. No reader of the *Tribune* knew till after election that Gibbs's character was so bad that hundreds of respectable Republicans in his district had signed a pledge to vote against him if he were nominated. Not a word on the subject appeared in the *Tribune* till these protesting Republicans had succeeded in defeating Gibbs, when the *Tribune* dismissed him from the party with a kick, saying it hoped now to take its "leave of him as a Republican candidate." He would have been elected had the Republicans of the district been as slavish in their partisanship as the Blaine organ was. Last year, when the fight was made against Gibbs for Senator, the *Tribune* had the shamelessness to defend him, and his record was the same then that it was this year. The standard of morality in the Organ appears to be, Stand by every Republican reprobate so long as he can get elected; when he fails, then kick him out with a fine show of virtuous indignation.

Mr. Gideon J. Tucker, a laboring man, having heard through the newspapers that he had been appointed by the President a Commissioner to examine a section of a bankrupt railroad in Oregon to which a land-grant had been made some twenty years ago, writes a letter to the President declining the appointment, with a good deal of loathing and contempt for the "corrupt Congress" that passed the land-grant, and with high scorn for the "free rides in palace cars and free quarters at hotels" which he assumes would be extended to him by the receiver of the railroad in question. Other reasons for not accepting are that Mr. Tucker, as a laboring man, cannot afford the time that would be required to perform the duty on the small compensation attached to the appointment, which he estimates to be no more than the expenses of ordinary travel to one who, like himself, would refuse the junketing extravagance which the receiver would probably pay for out of his own pocket, or ask the United States Court to allow out of the funds belonging to the unfortunate bondholders. Still other reasons urged for not accepting the appointment are that Mr. Tucker is not qualified for the position, his training and avocations not having fitted him for such examinations. We have seldom read anything more conclusive upon all points than Mr. Tucker's letter. Nevertheless, the example of Spartan simplicity furnished by Mr. Tucker refusing free lunches and champagne while travelling on the public service, would have an improving effect on society and would be a great gain to Labor.

In the general hilarity of the tariff set over the defeat of Mr. Morrison, they have not only overlooked the election of two tariff reformers in Massachusetts in manufacturing districts where the tariff was made the distinct issue of the fight, but they have not yet had time to think of one very important fact connected with the national finances which will soon be pressing upon their attention. The November statement of the public debt shows that there are only $86,848,700 of 3 per cent. bonds outstanding. Of this amount $12,000,000 have been called and the calls have matured, and $10,000,000 more have been called, upon which interest will cease next month, leaving say $64,000,000 outstanding on the 1st of January next. All these will be absorbed before the end of the present fiscal year (June 30, 1887)—that is, before the next Congress meets in regular session. What is to be done with the surplus revenue after these bonds are paid off? It cannot accumulate in the Treasury, at the rate of $100,000,000 per year, without producing a financial crisis of tremendous proportions. Nor can any way be devised for spending it honestly. Possibly the Secretary of the Treasury may buy 4½ per cents in the open market to the amount of the sinking fund, under that clause of the law which requires him to apply the revenues to the "purchase or payment" of 1 per cent. of the public debt each year. But it is doubtful whether the holders of the bonds will sell them to the required amount, seeing that a great many 3 per cents upon which interest has actually ceased are still retained by the owners. The pressing and unavoidable question coming before the Congress this winter will be the reduction of taxes, and this will resolve itself practically into the question whether the reduction shall be made on the tariff or on whiskey and tobacco. Probably the high-tariff party will conclude to cut the Louisiana planters adrift, and make the necessary reduction on the sugar duties. There will be less outcry in consequence of this step than there would be among the temperance people everywhere if a measure were passed in favor of free whiskey.

The vote for the Constitutional Convention in this city was very large, although the abstentions were numerous. We believe the followers of George are generally in favor of it, in the belief that through a convention they will obtain modifications of the Penal Code which will give them a free boycott, or at all events a nearer approach to it than they enjoy now. They will admit, when driven into a corner, that they must have liberty to use violence in some shape towards their enemies in order to assert the rights of labor. Turner, Powderly's secretary, had this confession extracted from him with some difficulty before the Congressional Investigating Committee. They are right from their point of view in this, because liberty of boycotting would bring in far more money, and bring it earlier, than the nationalization of land.

The strike at the stock yards in Chicago is the largest that has taken place in this country since the great outbreak of railway employees in 1877. It exceeds in numbers the Southwestern strike and boycott of last spring, and it is destined apparently to put the power of the Knights of Labor to a more crucial test. Gov. Oglesby appears to have waked up at last to a recognition of the fact that men who want to earn their bread by working ten hours a day, have some rights which the law is bound to respect and look after. He has accordingly ordered out two regiments of militia, whose duty presumably is to enforce the maxim that the right of A to work is as sacred as the right of B to desist from work. If this right cannot be defended in Illinois, there must be a greater difference between that State and the adjoining one of Wisconsin than their geographical situation can account for. "The measure of one man's rights is another man's wrongs," said Mr. Arthur in his recent speech to the locomotive engineers. When America adopts and puts in practice any maxim opposed to this, it will cease to be the home of freemen.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 3, to TUESDAY, November 9, 1886, inclusive.]

DOMESTIC.

THE celebration of the 250th anniversary of the founding of Harvard University was begun on Friday by the meeting of the Harvard Law School Association, before which Judge O. W. Holmes, jr., delivered an eloquent oration. Saturday was Undergraduates' Day. There were boat races, literary exercises, and a foot-ball match.

Sunday was "Founder's Day" of the Harvard Anniversary. The Rev. Francis G. Peabody delivered the commemorative address. The Anniversary Chorus, composed of past and present members of the Glee Club, sang the commemoration hymn written for the occasion by John Knowles Paine, and a hymn of praise by J. C. D. Parker, Class of '48, also written for the day. In Appleton Chapel the Rev. Phillips Brooks preached a sermon.

President Cleveland was present on Monday at the exercises of Alumni Day. James Russell Lowell delivered the oration, and Oliver Wendell Holmes the poem. The President was enthusiastically received, both in his progress from Boston to Sanders Theatre and in the theatre. Mrs. Cleveland was also present. The President had indicated to the College authorities his desire that the degree of LL.D. should not be conferred upon him. The President spoke at the Alumni dinner in the afternoon.

Col. Morrison (Dem.) admits his defeat for Congress in the Eighteenth Illinois District. The labor element caused the defeat. His opponent, Jehu Baker, is a lawyer who defeated Morrison for Congress in 1864 and 1866, and was appointed Minister to Venezuela by President Hayes. Congressional returns reduce the number of Democratic Representatives to 166, with a few possible changes to come. There are 155 Republicans and 3 Labor men. A new election must be held in the Second Rhode Island District. Nevada elects the Republican State ticket and a Republican Legislature. The Republicans have elected six Congressmen in Virginia. In Indiana both parties are holding meetings to protest against alleged election frauds. The official count in Mr. Carlisle's district gives him 768 majority. A Democrat is elected in the Second West Virginia District, making the delegation three Democrats and one Republican. In the North Carolina Legislature Republicans and Independents have a majority of two, and have probably elected the State judicial ticket. California is probably Democratic and Indiana Republican by about 3,500.

The London *Times*, commenting on the election in this city, says: "It shows that the opponents of anarchy and spoliation have not awakened an instant too soon to the perils of the situation. Both the Democratic and Republican parties have suffered, and the danger is that these losses will tempt Machine men to traffic with the promoters of George's candidature, to advance to meet the demands of predatory Socialism. Enterprising and industrious Americans must look to it lest the appeals of demagogues to half-instructed, restless artisans in their great cities should inflict damage upon the public credit and paralyze the productive resources of the country."

The criticisms which have been made upon the Treasurer of the United States because more of the new $1 silver notes do not find their way into circulation are unjust. The fundamental difficulty is to be found in the legislation. Congress refused to make the appropriation necessary to enable the Bureau of Engraving and Printing to pay for the labor necessary to perform the additional work imposed upon it by the small-silver-note law and the oleomargarine law. The consequence is that, although the Bureau is worked to its fullest capacity, it cannot exceed the limitations of the existing appropriations. The Treasury is supplied daily with $80,000 of these new notes, and they are put into circulation as fast as received, in accordance with the best methods of distribution which experience has suggested.

The total expenses of the Bureau of Printing and Engraving under Mr. Graves, during the last fiscal year, were $763,208, being $201,987 less than the expenses for the preceding fiscal year, and also less than in any year since 1878.

The Philadelphia Civil-Service Reform Association has forwarded to the Commission in Washington the following charges: The Civil-Service Reform Association has been for the past six months the recipient of many complaints of fraud in the conduct of the civil-service examination of candidates for appointments to fill vacancies in the Post-office of this city, and also of violations of the civil-service rules on the part of the Postmaster. The charges are in effect that the examination papers were opened before the examinations and the contents made known to certain applicants. Also, that Rule 8 of the amended civil-service rules has been constantly, if not habitually, violated. The majority of the new appointees in the Philadelphia Post-office entering under the civil-service laws and rules have been Democrats, though it is known that many Republicans presented themselves for examination. These appointments have been distributed evenly among the different election districts of the city. The percentage of those who were certified as having passed the examination was very much greater than at any previous examination held in Philadelphia, viz., about 80 per cent., whereas, in previous examinations, the percentage was less than 60 per cent. Among the appointees are numbers of men who cannot spell ordinary words correctly or write grammatically. Numerous discharges have been made of men who were informed by the Postmaster that he had no complaint against them. This is very convincing to the public mind of the veracity of the accusations in question, showing that the Postmaster believed that he could select the applicants to fill the vacancies so created.

The Vermont House of Representatives on Wednesday passed the bill granting suffrage to women by a vote of 135 to 82.

In accordance with the order of Master Workman Butler, 1,500 of the beef-killers employed in Armour's packing-house in Chicago joined the strikers already out in making a demand that their employers should reëstablish the eight-hour working day. About two hundred men remained at work at Armour's.

The Knights of Labor on Saturday ordered out the pork-packers in Chicago to join the beef butchers in their strike. On Monday 12,000 men refused to go to work. Two militia regiments were on guard at the order of Gov. Oglesby. Several of the men who wanted to go to work were attacked and seriously beaten by the strikers. Comparative quiet was, however, maintained during the day. The employers will either shut down work at their packing-houses entirely, or proceed without employing any Knights of Labor.

Quiet was maintained in the Chicago stock yards on Tuesday. Three thousand new men were at work.

Another sharp earthquake shock was felt in North and South Carolina and Georgia on Friday afternoon.

The case of ex-Alderman McCabe, one of the members of the Board of 1884 indicted for bribery in connection with the Broadway Railroad franchise, and whose trial was postponed until the question of his sanity could be determined, came up on Thursday morning before Judge Cowing. The experts who had been appointed to examine him as to his sanity all declared him insane, and the jury so found on direction of the Court.

Nathaniel E. Atwood, a distinguished citizen of Provincetown, Mass., is dead at the age of seventy-nine years. His career has been somewhat remarkable. From poverty and drudgery he rose to occupy an honored position in his community, and achieved a scientific reputation not bounded by this country. In 1852 Louis Agassiz, impressed with the value of Mr. Atwood's contributions to ichthyology, visited him in his home upon Long Point, and there began an acquaintance that shortly ripened into a warm lifelong friendship. Their correspondence respecting fishes was constant. It was at his suggestion that Mr. Atwood was employed in the winter of 1868-69 to deliver a course of fourteen lectures upon food fishes before the Lowell Institute of Boston. Mr. Atwood in 1847 was chosen a member of the Boston Society of Natural History. He was several times a member of the Massachusetts Legislature.

August Brentano, whose name has for many years been familiar in this city in connection with the sale of newspapers, periodicals, and books, died on November 2 in Chicago, at the age of fifty-seven years. He was a native of Hohenems, in the Austrian Tyrol.

FOREIGN.

In the Austrian Delegation at Pesth on Thursday, President Smolka said that, in view of the fact that it was found necessary to ask increased credits for the army, it seemed likely that the House would be required to decide a weighty matter. The Emperor had thus far succeeded in maintaining peace, but whether it would be possible to do so in the immediate future was a question which caused serious disquietude. Faithful to old traditions, the Delegation would leave nothing undone to make clearly understood the fact that the nation is firmly resolved to maintain the status of the empire in the councils of the great Powers, and to defend it if necessary even with an *ultima ratio*. In the Hungarian Delegation Prime Minister Tisza said the members had a double duty to perform. First, they must endeavor to obtain a clear idea of the country's foreign relations—whether the policy of the Government was a policy befitting the monarchy, and whether everything was being done to make its policy felt; second, they must make sure that the national forces were equal to those of other Powers, not only in patriotism and devotion, but in strength and equipment. The Ministers have repudiated Smolka's sentiments.

Emperor Francis Joseph addressed the Delegations on Saturday. In his speech he said: "It is regrettable that the complications in Bulgaria, which originated in 1885 from the overthrow of the Government at Philippopolis, should again cause serious apprehensions. The Powers by united efforts had succeeded in localizing the movement and paving the way to a reëstablishment of a legal state of affairs, but recent events in Sofia have produced a fresh and dangerous crisis, the development of which and, I trust, its pacific solution occupy at the present moment the full attention of my Government, whose efforts are directed to attain in the final settlement of the Bulgarian question, which must be effected in coöperation with the other Powers, an agreement that there shall be created an autonomous principality, and a legal state of things which, while taking into account the admissible wishes of the Bulgarians, shall equally conform with existing treaties as well as with the interests of Europe. Our excellent relations with all the Powers, and the assurance of peaceful intentions we receive from all governments, justify the hope that, notwithstanding the difficult situation in the East, it will be found possible, while safeguarding the interests of Austria and Hungary, to preserve the blessings of peace to Europe." The Emperor appealed to the good will of the nation to make the increased sacrifices rendered necessary by the progressive improvement in the manufacture of firearms.

Lord Salisbury, speaking at the Lord Mayor's banquet in London on Tuesday night, said the Conservatives occupied a position on Irish affairs which it was impossible to misinterpret. Their business was to legislate in favor of the integrity of the Empire, and to enforce laws which had long been neglected and trodden under foot. He believed the Conservatives

could claim that public confidence was somewhat restored, and that the relations between landlord and tenant were better than formerly. On foreign affairs he said that the English could not leave Egypt until that country was secure from foreign oppression, and until order had been restored in domestic affairs. The Government was encouraged in this task by growing proofs of advancing prosperity in Egypt. Referring to Bulgaria, Lord Salisbury said the sympathies of the English people were aroused by the spectacle of her struggle for independence, and that the language of diplomatic menace used towards Bulgaria by a European state had caused the deepest regret. A midnight conspiracy, led by men debauched by foreign gold, had hunted Prince Alexander from the throne of Bulgaria and outraged the conscience and sentiment of Europe. Bulgarian rights were assured by the Berlin Treaty, on which the salvation of Europe depended. English interest in that treaty was not an isolated interest. Other Powers also were interested in the vindication of the treaty. He was sure that, if a majority of the signatory Powers recognized the fact that it was their duty to enforce the treaty, England would not be found backward in coöperating with them. If England's individual interests only were affected, England would ask no counsel and would seek no assistance, but would defend her interests with her own arm. But in this instance she would not accept the responsibility of isolated action. The Government's policy was shaped in harmony with that of Austria. He trusted that the peace would not be disturbed, and that under the influence of public opinion the infant liberties of Bulgaria would not be impaired. For the relief of the poor in London he suggested another Mansion House fund.

Mr. Gladstone, in reply to the telegrams of the Bulgarian Deputies, says: "My opinions and desires concerning the emancipated or autonomous provinces of the Ottoman Empire have always been the same. The liberties obtained for them from the Sultan I consider to be intended for their own use and benefit, and it is not proper that they should be handed over in whole or in part to anybody else."

The Sobranye have decided to elect Prince Waldemar as Alexander's successor.

A state of siege has been proclaimed throughout Bulgaria.

The Russian captain, Nabokoff, who was leader of the Bulgarian *coup d'état* in May last, at midnight on Wednesday led a band of Montenegrins which attacked the Prefecture at Burgas, Rumelia, seized the Prefect and other officers, and proclaimed Russian rule. The Government sent troops who quelled the revolt.

The meeting of the National Liberal Federation at Leeds on Wednesday was one of the most successful ever held. Mr. Kitson, the president, read a report showing that despite the secession of Joseph Chamberlain and his followers, the association had increased by 100 branches in the provinces. A resolution declaring the confidence of the meeting in Mr. Gladstone was carried, amid enthusiasm, by acclamation. Resolutions were adopted declaring that free public elementary schools should be established, and be placed under the control of the people's representatives; that a reform of the registration laws is necessary, and that the land laws should be amended in the direction of the creation of peasant land-owners. The home-rule resolution declares that the only plan which will satisfy either the justice or the policy of the case is that of an Irish legislative body for the management of what Parliament shall decide to be distinctively Irish affairs. Upon this subject, at the afternoon conference, Mr. Morley said: "We are yet open, all of us, to any suggestions, propositions, or modifications that may be urged upon us in good faith which can be supported with solid reason or argument. That is the temper in which I believe we are going into the new episodes of this historic strife. We may say that the upshot of this meeting to-day is a deliberate affirmation by the great bulk of the Liberal party of our proposal. Contained in it is the germ of a durable settlement. Upon no other lines can a durable settlement be arrived at." At the evening meeting he said: "There is a combination to-day of men who agree in nothing else than that Her Majesty would be graciously pleased to remove from her councils a minister as great as Sir Robert Walpole. Gentlemen, we are all for union; but with those who are in that state of mind we cannot consent to argue. We can make no terms with them. We are not here to choose a leader. There is no vacancy." At these words most extraordinary enthusiasm was manifested.

The movement for educating the British public in the principles of home rule has taken very large dimensions and is being pushed with the greatest vigor. Four English barristers, first-rate, experienced speakers, are preparing with great care a series of lectures on the home-rule question, which they will deliver all over England and in sixty-four divisions of London. Immediately after each lecture the neighborhood will be flooded with political literature inculcating the same principles. The great meeting in London will be held at Hackney. Mr. Gladstone has privately promised to speak there if he can possibly do so.

Mr. Chapin definitely hoisted the standard of revolt for the Tory elements of the Conservative party on Friday night at Radcliffe. The most of his speech was devoted to an attack upon the principle of closure by a bare majority, which he proved conclusively to be a complete right-about-face on the part of Lord Randolph Churchill, whose wishes the Tory party follow. "To tell the honest truth," said Mr. Chaplin, "I never really realized, till I turned over some of the old debates last night and read the assault upon the measure by the rank and file of the Tory party, what a monstrous, unprincipled proceeding the proposal to adopt this closure rule is." The proposal was full of danger, he added, and he was irreconcilably opposed to it. In a speech at Lincoln on Tuesday evening, he advocated an import tax on foreign manufactured articles.

At the beginning of the coming session of Parliament the Conservative Government will be ready to submit three bills. The first, which has been prepared by Mr. Long, Secretary of the Local Government Board, will deal with the allotments. The second is in charge of Mr. Ritchie, and will deal with the extension of local government. The third, bearing on the payment of tithes, will probably be introduced in the House of Lords by Lord Salisbury.

Mr. Stead, the editor of the *Pall Mall Gazette*, has been in Ireland for the past six weeks investigating chiefly the question of agricultural depression and the general issues between landlord and tenant. His first special commissioner's report covers seven columns of the *Pall Mall Gazette*. It begins by saying that the problem of the hour in Ireland is not home rule, but rent. There is no abatement in the popular demand for the former, but it is the latter which occupies the public attention. Home rule can wait till next year; the rent must be produced this month. References to Ireland as a nation may serve as garnishing for the speeches of agrarian agitators, but the one practical question is how much of the rent which falls due in November will be paid this month and next. Mr. Stead replies with great detail of statistics, and reaches the conclusion that, eliminating the items of hay and potatoes, the losses of the Irish farmers in the two years 1885 and 1886, estimated upon the average returns of 1881 to 1884, amount roughly to £13,500,000.

There were great apprehensions in London on Tuesday that the Socialists might carry out their threat of creating a disturbance. Thousands of police and soldiers were on guard, and in their barracks. The Socialists and unemployed men gathered in crowds in Trafalgar Square. The Life Guards were drawn up, and formed a cordon across Whitechapel, shutting out the East End Socialists. The crowd about Trafalgar Square at one o'clock had grown colossal, the rough element predominating. Police surrounded the square, and refused to permit any one to enter. The Lord Mayor's procession started at the usual hour, and proceeded over the assigned route without anything happening beyond the usual horse play incident to the occasion. Socialist orators then harangued the excited crowd in Trafalgar Square. Resolutions, asking the Government to provide work for the unemployed, and to reduce to eight the number of hours constituting a day's work, were carried amid loud cheering, and the group which adopted them dispersed, cheering for the promised social revolution. Several ugly rushes took place with the police, but nothing serious happened.

Viscount Barrington died suddenly on Saturday at the age of sixty-two.

Fred Archer, the celebrated English jockey, died on Monday from the effects of pistol shots fired by his own hand while suffering from the delirium of typhoid fever. It is estimated that his income from riding was $100,000 a year. He was thirty years of age.

The session of the Belgian Chambers was opened on Tuesday. The King's speech held out the promise of extensive amnesty for the persons convicted of participating in the riots of last spring, and expressed a trust that there would be a patriotic accord among all Belgian political parties to solve the recruiting question in the manner which interests of the highest order demanded. The financial condition of the country was described as prosperous, and the introduction of a bill for the promotion of higher education was promised.

In the Budget debate in the French Chamber of Deputies on Saturday, Raoul Duval, a free-trader and formerly a Bonapartist, made a notable speech, boldly allying himself with the Republicans. Two other deputies followed him.

M. Pasteur has informed the French Academy of Sciences that he has treated during the past year 2,490 persons who had been bitten by animals, and that out of this number only ten had died. Seventeen hundred and twenty-six of the patients were French.

Joseph Aubanel, the French littérateur, is dead in his fifty-ninth year. He was the son of a painter at Avignon, and was born in 1829. He is known in connection with Mistral and Roumanille as one of the leaders of a literary movement having for its object the restoration of the Provençal language and poetry. He edited and published several works on this subject. His most important and popular work is entitled 'La Grenade entr' ouverte' (1860). He has been called "the French Petrarch."

Dr. Wilhelm Loewe, the German Liberal politician and leader, is dead at the age of seventy-two. After studying medicine at Halle he settled at Kalbe, and was chosen as a Democrat to the Frankfort Parliament of 1848. He was chosen Vice-President of the Assembly, became its President when it removed to Stuttgart, and was at its head until its closure, June 18, 1849. Dr. Loewe was subsequently condemned to imprisonment for having voted for the "Conclusions" of that Assembly, and sought by their execution to destroy the then existing confederation. Escaping to Switzerland, he resided there two years, visited Paris and London, came in 1852 to the United States, and resided here nine years, practising his profession and interesting himself in the welfare of German immigrants. Returning to Germany after the amnesty of January 12, 1861, he was chosen a Deputy in 1863, and regularly re-elected for many years. He was one of the original leaders of the Progressist party, but separated from it in April, 1875, on the military question, and subsequently formed with his friends the so-called "Loewe group" which made a moderate opposition to Prince Bismarck, chiefly on questions of finance.

A BILL OF PARTICULARS NEEDED.

EVER since the George vote in this city proved so large, we have been hearing from all sides admissions or proclamations that the claims of labor must now be attended to, and its wrongs in some manner be redressed, and that the labor party which the vote has called into existence must be "recognized." Mr. Hewitt has said all this, or something like it. The leading morning papers of both parties have concurred in it. All the politicians who have attempted to draw the moral of the municipal election, have reëchoed it. In short, whatever the George movement may have failed to accomplish, it has unquestionably called forth a general acceptance of the idea that such grievances of workingmen as it is possible to remedy by law, must be remedied forthwith.

We have been waiting anxiously to see some detailed description of these grievances from some quarter, but none has as yet appeared. The nearest approach to it has been made in the *Times*, but this was very vague, and indeed contained only one thing that could be called "a particular," namely, the assertion that the workingmen were in some manner oppressed or injured by the great corporations. Mr. Powderly's enumeration, given at the opening of the Richmond Convention, of the reasons for being a Knight of Labor, shed little light on the matter, because it covered too much ground. According to him, the reasons for joining the Knights might really be included in the one ground fact that we are all miserable sinners, that our lives are full of care, and that grim death and sorrow are shamefully common among us. There would be no use in attacking his list of labor woes through a purely human legislature. If his statements are correct, nothing but a batch of good old-fashioned miracles will ever set the Knights on their legs and make them happy and contented men.

Now, we would respectfully remind all those who are seriously impressed by the magnitude of the George vote, and think it calls for legislation of some kind, that the time has come for vague and general discussion of the wrongs of labor to cease absolutely. Further continuance of it will certainly work nothing but mischief by keeping ignorant men in a state of inflamed expectation. Those who think that the community at large has some duties towards the workingmen which it has not fulfilled, must now define those duties, or else stop talking. For instance, if the dwellings of the poor here or elsewhere are not as comfortable as they ought to be, do not keep repeating this barren allegation. Let us know precisely how they are to be improved. If the wages paid by employers are not high enough, how are the employers to be made to pay a higher rate? If the hours are too long, how are they to be made shorter without diminution of production? And if the production be diminished thereby, how is the loss to be confined to the employer? If the workingman, too, be not competent to make his own contracts and must be made a ward of the State, how is his character as a voter to be saved from the weakening effects of tutelage? The struggle of life, which is neither more nor less than the struggle to acquire property or avoid losing it, has hitherto been relied on to furnish the needed bracing for men's moral nature. If we take it away by legislation, what is to be substituted for it?

These are all questions in the highest degree interesting and important. If, as some people think, the George vote compels us to answer them, let us sit down and do it, and cease restating them in eternal iteration. In short, the business of every man interested in "the labor problem" now, who insists on a legal solution of it, is to take pen in hand and draft the bills which are to put labor in the position to which it is entitled. The emancipation or regeneration of labor must now be worked out in detail. How much money will it take in this State or city? Who is to pay it? How many officers will be needed to see that the laborer is not wronged, and what salaries are they to receive? How much care, too, is the laborer to receive? Is the State only to look after his dwelling, or must it also look after his clothing and food, and those of his family? If not, why not? Will it not be incumbent on the State to take care of all persons who are now eligible for admission to the Knights of Labor—that is, all persons except gamblers, bankers, brokers, lawyers, and liquor-dealers? If so, and all insist on their rights, where are we to find guardians enough? Should we in New York, for instance, not have to hire non-residents from other States to look after us?

As for the way the laboring class has been, and is, treated by the great corporations, which at the Richmond Convention was put in the foreground of the grievances, what is it that the corporations do to injure the workingman? We can honestly say that we do not know, and that all inquiries on the subject have thus far been fruitless. What the great railroad corporations do to benefit the workingman, in carrying his food and clothing immense distances at wonderfully low rates, and in giving employment to tens of thousands at good wages, we see clearly enough. But what does he suffer at their hands? Let us have a description of it in detail. Jay Gould and men of his kind are very unpopular persons because they appear to represent the greed and unscrupulousness of railroad corporations. There are many such men all over the country, and it is such men people have in mind when they are indulging in general denunciations of monopolists. But their evil fame has been earned not by doing damage to workingmen, but by doing damage to the owners of savings. It is the investors, for instance, or other capitalists, who have suffered at Jay Gould's hands, not the laborers. When Jay Gould wrecks a railroad, what he does is to make away with the savings of people who have bought the stock and bonds. The men who earn its wages do not suffer from him at all. They get their pay, and get the market rate of pay, no matter what happens to the unfortunates who have put their savings into the securities of the road, and whom Gould "freezes" or frightens into selling them at low rates.

Nothing, in fact, could better illustrate the deplorable vagueness which has thus far characterized the discussion of the labor question, than the way in which the great corporations have been converted into special foes of the wage-earners. The truth is, that as employers they are about the greatest benefactors the laborer has had in this country. All these fogs will, however, rapidly disappear as soon as the friends of labor cease declaiming and prophesying, and give us drafts of the bills we have to pass.

BRIBERY IN ELECTIONS.

MR. HENRY GEORGE, in an interview published since the election, has complained that his vote was seriously reduced by bribery. Some of his men, he thinks, were bought away from him after the polls opened. We should not wonder if this were true, although we are surprised that Mr. George should accuse any of his supporters of susceptibility to pecuniary blandishment in such a crisis as that of last week. If it becomes generally understood that the "labor vote" can be bought in sufficient numbers to change the result of an election which is regarded as big with the fate of labor, it is easy to see that the evils of bribery, already alarmingly great, will be largely multiplied.

We agree with Mr. George that something ought to be done to put an end to bribery in elections. There is evidence before us that the election in Connecticut the other day was a veritable debauch, in which the purses of the rich men in both parties were matched against each other at the polls in the most brazen manner. The article which was mainly bid for in the election was the United States Senatorship, and the money was chiefly spent to carry the Legislature. The Democratic aspirant, the man who would have been elected if his party had secured a majority of the members, supplied his henchmen with what he supposed was a sufficient amount to secure such majority, and it would have served the purpose undoubtedly if the other side had not "oversized his pile." The Republicans have carried the Legislature and secured thereby the Governorship as well as the Senatorship, and they have achieved this result by the liberal use of money. They have, in fact, carried out the programme that they advertised when they nominated Mr. Lounsbury for Governor. The rest of the programme will be carried out when they elect some rich man as Senator in Gen. Hawley's place.

Preaching about bribery in elections is a twice-told tale, and yet it cannot be accounted a useless task. The country has made great progress in civil-service reform, because it has been preached about in season and out of season, and because the evils which it aimed to cure were notorious and flagrant, and touched the consciences of the people. It is only necessary to expend the same effort—and perhaps even less will suffice—upon the monstrous evil of bribery in elections that was expended upon the nefarious practice of assessing poor clerks and letter-carriers, in order to put an end to the former as effectually as it has been put to the latter. No decent person can have failed to notice or to be thankful for the wonderful change that has come over the civil service in this particular. If any man chides President Cleveland for failure to carry out his promises in regard to

the civil service, this great fact will stand to his credit among others, that in the exciting election of 1886, the first general election after he came into office, the shadow of the political tax-gatherer was not allowed to darken the doors of any Federal office or to frighten the souls of any of the inmates. And yet, strange to say, the people found their way to the voting places just the same.

In a former article on the subject of bribery in elections we invited attention to the very notable progress made in England toward the suppression of this evil. Since the English anti-bribery law was passed, there has been an election for members of Parliament held under it, and it has been found to be as effectual in securing the ends it was designed to accomplish as its advocates said that it would be. It is indeed a model for all countries having representative institutions. It was prepared, after some three years' labor, under the direction of Sir Henry James, her Majesty's Attorney-General, and was finally enacted in 1883. Former laws had prohibited the *receipt* of money for this or that purpose connected with elections. This law prohibits the *disbursement* of more than a fixed amount, proportionate to the size of the constituency. A borough constituency of 2,000 electors is allowed £350 sterling to each candidate, if one member of Parliament is to be chosen, and £525 if two members are to be chosen. The maximum sum for a borough of 66,000 electors is £3,000. This sum must cover all expenses—for printing, postage, hiring rooms, hiring agents, clerks, teams, and everything else. All disbursements must be made by one person, either the candidate himself or his agent. If he employs an agent to disburse money, he cannot disburse a farthing himself—the agent must disburse the whole. An account, with vouchers, must be kept of all disbursements, and returned under oath to the proper officers after the election. Penalties for paying more than the allowed sum are visited upon the candidate and the agent in the form of political disabilities, if the payment is not accompanied by bribery. If bribery is involved also, then the existing penalties for bribery are superadded. The safeguards are as extensive and minute as the evils intended to be cured. The whole act is a monument of painstaking thoroughness.

In the last general election held prior to the passage of the law, the enormous sum of $7,500,000 was spent in campaigning and bribery in one form or another. In the election held next after the passage of the law, only one case was found where any money had been expended over and above the amount allowed by the law. In this case, that of Mr. Jesse Collings, the expenditure of the excess was accidental, but the law was imperative, and Mr. Jesse Collings was unseated.

There is nothing in the condition of affairs in this country which would prevent the adoption of the main features of the English anti-bribery law by Congress, as the law governing all elections for members of the House of Representatives. The Constitution gives Congress complete jurisdiction of that subject. The enforcement of it would have an influence upon other elections, which would soon, by force of example and contrast, make bribery detestable and unbearable everywhere.

TRAMP POLITICS.

There could hardly be a better illustration of the stagnant condition of our politics than the various devices which Mr. Blaine's friends are resorting to, to keep him in readiness for 1888. If there were any issues before the country in which the mass of the voters felt a real and living interest, anybody who sought the Presidency, or, indeed, any high office, would perforce try to represent one of them, and make it his main reliance. But, in the present condition of public affairs, a chronic candidate like Mr. Blaine is literally compelled to live by his wits. When he gets up in the morning he probably has no more idea what dodge or cry he will rely on during the day than a tramp leaving his barn has where he will get his dinner. "Trust to luck" is, in fact, the Blaine motto all over the country. For a long while his followers relied on "the bloody shirt," which played somewhat the same part in their oratory that, some years ago, a shipwreck on the Jersey coast used to play in the tales of tramps, who were then travelling in great numbers to Boston from New York as distressed mariners. But this is now worn out. It has become too familiar, and only draws a smile, or, at best, an offer of cold victuals instead of drink money.

An attempt has been made to substitute the tariff for "the bloody shirt," but the tariff orator almost always cuts his own throat—figuratively speaking—in full view of his audience, by the accounts he gives of the feebleness and insignificance of the free-traders. He is almost sure to represent them as a mere handful of cranks, or doctrinaires in British pay; and, this being so, the folly of keeping a great party a going, with a magnificent orator and statesman like Mr. Blaine at the head of it, simply for the purpose of resisting them, becomes plain to the meanest capacity.

Under these circumstances his following is driven back irresistibly on the policy of trusting to luck. They trudge along, "keeping their eyes skinned," as the tramps say, and watching closely for chickens, orchards, potato patches, drunkards, and farm-houses from which the men of the family are absent. Any little trick helps them along. "A split among the Democrats," no matter how small, though it only occurs in one town, fills their souls with joy, and makes them feel as if there was a good time coming. Or if they can start a Labor or Butler or George movement, so as to draw off votes from the Democrats, they are as much tickled and as triumphant as the wayworn stroller who has thrown his line across the fence among the chickens with a baited crooked pin on it, and finds that they bite freely.

Another device they delight in and think full of talent, is dropping their own candidates whenever the Mugwumps support them, thus revealing to the universe the weakness and inefficiency of the Mugwumps as politicians. The admiration felt by the Blaineites for this last dodge is unbounded. In fact, some of them seem to believe it to have originated with Washington, and to have received the emphatic endorsement of Hamilton and Burke, as one of the most fruitful of political discoveries.

The Catholic dodge, too, has been and still is a source of great comfort, and we think is on the whole the cleverest of all, although we admit that the knifing of candidates supported by the Mugwumps has much merit. The Catholic vote is a very valuable thing indeed to a politician "down on his luck." But it is an awfully difficult thing to get at without being caught. You have at one and the same time to make the Protestants believe that you would not take it if it were offered you, and that you are nearly as far removed in thought and feeling from Catholicism as John Calvin, and to make the Catholics believe that you live in a Catholic atmosphere, and have Catholic traditions of one sort or another hanging all over you like a lot of cobwebs, and that any little accident, such as the death of a Catholic aunt or cousin, might any day precipitate you into Catholicism yourself.

But the temperance question is to the Blaine politician the rift in his lute, or, if he does not keep a lute, the sand in his shoes, the lumps in his mashed potatoes, the cold meat where he expected whiskey There is no man clever enough to make people believe that he hates liquor, while taking a dram whenever he can get it; and this is what the genuine Blaine man tries to do. His efforts to make rum "local," and to "take it out of politics," and to make it "an open question," have all miscarried, and he is now disposed in sheer desperation to come out for individual liberty and protection for Republican saloons But the matter causes him more annoyance than real damage.

Possibly Blaineism may some day turn into real politics, but we think not. It is distinctly a commercial enterprise, and wholly hostile to ideas of any kind that do not pay; and it is in the hands of men whose only idea of public life is the confusion of opponents by little tricks and surprises.

RUMANIA IN THE EASTERN CONFLICT.

Of the Christian States of the Balkan Peninsula declared independent or semi-independent by the Treaty of Berlin, in 1878, Bulgaria alone directly and fully owed its deliverance from Turkish rule to the intervention of Russia. Montenegro, strong by reason of its mountain fastnesses, the sturdiness of its people, and its poverty, had never been really subjugated by the Sultans; it had never ceased to fight for its freedom and faith, and had to thank the Czars only for moral encouragement, occasional subsidies, and opportunities offered by their assaults on the Porte, the last of which, in 1877, proved decisive for the acknowledgment of its independence. Servia, which was completely enslaved by the Moslems, was more directly aided by the Russian wars in the early years of this century, when it rose under the lead of Kara George it owed much to Russian diplomacy when Milosh Obrenovitch had resumed the work of liberation, and still more to Alexander II.'s saving intercession when,

after the Herzegovinian insurrection, its final effort of self-emancipation in 1876 had been signally foiled by Abdul-Kerim and Osman Pashas. The principalities now forming the kingdom of Rumania had been neither as virtually free as Montenegro, nor subjugated and trampled upon as Servia or Bulgaria, but vassal States of the Porte, nationally autonomous and exempt from the sway of the pashas. Lying on Russia's road to Constantinople, they had been crossed and recrossed by the Russian armies in numerous campaigns, occupied at times, and repaid for ample "aid and comfort" by favorable stipulations in the treaties extorted from the decaying Porte; until, France assisting, Moldavia and Wallachia became united Rumania a quarter of a century ago, and this State finally earned its independence by allying itself with Russia in 1877, and effectively helping her to retrieve her defeat before Plevna.

Of all these States Rumania alone, as its name indicates, is not a member of the Slavic family of nations, to the sole hegemony of which Russia aspires. It is, however, like Montenegro, Servia, and Bulgaria, connected with the Empire of the Czars by the bonds of the Orthodox Greek faith. Nationally the Rumans lean towards the Latin West of Europe; denominationally they are in sympathy with the Slavic East. Towards Austria-Hungary, which pretends to the leadership of the western Slavs—mainly Catholics—most of whom it embraces within its frontiers, they nourish strong antipathies both of race and religion. Ignorant and superstitious in the extreme, the mass of the Rumanian people equally dislike Germans, Magyars, and Catholic Slavs, but politicians and demagogues have of late marked out the Magyar as a particular object of national detestation. The reason for this agitation is double; for not only were the Hungarians, in past times, often inveterate enemies of independent Moldavia and Wallachia, but they have also succeeded in keeping in subjection to their crown—in Transylvania, the Banat, and adjoining parts—half as many Rumans as there are in the Rumanian kingdom. To deliver these detached brethren from the "Hunnish" yoke, and expand the present Rumania into a "Daco-Ruman" realm embracing 8,000,000 people, and corresponding in extent to the Dacia of the Romans, of which Transylvania formed the main portion, has become the cherished aspiration of the patriots of Bucharest and Jassy; and were not the wall of the Carpathian Mountains a tremendous barrier between the Austro-Hungarian monarchy and the kingdom ruled over by Charles of Hohenzollern, all the cautious prudence of this prince and his ministers—of whom Bratiano himself was formerly an impetuous Dacian propagandist—would not suffice to prevent revolutionary inroads by Rumanian hotspurs upon the neighboring "Irredenta." Secret agitation is carried even now across the border, but it is closely watched and frustrated by the Magyar authorities, who remember but too well how powerfully the Ruman peasant insurrections in Transylvania contributed to the downfall of the Hungarian revolution in 1849, by paralyzing the victorious arms of Gen. Bem, and paving the way to Russian invasion from the east and south.

Such being the disposition of the Ruman people towards Austria-Hungary and Russia, there could be no doubt as to the side the Government would espouse in case the two empires, from antagonism in the affairs of the Balkan Peninsula, came to blows, but for another necessary consideration. Rumania hates Austria-Hungary, but she fears no aggression from that quarter; she is indebted to Russia for services in the past, and is sure of her present readiness for common action against the Magyar, but she sees in her a most redoubtable enemy in the future. Russia alone can give her Transylvania, but, after having dismembered Austria-Hungary, the ally and friend would become an irresistible aggressor and oppressor. It is, in fact, only Austria-Hungary, tacitly supported by Germany, that keeps Russia now from absorbing the countries she has delivered or aided in their struggle against the Turk—Rumania as well as Bulgaria and Servia. And subjection to Russia would mean to Rumania subjection to an overwhelming foreign race. She would be surrounded on all sides by Slavs obeying the behests of the Czar. Courted as a useful auxiliary now, she would be crushed if she attempted to protect herself from the Panslavic tide. Was not Russia's first act towards her, after the common victory over the Turks, in the war of 1877–8, the reoccupation by force of that portion of Bessarabia inhabited by Rumans which the Treaty of Paris in 1856 had given to Moldavia, to which it originally belonged? Did not Russia soon after show herself hostile to Rumania in the delimitation of the Rumanian and Bulgarian territories contiguous to Silistria? Does not Russia, by her high-handed dealings with Bulgaria, show clearly how she intends to respect the independence of her "wards"? Besides, siding with Russia means the opening of the country to her armies and participation in aggressive wars, the issue of which, owing to the dimensions they must ultimately assume, cannot be calculated; while siding with Austria-Hungary means neutrality, with a good chance of preserving the country from the passage of foreign hosts, for the Russians would hardly dare to force a crossing in a march to the Danube with the Austro-Hungarian forces on their flanks and in their rear, in Transylvania and Bukowina. All these considerations are of the highest moment, and they make the King and ministry inclined to take the advice of Kálnoky—which is well understood to be also Bismarck's—while the people are moved by national prejudice and ambition in the opposite direction. The decision is still to come.

THE HARVARD CELEBRATION.

THE two hundred and fiftieth anniversary of the foundation of Harvard College was celebrated on Monday with a pomp and pride and circumstance which are rarely witnessed in this country. The President and most of the members of the Cabinet were there. There were delegates from foreign universities, and among them one from the Emmanuel College, Cambridge, Eng., in which John Harvard was educated. There was such a gathering of the alumni as has probably never before taken place, and in addition to all this there was such a body of notables in theology, science, and literature come to receive academic honors from the University as has rarely, if ever, been seen in one room in the United States in our time. And the room, the Sanders Theatre, in which the ceremony took place, was worthy of the occasion in everything but its size, and was crowded to the ceiling. Probably no college or other institution in the world has a hall so well adapted for both repose and pleasure for the eye and ear.

It is not easy to find an orator who can speak fittingly for a great seat of learning on the two hundred and fiftieth anniversary of its foundation. It is still harder, of course, for any institution to find such a man among its own graduates. Harvard was, therefore, wonderfully lucky in having Mr. Lowell for this function on Monday. He spoke for nearly two hours, with a richness, and variety, and lightness of touch, such as we think an audience has seldom listened to. He had no thesis to maintain and maintained none. He simply ran over the various phases in the history of the University, its relations to the State and the community, the demands which democratic societies make on their men of learning, and the things which learning can do for democracies, without dwelling one second too long on any one topic, or leaving it until he had crowded the hearer's mind with suggestions about it. It was, in fact, taken for all in all, a marvellous example of the highest order of rhetorical skill, and undoubtedly the best of Mr. Lowell's efforts in the most difficult art of occasional oratory. Any one who heard it heard what one seldom hears in our day and generation: the talk of a man who in every sentence gives you glimpses of the vast number of things he might say on the same themes if he had the time—that is, gives you an almost overwhelming impression of fulness.

One of the most interesting features of the occasion was the reception given to President Cleveland, and he was greatly and visibly affected. The house rang with long-protracted applause at every mention of his name, and especially at the allusions to him in Mr. Lowell's address. This closed with one of the most graceful and flattering tributes ever paid to a public man. It extolled his firmness, his constancy, his courage, and finally put him in the place of Seneca's pilot, who made the immortal speech, "O, Neptune, save me if you will, or sink me if you will; but whatever you do, I will keep my rudder true." Another comparison of the President to the "*justum et tenacem propositi virum*," who does not shrink from "*civium ardor prava jubentium*," brought down thunders of applause from an audience which knew that "*civium ardor prava jubentium*" meant "politicians yelling for spoils." In fact, it was quite plain that, whether for better or worse, the President at least has Harvard College at his back.

A MANUSCRIPT AND A MAN.

SCHOLARS who are familiar with the history of the persecution for witchcraft will not have forgotten the tragical story of the young college professor, Cornelius Loos, the second man who in Germany dared raise his voice openly against that horror. His boldness cost him his life. His book

on the subject was confiscated by the Inquisition, and for three centuries all we have known of him has been through his forced recantation, which was published to the world by the malice of an opponent. From this document, however, something has been gathered regarding the fiery earnestness of his attack upon the superstition. His book, of which only a few pages had been printed before its seizure, has always been supposed to have been destroyed at the time. But a few months ago it occurred to a young American scholar, Mr. George L. Burr of Cornell University, who is interested in the history of witchcraft, to make a search for the original among the libraries of Europe. The result was the discovery of the long-lost document among the archives of the old Jesuit College at Treves. In the light of this discovery a fresh glance at the career and fate of Loos may not be uninteresting.

Born at the little town of Gouda in Holland, the son of a man of learning and ability, who was devotedly attached to the faith of the older Church, Cornelius Loos inherited the same views and early destined his life to their advocacy. An enthusiastic, precocious boy, he distinguished himself as a student at the Universities of Louvain and Liége, and was called, on the attainment of his doctor's hat, to take the chair of a professor in the Catholic College at Mayence. The counter-reformation was at its height, and into it Loos threw himself with all the fervor that belonged to him, pouring forth book after book against the prevailing heresy. His prestige rose rapidly, and it was but a few years before he was called to a similar professorial position in the University at Treves. There he found the witchcraft persecution at its height. Perhaps nowhere even in that dark century did it rage with greater severity. The number who perished in the diocese within the space of a decade has been estimated at many thousands. An extant list of those burned in twenty villages belonging to the Abbey of St. Maximin gives the names of over three hundred who perished between 1587 and 1594. Two villages were absolutely blotted from the map, and in two others only two women were left alive. All this had not gone thus far without exciting some hesitation among thoughtful men at Treves. The magistrate of the city, Dr. Flade, a man of years and authority, who had once been rector of the University and for many years a privy councillor of the Elector, endeavored, it is said, to set some bounds to the persecution in the city itself. But his moderation, if we may believe his opponent, the Jesuit Delrio, brought him into suspicion of collusion with the witches. He was himself arrested, put to the torture, confessed his crime, and was burned at the stake.

This was prior to Loos's arrival. Where and when there first fell into the hands of the young professor a copy of the book of Weyer, the physician who had first, thirty years before, written against the delusion, we do not know. But seen it he had, and its effect upon him was profound. At a glance he saw all of its truth and more. Weyer, though (as has been adequately shown by his last biographer, Prof. Binz) he doubtless had his own opinions as to the agency of the torture in the extortion of the confessions, preferred not to question the sincerity of the witches, and attributed the whole matter to hallucination and hysterical delusion. Loos, bolder or less shrewd, saw at a glance that the real root of the trouble lay in the torture, on the one hand, and in the theological theory as to the nature of the devil, on the other. He denied outright that a spirit, such as Satan, could appear in visible or tangible form to human beings, and dismissed the whole tissue of tradition on which the superstition rested as a mass of lies wrung by torture from human frailty. Arrived at these conclusions, the enormity of the persecution seems to have fired his very soul, and without counting the cost he flung himself wholly into the effort to enlighten others. The authorities, civil and ecclesiastical, the members of the magistracy and of the city council, he approached both in person and by letter, setting forth the truth and begging a suspension of the cruelty. When all this proved unavailing, his indignation flamed forth without restraint, and pen and tongue seemed touched with gall. The torture was a butchery—a new alchemy by which gold was coined from human blood. He even ventured to upbraid with tyranny the Government that dared thus to make light of its subjects' lives.

But the real bulwark of the persecution at Treves was a book. Peter Binsfeld, suffragan bishop and virtual head of the Church in the province, alarmed at the incursions of doubt as to the credibility of the witch confessions, had himself prepared a treatise on the subject, in which he proved that everything extorted from the witches was worthy of belief, nay, *must* be believed by all who were not determined to fly in the face of all Scripture and authority. It was against this book, which for a century was to have almost the force of a code in the courts of Germany, lay as well as ecclesiastical, that Loos now saw his efforts must be directed. He determined to answer the Bishop's book. In due time his answer was ready and was sent covertly to his printer at Cologne. But he had not been able thus long to resist the temptation to share it with others, and his opponents had got wind of his plan. The printer had struck off but a few sheets when he received orders from the ecclesiastical authorities to stop, and the manuscript was confiscated by the Inquisition. At the same time Loos himself was arrested upon the charge of heresy and imprisoned at the Benedictine Abbey of St. Maximin, just outside the walls of Treves. What means were employed to force him to recant we cannot know. We can only guess from the practice of the dread tribunal in whose hands he lay. He was at last led forth, in the spring of 1593, and, before the assembled church dignitaries of the diocese, pronounced upon his knees his solemn recantation. The paper bears evidence of having been drawn by Binsfeld himself. In it the statements which Loos is compelled to renounce show how far beyond his forerunners he had ventured to go. He denied the possibility of a compact between the devil and human beings, the visible or tangible appearance of Satan, the power of a witch to ride through the air or to raise tempests; and he even dared to affirm "that there *are* no witches who renounce God, pay worship to the devil, and perpetrate like things, but that all these are dreams." That terrible passage of the Mosaic law, "Thou shalt not suffer a witch to live," which Binsfeld had used as the epigraph of his book, and which had already cost oceans of innocent blood, he declared to apply only to poisoners.

A curious count in the indictment against him was that he had denied that the Popes in their bulls affirm the existence of witches and the reality of their deeds. This heresy, which is today the loudly proclaimed dogma of his Church, he was compelled to recant on pain of death. But even with this abjuration his enemies were not content. He was banished in ignominy from the land. His bright future seemed ruined. Broken in fortune and perhaps in frame, but with unflagging courage, he turned his steps towards his native land, and found in Brussels a humble place as curate at the old Church of Notre Dame de la Chapelle. His forced recantation sat lightly on his conscience, and it was not long before he was again seized for a relapse into his heresy upon the subject of witchcraft, and thrown into prison. After months he was released, but, his offence being renewed, was about to be incarcerated for a third and doubtless for the last time, when death snatched him from the scene. Obedient to a clause in his own will, his friends buried him in the obscure church of his pastorate before a figure of Christ bearing his cross.

So passed from earth Cornelius Loos. Of his book nothing more was heard, and it seemed as if his name and the memory of his struggle against the terrible delusion were to be blotted out for ever. Binsfeld, in the next edition of his infamous book, alludes to the assaults of Loos, but spares him the mention of his name. Ten years later, however, appeared an opponent less considerate. The Jesuit Delrio, whose learned book upon magic was to be the last, and for a century the effective pillar of the persecution, seems to have felt it a peculiar disgrace that a countryman of his own should have fallen into heresy upon the subject, and forthwith, lest some fragments of Loos's writings might still be in existence, prints as an antidote to such poison the full text of his recantation. Three hundred years have passed away. Witchcraft is long a thing of the past. The execrations once heaped upon the defenders of the witches have passed to their persecutors, and the name of Loos, rescued from the abusive page of Delrio, has been registered among the martyrs of humanity. But his book remained undiscovered until two or three months ago. The following account of the way in which it was unearthed was given by Mr. Burr at a recent meeting of the History and Political Science Association at Cornell University:

"It had occurred to me that inasmuch as both Binsfeld and Delrio expressed so much anxiety lest a copy of the manuscript might be at large in their day, it was not impossible that one might still be in existence—for I had had occasion to notice how very far from fully exploited are the manuscript treasuries of Europe. I made search for it, therefore, in various libraries and archives of Germany, Austria, Switzerland, Italy, France, England, Holland; but in vain. Of course I had looked especially at Treves, but there, too, to no purpose. Now, it so happened that on my return from what was to be my last visit to that city I had the misfortune to lose a portfolio containing nearly all the notes and memoranda of many months. After seeking it long in vain, I went sadly back to Treves to replace my papers; but, with a natural dread of taking up again work already carefully done, I gladly turned my hands to things before neglected, and one day it occurred to me to read through the rich manuscript catalogue in course. I did so, and came unexpectedly upon an imperfect description of a manuscript which might possibly be the lost book of Loos. Gaining the kind librarian's aid, I sought with him the dusty shelves, and soon unearthed the little volume. It lacked cover and title-page; but a moment's inspection convinced me that it was indeed the long-lost treatise. Only the title-page was wanting at the beginning, and the text was complete as far as it went; but it comprised only two books of the four described in the index. No search revealed more. The index was in a different handwriting and ink and on a leaf of slightly different size from that of the text; but examination showed that corrections and notes had been added to the text in the hand and ink of the index. The latter were of such character that they could hardly have been made by another than the author. Now, this corresponds with Binsfeld's statement that Loos had it *copied* for sending to the printer. This, then, was doubtless the confiscated original—the finished draft of Loos himself. I was permitted to make a facsimile of the whole book, and this now lies beside me.

"No mention of the manuscript or its discovery has as yet been made in print. I am happy to say, however, that the Catholic historian, Janssen, who visited Treves, only a few weeks after my own stay there, for the completion of that chapter on witchcraft which we have so long been anticipating as the final word on the subject from the Catholic side, was much gratified at the finding of the book, wholly confirmed my own opinion regarding it, and, in the pleasant greeting he sent me, promises to give it its merited place in his own volume."

The book is carefully and legibly written upon

stout paper, the sheets being gathered into signatures and stitched, but not bound. It comprises in all 177 pages. There is no appearance of mutilation, and it is probable that the remaining two books, if ever written, formed a separate volume. The title-page had evidently been torn away, as a corner of it still remains. Whether this was the work of accident or of design, can be only matter of conjecture. The title of the volume is, as in Delrio's account, 'De Vera et Falsa Magia.' The "falsa" was, however, originally "ficta," from which it has been changed in each place of its occurrence by the hand of Loos himself.

As to its contents, the book is in the main what might be inferred from Loos's recantation. In his preface he attacks bitterly the first introduction of the witchcraft persecution into Germany and the "Malleus Maleficarum," which was its main instrument, ascribing the whole to the suggestion of the devil. Then with equal vehemence, but more guardedly, he assails Binsfeld and his book against the witches, declaring that the persecution had fallen into discredit until these renewed efforts to bolster it up, and affirming his own aim to be the overthrow of the Bishop's theories. The scope of his arguments can best be judged from a summary of his chapters. The first book is divided into six propositions, as follows: 1. On the nature of magic. 2. On the essence of demons. 3. On the diversity of witchcraft. 4. On the divine permission. 5. On the consent of the witches. 6. On the imaginary compact. The second book has also six propositions: 1. On the power of devils. 2. On the impotence of devils. 3. On poisoning and magic. 4. On the disparity of devils. 5. On incorporeal substances. 6. On the assumption of bodies. For the remainder of the work, we have *only* the titles of the propositions—in Book III.: 1. On the appearance of spirits. 2. On the haunting of places. 3. On the casting out of devils. 4 On the operations of devils. 5. On spectres and visions. 6. On the bodies of the dead. 7. On various points regarding magic. 8. On the causes of magic. 9. On attendant devils. 10. On the functions of devils. 11. On miraculous works. 12. On the transmutation of things. And in Book IV.: 1. On the assembly of demons. 2. On the deeds of magicians. 3. On the transportation of bodies. The whole was to be closed by an epilogue.

The method was the scholastic one in vogue, and every point was established by citations from the Bible or from the theological authorities. Only now and then does Loos's indignation seethe over into eloquence, as where, in speaking of the imaginary compact, he bursts forth: "Ah, I feel my pen insufficient to express the emptiness of the matter, and far less to set forth its indignity. Nay, what pen were adequate! One can but exclaim, O Christian Religion, how long shalt thou be vexed with this direst of superstitions? and cry aloud, O Christian Commonwealth, how long in thee shall the life of the innocent be imperilled?" And not content with this, he has added on the margin, "Let the rulers of the Christian State weigh these things within themselves." Weyer is several times alluded to, always without mention of his name. In one place he is spoken of as "an author of our own day, eminent in medicine, and a man of much and varied reading." And in another there is added the pious wish, "And would that he were a Catholic Christian!"

The arguments of Binsfeld are taken up in detail, though not in the order of his own treatment. There is frequent allusion, both to the Bishop and to Treves, but names are carefully excluded. Once or twice Loos alludes to the sad fate of Flade, once intimating that he was the victim of malice, and ascribing his confession to the torture; but a fuller discussion of this subject he reserves for that portion of the volume which is still missing.

The ill-fated manuscript remains in the possession of the city library at Treves, where it was found. It deserves to be given in full to the public; and it is not improbable that this may soon be done, if only in justice to the brave and unfortunate author, who merited so well and fared so ill at the hands of his own generation.

C. K. A.

Cornell University, Nov. 3, 1886.

THE COÖPERATIVE CONGRESS IN MILAN.

Italy, October 16, 1886.

The coöperative system which has assumed such gigantic proportions in England, especially in the northern counties, and is there accepted as one of the most important factors in the solution of the social question, has never taken deep root in Italy, although her greatest patriots, Mazzini, Garabaldi, Saffi, Cavour, and a considerable number of the Moderate party, have ever stanchly advocated it. This is owing partly to some inherent defects in the Italian character, to a want of mutual trust, a taking for granted, not that a man is innocent till he be found guilty, but that ten chances to one he will apply common funds to his own special uses. Then, again, whereas in England coöperation commenced on a modest and minute scale—twelve workmen setting aside their small savings until they reached the sum of twenty pounds, then taking a room in Toad Lane, buying and selling their own goods, the purchasers taking them home themselves—the Italian coöperatives have generally commenced on a grand scale, inaugurating their undertaking with a costly banquet, taking expensive buildings, and not always keeping to the fundamental principle of coöperation—no credit. However, there are at present some three hundred flourishing coöperative societies in Italy, the mutual aid societies outnumbering them by five thousand; of these, two hundred and fifty were represented in Milan. A special interest was given to the Congress by the presence of George Jacob Holyoake, the veteran coöperator in all efforts for the emancipation of the people, and not in England alone. One of the earliest friends of Mazzini when Italian unity was regarded as a utopia and a chimera, secretary of the British Society for the Liberation of Rome and Venice, he is now entirely devoted to the propagation of coöperative principles. Signor Fougerousse represented the French coöperatives. Vansittart Neale was also present, and the veteran of Italian coöperation, Franceso Viganò. Holyoake made a pithy speech, alluding to Mazzini's intense interest in the movement, quoting his letter to the Congress of Halifax when too ill to be present:

"No, there is not the least chance of my ever being able to accept any invitation for a public meeting. I am laboring under a severe cold and coughing a great deal, and generally the state of my health and the impossibility of speaking loudly and long without severe effort are a perennial obstacle. Pray convey my heartfelt thanks to our friends in Halifax for the very kind thought, and a deep sensibility and sympathy for the work to which they have devoted themselves. I have been earnestly and anxiously watching the spread of the coöperative idea as the beginning of an immense revolution which will do more for the brotherhood of man to man than all the eighteen centuries of civilization have done; and, provided they avert every danger of material egoism by taking up the whole of the moral, intellectual, and economic problem, and sympathizing with all its different manifestations, I look to the working classes of England and Europe as the prominent element of the future."

Then Mr. Holyoake showed us "how we do these things in England." We buy the genuine article, do not undersell the ordinary shops, give no credit, hence have no losses or expense of book-keepers; 5 per cent. of the profits pays the interest on capital, 2½ per cent. is set aside for educational purposes (an ignoramus cannot be a good coöperator), the members have no other trouble save to buy at their own shop, and every year the workmen (of Rochdale, for instance) present themselves with £50,000 sterling. But our cooperative magazines, while producing these results, are nothing in comparison with our cooperative workshops, which demand greater patience, faith, and capacity. Their object is to emancipate workers from employers and middlemen by enabling them to become their own employers, equal among themselves, and receiving equal profits. As individuals, we all belong to different religious and political societies, but as coöperators we maintain strict neutrality. We have succeeded in an unhoped-for degree in imparting morality to commerce, prosperity to industry; and every day increases the conviction in each that only the welfare of all can place the social organization on a solid basis.

M. Fougerousse, after drawing a vivid picture of coöperation in France, and expressing his regret at not seeing women among the coöperators, insisted on the necessity of a federation of all the Italian coöperative societies. A brief sketch of these shows steady progress. The first coöperative store, founded in Turin, 1850, now counts 7,000 members. Of the total 300, a hundred and thirty-nine are mere stores; then there are eight immense bread factories and ovens, forty-one workshops, fifteen building societies, twenty-nine loan banks for workmen and peasants, sixteen large dairies. The first coöperative workshop was formed by the glass-workers near Savona, and the Government, scenting Socialism, made great efforts to suppress it, but it is now flourishing and numbers 1,500 members. At Lecco the cooperators of the *vinicolo* have also been successful, and annually distribute a portion of their wine to the poor. One of the articles, providing that any member who shall "sell the wine purchased for the Society to outsiders shall be expelled," was severely criticised, as was that of Villamasoni, which prohibits its members from attending the meetings of any other societies or from admitting strangers to their own. Why not sell to all who wish to purchase, members or not members, reserving the profits for the members alone? The "Sons of Labor" of Borgonuovo exclude all members of Catholic societies, while on their banner is written: "God, country, work." All the Italian societies set aside a portion of the profits for social and educational purposes, the workmen of Bologna 20 per cent. of net profits for education; the miners of Eglesias in Sardinia, half for the aged and such as can work no longer. The Society of Work and Loans of Bertinoro has assumed large undertakings, building houses and making roads; even in times of industrial depression there has always been work for laborers, whose salary has been raised 15 per cent. Four societies of day laborers have been formed at Budrio, Villanova, Villaprati, and Ravenna, successful all; and as this class is the very poorest of agricultural laborers, their success is one of the most hopeful signs of coöperation.

The society formed in Rome among butchers, bakers, druggists, grocers, is also a decided success, as are the loan societies in the Venetian provinces, where the capital is furnished by the members, and where all at small interest can receive a loan. Rinaldo Anelli, the parish priest of Bernate, Ticino, an enthusiastic missionary, grieved by the frequence of pellagra among the members of his rural flock, set on foot a society of coöperators. All the maize is brought to the drying oven, and, when perfectly seasoned, ground and given back to the owners. So wheat is ground and baked, and the health of the district has improved to a great extent. This proves

the truth so often asserted, that it is not polenta and bread which cause pellagra, but unseasoned maize and mouldy or uncooked bread. The best specimen of these societies was at S. Donà di Pieva, where good bread was once an article of luxury and the peasants ate stuff scarcely fit for dogs. In 1883 a number united and set up a co-operative oven: but the contractor for the tax on consumption having imposed what was really a prohibitory fine, the society brought three actions and finally won their cause. But, alas! all their capital was consumed, and they had to close their oven—with this beneficial result, however, that the bakers of S. Donà now sell good bread at the original prices of the oven. In Milan there is a building society set on foot by five members with twenty-five lire of capital, which now possesses 1,320,000 francs. The silk weavers of Como are flourishing, like the other twenty-three co-operative societies in Milan.

The object of the present Congress was precisely to promote the federation of all existing Italian societies; and after some lively discussion and not without considerable opposition, the following order of the day was passed: "This Congress affirms the necessity and urgency of a federation between the Italian coöperative societies which shall respect the autonomy of all separate associations, and appoints a committee to formulate the statute." The Congress lasted three days. The second was somewhat stormy, but at last an article was approved proclaiming a committee of fifteen members resident in Milan, and some practical measures were taken for the dissemination of the principles of coöperation in the cities where no society exists. Signor Fougerousse, special representative of the coöperators of Lyons, in their name insisted upon a federation between the coöperators of France and Italy, and the proposition was warmly applauded, especially at the banquet given by Mussi, one of the wealthy Milanese members of Parliament.

Numbers of other members sent letters of cordial sympathy and approval. The ex-Minister Baccarini, who was to have represented the general association of the day-laborers of Ravenna, and who is dubbed a Socialist by his adversaries, unable to be present, "augured that the Congress of Milan would strengthen the forces of coöperation, destined to become one of the chief factors of civilization in the future more even than in the present." But the best letter was that of the venerable Aurelio Saffi:

"Coöperation," he writes, "harmonizing association and liberty, is destined to solve in great part not only social, but moral and political questions, because the law of development of the human faculties is intimately connected with the coöperation of individuals for the increase of the value of the whole community, and with the mutual guardianship of common rights insuring the free fulfilment of common duties. Those who labor as you do to substitute the ties of coöperation in all its aspects for privileges and class distinctions, are laying the foundation of national associations on the basis of civil equity, uniting them under the auspices of mutual justice. Hence coöperation is the first and safest step towards fraternity and peace, to be reached by an equal and free federation of nations. It is true, as you say, that the peoples ought to form a vast coöperation of labor and of reciprocal help, thus divesting civilization of its last vestiges of barbarism, and developing by progressive steps all the power of intellect and affection existing in the peoples for the attainment of the moral and social aims of life."

In the general chorus of strikes, anarchical proclamations, and socialistic strife, the Congress of the Coöperators at Milan has struck a melodious and harmonious chord. Good old Holyoake was edified by what he saw and heard, and touched by his own reception.

The anti-papal campaign continues. The Minister of Grace and Justice, Tajani, continues to evacuate convents and monasteries illegally populated. The Pope protests and fumes, threatens to fill the religious houses with foreigners and send their Italian occupants abroad, promises a batch of foreign cardinals to the exclusion of Italians, but meanwhile has withdrawn his permission to the Jesuits to reëdit their rabid review, the *Civiltà Cattolica*, in Rome. The agitation will be brought to its climax on the 3d of November, as grand preparations are being made for the celebration of the nineteenth anniversary of the defeat of Mentana. J. W. M.

Correspondence.

THE POLITICAL OUTLOOK.

To the Editor of The Nation:

Sir: The smoke of battle has cleared away, the results have been counted, and the causes of change considered. The Democratic party strength in the House of Representatives has been lessened, as everybody expected, for several months past, that it would be. The spoilsmen and enemies of the President put the responsibility for the losses suffered at his door, arguing that apathy among the "workers" resulted from his reformed methods in the civil service, and thus the Democratic vote was not brought out. The facts in detail, as appearing in the different districts, do not bear out any such view. Looking at two districts in Kentucky, with which I am best acquainted, the third (Bowling Green) and the fifth (Louisville), I find that the defeat of the Democratic candidate in the former district, and the narrow escape of Caruth, who is elected in the latter by a majority of only 146 against a majority of 3,736 given in 1884 to A. S. Willis, is not due to any apathy on the part of the professionals, but rather to the revolt of the business men and farmers against the dictation of bosses, and to a protest against unfair or improper nominations. The narrow escape of John G. Carlisle, and the slightly increased Republican majority in the Maysville district, as well as the gains in West Virginia, are clearly traceable to the prominence given to the tariff issue, and to the strength of the mining and manufacturing interests in eastern Kentucky and in the little State adjoining it on the east. The same cause played havoc with Democratic Congressmen in Ohio, Indiana, and Illinois, though Bynum of Indianapolis, who was not afraid to meet the issue, nor to pronounce the fearful words "free trade," more than held his own. On the other hand, three Democratic Congressmen are elected in Minnesota, and one in Nebraska, the first ever returned from either of these States.

In all but the seven cotton States the old party lines, based on color and war sentiment, are effaced. In Delaware, Maryland, the Virginias, Kentucky, Tennessee, Missouri, and to some extent in North Carolina and Florida we are brought back to the days before 1854; we can begin to write "Whig" for Republican. The other Southern States cannot much longer remain "solid." The iron-masters of Alabama and the sugar planters of Louisiana will affiliate perforce with the wool growers of Ohio and the coal and iron men of Pennsylvania, while Minnesota wheat and South Carolina cotton are drawn together by common interest.

All this would be very nice but for the short-sighted and unpatriotic leadership of the Democratic party. Men like the editors of the *Sun* and *World* have not the stuff in them of which the pioneers in great reforms are made. They want above everything else present success—"ante omnia rem, rem!" Instead of accepting the logic of events, which would gather all the friends of "least possible government," of "greatest possible personal liberty," into the ranks of the Democratic party, these seekers after power and pelf are already holding out offers of alliance to the Socialists, that is, to the greatest enemies of individual freedom, the advocates of the most meddlesome and strongest possible government. Thus considered, the political future of our country is becoming more serious, the dangers ahead more threatening, than at any time since the day of Gettysburg. L. N. D.

Louisville, November 5, 1886.

THE ELECTIONS AND TARIFF REFORM.

To the Editor of The Nation:

Sir: At first thought, the result of the election in the districts represented by Hurd, Morrison, and Carlisle might seem to show that any immediate attempts at tariff reform would be useless. Upon closer inspection, however, the friends of reform will find no adequate cause for discouragement or delay.

It is plain that the heavy losses in Mr. Carlisle's district were not due to the tariff question at all, but to the apathy of the Democratic leaders, who were blind to the fact that any serious contest against their candidate was being made. A repetition of the attempt to defeat such a man as Carlisle by a coalition of Republicans and Socialists will be taken more seriously, and, on anything like a full vote of the district, will meet with the rebuke which it merits. The South may have faults, but a hankering after Socialism is not one of them; and that it can be depended upon to stand up firmly for the reform of our tariff, is regarded, even by protectionists themselves, as a matter of course.

To offset the defeat of Hurd and Morrison, both in States in which it has been useless of late years for the Democracy to contest in national elections, we have the large gains in Massachusetts, where the issue of tariff reform was boldly presented, and the even more remarkable gains in the Northwest. It remains to be seen what effect the defeat of Morrison, who has been leading the fight in the House, will have upon his followers. The only possible party advantage to be gained by dropping the issue would be in such States as Pennsylvania, Ohio, and Illinois, which are perfectly safe for the Republicans anyhow. At the same time, nothing is more certain than that such a backdown would result, in a great many Congressional districts, in separate tariff-reform nominations, which would mean a Democratic reverse with which the present would be too small for comparison.

In the other direction, the outlook is altogether favorable. New York and Indiana have both given good evidence in the past that they can be depended upon to endorse the desired reform. Massachusetts, Minnesota, and Michigan are demonstrated to be better fighting ground for the Democracy, on a tariff-reform platform than Ohio and Illinois on any platform whatever. The party has reached a point where it dare not offer any active opposition to the civil-service reform. This is due to the support of the Independents, towards whom the masses of the party feel nothing but friendship, however different it may be with the professional politicians of the party. The Independent vote is practically a unit in favor of tariff reform. With the assurance of its support in case of suitable nominees, the better elements of the Democratic party have it in their power to bring the party squarely before the country in the next national election as the champion of civil-service reform and tariff reduction. Can there be any reasonable doubt that such a campaign would have the chances largely in its favor? W. H. J.

Ohio, November 6, 1886.

THE CALIFORNIA ELECTIONS.

To the Editor of The Nation:

Sir: The political campaign through which we are now passing in California deserves some notice on account of certain peculiar features. I desire, therefore, to send you my impressions on the eve of the election, well knowing that after the result is announced I shall think that I thought differently.

The first thing to be noticed is the breaking up of party ties. This is more surprising when we consider that at the last Presidential election the Independent movement had very little strength here, and party enthusiasm was general. This year independent tickets—protests against either the managers or the policies of the old parties—are the rule. We have six State tickets, and there are eleven municipal tickets for the voters of this city to choose from. The only prediction which is generally ventured is, that what the Democratic ticket loses to the Labor and Independent (O'Donnell) candidates, will be more than balanced by the Republican loss to the Prohibition and American tickets.

The next noticeable feature is the strength shown by the O'Donnell and American movements. Dr. O'Donnell, who has an unsavory reputation as a physician, posed as an Independent candidate for City Coroner for several years, polling an insignificant vote until two years ago, when the unpopularity of the two regular candidates led some 29,000 voters to support him "as a joke." This burst of humor has since been regretted by many of the jokers, for he is now using this vote throughout the interior of the State to prove that he is the "People's Friend," and that the opposition of the city papers to him is bought. In politics he represents nothing but O'Donnell.

The "American" party, which demands Americans in office and a repeal of the naturalization laws, is evoking an enthusiastic support which is surprising. Its strength dates from the time when the eccentric editor of the *Argonaut* placed at the head of an "American" ticket the name of Mr. Swift, the Republican candidate for Governor. Mr. Swift showed extreme haste in ordering his name to be taken down, and, in his opening speech for the campaign, delivered that same evening, he made so open a bid for the ignorant and lawless portion of our foreign vote as to repel a large number of Americans. The "American" meetings have been attended by large numbers of ladies and gentlemen, who display an enthusiasm which the old parties cannot arouse. It is noticeable that the young men are most active in this movement, and seven out of ten of those who cast their first vote this year will support the new party.

I have endeavored in the above to jot down my impressions, unbiassed by my personal feelings. Perhaps I may add, therefore, that I do not support the new party, because it is an attempt to punish all citizens of foreign birth because *some* of them are ignorant and corrupt.—Yours very truly, V.

Civil-Service-Reform Association of California,
San Francisco, October 29, 1886.

THE *NATION* ON THE PACIFIC COAST.

To the Editor of The Nation:

Sir: The correspondence entitled "Some Belated Praise," in your No. 1112, moves me to write down thoughts which have been seeking expression for some time.

My first knowledge of the *Nation* was about the year 1875, when Prof. E. R. Sill, then occupying the chair of Literature at the University of California, advised his classes that the *Nation* was indispensable to a complete reading list for any one who sought a high education. Unfortunately I did not take the Professor's advice, and my intimate acquaintance with the *Nation* did not commence until about two years ago.

In 1884 I voted for Blaine, not because I was satisfied with the current explanations of and apologies for his record, but because I had a sincere dread of the Democratic party—a dread which I had imbibed when a little boy, listening in the evenings to my father reading to mother the accounts of the then progressing civil war. Cleveland's election stunned me. When I came to, I looked about to find out what the matter was, and, understanding that the *Nation* was the author of the mischief, I immediately subscribed, from a mixture of motives which it is rather difficult to fully analyze now. It is needless to say that now I am a Mugwump, and hope I may have an opportunity in 1888 to vote for Cleveland.

But two years of constant reading of the *Nation* has had an influence far wider than simply a political conversion. The condition of the press in California is sickening. Even the *Bulletin* of this city published the full, disgusting details of the Sharon trial, and, when it had done it all, admitted it was wrong, begged pardon, but did not promise to do better. Nearly all the San Francisco dailies devote columns to the drawings of the Louisiana lottery. Politically, the papers here may all be characterized as unreliable, and either weakly non-committal or foolishly partisan. In this condition of affairs it is inexpressibly refreshing to find a paper which has at once brains, morality, and independence. The *Nation* is the only paper that I read through. Its discussion of politics, the press, the labor and liquor questions, I am following with increasing interest and profit. And if I wince at some of the things it says about religion and religious matters, I try to have patience and wait for more light.

We have in San Francisco a club of about twenty-five gentlemen who meet once a month, and, after dinner, listen to an essay upon literature, or political economy, or some kindred topic, followed by a general discussion of the essay. At the October meeting this year, the subject of the essay was the "Rule of the Newspaper." The essayist was strong in his condemnation of the insincerity and immorality of the average American newspaper; and there was a striking unanimity of agreement with him exhibited in the discussion. In this discussion it is remarkable how many references to, and quotations from, the *Nation* were made. In fact the chief inspiration of the evening seemed to be drawn from that source. And one of the oldest and most influential members of the club, a gentleman who spent several decades as a brilliant and successful journalist, stated that he did not believe the newspaper ever formed public opinion; that it merely exercised shrewdness in discovering the probable trend of public thought, and then governed itself accordingly, finally claiming to be the author of what it had scarcely assisted to produce. But from this general statement he expressly and emphatically excepted the *Nation*.

A San Francisco Subscriber.
San Francisco, October 29, 1886.

A SHAM JOURNALIST.

To the Editor of The Nation:

Sir: You speak of Julian Hawthorne as a journalist. Has he not always been a literary man and reviewer until the *World* employed him, for his social acquaintanceship? As a journalist merely, could he have obtained access to Mr. Lowell? Was it not a literary piece of fraud, bringing upon the journals a censure they never had incurred before from Mr. Lowell? And did not Julian Hawthorne equally take advantage of his father's private diaries to sell their secret notes concerning Margaret Fuller and others, before he had ever been connected with the daily press?

I submit that this is a case of literary and dilletante, and not of robust newspaper, education. An honest reporter would not have invaded literary privacy, however much he might have stampeded some buffalo politician.

Ex-Journalist.

WHITE TEACHERS OF THE BLACKS.

To the Editor of The Nation:

Sir: In regard to the statement in a recent number of the *Nation*, that Rev. Dr. Skinner, of Raleigh, N. C., had accepted a professorship in Shaw University, allow me to say that the Southern Presbyterian Church has had, since 1876, an institution for the training of colored ministers, the teachers of which are now, and have been from its foundation, *white* clergymen of the said church.—Respectfully, E. H. Harding.

Graham, N. C., November 3, 1886.

COLUMBUS STATUES.

To the Editor of The Nation:

Sir: In your notice of the Columbus monument at St. Louis (*Nation*, No. 1113) you say you "do not know where in the Union to find another, except in Louisburg Square, Boston, and on the steps of the Capitol in Washington." You have overlooked the marble statue in Fairmount Park, Philadelphia, a work quite equal to either of the two you have named. It was erected by the Italian citizens of Philadelphia in 1875.—Respectfully,

James T. Mitchell,
Philadelphia, November 8, 1886.

DR. OTTO AHRENDT.

To the Editor of The Nation:

Sir: In commenting on an interview with Dr. Otto Ahrendt of Berlin, reported in one of our leading papers, you are kind enough to call this gentleman the leader of the silver party in the German Parliament. Permit me to state that this is an error. Dr. Ahrendt is neither the leader of that party in the Reichstag, nor has he ever been a member of that body. A few years ago he was sent to the Prussian Landtag, and I believe by one of the smaller towns of the province of Saxony.

You are quite right in calling some of his opinions funny, but not these alone are funny; the individual is funny, and not to be seriously spoken of. I freely admit that, among this party in Germany, there are very able politicians, for instance, the famous Prof. Adolf Wagner, or Von Kardorff, the present leader of the Bimetallists in Germany (the term "silver party" is incorrect). Dr. A. is certainly not to be placed in this category. He is the correspondent of the Berlin *Börsen-Zeitung*, which is influenced by the Rothschilds of Paris.

I am, sir, your obedient servant, R.

New York, November 7, 1886.

TRANSFORMATION OF SURNAMES.

To the Editor of The Nation:

Sir: I have read with interest the communications, from your friends and readers, concerning the transformations of proper names in their passage from one language to another. I can add a few that have come under my notice.

Louisiana, having been first settled by the French and subsequently occupied by American immigrants from the Southern States, many strange, not to say ludicrous, names have result-

ed, for many localities. My memory supplies the following: Bayou Bonne Idée has become Bonady. The Atakapas country has degenerated into Tukapan and sometimes Turkeypan; and a number of similar transformations might be instanced. But the following are unique: Bayou Shemanaha and Bayou Shemanaba have all the appearance of having beautiful Indian names. But these are real French names, the first being originally *Chemin-en-haut*, and the second *Chemin-en-bas*. The French names were derived from the location of two roads—one running along the bayou on the low grounds; the other keeping parallel to the bayou to which it has given a name on, the bluff side. In Southern Arkansas is a bayou called by the present inhabitants Smackover Bayou. Its French name was Bayou *Chemin-couvert*. It was so called because the road which ran along its banks was covered at high water. Another notable and well-known corruption of the same sort exists in Missouri, near St. Louis, where the bottom lands were once known as the Bois-brulés. They now rejoice in the euphonious title of Bob Rooley's Bottom. In Mobile, Ala., there is a family of Threefoots. Many inhabitants, not even among the oldest, remember the progenitor of the Threefoots as Mr. Dreifutz.—Yours truly, S. H. Lockett.

New York, November 3, 1886.

GETTYSBURG AGAIN.

To the Editor of The Nation:

Sir: In your issue of November 4 is a note on "At Gettysburg and After," by Jesse H. Jones of North Abington, Mass., in which he says, when speaking of the repulse of the Confederates: "The matter was not with the army, which was capable of having captured or dispersed the whole of Lee's army before Saturday night." It might be interesting to put the testimony of a combatant on the Southern side. In the *Southern Bivouac* for February, 1886, in the article, "The Third Day at Gettysburg," Wm. H. Swallow, writing of the failure of Pickett's charge, says: "If Meade had followed up the repulse of our column, he would have received the same reception that he had given the column of attack." That certainly would have been very warm. And further, with reference to the Federals capturing or dispersing "the whole of Lee's army before Saturday night," he says: "At 8 or 9 o'clock P. M. (Friday) the Army of Northern Virginia was safely posted on the crest and western slope of Seminary Ridge. In this position Gen. Lee remained all the following day—Saturday, July 4—in a position rather to invite than to decline a battle."

A parallel case, with the conditions reversed, is found at Cold Harbor in the following year. Although the Confederates bloodily repulsed the attack, yet they would have been just as roughly handled if they had attempted a counter-attack.

Very respectfully, C. Meriwether.

Johns Hopkins University, Baltimore, Md., November 6, 1886.

Notes.

D. Lothrop & Co., Boston, announce two holiday volumes—'Idyls and Pastorals,' twenty-four poems by Mrs. Celia Thaxter, illustrated by (or perhaps written for) the same number of photogravures of American and foreign origin; and 'Youth in Twelve Centuries,' two dozen photogravures more, by F. Childe Hassam, with a character poem for each.

Cassell & Co. on their part will bring out Sir Walter Scott's 'Christmas in the Olden Time,' with twenty-six illustrations by Mr. Hassam, Harry Fenn, E. H. Garrett, and other artists; 'Scenes and Characters,' with descriptive notes on Shakspere's plays and the principal actors thereof, by Austin Brereton; and 'A Mother's Song,' by Mrs. Mary D. Brine, "set to pictures" by Miss C. A. Northam.

'Two Pilgrims' Progress' is the title of a tricycling itinerary from Florence to Rome, written and illustrated by Mr. and Mrs. Joseph Pennell, and to be published directly by Roberts Bros.

A new edition of 'Pickwick,' edited by Dickens's eldest son, and embracing the three scarce "addresses" printed with the original numbers, as well as editorial notes and numerous engravings, is to be published by Macmillan & Co.

A series of five religious volumes, by the Rev. H. R. Haweis, will be at once begun through T. Y. Crowell & Co., the American publishers. The titles are 'The Story of the Four [Evangelists],' 'The Picture of Jesus,' 'The Picture of Paul,' 'The Conquering Cross,' 'The Light of the Nations.'

A. D. F. Randolph & Co. will publish immediately 'The Wisdom of the Apocalypse,' by the Rev. J. H. McIlvaine, D.D.; 'Siam, or, The Heart of Farther India,' by Mary Lovina Cort; 'For Love's Sake,' poems of faith and comfort, and 'A Handful of Monographs,' Continental and English, by Margaret J. Preston; 'In Quietness and Confidence,' spiritual talks by Rose Porter; and 'The Three Kings,' a Christmas legend by Mary Leland McLanathan, illustrated by Rosina Emmett.

Mr. Thomas Davidson's 'Parthenon Frieze' and 'Rosmini's Philosophical System' will hereafter have Ginn & Co. as their American publishers. Mr. Davidson has in preparation a Dante handbook, to be issued by the same house.

The perpetual puzzle of 'Sordello,' which is the chief godsend of the Browning Society, has given occasion for a very pretty volume by Annie Wall, 'Sordello's Story, Retold in Prose' (Boston: Houghton, Mifflin & Co.). It is one of the most successful attempts we have seen to make plain prose of the obscurest poem of the language; and it carefully sets forth the nobleness of Mr. Browning's conception, and the moral character of the problems dealt with. We recommend the little work to any who, like ourselves, would rather read Sordello's story in prose than in verse any day.

We have already noticed with approval Paul Bert's science primer, translated by his wife. It now appears with the title, 'First Steps in Scientific Knowledge,' in an American edition revised and corrected by Prof. W. H. Greene (Philadelphia: J. B. Lippincott Co.). The numerous illustrations of the original are retained.

Mr. William Cleaver Wilkinson has done all he could have done to give, in a very short space, a comprehensive view of French literature. His volume, 'Classic French Course in English' (New York: Chautauqua Press), contains less than 300 pages, many of which are filled with translated extracts. After a brief introduction he has a short study on Froissart. Then he immediately passes on to Rabelais, Montaigne, La Rochefoucauld, La Bruyère, ending with Voltaire, Rousseau, and the Encyclopædists. Boileau and many others are omitted, but, as the author tells us, the space placed at his disposal in which to give a general view of the whole of French literature was "less than half that allowed for the display of either Greek or Latin." Whoever made this limitation must have had a strange idea of the relative importance of modern and ancient thought. If Latin literature required two volumes to present it to English readers, a single century of either French or German would demand as many to give anything but a superficial and unsatisfactory idea of the wealth and comprehensiveness of these literatures. Mr. Wilkinson has very ably made the most of the space allotted to him, and if his little book were entitled 'Information for English Readers, with Specimens of Translation from Twenty French Authors,' no fault could be found. The author has one great merit: he is always interesting, and will certainly make his readers wish for more information on the subjects he presents so felicitously.

Houghton, Mifflin & Co. reissue their Emerson, Holmes, Longfellow, Lowell, Whittier, and Whitney calendars, plus one of Browning and another of Hawthorne—eight in all. In the former instances, the decorative background is retained, but the scheme of the calendar is new, being disposed on the pad by weeks instead of days, and containing a great variety of information, ingeniously stowed away, besides the usual extracts from the authors who give their names to the respective calendars.

The same firm have now published the whole of Franklin's Autobiography in two parts of their "Riverside Literature Series," for the use of schools. 'Poor Richard's Almanac,' Hawthorne's 'Tanglewood Tales,' Longfellow's 'Golden Legend,' and Thoreau's 'Succession of Forest Trees,' are on the list of this series, which promises to furnish a useful resource for the teaching of reading and the formation of literary taste.

Mr. Edward Roth's 'Complete Index to Littell's *Living Age*'—the first hundred volumes—reaches Baroness de Sternberg, in its biographic section (Philadelphia, 1135 Pine St.).

Bulletin No. 35 of the Library of Harvard University contains a valuable list of Miltoniana recently presented by the heirs of the late George Ticknor, and the beginning of a list of works on Dante, alphabetical by authors, and to be followed by an index of special subjects. In the Records of the Corporation regularly prefixed to the Bulletin, one observes that Mr. John O. Sargent's renewed offer of a $100 prize for a translation from Horace, "but admitting the Annex to competition," was accepted, thus giving a sort of official recognition to the name "Annex," while not opposing the amount of "co-education" involved in the competition.

We are requested to state that the bulletins of the Hartford Library Association will hereafter be sold instead of given away. They will be sent, postpaid, to any address at ten cents a number or twenty-five cents a year.

The December *Atlantic*, which will be ready next Saturday, will contain in a supplement the oration of Mr. Lowell and poem of Dr. Holmes delivered at the Harvard 250th anniversary.

We have already noticed the opening paper of the November *Century*, the new Lincoln biography. Other articles of interest are Mr. Roosevelt's upon the organization and social strength of machine politics in this city, Prof. Waldstein's upon the Hermes of the Ephesian temple and its copies in silversmith work, and Mr. Auchmuty's sound and instructive argument on Trade Schools.

We wish one might oftener meet with such papers in the *Magazine of American History* as that on Gov. Thomas Pownall in the November issue. Mr. Robert Ludlow Fowler compresses, with much literary dexterity as well as historical grasp, all the necessary facts about Pownall's career into a few pages, while contriving to impart a high degree of interest to his study, as it may properly be called. He has performed a needed service in behalf of a clear-sighted statesman, friend of the colonies and of the "Imperial idea" now agitating England and her remaining colonies, who is little remembered by the present generation, and is commemorated by name only in one obscure place on this continent. A copy of a fine portrait accompanies the paper.

The contents of the *Pennsylvania Magazine of History and Biography* for October have a solid value, and two of the papers are especially important—Mr. A. D. Mellick, jr.'s "German Emigration to the American Colonies: its Cause, and the Distribution of the Emigrants," of which the first part is here printed; and Mr. Charles J. Stillé's "Attitude of the Quakers in the Provincial Wars," which presents this body in the light of patriotic defenders of constitutional independence, as well as of skilful salvers of conscience by the use of adroit legislative phraseology. For example, in 1745 they voted money for Gov. Thomas to purchase "wheat or other grain" (*i.e.*, gunpowder).

The October *Auk* (New York: L. S. Foster) is made precious by a frontispiece portrait of Audubon, photo mechanically engraved from an oil-painting by the naturalist himself. It is a very striking face, recalling a little, perhaps, one of the early portraits of Webster; and Dr. R. W. Shufeldt, who procured a photograph of it for this reproduction, has deserved well of a larger public than that immediately gratified by his enterprise.

Nature for October 14 (Macmillan) resumes its engraved portraits of "Scientific Worthies" with one of John Couch Adams, the English astronomer, discoverer (like Leverrier) of the planet Neptune.

The cost of public spirit, or disinterested devotion to an idea, is well exemplified in the showing made by the *Publishers' Weekly* for October 30 of the balance sheet of the 'American Catalogue.' This great and immensely useful work, recording all American books in print up to July 1, 1876, was projected by the late lamented Frederick Leypoldt, and may be said to have shortened his life. It was helped through by a great deal of half-paid or unpaid labor, and on January 1, 1886, the total outlay amounted to $27,000 (in round numbers), the returns to $26,000, with interest out of the question. The few sets remaining unsold will not make good the deficit.

In the last number (July) of the *Journal* of the Royal Asiatic Society there are two Assyriological papers of considerable interest. Prof. Fritz Hommel of Munich treats of the Sumerian language and its affinities, comparing its phonology, grammar, syntax, and vocabulary with the Turko-Tartaric and Mongolian languages. Mr. George Bertin, under the title of "Pre-Akkadian Semites," attempts to prove, in opposition to the usually accepted theory, that the Semites were the first inhabitants of Babylonia; that they developed a method of writing and some learning, especially astronomy, or rather astrology; that they were conquered by a Turanian people, the Akkadians (whom he would prefer to call Urians). These Akkadians lived peaceably with the conquered Semites and learned their arts. Then the Cushites invaded and for a long time ruled the country, and in the struggle against them the native Semites regained the upper hand.

Tastes will differ, and some readers of *Le Livre* for October will prefer, of the two leading articles, that on Mélanie Waldor and Belle Krelsamer, or "Alexandre Dumas intime," as this account of two of his amours is also entitled. It is, indeed, not without a psychological interest. Book-lovers will find a more intellectual enjoyment in the history of "Pierre du Marteau," by L. Jaumart de Brouillant, who undertakes a learned bibliography of the works assumed to have been printed at Cologne by this fictitious personage. This may offer an arid prospect to the uninitiated, but we are really treated to a very curious and suggestive chapter in the European struggle for free thought and utterance. The mask first adopted in 1660 by Jean Elzevier, in Leyden, to avoid embroiling himself with the authorities or his country with France (the book being a 'Recveil de diverses pièces servans à l'histoire de Henry III. Roy de France et de Pologne'), was very extensively borrowed, and M. de Brouillant finds it in frequent use among Dutch, Belgian, French, and even German printers. The jest was carried so far that Adrian Anvil (Adrien de l'Enclume) professed himself the son-in-law of Peter Hammer, and still other imprints read "chez les héritiers de feu Pierre Marteau," or "Peter Hammers Erben," or "Pierre Marteau Wittwe," etc. Naturally in a great many instances the books thus falsely issued were scandalous in themselves, and would have lain open to any censorship in the interest of good morals.

In this age of rehabilitations, it is well that, *per contra*, reputations should be sometimes stripped off, and it is amusing to see the attempt made, even if it is neither justified nor successful. It is for this reason that we expect a certain enjoyment from reading an anonymous pamphlet just issued by an inhabitant of Langres (Paris: Retaux-Bray) entitled 'Diderot de Langres.' The author is boiling over with indignation. "What I want," he cries, to the admirers of Diderot, "is to show him to you as he really is, and so to disgrace the repugnant character whom you are going to glorify. And I want, too, to tear off the last shred of the masonic mask with which you have covered yourselves for the last nine years, to impose upon simple people."

Olcott's 'Buddhist Catechism,' copiously annotated by Dr. Elliot Coues for one of his "Biogen Series," has been admirably translated into German by the Countess von Spreti of Munich, and published at Leipzig.

The National Educational Association of the United States will hold its next annual meeting in 1887 at Chicago. In connection with it there will be a National Educational Exposition.

The Western Association of Collegiate Alumnæ are making some investigations concerning the industrial education of women in this country and abroad, and ask for information in any shape. The chairman of the committee is Miss Lucy M. Salmon, Bryn Mawr, Pa.

—In the early days of the *Nation* a young Philadelphian, Mr. Earl Shinn, presented himself at the office of that journal, and solicited the post of art critic. The post was already filled, and there was no necessity of asking for the applicant's credentials. His next appearance, in 1866, was by letter, for he had meanwhile gone abroad to study painting at the Paris School of Fine Arts, in the atelier supervised by Gérôme. "Art Study in Paris" was the theme of this and a closely following communication from Brittany, of which the graphic and racy quality insured the speedy printing. Such was the beginning of a relation which, with sundry intervals of inactivity on Mr. Shinn's part (caused, it should be said, by superactivity in other directions), remained unbroken till Wednesday week, when Mr. Shinn died in this city. The above-mentioned letters were succeeded in 1869 by a series describing realistically and picturesquely the student life of the École des Beaux-Arts—a most entertaining and authentic record. Early in 1872 Mr. Shinn had taken up his residence in this city, and his connection with the *Nation* for the next nine years was very close and constant, and during a large portion of that period he had the satisfaction of being at last its chief art critic. In 1885 he revisited Paris, and in a notable letter to the *Nation* (No. 1063) he gave his mature view of the teachings of the School in which he had been trained, and which he now rated somewhat lower than before. If we are not mistaken, some organic defect interfered with Mr. Shinn's proficiency as a painter. Be that as it may, the literary impulse which is most dangerous to productivity in an artist was very strong in him, and made him delight as much in the strokes of his pen as of his brush. He employed a vocabulary of remarkable scope and originality, scrupulously shaded, whether to express the exact degree of praise, to blunt the edge of censure, or to disguise the nature of hack-work. Of this last he did perforce an enormous amount, in connection with some large and costly enterprises—such as the illustrated catalogue of the masterpieces of the Centennial Exposition, the portfolios of Gérôme's works, and the like. His fertility and variety of phrase seemed to know no limits. In this class of labors—in fact, whenever he had occasion to sign his writings—his modesty led him to adopt the fictitious name of "Edward Strahan," perhaps first affixed to a volume in the case of his 'New Hyperion,' a sentimental journey from Paris to Marly, published in 1875. Had he devoted himself exclusively to literature proper he must have made his mark, as sporadic essays clearly showed. As a dramatic critic, too, he might have taken high rank. His ill health, however, of long standing, made performance very uncertain. His friendships biassed little his art judgments, which were always as much distinguished for conscientiousness as for tact and discrimination of language. He did not pose as a missionary or a teacher, and was not fond of enforcing general principles of art. He was most at home among modern works, and naturally his knowledge of the French school was most extensive and intelligent. He will be greatly missed, both professionally and in those circles where his personal amiability was known and prized.

—In the report for the year 1885-6, presented by the Board of Managers of the Observatory to the President and Fellows of Yale College, the Secretary tells what publications the Observatory has received, and describes the changes of the sidewalks and drives about the Observatory; the Astronomer of the Horological Bureau reports seventy-four time-pieces received from the makers to be rated (a continuation of the experiments in the construction of precision clocks), and notes the fact that the State Legislature, at its last session, practically refused to reconsider its action in repealing their appropriation to the Observatory for the State Time Service (whose support must consequently devolve upon the railroads); and the Astronomer of the Thermometric Bureau states that he has been called upon to examine 6,355 instruments, and notes with great satisfaction a decided improvement in the clinical thermometers of the better grades furnished by American makers since the first year of the operation of the Bureau. In the comparisons of rainfall at the Observatory and at the local Signal Service Station, the difference of distance between the two being about a mile and a quarter, the remarkable fact appears that the former station has received 24 per cent. more rain than the latter. The eight-inch equatorial has throughout the year been applied to spectroscopic work, with results which have met with much criticism from the Royal Astronomical Society of London. The report of Dr. Elkin, in charge of the heliometer, shows that the series of micrometric observations of the Pleiades has been completed, all the stars having been observed from ten to twelve nights, while the reductions of these observations are also well advanced. Dr. Elkin's principal work of observation, however, has been in connection with a scheme for determining the average parallax of the first-magnitude stars, as a first step towards the more comprehensive plan outlined by Dr. Gill and himself. What is proposed at present is to take the ten brightest stars in the Northern Hemisphere and observe them each from six-

teen to twenty times, at epochs of maximum parallactic displacement, using a favorably situated pair of comparison stars, with a view to securing a fairly reliable value for the average distance of the most brilliant stars. Arcturus, with its large proper motion, presents an object of especial interest, and has been taken up in a more exhaustive manner. It is expected that this work will be completed in the spring of 1887. In addition to this, a series of measures of one of the satellites of Saturn has been conducted, with a view to determining the mass of the planet.

—Among all the countries in which archæological explorations are going on, Egypt, which is the oldest, remains the most interesting. M. Maspero presented last summer to the Academy of Inscriptions a report of his operations for the previous nine months. He has made a wise change in giving up the monopoly of antiquities which the Bulak Museum had, offering to share all that are found with the finder. The result is that now he is informed when a discovery is made, and finds the tombs unpillaged. He has, as it were, made the poachers gamekeepers. One such undisturbed tomb, besides the owner, his wife, and a large family, contained all the implements of his trade, and, best of all, the first part of the romance of 'Sinuhit,' a work of the seventeenth or eighteenth dynasty, of which only the second had been previously known. These romances, it is supposed, were put into tombs to amuse the leisure of the dead; the 'Book of the Dead' has one chapter designed to teach the dead to play chess in the other world. The correctness of the portrait-statues of the Egyptian monarchs has received a striking confirmation. M. Maspero presented to the Academy photographs of mummies of various kings that have been unrolled at the Bulak Museum, and stated that the face of Seti I. (an account of whose tomb, by the way, with over a hundred plates, has just been published as the ninth volume of the *Annales du Musée Guimet*), which is perfectly preserved, shows a wonderful resemblance to contemporary portraits of him that have been found on monuments. Such confirmation was not needed. The statues of the Egyptian kings are so individual and full of character that one could not suppose they were fancy sketches. It is curious to hold an inquest on a corpse forty centuries old. Coroner Maspero determines, on examination of the body of Ra-skenen, that he died fighting. There are three wounds, one that knocked him over and two others that finished him, and traces of decomposition show that some time was lost in bringing him from the field of battle. Another case is not quite so clear. A man twenty-five or thirty years old was left in most unusual style, without any inscription. Moreover, he was embalmed as usual; the internal organs were not removed, but the exterior was covered with some matter at once fat and caustic. The body shows that the man died in horrible suffering, and the question arises, Was he poisoned or was he embalmed alive? Here is hint of a palace tragedy on which some antiquarian novelist may write a novel more sensational than anything that Ebers has yet given us.

—Profs. Rudolf Smend and Albert Socin have rendered Semitic students an eminent service by publishing a revised text (with comments) and table of the Moabite Stone ('Die Inschrift des Königs Mesa von Moab, für akademische Vorlesungen herausgegeben,' Freiburg, 1886). The inscription of King Mesha's famous stela has hitherto been generally known only from copies issued by M. Clermont Ganneau, who, after the discovery of the stone among the ruins of Dibon by the German missionary Klein, in 1868, secured a paper squeeze of it, and subsequently, when the monument had been broken by contending Bedouins, saved a large number of fragments for the Museum of the Louvre, where the restoration of the whole was effected by filling up the gaps in accordance with the squeeze. The gaps, however, were numerous, and the transcriptions issued, and repeatedly corrected, were in part based on conjectural readings far from satisfactory. The main contents of the Moabite King's boastful glorification of himself and his god Chemosh, as against the house of Omri and Jehovah, were, it is true, clear enough, and were almost uniformly read and explained by Ginsburg, Schlottmann, Nöldeke, Kaempf, M. A. Levy, and other competent scholars; but even the minutest points, historically and linguistically considered, are interesting in an inscription twenty-eight centuries old and closely covering texts of the Biblical books of Kings and Isaiah. The two German Orientalists, therefore, have executed their task of reëxamining, reproducing, and critically elucidating the thirty-four lines of the inscription with a conscientious closeness and laboriousness worthy of the best efforts of epigraphic criticism. The French authorities at the Louvre readily offered the facilities wished for, and the results obtained—though referring to small details—are important enough to increase in the eyes of the learned world the value of the unique treasure. It need hardly be added that the critical work on the stone is not yet ended.

—*Les Lettres et les Arts* for October (Paris: Boussod, Valadon & Cie.; New York: Charles Scribner's Sons) opens with the first part of a story by M. Ludovic Halévy, "Princesse!" which, with all the sparkle of 'Les petites Cardinal' and none of its wickedness, recalls also his 'Mariage d'Amour' and 'Abbé Constantin,' with none of the sentimentality of the latter. The brilliant Academician has never chosen a heroine who could lend herself with a better grace to his light and airy mockery than the charming little *bourgeoise* of the Marais whose journal he gives. M. Henry Laujol brings his story of "Le docteur Modesto" to a tragic but satisfying conclusion, though the impression of the whole would have been better with less light thrown upon the crisis, a few pages before the end. The fantastic illustrations of Rosset-Granger continue as excellent and suggestive as in the preceding part. The longest and most prominent poetical contribution to the pages of the present number is the series of six poems, called collectively "Arrière-Saison," by M. François Coppée. Neither the verses nor the abundant illustrations which accompany them are in the least poetic or attractive—indeed, they are commonplace in the extreme; but the simple and beautiful little poem of Pierre de Nolhac, "Chanson d'automne," with the birch trees and swallows flying low with which Giacomelli has illustrated it, makes a page to linger over in a true October mood. Octave Lacroi has also some verses to Léon Lhermitte's "Au temps des Foins," in which he describes the fine etching by this artist which forms the frontispiece; but the poetry of the number is by no means equal to most of that which has heretofore appeared in the *revue*. A name familiar to American and English readers, that of Miss Helen Zimmern, is signed to the article, "Hubert Herkomer et son œuvre," which is illustrated by some of this artist's most characteristic work, impressively rendered. M. Antony Valabrègue writes about "Les Femmes artistes au XVIIIe siècle" with an abundance of interesting details and anecdotes from works not easily accessible. The article is illustrated by a number of portraits of the artists mentioned, by themselves and by others, among which the most striking are the charming one of Mme. Vigée Le Brun and her child, familiar to every visitor of the Louvre, and the reproduction of an old engraved portrait of Rosalba Carriera, the Venetian *pastelliste* whose skill was so much in demand during her stay in Paris, just before the bursting of the Mississippi bubble, and of whose *Diario* of the years 1720 and 1721 M. Valabrègue has made such good use.

VEGETAL ÆSTHETICS.

Flowers, Fruits, and Leaves. By Sir John Lubbock. Macmillan & Co. 1886.

ALTHOUGH the word æsthetic does not once occur in this volume, we have what might nevertheless be termed an elementary treatise on natural æsthetics; for its object is to explain how flowers, seeds, fruits, and leaves came to have those colors, forms, and perfumes which we admire in them. And those who investigate the laws and causes of beauty in nature will in this volume, as in Wallace's 'Tropical Nature,' find more food for thought than in any of the ponderous German text-books of æsthetics. The old-fashioned philosophy accounted for the beautiful colors and shapes and perfumes of flowers very glibly, by assuming that they were made to delight the eyes of man. Gratifying to human vanity as this view was, it can only appeal to the sense of humor of those who reflect on the facts. It is well known that primitive races have no eyes whatever for the beauty of flowers and similar useless objects. Shall we, then, suppose that all the millions of billions of flowers in Africa, and Asia, and South America, and Australia are annually produced to please some European tourist who may chance to put his eyes—or feet—upon them? And among ourselves, how many are there who appreciate the beauty of flowers and leaves? Certainly not those who are supposed to care most for them—the fashionable young ladies who value flowers only in clumsy bunches, and proportionately to their size.

The German naturalist Sprengel was the first to discover, towards the close of the last century, that the peculiar forms, colors, fragrance, and honey of flowers are in some way related to the visits of insects, which perform an important function in transferring the pollen from the stamens to the pistils. But his discovery attracted little attention until Darwin took up the matter, and supplemented Sprengel's theory by the most important additional discovery that the value of insects lies in their transferring the fertilizing pollen not so much from one part of a flower to another, as from one flower to another, thus securing to flowers the advantages of cross-fertilization—namely, superior vigor and fertility, as compared with flowers fertilized by their own pollen. Not that insects care more, æsthetically, for the lovely colors and forms of flowers than Hottentots, peasants, and fashionable young ladies. They visit the flowers to get the pollen as food. So, as their visits are of advantage, the flowers provide them with an additional delicacy in the shape of honey, and gradually develop luscious perfumes to guide the bees, etc., to these stores. For the same reason the colored petals are developed to attract insects from distances at which fragrance becomes imperceptible—a phase of the theory which Sir John himself has strengthened by showing experimentally that bees do distinguish different colors. Bees being the chief flower fertilizers, it is fortunate for us that their tastes agree with ours in color and fragrance; for those flowers which are fertilized through the agency of flies have disagreeable odors and less brilliant colors. The rich fragrance and extremely brilliant colors of Alpine flowers are accounted for by the fact that, insects being rare at these altitudes, only those flowers succeed in being visited which are unusually favored and conspicuous. Wind-fertilized flowers have neither color nor perfume.

Regarding the forms of flowers, Darwin discovered the fact that when fertilized through the agency of the wind, they always follow the natural tendency towards symmetry. "There does not appear to be an irregular flower which is not fertilized by insects or birds." Through natural selection flowers have adapted their shape in such ways as to facilitate the visits of insects, while the insects in turn have become modified in appearance by their habit of visiting flowers. The details of such modifications, some of which Lubbock illustrates, are more fascinating than a romance, and prove the theory in question to be in accordance with the strictest canons of logic. Some of the peculiarities in the shape of flowers are, however, due to changes made not to facilitate the visits of useful insects, but to keep out unwelcome visitors, like ants, who would only eat the honey without involuntarily carrying the pollen from one flower to another. In the chapters on seeds and fruits Sir John considers, among other things, the various ingenious devices some plants have for dispersing their seeds. It might be said, he remarks, "that the ash fruit has not a wing in order that it may be carried by the wind, or the burdock hooks that the heads may be transported by animals, but that happening to have wings and hooks these seeds are thus transported." But if the wing were accidental, it would be as likely to occur on low plants and shrubs as on trees, which is never the case; or, again, if hooks in seeds were accidental, we should expect to find them in all classes of plants; but they do not occur in aquatic plants, or such as are too high or too low to come into contact with a passing animal. So that here again the old-fashioned teleology is shown to be fallacious.

In these chapters on flowers and seeds Sir John does little more than state in popular form the recent views of specialists in vegetal biology, adding an ingenious suggestion or observation of his own here and there. In the last chapters, on leaves, however, he touches virgin soil, on which Mr. Ruskin alone appears to have preceded him. Strange to say, Ruskin, who constantly sneers at modern science, has in the ten chapters devoted to "Leaf Beauty," in the 'Modern Painters,' anticipated Sir John in several points relating to vegetal æsthetics. Not that he emphasizes or apparently sympathizes with Sir John's homily that, as in the case of flowers, so with leaves, the infinite variety of beautiful forms was not made to delight the eye of man; but he ingeniously points out some of the causes which made leaves assume certain attitudes and dispositions in regard to the stem:

"The leaves . . . are the feeders of the plant. Their own orderly habits of succession must not interfere with their main business of finding food. Where the sun and air are, the leaf must go, whether it be out of order or not. So, therefore, in any group, the first consideration with the young leaves is much like that of young bees, how to keep out of each other's way that every one may at once leave its neighbors as much free-air pasture as possible and retain a relative freedom for itself. . . . And in the arrangement of these concessions there is an exquisite sensibility among the leaves. They do not grow each to his own liking till they run against one another, and then turn back sulkily; but by a watchful instinct, far apart, they anticipate their companions' courses, as ships at sea, and, in every new unfolding of their edged tissue, guide themselves by the sense of each other's remote presence, and by a watchful penetration of leafy purpose in the far future. So that every shadow which one casts on the next, and every glint of sun which each reflects to the next, and every touch which in toss of storm each receives from the next, aid or arrest the development of their advancing form, and direct, as will be safest and best, the curve of every fold and the current of every vein."

We have quoted this passage not only because it explains certain peculiarities in the aspect of leaves and branches, but because it illustrates most exquisitely the poetry of science—two terms which are so often absurdly considered antagonistic. Lubbock, without referring to Ruskin's remarks on leaves, gives many curious instances of leaves variously arranged so as to secure the maximum of light and air; or conversely, as in the tropics, so as to avoid an excess of sunlight, by becoming narrow or succulent. He believes there is no peculiarity of leaves the cause of which might not be traced by patient observation. Much still remains to be done, but his own suggestions are full of interest. Hairs on leaves serve perhaps in some cases as a protection against being eaten. In other cases "they serve to keep off insects—apparently with the special object of preventing the flowers from being robbed of their honey by insects which are not adapted to fertilize them. . . . If we make a list of our English plants, marking out which species have honey and which have hairs, we shall find that we may lay it down as a general rule that honey and hairs go together." On the other hand, he suggests that smoothness, as in evergreens, is an advantage "as tending to prevent the adherence of snow, which might otherwise accumulate and break them down." Spines, again, serve as a protection against browsing animals, "and in this way we can, I think, explain the fact that, while young hollies have spiny leaves, those of older trees, which are out of the reach of browsing animals, tend to become quite unarmed." More curious still are the cases of mimicry to be found among plants, as modifying causes of their aspect. Just as many inoffensive animals, as described by Wallace, Belt, and others, assume the appearance of poisonous or dangerous ones, as a protection against hostile attacks, so low plants manifest the same sagacity, as, *e.g.*, in case of the harmless dead nettle which so closely resembles the true stinging nettles that Sir John himself was deceived by the resemblance.

In dry regions, as the Cape of Good Hope, a large proportion of species are bulbous, which is obviously owing to the necessity of absorbing moisture when opportunity offers, and storing it up for future use. Another peculiarity of leaves in dry regions is somewhat summarily disposed of by Lubbock, who appears to have overlooked Mr. Wallace's remarks on the subject in 'Tropical Nature.' We refer to the aromatic character of some species of leaves. Mr. Taylor having suggested that the emission of essential oils from leaves serves to protect them against the dry heat of the desert sun, Sir John, on the contrary, inclines to the belief that "the aromatic character of the leaves protects them by rendering it less easy for animals to eat them." Darwin expressed a similar view to Wallace, who, however, objects to it on several grounds. In the first place, "highly aromatic plants are characteristic of deserts all over the world, and in such places insects are not abundant." Again, various aromatic plants are not protected against insect attacks, as, *e. g.*, in the case of the Labiatæ, the cherry laurel, firs and pines, orange trees, etc. Mr. Wallace seems disposed to connect the presence or absence of odoriferous glands on leaves with the phenomena of cross-fertilization. It has been ascertained that New Zealand has few attractively colored flowers, and correspondingly few insects, especially of bees and butterflies, the chief agents of cross-fertilization. Now, Sir Joseph Hooker informed Mr. Wallace that "not only are New Zealand plants deficient in bright-colored and sweet-smelling flowers, but equally so in scented leaves." Since, moreover, "near the limits of perpetual snow on the Andes such plants as occur are not, so far as Dr. Spruce has observed, aromatic, and as plants in such situations can hardly depend on insect visits for their fertilization, the fact is comparable with that of the flora of New Zealand, and would seem to imply some relation between the two phenomena, though what it exactly is cannot yet be determined."

We feel inclined to suggest that the difficulty here is not so great as it seems. Why should not the leaves as well as the flowers be fragrant, and thus by their combined aroma attract insects at a greater distance in consequence? Once attracted into the flower's vicinity, the bee or butterfly would then find it easy, by the aid of its color sense, to find the flower and the honey secreted in it as a bait.

RECENT NOVELS.

East Angels. By Constance Fenimore Woolson. Harper & Brothers.

Kidnapped. By Robert Louis Stevenson. Charles Scribner's Sons.

Effie Ogilvie. By Mrs. Oliphant. Macmillan & Co.

Cynic Fortune. By David Christie Murray. Harper's Handy Series.

The Long Lane. By Ethel Coxon. Harper's Handy Series.

Katharine Blythe. By Katharine Lee. Harper's Handy Series.

A Daughter of the Gods. By Jane Stanley. Harper's Handy Series.

Doris's Fortune. By Florence Warden. D. Appleton & Co.

Won by Waiting. By Edna Lyall. D. Appleton & Co.

Two Pinches of Snuff. By William Westall. Harper's Franklin Square Library.

The Phantom City. By William Westall. Cassell & Co.

Bad to Beat. By Hawley Smart. Harper's Handy Series.

Miss Melinda's Opportunity. By Helen Campbell. Boston: Roberts Brothers.

In 'East Angels' there is nothing so fresh or remarkable as are the opening scenes of Miss Woolson's 'Anne.' The movement is intentionally languid, fitted to the surrounding, but, through a too scrupulous regard for conformity, the effect on the reader is similar to that wrought upon the heroine, Garda, by the sight of her hammock in the tropical afternoon—it invites drowsiness. Little penetration is needed to discover some of the reasons why a novel with so many pleasant pages is tedious, requiring in the reading a mental effort which is not repaid. The unfolding rose is a more interesting object for contemplation than the perfect flower; the bud that in spite of anxious care should continue to be a bud, refusing either to bloom or to die, must eventually excite irritation or indifference. Evert Winthrop and Margaret Harold, the people to whom Miss Woolson devotes most space, are presented full blown, past the period of growth, and the period of decay still remote. Their completeness is immediately recognized, their stability taken for granted, and it is impossible to stimulate concern about what they do or think or feel. They are so essentially of those to whom life brings no severe tests, no moments when character reels before temptation, that the emotional crisis to which they are subjected in the later chapters provokes neither fear nor doubt. We know they will come out without damage, and bloom on serenely for many a day. Garda Thorne is the perpetual bud. On first acquaintance she piques curiosity; even if the author does not suggest possibilities of development, the reader instinctively looks ahead with expectation. But Garda passes through the fires of life, her selfishness unimpaired, her capacity for sleep undiminished,

and, though it is not mentioned, probably fulfils the only possibility of young girlhood which we all scorn to contemplate—grows fat. In the delineation of these characters, it is clear that Miss Woolson understands what she means to do, and the fault is comparative worthlessness of design, not defective execution. In representing the passionless, shallow, selfish Garda as a child of the South and of Nature, she is perhaps at fault; aside from her habit of dozing in the sun, Garda is a daughter of the long-conventionalized North. The numerous passages descriptive of Florida are the most agreeable and valuable in the book. They are faithful, often vivid, and occasionally reproduce the fantastic impression made upon the imagination by the most unreal and elusive of landscapes.

Mr. Stevenson has never appeared to greater advantage than in 'Kidnapped.' It is finer work than the famous 'Dr. Jekyll,' for, besides being a more successful example of literary art, it has the charm of personal enthusiasm, the strength of natural aptitude. No better book of its kind than these 'Memoirs of the Adventures of David Balfour' has ever been written. The kind is no inferior one, for it is an excellent thing to fire a boy's blood with illustration of courage and loyalty and self-sacrifice for an idea, and to demoralize well-regulated pulses while Alan Breck and Davie are flying over the heather, before King George's men. The movement never flags, yet there is no appearance of haste, and, except in the defence of the roundhouse of the brig *Covenant*, nothing like the unwholesome bloodthirstiness which distinguishes many popular tales of adventure. The reader instantly identifies himself with Davie in his early disenchantment by his great relation, Ebenezer Balfour of Shaws, in his woes on board the *Covenant;* but when Alan Breck appears, interest is divided, or rather irresistibly extended. After the shooting of Colin Roy Campbell of Glenmure, when the two queerly assorted comrades decide to dodge the redcoats, the vicissitudes become exciting. Their general tenor is best described in Alan's words to Davie before the start:

"But, mind you, it's no small thing. Ye maun lie bare and hard, and brook many an empty belly. Your bed shall be the moorcock's, and your life shall be like the hunted deer's, and ye shall sleep with your hand upon your weapon. Ay, man, ye shall tangle many a weary foot or we get clear! I tell ye this at the start, for it's a life that I ken well. But if ye ask what other chance ye have, I answer: Nane. Either take to the heather with me, or else hang."

Like all the Highlanders in moments of excitement induced by the exigencies of patriotism, Alan's diction becomes more poetical than accurate. And one particular charm of this story, though the boys may not know it, is the author's appropriate use of Scotch phrasing—not dialect, but national turns of speech which express Scotch character and feeling as plain English never could. Mr. Stevenson confesses in a note his own great kindness for Alan and Davie, and half promises to tell what further befell them after their parting in Edinburgh—a promise which the friends they have already made must long to see fulfilled.

The matter of Mrs. Oliphant's 'Effie Ogilvie' has not the remotest resemblance to that of 'Kidnapped,' yet a similar quality is its chief attraction. It is the expression of the author's best personality, the unaffected work of a woman clever and kind, not blind to the frailties of her neighbors, but scanning them gently withal. As in 'Kidnapped,' too, the æsthetic pleasure of the story is in its easy flow and in the nice use of Scotch diction. Effie's little love tale is common enough, not over thrilling, and worth more to outsiders through the people who gossip and meddle than for itself. It shows the author to be remarkably alert in keeping abreast with youth. Her young people are of to-day, not of two generations past when she counted in their ranks. She has so complete a comprehension of types evolved in the last quarter of a century, that in delineation not a breath of harsh criticism escapes her. The story has less padding than many of her recent novels, which have, in a degree, justified the observation that, had she written less, she would have stood a better chance for the achievement of lasting fame.

The first chapters of Mr. Murray's 'Cynic Fortune' stir up resentment. He seems resolved to run about the earth in pursuit of an abnormally cold-blooded and audacious murderer. The resentment cools and vanishes when we discover that the author is going to entertain us with a study of Mr. Gabriel Kenyon's conscience and not with his cunning evasion of detectives. Mr. Kenyon, peacefully and with all legal formality, takes possession of the property of his victim, who had had the misfortune to be his cousin. He solemnly settles down to the business of being respectable, the better to succeed in which he opens an account with his conscience. He lashes himself for trivial neglect of duty; no virtue is too small or too great for him to practise it ostentatiously. He accumulates stores of righteousness and is perpetually weighing them against his awful crime. It is unnecessary to say that confession and submission to the law never are considered by Mr. Kenyon as practicable or desirable methods of expiation. This exposure of Mr. Kenyon's conscience is the result of a wide generalization. There is no commoner and more contemptible superstition than that which prompts men to keep a score of good and evil deeds, with some vague notion of propitiating an all-seeing, avenging Deity. The interest in Mr. Kenyon's system of accounting heightens to the catastrophe, not, however, excluding appreciation of his friends and enemies, or of the prettily sketched love story. Mr. Murray's expression is here more precise and telling than in his former novels, without loss of originality. That is both an agreeable and uncommon point to note, but it is neither so agreeable nor so uncommon as is his clear opinion about the degradation of such a conscience as that in the possession of Mr. Kenyon. The average British novelist has lately fallen into woful confusion on questions of conscience and morality. If the novelist happen to be a woman, the spectacle presented is frequently pitiable, inevitably ludicrous. She wishes to break away from the old moorings of convention and tradition, but she has no safe shore, not even a sound stake to tie up to. She is resolved to beat down tried standards of right and wrong, but she lacks courage or capability to set up new, and insist that they shall be tested.

In 'The Long Lane,' a young woman whose ardor runs far ahead of her discretion, turns her attention to a difficulty between man and wife. She is not daunted by any suspicion that certain topics can be treated with any degree of wisdom only by those who have been scourged by experience, and, later, passed a profitable season in philosophically correlating facts and making inferences. Her distractingly beautiful heroine runs away from her husband because, after two weeks' trial, she finds that she doesn't like him. We may say frivolously, in private, that that is the very best reason possible for such behavior; but if we grant universal moral responsibility, we are careful, in public, to pronounce the reason insufficient. The author of 'The Long Lane' imagines herself to be a fervid preacher of morality, and yet she does not even find her heroine rash or a trifle hasty. She proceeds to square her accounts ingeniously. She has the impetuous wife point out to a lover that an existing husband is an insuperable obstacle to their happiness, and she subsequently makes this lover, wasting with despair, take a fatiguing and expensive journey in order to persuade Honor to go back to her forsaken but still loving husband. It would have been well for this ingenious author to have thought before she began to write that if she means to prove a woman a pattern of nobility, a martyr to duty, she should not introduce her prematurely abandoning her husband.

The scene of this novel and of one not much more logical or inspiring, 'Katharine Blythe,' is in Cornwall. Between the two an impression gleaned from many volumes of fiction is confirmed. The peninsula is nothing but a blaze of "golden furze" all the year round. The furze is bounded by sheer precipices, above which a lone condor is incessantly whirling. None but picturesque young men and lovely maidens ever walk out on the furze. The destiny of the young man is either to fall into a pit and be rescued by a maiden, or to rescue from an isolated rock beneath a precipice a maiden probably picked up from the furze by a frolicsome condor and dropped in an apparently inaccessible spot. Katharine Blythe is a clergyman's daughter who stalks over the golden furze, lights on her rock, and is rescued by the hero. This author has not asserted her independence by encouraging the caprices of young wives. The pair in her story who cannot be said to hit it off well together, fling dishes at each other, and, in moments of severe trial, more massive articles of household furniture. Her protest against convention takes the form of derision of Katharine's sister, who gives out the tracts to indigent parishioners. The parson's daughter who loves to do the parish work is almost necessarily a dull person, and many a dull novel has been written with intent to convert her into a heroine. But because one has come to believe that she is not the most appropriate theme for an epic, that is no reason why she should be belittled and contemptuously contrasted with a beautiful sister of vagabond tendencies.

The author of 'A Daughter of the Gods' does not stop at the destruction of time-honored ideals; she at least attempts constructive innovation in the domain of the good and the beautiful. The initiation and continuance of a wretched fraud make up her unpleasant tale, and she perversely labors to rouse sympathetic sentiment for a woman guilty of inexcusable deceit. She advances in exculpation of the "Daughter of the Gods," less euphoniously called Verena Dugan, a mother's eagerness to screen her nameless child from the world's mercy. Though she discusses Verena's behavior with apparent candor, she clearly thinks that the end for which the lady lived a lie justified the means. She is rather stronger than most of her contemporary sister moralists, and does an unusual amount of clever and careful work, all of which helps to conceal the inherent offensiveness of the central idea.

The author of 'The House on the Marsh' seems to have bidden farewell to mystery, to fascinating masculine monsters, and to all-conquering governesses. With her usual rattling audacity, she proceeds, in 'Doris's Fortune,' to lay bare another case of matrimonial infelicity, and to arrange a compromise, hardly a renewal of bliss. She has developed quite a savage cynicism, and the target of her scorn is man in general, more especially Doris's weak, hypocritical, altogether worthless husband. The only man in London whom she concedes to be fit to breathe is one Charlie Papillon (the personification to her mind of airy banter and irresistible outspokenness), a gentleman who would not be permitted to exist an hour in the society of ordinarily civil people. Her enthusiasm for millinery has suffered no decline, and glows in all the great situations. The man who could preserve an impassive demeanor before a wife arrayed in a "new tea-gown of

coral-colored, Liberty silk, trimmed with coffee-tinted net embroidered in gold," well deserves the engaging Miss Hilda Warren's assertion that he is "an ungrateful, cold-blooded rattlesnake."

'Won by Waiting' opens with the horrors of the siege of Paris by the Germans, and continues in a strain of surpassing dismalness. If the affection of an uncongenial English uncle repaid the little French girl for all her patience, humility, and tears, the tale of her long-suffering does not repay the reader. The author, who has written two or three readable novels, here falls into the ranks of the purveyors of machine-made fiction.

For a novel in which forgery, robbery, and murder are the incidents, 'Two Pinches of Snuff' is not at all violent or shocking. The transition of the action from a commercial set in Manchester to a commercial set in Dresden is naturally effected, and the identification of the doubly criminal owner of a remarkable snuff-box is accomplished in a novel yet very probable way. The moral is that a harmless, indeed refined, taste may be fostered till it becomes monomania and urges to crime for its gratification.

In 'The Phantom City' Mr. Westall attempts something in which his natural qualification as a story-teller counts for nothing. When the reader's reason asserts that a series of events is impossible, only a genius of a peculiar order can temporarily persuade the imagination that the reason is at fault. Yet it is within our knowledge that the story is based upon fact; and this, perhaps, is the reason why it is hard, dry, mechanical—everything that a tale of a phantom city has no right to be.

In 'Bad to Beat' Capt. Smart of course provides a military hero. Major Denton is invincible in war, and the prince of jockeys. The chapters devoted to racing are spirited and realistic, but since the author never wrote a novel not largely devoted to sweepstakes, they chiefly illustrate his skill in varying the arrangement of sentences. The incidents of the Indian Mutiny might have been selected from a school text-book. No great novelist has ever described the horrors of that most horrible episode in England's later history, and the attempts of the lesser host have only proved their rashness.

In 'Miss Melinda's Opportunity' Mrs. Campbell suggests a feasible plan of living for the working girls of New York, to whom a semi-charitable institution and a cheap boarding-house are alike repugnant. There is no reason why the experiment of coöperative housekeeping which she imagines should not be tried and succeed. But to preserve the distinctive features of "home" it must be restricted to the private enterprise of groups who are reasonably sure of congenial tastes and sympathetic temperament. The weakness of earnest reformers like Mrs. Campbell is that they are apt to overlook the restiveness of individuality in their eagerness to benefit the class. The moment a Miss Melinda expends a dollar for the comfort of girls, able to provide for themselves, not legitimately dependent on her, that moment the girls become the recipients of charity; when Miss Melinda undertakes to improve the homes which girls have established as their light directs and their purse permits, the idea of possession, of personal independence and liberty, of much that goes to make the joy of home, is destroyed. In the latter part of her book Mrs. Campbell almost defeats her original idea. Even in the matter of reading-rooms and club-rooms it is much better that girls should do without them for ever than enjoy them under the ægis of private benevolence.

Susanna Wesley. By Eliza Clarke. London: W. H. Allen & Co. 1886.

Not wholly because the mother of the founder of Methodism, was Susanna Wesley deserving of a biography; and yet, except for the fame of the two more celebrated of her sons, it is hardly likely that the memory of her would have reached the nineteenth century. As the stock from which she sprang was ancient and highly respectable, no less was it prolific, seeing that she was the twenty-fifth child of her father, the Rev. Dr. Samuel Annesley. This patriarch, a kinsman of the Earls of Anglesey, was educated at Queen's College, Oxford, was inducted as a Presbyterian minister, and on St. Bartholomew's Day in 1662 was ejected from his cure, with some 2,000 others of his profession, for refusing to subscribe the Act of Uniformity. Susanna's husband, the Rev. Samuel Wesley, who boasted a pedigree traceable to the days of Athelstan, was of the family to which have since belonged Lord Mornington, the Dukes of Wellington, Sir Robert Ker Porter and his sisters, Jane Porter and Anna Maria Porter—literary luminaries of considerable magnitude to their contemporaries. Though a dissenter in his youth, he eventually became a member of Exeter College, Oxford, and, at the end of his University course, was ordained deacon by Dr. Sprat, Bishop of Rochester, in 1688, and a priest in the year following. He and Susanna Annesley were married about 1690. It is recorded that Mrs. Wesley was very comely, even in advanced age, till which time she also retained the graceful figure of her prime.

From her very girlhood she was an ardent politician, with pronounced Jacobite leanings, and equally zealous in the investigation of religious topics. Already at the age of thirteen she studied herself into dissatisfaction with non-conformity, and joined the Establishment, yet without incurring either censure or obstacle on the part of her liberal-minded father. It was not solely matters of state and church, however, that she was interested in, though these are mainly the subjects of such of her letters as have been preserved. What her early scholastic advantages were we have no means of knowing; but, as Dr. Annesley was a man of learning, and as she was his favorite daughter, it is to be presumed that he did not neglect her mental cultivation. Nothing, indeed, but auspicious juvenile surroundings and discipline, and those turned to good profit by a mind of unusual robustness, could have availed to make her what she came to be. Evidently she had read somewhat diligently; and one need but run through her correspondence with her sons to perceive that, for a woman, she had thought independently, and far from superficially. Near the close of her life, when she had passed her seventieth year, she was induced to accept the novelties of Methodism; nor, devoted as she was to her son John, is it surprising that she succumbed to his persuasions, rather than to those of his elder and conservative brother Samuel, who likewise was a clergyman.

Above all, it is in virtue of her domestic excellences that Susanna Wesley stands conspicuous. Practically, her world was bounded by her family circle; and that circle was not a narrow one, her children making up the goodly tale of as many as nineteen. Energetic, resolute, resourceful, studious of her husband's interests, patient of his peculiarities, and always sanguinely hoping for the best, she fell little short of approving herself a model wife. As a mother, too, none ever bethought herself more seriously, or more unintermittingly, so far as the welfare of her offspring was in question. If, as she phrases it, in a well-written letter, "when turned a year old (and some before), they were taught to fear the rod and *to cry softly*," still she had no difficulty in attaching them to her with lasting and unabating reciprocal affection. In passing, how peaceful a world, comparatively, would this now wailsome one of ours become, if babes in general were only schooled, whether by bacular arguments or otherwise, to moderate their ululation after the fashion attained by this ingenious mother's sucklings! Mrs. Wesley's rare maternal wisdom and self-sacrifice, and the happy results which attended them, with much besides, transpire perspicuously from her epistolary remains, for the reproduction of which, though it were for nothing else, the biography before us would challenge a welcome. It also deftly pieces together, however, a minute picture of the home-life of a strenuous and memorable woman, and supplies a painstaking account of most of her descendants down to our own generation.

At the same time, it would be flattery to speak very highly of the literary skill displayed by her memoirist. To say sooth, the style of this lady seldom rises above that of an average newspaper, while her comments too frequently border on commonplace. As to her English, the aid of a critic, though ever so elementary, would have forbidden her the use of expressions such as "in arrears," "live-long banishment," "demise" where simple "death" is intended, and "make an absence" instead of "be absent." But these and the like blemishes are no worse than are, unfortunately, those that sully the pages of nineteen in twenty of all the books which our over-publishing age produces.

The Literature of Local Institutions. By Geo. Laurence Gomme, F. S. A. London: Elliot Stock. 1886. Pp. viii, 248.

This work, which forms vol. iii of "The Book-Lover's Library," edited by H. B. Wheatley, relates wholly to Great Britain, and not, as one might infer from the title, to local institutions generally. It is divided into seven sections: 1, Local Government generally; 2, The Shire; 3, The Hundred; 4, Municipal Government; 5, Gilds; 6, The Manor; 7, The Township and Parish. Each of these sections is prefaced by an historical account of the institution with which it deals. This is followed by a classified list of books, pamphlets, and essays relating to the subject. But more space is devoted to the historical prefaces than to the bibliographical portions of the work. Most of the titles in the latter were printed in the *Bibliographer* in 1882.

Mr. Gomme aims to make his book bear, as far as possible, upon the practical question of reform of local government, with which the current thought of England is so much occupied. In his opinion, the study of the history of local institutions shows "that most of the powers now proposed to be conferred as a blessing at the hands of this or that political party already exist, but have been lying dormant and unused as portions of a social system which has become obsolete" (p. 8).

"The time has now undoubtedly arrived when Englishmen must look to their local institutions, and the first step in the way of true reform is to gather up all the deep lessons of the past; and if the Government, before attempting legislation, were to first examine by a competent machinery what is left of the old system, what has been swept away by forces inimical, and what has decayed through natural disease, they would obtain results satisfactory to future development. . . . A reform based upon what is best in the past, and upon the largest and widest extension of thought for the future, is the safest way to progress" (pp. 234–235).

The following compliment is incidentally paid to American scholarship:

"But by far the most interesting studies are those which have lately been engaging the attention of American students. The Johns Hopkins

University has instituted a series of studies on historical and political science, under the able editorship of Mr. Herbert B. Adams. In this series have been investigated the local institutions of Virginia and Maryland; dealing with the land system, the hundred, the parish, the county, and the town. From these very important books are to be gained some most instructive lessons as to the application of the principles of the local institutions of England in the seventeenth century to an entirely new country and settlement; and it is greatly to be hoped that the University authorities, more alive to the requirements of the age than the authorities in England, will pursue these studies, until they have exhausted the rich and varied evidence which must be forthcoming" (pp. 13-14).

The prefaces to the various sections differ in value; none of them places new results before the reader, and all of them dwell too much upon the archaic aspects of the subjects discussed. A general sketch of the history of each institution would have been far better than a vague exposition of origins, with which the author's attention is almost wholly absorbed. It would have been still more relevant to have carefully indicated the relative importance of the chief authorities enumerated, so as to enable the casual reader to discriminate between them. As it is, the reader is left to grope his way through the maze as best he may. The words of explanation which the author gives are in great part misleading. From the reference on page 96, for example, to Mr. Fletcher's valuable 'Statistics of the Municipal Institutions of English Towns,' one might easily be misled to regard it as the best treatise on English municipal history. Nothing is said in this preface of the insidious Brady, the conscientious Madox, the ponderously learned but fallacious Merewhether and Stephens, and the instructive but not very profound Thompson, who, with all their defects, are the leading authorities on the subject. Equally misleading are Mr. Gomme's words concerning the "scholarly," "important and famous" essay of Dr. Brentano, in the preface to the section on gilds (p. 152). The truth is, that Brentano has done more to falsify than to elucidate the history of gilds, though Englishmen will persist in regarding him as an infallible guide.

The bibliographical portions of Mr. Gomme's book must be regarded as valuable for the same reason that a few drops of water are highly prized by the thirsty traveller in the desert. Although the author evidently considers most of his lists "fairly complete," it may be asserted with confidence that, without at all departing from the narrow limits to which he has confined himself, the number of titles may easily be doubled. The omission of such prime authorities as the 'Rotuli Chartarum' (1837), the 'Chartæ, Privilegia, etc., Hiberniæ' (Record Commission), Gale's 'Inquiry into the Corporate System of Ireland' (1834), the Records of the Convention of the Royal Burghs of Scotland (5 vols, 1856–1885), and Norton's 'Commentaries on the History, Constitution, etc., of London' (3d edition, 1869), indicates a superficial knowledge of the subject or inexcusable negligence in the execution of the work. Subjoined is a small fraction of a long list of flagrant omissions: Corbett, 'Inquiry into Corporate Counties of England and Wales,' 1826; Maurer, 'Anglo-Saxon Mark Courts,' 1855; Rathbone, Pell, and Montague, 'Local Government,' 1885; Cruden, 'Observations on Municipal Bodies,' 1826; 'Rules, Orders, etc., of the Lord Lieutenant and Council of Ireland,' 1672; Black, 'Privileges of the Royal Burrows,' 1707; 'Constitution of the Royal Burghs,' 1818; 'Sets or Constitutions of Royal Burghs,' 1787; 'Schedule of the Records of Bedford,' 1883; 'Charters of Ayr,' 1883; Wyatt, 'Memoirs of the Corporation of Bedford,' 1852; Cudworth, 'Corporation of Bradford,' 1881; Seyer, 'Charters of Bristol,' 1812; Ferguson, 'Carlisle and its Corporation,' 1882; Daniel-Tyssen, 'Charters, etc, of Carmarthen,' 1878; Caulfield, 'Council Books of Cork, Kinsale, and Youghal,' 1878-1879; Sheardown, 'Corporation of Doncaster,' 1862; Beatts, 'Municipal History of Dundee,' 1878; 'Municipal Constitution of Edinburgh,' 1826; 'The Domesday of Ipswich,' vol. ii of the Black Book of the Admiralty (Rolls Series); Paul, 'Origin of Leicester Corporation,' 1885; 'Civitas Lincolnia,' 1870; Earwaker, 'Court Leet Records of Manchester,' 1884-1886; Picton, 'Selections from Liverpool Archives,' 1883; Renwick, 'Stirling Charters,' 1884; 'Extracts from Edinburgh Records' (1573-1589), 1882; 'Glasgow Records' (1630-1662), 1881; Salvioni, 'Le Gilde Inglesi,' 1883; Abram, 'Rolls of the Preston Guilds Merchant,' 1884; Crawfurd, 'Trades-House of Glasgow,' 1858; Hill, 'Merchants-House of Glasgow,' 1866; Oliver, 'Holy Trinity Guild of Sleaford,' 1837; North, 'Accounts of Church Wardens of St. Martin's, Leicester,' 1884.

The omission of parts of works or later editions (for example, the Ninth and Tenth Reports of the Historical MS. Commission, 1883-1885; Bunce, 'Corporation of Birmingham,' vol. ii, 1885); the assertion on page viii that Gneist's 'Geschichte, etc., der englischen Communalverfassung' has been translated into English; the reduplication of a rubric, such as Kings Lynn and Lynn Regis (pp. 121, 134); the repetition of the same title almost within the bounds of a single page (Corpus Christi Gild of York, pp. 164-165), not to mention many minor errors, must be characterized as extremely shiftless workmanship. Though the book, with all its defects, is useful, it is to be regretted that an author who has made substantial contributions to the literature of municipal history and folk-lore, has not given us a better guide to the literature of the local institutions of Great Britain.

The Family: An Historical and Social Study. By Charles Franklin Thwing and Carrie F. Butler Thwing. Boston: Lee & Shepard. 1886.

PERHAPS the greatest lack of this book is a preface. This would not be denied even by one generally as impatient as Bacon of "prefaces and passages and excusations," for the merit of a compilation of this sort depends upon the end aimed at and the method followed. These are not revealed to us by the authors, and, unfortunately, the book does not speak clearly for itself. All of the historical matter of the introductory chapters is easily accessible elsewhere—has, in fact, already been popularized; the social statistics of the closing chapters can be found in other publications. Does the book exist, then, for the sake of the intermediate chapters—the hortatory and least satisfactory part of the work? Is its justification found in the bringing together under the name 'The Family' what has before been published under the general title, Sociology, or specifically under Marriage and Divorce? One may acknowledge industry in the "Study," but still he asks, Why this public recitation? There should have been a preface to tell us. A reader could also wish that the authors had made known their ideas on the proper use of authorities. We had supposed that the rule for which Niebuhr so strenuously contended was now established—the rule, namely, that citations from original authorities encountered in any writer, even if separately verified, should always be credited to the author first using them. The book before us follows this rule in two or three instances; Rev. and Mrs. Thwing should have been content to range themselves with Niebuhr in avoiding a show of cheap learning, and should have acknowledged many more of their quotations.

We note a few cases of careless writing. "Ruminants" and "ungulates" are used as if they were mutually exclusive terms (p. 12). "Utensils and instruments which are for use" is not a happy combination, and what is "the Semitic language" referred to in the same sentence (p. 16)? The elaborate definition of marriage on page 100 is palpably ungrammatical. A paragraph on Socialism (p. 108) has sentences which convey exactly the reverse of the meaning intended. The equality of husband and wife is argued for on the ground, among others, of the teaching of Scripture. But the witness is immediately discredited as follows: "If one holds to the literal, verbal inspiration of the Scriptures, he is forced to believe in the moral and intellectual inferiority of woman, and in her subordination to her husband in the marriage relation" (p. 117).

Our Government: How it Grew, What it Does, and How It Does it. By Jesse Macy, A.M., Professor of History and Political Science in Iowa College. Boston: Ginn & Co. 1886. 12mo, pp. 238.

BY "our Government" Prof. Macy understands the entire political system under which we live—that part of it which lies nearest to us, as well as that which is largest and most remote; and his method of introducing the pupil to the knowledge of this system of government is by beginning with that which is nearest to him, and passing from this to what is more general. After a short introductory Part i, of two chapters, we have Part ii, "Matters chiefly local"—education, highways, care of poor, etc. Part iii treats of the administration of justice; Part iv, of Federal executive business; Part v, of Legislation; Part vi, of Constitutions; a copy of the United States Constitution coming at the end. We think it would have been well to give a compendious commentary upon the several articles of this document in systematic order; this would form a suitable supplement to the book, and need not have added much to its bulk.

We have no doubt that this is the right method for our schools. It not only affords a more intelligible introduction to the systematic study of the Constitution, but impresses upon the mind of the pupil the importance of these institutions of local self-government which the exclusive study of the Federal Constitution is apt to leave out of sight. And the freshness of treatment seen in this arrangement is carried into all parts of the book. The pupil is constantly encouraged to look at government as something that concerns him nearly and individually, and not as a distant and incomprehensible power; as a living organism of which he is a part, and not as an artificial and complicated mechanism. The work has the defect of its method—that the knowledge obtained is very vital, but not systematic enough; but this defect would be removed, without destroying its present merit, by such an addition as we have suggested. The book, in its plan and its details, deserves high commendation, and ought to come largely into use in our schools.

The Ivory King, a Popular History of the Elephant and its Allies. By Charles Frederick Holder. 8vo, xvi, 330 pp. Chas. Scribner's Sons. 1886. Illustrated.

THE author of this volume is familiarly known from various popular articles on the peculiarities of birds and mammals in the magazines; in which, and especially in the illustrations of which, exaggeration and fancy have played so prominent a part that it was with some apprehension we proceeded to the examination of the present more pretentious work. Fortunately, the author seems to have better realized his responsibilities, and though he has given us a treatise not

remarkable for thoroughness and precision, it is at least a fairly accurate account of the living species of elephant and some of their extinct relatives, written in a popular and easy style and tolerably well illustrated.

The elephant is so remarkable an animal as to afford abundant material for a book of this sort, and the writer has brought together a great deal which has existed in a scattered form and will be practically new to most of his readers. The most praiseworthy feature of the narrative is the full account of the use of the elephant in classical times and in the wars of Oriental nations. By giving precision to his citations through the medium of references to their source, the book would have acquired a more permanent value, and its usefulness to the casual reader would have been undiminished. As it is, there is a long but extremely imperfect and fragmentary collection of references, not even by courtesy to be called a bibliography, but which might assist a good guesser to prepare a bibliography. The author, in his preface, disclaims any scientific character for his work, but he cannot, if he would, divest himself of scientific responsibility for accuracy of statement. On the whole there is no great reason to complain. The reference to elephant sculptures at Palenque should have been omitted, as it is now definitively decided that there are none, and the figures representing them were due to a misconception of the draughtsman. It should also have been stated that the so-called "elephant pipes," whether genuine or not, have been the subject of much doubt and controversy. On page 262 we read that a party of elephants proceeded at the rate of "one or two yards an hour," which from the context is evidently an error. In spite of these and other points to which criticism might be devoted with success, if not with profit, the book contains much that will amuse and interest most readers and will not lead them greatly astray.

We have devoted a more serious criticism to this work than perhaps its character justifies, for the reason that until very recently the place in literature which Mr. Holder seems to have in view has been almost vacant. Ernest Ingersoll and one or two others have shown that graceful and attractive prose on subjects supposed to be familiar only to students and specialists may be sure of an appreciative audience, none the less because it is scientifically accurate. Every additional writer in this field will for a long time have golden opportunities, and eventually be of service to science and literature in the exact proportion in which he is faithful to both. We have thought that Mr. Holder showed signs of promise in this direction, in spite of some extravagances, and have felt that it was time he addressed himself more seriously to his work. The 'Ivory King' shows a certain step in advance. We hope that the author's next contribution to literature may be even more worthy of his abilities.

Ben Jonson. By John Addington Symonds. [English Worthies.] D. Appleton & Co. 1886.

MR. SYMONDS refers in a foot-note in this volume to his larger work on 'Shakspere's Predecessor,' and says he has drawn largely upon it, and "frequently borrowed from it textually in the composition of this sketch." He has, in other words, preferred to repeat rather than to rewrite some portions of what he thinks of Jonson. The frank avowal of this method of composition forestalls objection. Certainly if a man has once criticised and placed an author, he need not be forced to paraphrase the estimate; there would be no use for such labor. The book, however, necessarily lacks freshness. The 'Life' of Ben Jonson, as Mr. Symonds conceived it, is mainly a criticism of his works; the only new item incorporated into the narrative is the indictment, published some months ago in the *Athenæum*, which shows that Jonson pleaded his clergy to escape the gallows, and was branded upon the thumb according to the law; but the details of this duel, or assault, or whatever it was for which he was put in such grave peril, are still obscure. The remainder of his life receives no new light, and in lieu of narrative we are treated to much criticism of a rather formal kind. Mr. Symonds is perhaps too accustomed to the liberty that a writer of unlimited large octavos enjoys, to move easily within the narrow scope of a short monograph; and, besides that, is too much imbued with the historic taste, too much interested in general social movements and in types of art, to write a vivid personal sketch for its own sake. He does not, however, contribute anything specially novel, with all his elaborate analysis and ready rhetoric, even in the department of criticism of the general order. The elements of Ben Jonson's art are very simple, and so is his character. Mr. Symonds dwells very strongly on the influence of his poet on the verse of the next generation in Herrick and others; and the clearness with which he brings this out is perhaps the most valuable part of his book. But this way of writing the lives of the worthies by padding the scanty record of their actual selves and doings by means of lengthy criticism of their works, has little to recommend it.

Familiar Talks on Some of Shakspeare's Comedies. By Elizabeth Wormeley Latimer. Boston: Roberts Bros. 1886.

THESE essays are no more than they pretend to be—preliminary talks upon nine of Shakspere's plays to make the understanding of them easier for a Women's Reading Club. For this purpose they were written out, and they were delivered, the authoress tells us, "to a large and appreciative class of ladies." There are touches in them, we should say, which could hardly fail to interest a more extended circle. Naturally the body of the matter is made up of description of the action, with long quotations, and of some criticism under the guiding star of Dowden, Mrs. Jameson, and other lights of the popular study of Shakspere; but there is, too, a vein of originality in the volume, a personal element, with judgments, antipathies, and observations of a lively nature. We confess to a sensation of "pricking in the thumbs" on noticing in the preface with what an "irreverent hand" the authoress made ready to dismiss Virgil from among the six great poets, and did send Lucan, Horace, and Ovid packing without ado; and in the midst of the volume it was not without a shock that we learned that the story of "As You Like It" was taken from "a pastoral romance by one Lodge," while the whole conduct of the essay upon the "Taming of the Shrew," which is to show that *Katharina* was a saint bedevilled by "the sly Bianca" and her other kindred, and *Petruchio* the prince of gentlemen, forced us to admit privately that the authoress was not free from the modern temptation to perversity in criticism.

But the frank avowals of likes and dislikes disarmed us of the critical temper, and frequent feminine "asides" engaged our amiable interest. What a light it throws on Shakspere's awkward masculinity (fortunately natural in this place) to know that when *Benedick* is being gulled by the *Prince*, *Claudio*, and *Leonato*, "these three men set about their work so unskilfully that any *woman* bidden in the arbor would have known at once that, as children say, 'they were making it up as they went along.'" How delightful must this confidence have been, apropos of *Orsino's* lax love-making—"Some of us must have known how hard it is to spur up one who hesitates and fears, to be an active lover"; and this bit of cold wisdom, with regard to *Posthumus* and *Imogen*—"There is a proneness to jealousy even in good men which does not exist in a good woman." The paper upon "The Merchant of Venice" is, perhaps, the most variously original of all. There one is told that *Dr. Bellario* probably taught *Portia* law, "at least the rudiments, which every woman who owns property ought to understand"; and that *Antonio's* sadness was occasioned "in part by a sense of mercantile responsibility"—a phrase which seems to be elucidated by the observation, "It makes one almost as sad as *Antonio* to see how rich men are 'put upon' in this country; every one who has a hobby," etc., to the end of the woes of the modern millionaire. In analysis, or insight without analysis, what Teutonic eye even ever pierced deeper than this?—"I fancied I could detect Germanisms, as if Shakspere had studied his *Shylock* from some German Jew"; and what remoulder of the world after his or her own heart ever expressed a more surprising wish than is here made for *Portia*?—"As for that sweet lady, may her married life have been a happy one; but I wish she had married *Antonio!*" These are some of the curious trifles of a volume which may serve a useful end in its own originally humble sphere.

BOOKS OF THE WEEK.

Aster, R. Americans in Rome. A Novel. James R. Barnett & Co.
Bancroft, H. H. The History of the Pacific Coast. Vol. xxiv. Oregon, vol. i, 1834-1848. San Francisco: The History Co.
Benjamin, S. G. W. Persia and the Persians. Illustrated. Boston: Ticknor & Co. $5.00.
Bishop, W. H. Detmold: A Romance. Boston: Houghton, Mifflin & Co. 50 cents.
Bloxam, Dr. J. R. Magdalen College and King James II. 1686-1688. A Series of Documents, collected and edited. Oxford: Clarendon Press.
Briggs, Prof. C. A. Messianic Prophecy. Charles Scribner's Sons. $2.50.
Cameron, Com. V. L. The Cruise of the *Black Prince*, Privateer. Belford, Clarke & Co.
Clark, Prof. J. B. The Philosophy of Wealth: Economic Principles Newly Formulated. Boston: Ginn & Co. $1.10.
Corrie, Theodora. In Scorn of Consequence; or, My Brother's Keeper. Harper's Handy Series. 25 cents.
Donaldson, F., Jr. Two Comedies: An Ill Wind, An Abject Apology. Boston: Cupples, Upham & Co. $1.00.
Don Valdes, A. P. The Marquis of Peñalta: A Realistic Social Novel. Thomas Y. Crowell. $1.50.
Elder, C. Man and Labor. Chicago: Belford, Clarke & Co.
Elliott, H. W. The Arctic Province: Alaska and the Seal Islands. Illustrated. Charles Scribner's Sons. $4.50.
Gilliat, E. Forest Outlaws, or Saint Hugh and the King. Illustrated. G. P. Putnam's Sons. $2.00.
Gladden, Rev. W. Applied Christianity: Moral Aspects of Social Questions. Boston: Houghton, Mifflin & Co. $1.50.
Handford, T. W. The Sands of Time: A Book of Birthday Gems. Chicago: W. H. Harrison & Co.
Hawthorne, J. Confessions and Criticisms. Boston: Ticknor & Co. $1.25.
Healy, Edith. Painters of the Italian Renaissance. Illustrated. Chicago: Belford, Clarke & Co. $2.50.
Helps to Belief. Miracles; Creation. 2 vols. Cassell & Co.
History of the United States, in Chronological Order, from A. D. 432 to the Present Time. Chicago: Belford, Clarke & Co.
James, H. The Princess Casamassima: A Novel. Macmillan & Co. $1.75.
Keleher, C. W. Romish Priests' Recent Outrages. Chicago: Craig & Barlow.
Larcom, Lucy. Beckonings for Every Day: A Calendar of Thought. Boston: Houghton, Mifflin & Co. $1.25.
Linton, Mrs. E. Lynn. Millionaire and Miser: A Novel. Harper's Franklin Square Library. 20 cents.
Lorimer, Dr. G. C. Studies in Social Life. Chicago: Belford, Clarke & Co.
Malot, H. Zyte. B. Westermann & Co.
Mitchell, S. W. Roland Blake. Boston: Houghton, Mifflin & Co. $1.25.
Navigation Laws of the United States. Washington: Bureau of Navigation.
Outing: An Illustrated Monthly Magazine of Recreation. Vol. viii. April to September, 1886. The Outing Co.
Owen, Catherine. Ten Dollars Enough: Keeping House Well on Ten Dollars a Week. Boston: Houghton, Mifflin & Co. $1.00.
Patterson, C. S. Railway Accident Law. The Liability of Railways for Injury to the Person. Philadelphia: T. and J. W. Johnson & Co.
Peabody, Rev. A. P. Cicero's Tusculan Disputations. Boston: Little, Brown & Co.
Perry, T. S. The Evolution of the Snob. Boston: Ticknor & Co. $1.00.
Postgate, J. W. Two Women in Black: The Marvellous Career of a Noted Forger. Chicago: Belford, Clarke & Co.
Ritchie, F. English Grammar and Analysis. London: Rivingtons.
Shorthouse, J. H. Sir Percival. Macmillan & Co. $1.00.
Stinde, J. The Buchholz Family: Sketches of Berlin Life. Charles Scribner's Sons. $1.25.
Swift, Dean. Gulliver's Travels. Boston: Ginn & Co. 35 cents.
Talmage, Rev. T. De W. Shots on Sundry Targets. E. B. Treat. $2.00.
Tchédrine, N. Berlin et Paris. 2d ed. Paris: Louis Westhausser.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 18, 1886.

The Week.

THE end of the suit instituted by the Government to find out whether the Bell Telephone Company had not obtained its patents by fraud, is most melancholy. The origin of the proceedings has been clouded with scandal, their expense has been great, and now the Ohio Circuit Court has dismissed the bill for want of jurisdiction. It would appear that the suit ought to have been brought in Massachusetts, if anywhere. But the promoters of the suit think they would not get justice in Massachusetts, because there the telephone stock is very extensively held. It is said that the leading points in the case will be passed on shortly by the Supreme Court in other telephone cases now pending before that tribunal, but the Pan-Electric people are not cheered up by this, because they say "collusion" has presided over the making up of the issues in those cases. They are five in number and their records fill 25,000 printed octavo pages, and they are to be all argued together.

The disastrous ending of the strike at the stock-yards in Chicago is calculated to weaken the power of the Knights of Labor, very much as the failure of the Southwestern strike did last spring. The growth of the organization, in its earlier stages, proceeded upon the crude notion that if all wage-workers were banded together under one leadership, they could compel all employers to do whatever might be required of them. It would only be necessary for the central organization to support the demands of the local assemblies by contributing funds to the support of strikers, and by extensive boycotting of the obnoxious employers, in order to win victories all along the line. The failure of the first large experiment was attributed to the disagreement between district assemblies represented by Martin Irons, and the Executive Committee represented by Mr. Powderly. But this internal trouble had an origin and *raison d'être* quite beyond the control of Mr. Powderly or anybody else. It sprang from the fact that men out of work need to be supported, and that the wages lost by them must be made good by assessments levied upon others. This grinding necessity operated to restrict and curtail the efficacy of the boycott as ancillary to the strike, because every new lot of workmen "ordered out" brought a new lot of families on the general treasury, and operated in fact to reduce the wages of all Knights in the United States. Mr. Powderly, seeing all this in the beginning, was instinctively opposed to the strike, and used all his influence to stop it, going so far as to order the men back to work. But Knighthood in the Southwest had got its blood up and would not go back. How the final catastrophe came we need not now repeat. The Chicago stock-yards strike has yielded to the same forces which crushed the Southwestern strike, but fortunately has not been accompanied by bloodshed. The necessity of supporting 10,000 men and their families led or rather compelled Mr. Powderly to order the men back, and they obeyed because they could not do otherwise. All this goes to show the hollowness of the order, and tends to strengthen the trades unions as separate organizations.

The Knights who are now trying to return to work in the Chicago packing establishments, are asked by their former employers to sign, as a condition of being taken back, an agreement not to quit work in future except upon two weeks' notice, under penalty of forfeiting a certain sum of money, ranging from $5 to $25, according to wages received, which must be deposited with the employers as security. This deposit is to be reserved from the wages of the first three weeks' work under the new agreement. On their side the employers agree to retain the men in their service only so long as their work is satisfactory. In other words, they insist upon controlling their own business, and upon a guarantee that it shall not be stopped or thrown into confusion without warning or indemnity, upon the orders of a secret society which has no interest in it. It is said that none of the strikers have objected to signing the agreement, and the probability is that they are glad of the opportunity which it gives of putting themselves beyond the tyrannical control of the Walking Delegate, and the various other local leaders of the Knights of the Martin Irons variety, who order strikes for the sole purpose of enriching themselves.

The *Sun* calls attention to the gradual evolution of the platform of the Labor party in this city. The party went into the George canvass with no principle but the taxation of land to its full value. After the election it demanded Government ownership of railroads and telegraphs. The Executive Committee now declares that its efforts to "raise wages and secure leisure" make no progress, "owing to the existence of an impoverished mass forced by their necessities to accept work on any terms." It therefore now denounces as "the great wrong which curses poverty," the private ownership of land. The *Sun*, in answer to this, points out truly that within twenty miles of New York there is a large quantity of land which can be bought for a mere trifle, but on which no one cares to settle. It might have added that within 100 miles of New York there are large areas of land which anybody can have for cultivation who will pay the taxes on them, and that within 100 miles of Boston tens of thousands of acres can be had on the same terms, with no takers. In fact, one of the most striking phenomena of modern times is the dislike both of the poor and the discontented to get their living by farming. They prefer to crowd into the cities for a life of "luck," and when they do not succeed they take it out in abuse of the capitalists. There are probably not ten men in the Central Labor Union who could be induced to accept a farm to morrow if they had to live on it and out of it, with no "hall" to go to in the evenings, and nobody to strike against.

Col. Bob Ingersoll took up the labor problem in a lecture on Sunday night and remarked, among other things, if correctly reported, that—

> "There is something wrong in every government where they who do the most have the least; where idleness is burdened with wealth, and industry pinched with famine; where honesty wears rags, and rascality a robe; where the loving and tender eat a crust, and where the infamous sit at banquets."

We think it very likely this is true. There is a fearful amount of wrong in the world in every direction. But we did not need an orator of Col. Ingersoll's powers to tell us this. Denis Kearney could do it and, indeed, did it. What we need to know is what is this wrong, and how we are to cure it. By what legislative process can we give honesty proper clothing, and take the robes away from rascality, give the loving and tender good square meals, and put the infamous on short commons? The country is swarming with orators and writers telling us "there is a wrong somewhere," or else Jones and Brown would not be so short of money, and Smith and Black would not have so much. We respectfully submit that we have had enough of this talk, and it works infinite mischief. What we need now is workable plans of preventing poverty and failure in life.

The way the Blaine newspapers all fall into line against Mr. Lowell in the Hawthorne controversy, since the complimentary allusions to President Cleveland in the Harvard address, is very amusing. They were, before the address generally disposed to consider Mr. Lowell the victim of a grievous wrong, and Mr. Hawthorne that curious but well-known thing, "a disgrace to journalism." But, since the address, they are one by one reaching the sorrowful conclusion that Hawthorne has been telling the truth and Lowell lying all along. Some of them—and notably the most disreputable of the lot, the Boston *Journal*—ascribe their conversion to Hawthorne's last letter, which they maintain contains fresh evidence. The truth is, there is not one line or word of fresh matter in it. He simply goes over the old ground, and mentions a letter he wrote to Lowell about the articles, and Lowell's letter refusing to write articles, and Hawthorne's telegram saying he was coming to see him. His defence still rests, as it has always rested, on his own story. He does add, as if it were corroborative proof, that he told people when he got back to Boston, that he had successfully interviewed Lowell, but how this concludes Lowell he does not explain. As evidence, it is very like the hole the woodchuck came out of as proof that a certain man had shot the animal.

The offence taken by Dr. McCosh at a certain allusion to Princeton in Dr. Holmes's poem at the Harvard celebration last week, has evidently a good deal of material in it for enterprising reporters to "work up," and has called forth explanations both from Dr. Holmes and President Eliot. But

to the impartial eye it certainly seems a marked case of much ado about nothing. It was doubtless an error of judgment for Dr. Holmes to put into his poem any allusions to other colleges that were not complimentary, or were capable of being considered uncomplimentary; but then it is hard to glorify one college in verse without seeming in some degree to depreciate some others, and poets are allowed great license of all kinds, and Dr. Holmes is an old gentleman who lives a good deal in the past, when controversies were raging which are now very dead. Moreover, insults and slights do not exist, and are not by sensible men taken to exist, unless they are certainly intended, and Dr. McCosh surely could not believe that he was asked to the celebration in order that he might be made the victim of a deliberate slight. There is, too, a certain want of dignity in being easily offended, which the representative of a great institution ought to bear in mind. It seems to us that Dr. McCosh owed it to Princeton not to be driven away from the dinner and out of Cambridge by anything which anybody could put into a few lines of a poem. It is the young and insignificant, usually, who are most touchy. Princeton is a great college, for which Dr. McCosh has done great things. He cannot possibly suppose that people will forget this because Dr. Holmes said that some of Princeton's light was in the beginning reflected from Harvard, and spoke disrespectfully of Calvinism.

The adverse report which the United States Attorney for this district, Mr. Walker, is said to have made upon the application to the President for the pardon of James D. Fish, will meet the approval of every right-thinking man. It is said that he goes over the testimony on the trial, and shows that every opportunity was given to Fish to establish his innocence, and that he completely failed to do this; that if Fish was guilty then, he is guilty now, and being guilty he ought to serve out his term of punishment; and that he pays slight attention to the plea of failing health, which is the latest to be advanced in favor of a pardon. There is no reason why that should be considered in his case any more than it is in that of any other convict. He is undoubtedly suffering from his confinement, but that is a part of the penalty for his crimes. There was nothing in Fish's case as it was proved in court to entitle him to sympathy, or to give ground for sentimental pleas in favor of his pardon now. The fact that a long list of respectable and in some instances honored names was secured in favor of a pardon, is a sad evidence of the muddled moral sense which is found in many business circles. This man betrayed his trust as a president of a bank, and yet retired bank presidents and business men put their names to the petition to have him relieved from the penalty of his dishonesty.

Full returns from the recent elections show how little foundation there is for the Republican expectation of a break in the solid South in 1888. In North Carolina there proves to be a Democratic majority of probably 15,000 on the State ticket, and the Republican gains in the Legislature were due to a "still hunt" by that party and to apathy on the part of the Democrats, so that there is no possible ground for expectation that the State will fail to go Democratic on a full vote two years hence. In Virginia the Republicans have simply repeated their victory of 1882, when on a small vote like this year's they elected the same number of Congressmen as now; but there is no reason to doubt that on a full vote the Democrats will carry the State, as they did for the Legislature in 1883 and for President in 1884. The Republican gains in the South this year have plainly been the result of accident, and the idea of counting any Southern State as "doubtful" in 1888 is absurd.

That the President's policy has strengthened the Democratic party is clearly proved by the official returns from Missouri. In 84 of 114 counties the Democratic plurality on the State ticket is 41,779, against 28,650 in the same counties in 1884, which is a remarkable gain. This gain is the more striking from the fact that the spoilsmen have been claiming that Missouri was a State in which the President's policy was especially unpopular, and in which the Democrats were so thoroughly disgusted that many of them would not even take the trouble to vote this year. An examination of the returns in detail shows the noteworthy fact that in the Democratic "strongholds," where the discontent has been represented as strongest, the party makes a much better showing than in the election of 1884. The figures for a dozen of the strongest Democratic counties show that the result of Cleveland's policy there has been to increase the Democratic majority from the 15,000 of a Presidential contest to 18,000 this year; the Democratic vote showing scarcely any of the falling off to be expected in a less exciting campaign and which is so marked in the Republican vote. It may be added that the same thing is shown by an examination of the vote in the Republican and close counties, so that no doubt is left that the Democratic party is distinctly stronger in Missouri by reason of the President's course.

The official vote in the Twelfth Indiana Congressional District affords conclusive evidence that it was the Democratic spoilsmen, and not President Cleveland, to whom the "rebuke" involved in Democratic losses at the recent election was administered. The vote of the district in the elections of 1884 and 1886 contrasts thus:

	Dem.	Rep.	Pro. and Scatter.	Total
1884..	19,507	16,957	674	37,138
1886..	15,416	17,900	1,162	34,478

The Twelfth District is normally a strongly Democratic district, and gave over 2,500 plurality for Congressman Lowry in 1884. But Lowry proved so shameless a spoilsman that the better class of Democrats revolted against his reëlection this year, and the result was his defeat by about 2,500 plurality. It will be observed that, although the total poll was much smaller a fortnight ago than in 1884, the Republican total was nearly 1,000 larger. This proves that hosts of Democrats who supported the Democratic candidate two years ago abandoned him this year, many of them voting directly for the Republican candidate, and the sole reason for this revolt was the fact that Lowry was a thorough-going spoilsman and a bitter opponent of the President's policy. On the issue of sustaining Mr. Cleveland it is obvious that, instead of 2,500 Republican plurality, the district would have given at the very least its old 2,500 Democratic plurality.

An examination of the complete official vote of Ohio reveals several interesting facts. We give it together with that of the two preceding elections:

	Rep.	Dem.	Pro.	G'b'k.
1886	240,895	329,314	28,657	1,902
1885	359,281	341,830	28,081	2,001
1884	400,082	368,280	11,069	5,179

It will be seen that during these three years the only vote that has uniformly gained is the Prohibition. The falling off in the Republican vote this year is much greater than in the Democratic. The Republican total is over 18,000 less than it was last year, and over 59,000 less than it was in 1884, while the Democratic total is over 12,000 less than in 1885, and nearly 39,000 less than in 1884. In other words, the Republican loss from last year is over 5 per cent. and from 1884 nearly 15 per cent., while the Democratic loss from last year is only a little more than 3 per cent. and from 1884 a little more than 10 per cent. The Prohibition vote has gained on the large vote of last year, which is a surprise to everybody, since it was generally expected that it would show a falling off. The Greenback or Labor vote appears to be steadily declining.

The "Reading Notice" abuse is growing so rapidly that very little disguise is attempted in the practice of it. It is invading all departments of the newspaper, and we should think would greatly confuse readers who are not familiar with it. For example, one New York paper published at the head of the first column of its eighth page on Saturday an article about the Custom-house and the Collector's methods. Immediately following this it published, in similar type and with the usual news style of heading, an article entitled "What a Big Tailoring House is Doing." Following this in turn was an article on the American Secular Union. Now, when the unsuspecting reader had finished the first article, which contained some sharp comments upon Custom-house methods, and, beginning upon the second, read that a tailor, name and address given, would "make a pair of trousers or a whole business suit between trains," or, "if you run in town some morning, will take your measure and furnish you with a 'claw-hammer' and doeskin trousers complete in time for calling or going to the opera in the evening," what was that unsuspecting reader to think? If he concluded that the second article was an advertisement, disguised as news, why might not the Custom-house article be the same? That sort of thing has been done many a time. The paper which sells its columns to puff a tailor will sell them to abuse a political or social opponent.

If the abuse were confined to the news columns alone, it would be bad enough, for it is then a fraud upon the reader, and a disguised sale of the newspaper's opinions; but it is now trenching upon the critical columns of many newspapers. Any lecturing charlatan who comes along can secure columns of "puffs" in the form of interviews which he pays for at so much a line. In these he is represented in just as flattering a light as

he chooses to draw himself, but the paper puts forth the picture as its own, not his. There are papers (we speak from personal knowledge) which are not merely allowing, but are demanding, pay for friendly preliminary and other notices of artists, even the most deserving. This is the inevitable outcome of the practice. An editor cannot sell one kind of views and give another kind free. The very fact that his so-called critical opinions will command a higher price than his views of tailors, will sooner or later force the former into the market, where they will be for sale at a tariff of their own until the fraud is discovered, when the price will fall to the tailor level.

A British Parliamentary paper has appeared, on the "System of Coöperation in Foreign Countries," compiled from the consular reports under the system which the British Foreign Office has instituted, confessedly in imitation of the reports from our own service under Mr. Cleveland's Adminstration. According to the paper, England remains well ahead of foreign countries in coöperative distribution, but is far behind in coöperative production. In Germany the movement started by Schulze-Delitzsch in 1849 has developed both in the direction of distribution and production. Co-operative stores, or *Consumvereine*, are successful and increasing, and, "as in England, the more developed societies are gradually undertaking the production of their own goods." It is almost amusing to observe that in France, as well as in Belgium and Germany, coöperation has to contend with political theorists who want to "destroy capital." But the chief difficulty of associated production seems to be want of management. This is a difficulty which, as we have often pointed out, will be persistent. Good management must be had, and it must be well paid for, because there is so little of it going that it can always command a high price. It may be believed, however, that supreme good management may be less needed in coöperative enterprises than in private concerns. This would appear from the reports of some schemes started by employers of labor, such as that of Leclaire, the Paris house-painter, who, beginning a workman, turned his business into a coöperative association; of M. Godin, of the well-known *familistère* at Guise; of M. Laroche Joubert, the paper manufacturer, who says that, "given two mills with equal capital, and similar in every respect, if one gives shares of profits to its workpeople, it is bound to beat the other out of the field, as it will have the pick of the workmen." M. Godin reports that the patents invented by the workmen have greatly increased since the co-operative system was applied, although the profits of them go to a common fund. Further facts assembled from the reports of these employers are that coöperative workmen do not ask for a Monday holiday, as do others; that there has been no case of a strike for an increased share in the profits; that the workmen of the "Maison Leclaire" worked fourteen hours a day during a strike without the slightest complaint; and, finally, that in "a silk-dyeing coöperation" during a crisis the members took twenty-five francs a week instead of thirty-six to forty-six, the ordinary price for their labor. The German reports are far less favorable to the principle. Lord Rosebery asked for special replies concerning coöperation applied to agriculture, but that relation seems scarcely to exist.

Those who have most closely studied Mexican politics are the very ones to be guarded in predicting the course of affairs in Mexico, yet we see no reason to modify the opinion, recently expressed in our columns, that most of the talk of a coming Dictatorship in Mexico, telegraphed from Arizona and elsewhere, shows more enterprise than good judgment. A reading of the Mexican press reveals a singular mixture of credulity, ignorance, and recklessness on the part of the news gatherers of the frontier. Some weeks ago, it will be remembered, a Nogales despatch announced the assassination of ex-President Gonzales. Not even the vaguest rumor of such an event appears to have been heard of in Mexico. Then came that self-contradictory telegram, the first on the question of a Dictator, upon which we commented at the time. This was soon followed by a confirmatory despatch, appealing to the authority of the Mexican press. One of the papers cited was an obscure journal of the frontier, of about the rank of the *Eatanswill Gazette*. The other was the *Voz de Méjico*. Now, the latter is the organ of the Church, utterly obscurantist, the determined enemy of democratic institutions; it has apparently seized upon the rumor of a dictatorship and given it currency to support its own frequent prediction of the fall of the republic. To quote it as a high political authority is about the same as it would be to cite the *Tablet* as representing American opinion on the question of common schools. This can be made clear by two lines of evidence. The organs of extreme and uncompromising Liberalism allude to the gossip about a Dictator, regard it as possibly a feeler put forth by the friends of Gen. Diaz, yet generally look upon it as the malicious suggestion of reactionary Clericalism. For example, *El Mefistofeles*, a Liberal newspaper of Leon, says: "Only the papers led by the *Voz de Méjico* are applauding, and already thinking that they see crushed under their feet the Constitution of '57 and the laws of reform." And *El Correo de las Doce* shows its idea of the origin of the rumor when it declares: "Let us have no compromises with this clerical party; it will neither forget its enmities nor appreciate favors. If it does not respect the laws, let it be made to do so by force; if it violates them, let it be severely punished." Then, on the other hand, we find the part of the press which is friendly to the Administration, strongly resenting the suspicion that President Diaz would gladly make himself Dictator. Thus, *El Partido Liberal*, the personal as distinguished from the official organ of the President, recently classed the charge of ambition for despotic power as only one among the many malignant and mendacious accusations brought against Diaz by his enemies.

It may very well be that some of the flattering and superserviceable friends of Gen. Diaz are talking of him as the only man capable of giving Mexico a stable government, and saying that either by a prolonged term of office, or making him eligible for reëlection, or, in case of necessity, proclaiming him as Dictator, he ought to be kept at the head of the nation. But, thus far, the most that can be said is that the Dictatorship has been talked about—just as the sale of Sonora has been talked about, just as the secession of the northern tier of States has been talked about. Probably it will turn out that one was no more to have been expected to take place than the others. The Constitution may be amended so as to prolong the Presidential term of office, or so as to admit the possibility of reëlection. The President has given no authorized expression of his personal views on either of these subjects. But it is far more probable that he is meditating measures of that peaceable sort, that he is employing his spare hours of thought in casting about to find some escape from the enormous financial difficulties which confront his Administration, than that he is desirous of imitating Santa Anna in plotting to obtain the brief glory of a Dictatorship, inevitably followed, as he must know it would be, by disgrace and exile and ignominy.

Count Kálnoky's speech to the Hungarian Delegation last Saturday at Buda-Pesth was called pacific in the telegraphic reports. In a certain sense this is correct. It makes for peace by being sufficiently warlike. It leaves no doubt that England and Italy are ready to coöperate with Austria against Russia if the latter Power should attempt a warlike intervention in Bulgaria, and that Germany is fully in accord with this triple alliance, though not inclined to participate in the action so long as she is not absolutely needed. Kálnoky's references to the attitude of Germany, though couched in diplomatic phraseology, cannot be misunderstood. Germany and Austria-Hungary have their higher interests in common, but each empire has its special ones. "The continuance of each country as a strong, independent Power forms an important interest for both"—in other words, Austria-Hungary is bound to support Germany when the latter's position is seriously threatened by a Franco-Russian alliance, and Germany to aid Austria-Hungary when imperilled by Russia. Germany has no interest of her own in the Bulgarian question, except so far as she is anxious to preserve the peace of Europe. Austria-Hungary's special interest there does not demand Germany's direct action; but this will be called into requisition when the former, worsted in the struggle with her special enemy, is menaced in her existence as "a strong Power." Thus, while repelling Russian invasion on the lower Danube—"lying outside of the sphere" of her German ally—with the help of England and Italy, she could also count on Germany's direct assistance in case Russia should seek a much more important theatre of war in Galicia, where "absolutely united interests are concerned." In the meanwhile neutral Germany would closely watch France, and prevent her from entering the lists as an ally of the Czar and enemy of Italy; that is, without drawing the sword, she would give her ally such aid and comfort as really amounted to active co-operation. Under such circumstances it would be little short of madness for the Czar to throw down the gauntlet to Francis Joseph.

SUMMARY OF THE WEEK'S NEWS

WEDNESDAY, November 10, to TUESDAY, November 16, 1886, inclusive.

DOMESTIC.

THE judges of the United States Circuit Court at Cincinnati on Thursday morning rendered a decision in the celebrated suit of the Government against the American Bell Telephone Company. It is to the effect that the court has no jurisdiction in the case as presented by the Government counsel, and that the Bell Company has no agent in Ohio. As a consequence the suit is thrown out of court without prejudice. The result is understood to be that the suit must now be brought either against the company in Massachusetts, or against the parties who are managing local companies in Ohio.

The Supreme Court of the United States on Monday decided that the Choctaw nation is entitled to judgment for $3,108,708 against the United States for all existing claims.

Second Auditor William A. Day of the Treasury Department, who was known when appointed as a very strong opponent of civil-service reform, says in his annual report: "In my report for 1885 I expressed the opinion that the 'efficiency of the force can be increased and maintained only by the prompt removal of clerks who are incompetent from any cause, by the appointment of active, intelligent, well-educated men, whose honesty and integrity are above suspicion, and by the promotion and encouragement of the most efficient and meritorious.' In consonance with that opinion I have had to recommend the removal of a number of clerks of the classified service, and have selected new men from among those certified for appointment under the civil-service rules. It is but just to say that the civil-service appointees generally appear to be men of intelligence and capacity, who will undoubtedly make excellent clerks as soon as they have acquired the technical knowledge and expertness which can be gained only by experience and practice. The clerks as a body are entitled to commendation for faithfulness and industry."

Postmaster Harrity of Philadelphia has written to the Civil-Service Reform Association of that city asking for an investigation of the charges against him.

Mr. Charles H. Ham, for a dozen years United States Appraiser at Chicago, has been removed, and Mr. Francis A. Hoffman, jr., appointed in his place. Mr. Hoffman is a young lawyer, who stands high in his profession, but who has no expert knowledge as an appraiser. Mr. Ham is a lawyer, who is admitted at the Treasury Department to be one of the best, if not in fact the best appraiser in the United States. Mr. Hoffman is a local Democratic leader. Mr. Ham is a Republican who is not active in politics. The contest for this office has been one of the most noted under this Administration.

Mr. Blaine has published an open letter denying that he sneered at civil-service reform in his recent speeches in Pennsylvania. He says: "In effect I said that the English civil service, which was held up as a model for our own Government by those who left the Republican party two years ago, is now under investigation and apparent condemnation by the English themselves; that the British Ministry have instituted a commission to examine into the alleged abuses, and that Mr. George W. Smalley, apparently agreeing hitherto with the American admirers of the English service, now declares the belief in England to be that the civil service is worse in all the departments of the Government than it was forty years ago. Mr. Smalley gives a somewhat detailed recital of the defects and abuses alleged to exist in the English service—defects and abuses which were never attributed to our own civil service, even by its most merciless censor. My argument implied, and was intended to imply, that the Republican party had been wise in not adopting the English system, with its life tenure and its large pension list, and all the attendant evils which have at last demanded investigation by a ministerial commission."

Joseph S. Miller, Commissioner of Internal Revenue, has submitted his annual report to the Secretary of the Treasury. It is an elaborate document of 115 printed pages. The receipts from all sources of internal-revenue taxation for the fiscal year ended June 30, 1886, were $116,902,869, as compared with $112,421,121 for the year 1885, $121,590,039 for the year 1884, $144,553,344 for the year 1883, and $146,523,273 for the year 1882. The estimated expenses for the next fiscal year amount to $4,236,440, of which $1,900,000 is for salaries and expenses of collectors, $1,950,000 for salaries and expenses of revenue agents, surveyors, gaugers, storekeepers, etc., and $266,440 for salaries of officers and employees of the Commissioner's office. The number of stamps issued during the year was 550,061,029, and their value $135,112,305. The amount of taxes collected from tobacco in the last fiscal year was $27,907,362.

In his annual report of the operations of his office during the past year, Adjt.-Gen. Drum devotes some space to recommendations touching the improvement of the militia. He says: "State encampments, to be of absolute benefit, should at least be of ten days' duration, and, while established at convenient points looking to economy in the concentration of the troops, should be at a sufficient distance from the homes of the members of the command in order to overcome business and social influences which seriously affect efforts at imparting instruction and holding the men in hand for drills, target practice, guard duty, etc. Camps should be divested of every appearance of holiday character. The programme of military exercises should exclude elementary company drills, and the time of the encampment devoted to instruction and practice in skirmish and battalion drills and guard duty. As most of the fighting in the future must be done in open order, a thorough acquaintance with the skirmish drill is of the highest importance."

The Chicago packers decided on Wednesday that they had been too hasty in placing an embargo upon all members of labor organizations who might apply to them for work, and adopted a resolution rescinding the anti-organization resolution, and substituting the following: "While we will not exclude from employment the members of such organizations, we will exercise the right to employ and discharge whom we please, and conduct the business on the ten-hour plan and according to our best interests." The result was, that on Thursday many of the old men applied for work.

Mr. Barry, delegate of the Knights of Labor, on Saturday night ordered the striking Chicago packers and butchers back to work. This was in accordance with orders from Mr. Powderly, who wrote: "The Board instructs you and Carlton to settle by putting the men back at the old hours until the Order of the Knights of Labor takes definite action on the eight-hour question. If the men refuse, take their charters. We must have obedience and discipline." About 10,000 new men are at work, and that number of the old men will therefore be thrown out of employment. The old men quietly applied for work on Monday, and many of them were accepted.

The legality of the boycott is involved for the first time in Massachusetts in a trial, at Plymouth, of Peter McGough of Lynn and Wm. B. O'Keefe of Salem, both prominent Knights of Labor. An indictment against them charges that an agent of Charles Harrington & Co. was in Plymouth on June 16 selling leather, and that the defendants attempted to prevent a man from buying leather of the agent by means of threats of boycotting. Gen. Butler for the defence moved on Wednesday to quash the indictment, citing the destruction of tea in Boston harbor as a precedent for boycotting. Chief-Justice Brigham overruled Gen. Butler's motion for these reasons: "It is a principle well established that every man has a right to choose his own employees, and any interference with that right is unlawful. The right of labor to choose its own employer is no more sacred than that of the employer to buy what and of whom he chooses. It is also a principle that labor has the right to combine for the amelioration of its condition. Any man who undertakes to prevent the manufacturer from buying what or from whom he pleases, interferes with a legal right. So, if a combination of persons be made to interfere with that right, it is an unlawful combination. If the means used for interference are unlawful, there is a combination in every sense of the law. As to what means are unlawful, a combination to prevent one man from using leather made by another is a combination to an unlawful end, and, if effected by threats or intimidation, there may be a conspiracy." The jury in the case disagreed and were discharged.

President McCosh of Princeton has made a public statement, in which he says: "I hasten to express my acceptance of the explanation given by Dr. Holmes, that only two lines of his poem relate to Princeton. I have also to acknowledge the favors shown by Harvard College to me personally in the matter of a degree, and could expect nothing further. But the fact remains, that on the occasion of an important anniversary the good-will shown to other institutions all about us was withheld from Princeton, which I was invited to represent. I acknowledge that Harvard had a right to bestow its honors where it chose, but, surrounded as I am by a body of professors, carrying on original research, and printing their results for the public in books and periodicals, I thought it strange that no notice was taken of our College. I still feel that I had the same right to give expression to my feelings of indignation as Harvard had to withhold the recognition she gave to others."

Archibald Alexander Hodge, D.D., Professor of Didactic and Polemic Theology in Princeton Theological Seminary since 1879, died on Thursday night at the age of sixty-three. Among his published works are: 'Outlines of Theology' (1860, translated into Welsh 1863), 'The Atonement' (1867), 'Commentary on the Confession of Faith' (1869), and 'Presbyterian Doctrine Briefly Stated' (1869). He had been an editor of the *Presbyterian Review*, and most influential in the counsels of his Church.

Judge Alfred Shaw, one of the organizers of the Republican party in the South, died in New Orleans on Monday.

FOREIGN.

The Bulgarian Sobranye on Wednesday formally elected, by acclamation, Prince Waldemar to succeed Alexander on the throne of that country. He is twenty-eight years of age and a son of Christian IX., King of Denmark. He is married to a daughter of the Duc de Chartres. One of his sisters is the Princess of Wales, and another the Empress of Russia, and one of his brothers is King of Greece.

The Bulgarian Regency resigned on Wednesday in order to simplify the withdrawal of Karaveloff. Stambuloff and Mutkuroff will be reëlected. The Bulgarian public received the news of Prince Waldemar's election with coldness, Alexander being the popular choice. Prince Waldemar sent a telegram to the Regents, expressing his grateful sense of the honor conferred upon him by the Sobranye in electing him Prince of Bulgaria. He stated, however, that the decision as to his acceptance rested with his father, the King of Denmark, and that other duties might prevent his assuming the rulership of Bulgaria.

The King of Denmark, in behalf of Prince Waldemar, on Friday sent a telegram to Tirnova expressing thanks for the honor conferred upon his son, but declining upon any condition to allow him to accept the throne.

After the election of Prince Waldemar, the Austrian and German ambassadors at St. Petersburg were instructed by their governments to inquire of Russia the name of the candidate she favored as Prince Alexander's successor. If Russia refused to accept the election of Prince Waldemar or to nominate another candidate, it would be considered that she entertained designs against Bulgarian independence, and in this event England, Germany, Austria, and Italy would arrive at an understanding similar to the one that existed among them at the period of the Berlin Congress.

On Tuesday it was positively announced that Russia had designated Prince Nicholas of Mingrelia as her candidate for the throne of Bulgaria. The other Powers have unanimously approved of him as the successor to Prince Alexander, and have invited Russia to now propose a satisfactory solution of her conflict with the Bulgarian Regency. Prince Nicholas of Mingrelia was born January 4, 1847, and is Colonel and aide-de-camp of the Emperor of Russia. He married in 1874 the Princess Marie, daughter of Alexander Adlerberg, General and Minister of the Imperial Court of Russia, and of the Countess Catharine, *née* Paltavzoff, maid of honor of the Empress.

Count Kálnoky, Minister of Foreign Affairs for the whole Austro-Hungarian Empire, on Saturday made before the Delegations a declaration of the Imperial foreign policy. The tenor of his entire address was pacific. In fact, Count Kálnoky's speech was a reëcho of the sentiments lately expressed by M. Tisza, maintaining the latter's declaration that the peace of Europe was for the present assured.

Count Kálnoky's statement was as follows: Austria's interests in Bulgaria will be the maintenance of treaty rights. It is immaterial how internal affairs in Bulgaria proceed if the essentials of the Berlin Treaty are not infringed. It will be most difficult for Austria to avoid taking action during the present excitement. The importance of Gen. Kaulbars's mission has been greatly overestimated. He has succeeded in making Russian influence felt in a most disagreeable manner, but he has also evoked the sympathy of Europe for the Bulgarian people. Gen. Kaulbars, by the course he has pursued, has attained nothing which is calculated to decide the political existence of Bulgaria. In the meantime, Austria will patiently await events, abiding by the principles embraced in the declaration of Herr Tisza, the Hungarian Prime Minister, which will remain a criterion of policy for a long time to come. If Austria is forced to interfere in order to vindicate the Berlin Treaty, the sympathy and coöperation are assured of all the Powers resolved to protect European treaties.

The London *Standard* says: "The plain English of Count Kálnoky's declaration is that Russia shall not occupy Bulgaria; if she does, she will have to reckon with Austria and England and, in case of need, with Germany." The *Journal de St.-Pétersbourg* regrets the tone of Kálnoky's speech, and says: "Count Kálnoky explains Austria's views; but we have yet to learn how it is proposed to reconcile those views with an exchange of ideas calculated to produce accord, and with Russia's special position arising from the sacrifices she has made for Bulgaria. These questions belong to diplomacy, and concerning them we abstain from pronouncing judgment, in order to avoid envenoming the matter."

The *Journal de St.-Pétersbourg* says that the Marquis of Salisbury's speech at the Lord Mayor's banquet makes Austria responsible for the maintenance of the peace of the East. It adds: "The Emperor Francis Joseph's speech to the Delegations in Buda-Pesth on Saturday testified that he was conscious of the responsibility created by the Marquis of Salisbury making British policy dependent upon that of Austria with regard to affairs in the East. It may be hoped that the warlike note sounded in the Guildhall will be lost in the eminently pacific note struck at Buda-Pesth."

An article in the Warsaw *Gazette* has caused a sensation in Vienna. The writer warns Poland that in clinging to Austria-Hungary she leans upon a decaying empire whose miserable collapse is drawing near; that the empire will soon be partitioned as was Poland, amid the exultations of one-half the people, who are now living in grumbling discontent under the Hapsburg sceptre.

The Budget Committee of the Austrian Delegation has ratified the ordinary war budget. The War Minister, in explaining the budget, dwelt upon the speed with which the forces could be mobilized.

It is rumored at Sofia that Russia is mobilizing troops. Gen. Kaulbars has declared the trial of the Burgas plotters null and void. It is reported from Athens that the peasants of Eastern Rumelia are declaring themselves in favor of Russia, and that a civil war is imminent. Count Andrássy, in an interview on Monday with the Emperor Francis Joseph, said that he feared Count Kálnoky's speech before the Delegations on Saturday would induce Russia to fight. The Emperor replied that his opinion was to the contrary, but that while he was passionately opposed to provoking war, he fully approved Count Kálnoky's attitude on the Bulgarian question.

The impending negotiations between Sir William White, British Ambassador to Turkey, and the Porte relative to the Egyptian question will, it is now stated, be completed forthwith according to the instructions given previously to the recent French agitation for evacuation. The basis of the fresh understanding will be the joint report on the condition of Egypt, to be made by Mukhtar Pasha and Sir Henry Drummond Wolff, the special Turkish and English envoys respectively, who have been for some time engaged in the work of investigating Egyptian affairs. Their report will deal with the workings of the present Anglo-Turkish Convention in Egypt, and make suggestions as to how the reforms in the military, civil, and other departments of the Khedive's Government specified in the Convention can best be carried into execution.

Mr. Gladstone publishes a letter inviting the Liberals to reunite. He says: "After reading the Marquis of Salisbury's speech it seems to me that we have arrived at the testing situation for all Liberals really desiring Liberal union. We have no right to demand, when the Government have produced their plans, that they shall pursue an altered course upon them, but we have already tolerated a long delay in the production of those plans. The beginning of new delays in February will virtually be making indefinite the production of the plans. I am unable to understand how anybody promoting or inviting such delay can be said to desire the reunion of the Liberal party."

Lord Salisbury will spend Sunday at Hatfield House, in Hertfordshire, notwithstanding the demand of the Social Democratic Federation that he remain in London on that day in order to receive a deputation of unemployed workingmen.

A meeting of British Anarchists has been called to assemble in Cleveland Hall, London, on November 23, to protest against the action of the Chicago court which tried and sentenced Spies and his colleagues.

The British Parliament was to have met on Thursday, but it has been prorogued to December 9.

Sir William Hart Dyke has been appointed Governor of Hong Kong.

The Earl of Enniskillen is dead. He was seventy-nine years of age.

George Thomas Doo, a famous English engraver, is dead at the age of eighty-six.

Mr. Matthew Arnold delivered a farewell address on Friday night to the schoolmasters of the Westminster District, who presented him with a testimonial on his retirement from the office of School Inspector. He concluded by giving the teachers before him counsel, and making a reflection. The counsel was, to insist upon having a Minister of Education. The reflection was on the anxious outlook of the new times. When old influences are failing, the masses are likely to be what their teachers make them. "I find," said Mr. Arnold, "plenty of deleterious and detestable influences at work, but they are influences of the journalist in one place, in another influences of the politician, in some places both. They are not influences of teachers. The influence of elementary teachers, so far as my observation extends, is for good. It helps morality and virtue."

Mr. Phelps, United States Minister to England, delivered a lecture on Friday before the Institute of Philosophy at Edinburgh, in the course of which he said that law is a reflex of public opinion and should thus be maintained, or it would perish in a free country. Liberty, said Mr. Phelps, is not a privilege of the strong, but a protection of the weak. Nor are the rich chiefly interested in the maintenance of the rights of property. The less property a man has, the more important it is to him that it be safe. No property will be safe when once the general security that protects all alike has been lost. It is a delusion to suppose that this security can be impaired to a certain extent and preserved for the residue. There can be no middle ground. Either title to lawful property must be universally protected, or it ceases to be protected at all.

The meeting of the next Oriental Congress has been postponed until 1890.

The Vatican is preparing for publication an encyclical letter condemning and stigmatizing the Italian Government, whose policy, the letter will say, places the Pope in the power of a revolution which menaces his liberty.

Paul Bert, who died on Thursday at Tonquin, of fever, was equally famous as politician, man of science, and reformer of social institutions. He had an inherited aversion to the aristocracy and the ecclesiastical party, and when he received from Gambetta in 1881 the portfolio of Public Instruction, the Clerical party was completely nonplussed for the moment. He first entered the political arena conspicuously in 1870, and devoted himself largely to matters relating to public instruction. It was mainly through his efforts that Pasteur got a pension of 12,000 francs annually, as a reward and encouragement of his researches. M. Bert's own scientific discoveries would have sufficed to establish his fame had he never entered politics. He discovered, among other things, that the all-important lung food, oxygen, becomes a deadly poison to all living things if condensed beyond a certain degree. His volume entitled 'La Pression Barométrique' contains many new observations on the effects of altitude on health. He was elected President of the Biologic Society in 1878, to succeed Claude Bernard.

The Prussian military budget, which has just been submitted to the Bundesrath, places the regular expenditures at 267,577,000 marks, an increase of 4,226,000, and the non-recurring expenditures at 27,811,000 marks, an increase of 12,476,000, arising chiefly from the purchase of additional supplies of arms. The official census of Prussia shows a population of 28,318,458.

The Ghilzai rebels in Afghanistan have been attacked by the Afghan General sent to subdue them and badly defeated. The General sent to Cabul ten cartloads of heads of rebels killed in the battle, as a token of the victory his forces had won.

The schooner *Flying Scud*, which was seized at Halifax, has been released on the payment of a fine of $400 under protest.

THE PRESIDENT AND THE NEWSPAPERS.

It has been said in some quarters that President Cleveland made a mistake, or committed some sort of indiscretion, in speaking as he did about the newspapers in his speech at the Harvard dinner. We have not been able to share in this view, for two reasons. One is, that the fitness of what a man says in a speech has to be measured in some degree by the way in which his audience receives it. The other is, that what the President said was true, and was called for in the interest of both political and social morality.

No man in the United States has ever addressed an audience of a better quality, as regards either intelligence or patriotism, than the President addressed on Monday week at Cambridge, and it came from all parts of the country. No part of his speech was delivered with as much feeling and emphasis as that relating to the press, and this might have been awkward for him if it had been addressed to disapproving or unsympathetic hearers. As a matter of fact, however, to no part of the speech was the response of the audience so hearty and enthusiastic. It seemed to touch an answering chord in the breast of every man in the room, and was greeted with vehement and long-protracted applause. All who were listening to him seemed to share the emotion with which he alluded to the way in which he and his family had been pursued by the newspaper "ghouls." They felt for him and with him as the victim of newspaper enterprise. What such an assemblage received in such a way cannot have been a mistake of any kind. On the contrary, we need no other proof that it was the right thing said at the right time and in the right way. To have called forth from such a body of Americans such hearty condemnation of "journalism" as practised by a portion of the American press, was, indeed, a great public service.

In the second place, there is no question anywhere of the truth of what he said. Every one acknowledges this. No better illustration of it could be furnished than the fact that since he said it the worst offenders have formed a sort of Syndicate of Blackguardism, for mutual defence and support. The chief members of it are the *Sun*, the *Tribune*, the *Mail and Express* (Cyrus W. Field's paper), the *World*, and the Brooklyn *Eagle*. Every one of these has felt the Presidential lash, and is writhing under it, tough as their hides are. So they are now feeling a common shock at the indelicacy of his attack on them, and at the absurdity of his objecting to their mode of making money and gratifying their malice. As they have no one else to quote in support of their positions, they quote each other. Each says ditto to all the rest. As a general rule the press of the country recognizes the abuse of the system of news-gathering of which the President has been the victim, so that the members of the Syndicate really find nobody to cite in extenuation except the companions of their guilt. Dick acquits Tom and Harry acquits Dick, and they try to be jocose over their wretched plight. But the scandal-mongering and prying branch of journalism has none the less received a check. The public indignation over it has been long rising, and has not been assuaged by any demonstrations, however ostentatious, of its pecuniary profitableness. In fact, this indignation has been deepened thereby, and all it needed was some powerful and fearless voice, like the President's, to give it expression. The result shows what a staggering blow he delivered when he turned on them in honest human shame and wrath.

Some members of the Syndicate are now trying to bolster themselves up under the effect of James Russell Lowell's splendid tribute to the President's honesty and courage, by taking up the wretched Hawthorne business, and pretending to believe Mr. Hawthorne rather than Mr. Lowell, when Mr. Hawthorne says that Mr. Lowell knew he had come to interview him. The way they are working this matter up is really amusing as an example of depraved ingenuity. One of their assumptions is, that Mr. Lowell's refusal to furnish English gossip to the *World* himself shows that he must have meant to furnish it to Hawthorne for the *World*. There is probably nobody, whether blockhead or knave, outside the "journalistic profession," who would have the hardihood to print a bit of reasoning of this sort. Decent people in other callings, of course, see that Mr. Lowell's refusal was full notice to Hawthorne that there would be no use in trying to get out of him through an interview what he was not willing to furnish through his own pen, and a full assurance to himself that Hawthorne came to him simply as a friend. It is, therefore, corroborative evidence of the strongest kind that Hawthorne went to his house and sat at his table in disguise, and, not daring to produce his note-book, tried to remember the careless chat of an old friend, in order to convert it into journalistic "hash" and sell it to a dealer. The controversy itself deserves no further notice. But the use made of it by the Syndicate shows how true the President kept his rudder when his galley dashed in among the journalistic bumboats at Harvard.

"THE CURSE OF PATRONAGE."

The examination which Democratic politicians and organs are making into the causes of their party's defeat where it suffered reverses in the recent elections, proves to be one of the most impressive lessons as to the wisdom of civil-service reform which have yet been taught the country. A great mass of unimpeachable Democratic testimony is being collected which establishes beyond question the fact that the spoils system has been the chief cause of all their troubles. "The curse of patronage did the business," says Chauncey F. Black, the Democratic candidate for Governor of Pennsylvania, in explaining his defeat, "and the same cause was operative all over the country, just as it was here."

The correctness of Mr. Black's diagnosis is established by the results of the election in States where the effect of the spoils policy and of the reform system has been clearly contrasted. In Massachusetts the President lived up to its professions in the treatment of public office as a public trust; in Indiana and Virginia he yielded to the demands of the politicians that places in the civil service should be treated as the rewards of partisan service. In Massachusetts the Democrats reduced the Republican plurality from 24,000 two years ago to less than 10,000, and made a net gain of two Congressmen; in Indiana and Virginia the Democrats lost their plurality of 1884 on the popular vote and almost half their Congressmen. There is no disputing the logic of such results, and honest Democratic newspapers, like the Montgomery (Ala.) *Advertiser*, frankly confess that they constitute a "boom for civil-service reform."

Spoilsmen who attempt to hold the President responsible for their own defeat, unwillingly bear witness to the harm which patronage has done their party. Congressman Barbour of Virginia set out the other day to saddle the blame for the result in his State upon Mr. Cleveland, and said that the trouble was that the Administration had not been Democratic enough—in other words, had not given out the offices rapidly enough to party workers. But with a delicious naïveté he immediately went on to say: "There has been another thing in Virginia operating against us. What patronage has been given out has raised up a crop of angry men. There were numerous applicants for each Federal office. The men who were disappointed have given us trouble." According to Mr. Barbour's own evidence, therefore, it was patronage itself which made the mischief, and the trouble would only have been greater if the offices had been given out more liberally.

Nobody has more forcibly stated the reasons why patronage harms a party than that uncompromising Pennsylvania Democrat, Solicitor-General Jenks, who talks in this plain-spoken fashion:

> "If all the offices in the civil service were turned over to the Democrats at one sweep, there would still be nearly as many disgruntled Democrats as now. For, even then, all the Democrats who think they are entitled to recognition could not be accommodated, and every man disappointed would be an agent of discontent. When the Republicans had the patronage of the Government at their disposal, they had the same trouble. It is simply impossible to dispense patronage to the satisfaction of the politicians. The only way to be without enemies is to be without patronage. Democrats have been opposed in elections not because patronage was sparingly or injudiciously or unfairly dispensed, but because they belong to the unfortunate party in power. In this regard it is a great misfortune to a man to be in power. A man who has no favors to give makes no enemies by giving them; but you cannot bestow favors on the few without making enemies of the many who expect and are disappointed."

This theoretical view of the matter is strikingly confirmed by the practical experience of Mr. Kleiner, an Indiana Democratic Congressman. Mr. Kleiner secured changes in all but one of the 134 post-offices in his district, expecting that his party would be delighted with his course. Instead of the universal satisfaction which he looked for, however, he found that there was no end of complaint. Mr. Kleiner thus illustrates the workings of the system:

> "Take a cross-roads post-office with a salary of $450 a year attached. There are two or three rivals in business, each keeping a little store. Each wants the post-office and makes a hot fight for it, and when the applicant who gets the largest number of residents in the vicinity to sign his petition is given the office, the others sulk and complain. They will say that the man appointed had not done as much for the party as they had respectively. The disappointed ones sympa-

thize with each other, and get the sympathy of relatives and friends, and pretty soon the Congressman finds that he has made enemies because of an appointment that was scarcely considered worth having."

Nor were the post-offices the only source of trouble. There were numberless applicants for foreign missions, consulates, and other offices in the civil service, who thought their Congressman ought to be able to get the places for them, and who held him responsible if he failed, as he must inevitably do in most cases, since there were not offices enough to go round. Mr. Kleiner, who declined a renomination, and is thus able to speak frankly upon the subject, confesses that he has been converted to civil-service reform by his experience. "It is no wonder to me," he says, "that the House was charged with inefficiency last session. The Democratic members were kept so constantly engaged in looking after places for constituents that they had not time to give legislative subjects consideration. I know that I found it impossible to keep the run of current business. The greatest reform that we could bring about would be to free Senators and Representatives from all responsibilities as to the distribution of offices. They should not have anything to do with it."

No feature of the recent elections is more fortunate than the fact that Democrats themselves have thus been brought to see and admit "the curse of patronage." It is no longer a theory of Mugwumps that the spoils system is bad for a party; it is now the confession extorted from Democratic politicians by the results of the recent campaign. It has been demonstrated by the unanswerable logic of figures that civil-service reform "pays" as a political investment, and the spoilsmen find themselves left without any argument.

THE PROHIBITION PARTY'S VOTE.

The impression which the first returns from the recent elections gave, that the Prohibition movement was losing ground, was entirely misleading. It now appears that instead of suffering a diminution, the Prohibitionists have made gains in nearly or quite every State in the Union in which they have a party organization. Returns of the votes for their candidates are still slow in coming to hand, but enough have been received to indicate that the vote which the party gave to St. John in 1884 has been more than doubled this year. We give in the following table the vote as it was cast in the two previous years in the principal Eastern, Middle, and Western States, together with that for this year, so far as it has been received. Most of this year's figures are semi-official and are not likely to vary much from those of the official count. Those for New York State are based upon returns received by the *Voice*, as are those for several of the Western States:

	1884.	1885.	1886.
Maine	2,160	.....	3,923
New Hampshire	1,571	.....	2,194
Vermont	1,752	.....	1,832
Massachusetts	9,923	4,714	8,160
Connecticut	2,305	.....	4,699
Total	17,711		20,808
New York	24,999	30,867	35,000
New Jersey	6,153	.....	19,579
Pennsylvania	15,283	15,046	32,422
Totals	46,435		87,001
Ohio	11,069	28,081	28,657
Indiana	3,028	.....	8,975
Illinois	12,074	.....	19,527
Michigan	18,403	13,950	35,000
Minnesota	4,684	.....	12,000
Totals	49,258	.....	104,159
Grand totals	113,404	.....	211,968

It will be seen at a glance that, with the single exception of Massachusetts, there has been an increase in every State over the vote cast for St. John. This is the severest test which can be made, for the St. John vote represented something more than prohibition sentiment. Thousands of Republicans voted for him because they could not conscientiously vote for Blaine, and could not make up their minds to vote for a Democrat. Then, too, in many States this year the Republican candidates were either openly committed to prohibition principles, or they stood upon platforms favoring the submission of the question to a popular vote. In Maine the Republican candidate was pledged to support the prohibitory laws, yet even there the Prohibition vote was nearly doubled. It was perceptibly increased in Vermont and New Hampshire, and though it fell off a little in Massachusetts from St. John's vote, it was nearly double that cast last year. In Connecticut it is more than double what it was in 1884.

In the important States of New York and New Jersey the showing of the party is a remarkable evidence of solidity and increasing strength. The figures for New York are based upon actual returns from half the counties, showing slight gains, and seeming to warrant the statement that the total vote will be two or three thousand larger than the very large vote of last year. When we consider that the only State candidates voted for in the last campaign were those for Court of Appeals Judge, and that the fact of there being a Prohibition candidate in the field was hardly recognized outside that party, this outcome is most significant. There was no dissatisfaction with the Republican candidate to account for the large vote, since Judge Daniels was known to be a Prohibitionist, whereas last year objection was made to Mr. Davenport that he was interested in a vineyard. In a very quiet State campaign, with no canvass conducted by any party, the Prohibitionists have polled over 30,000 votes, or about 5,000 more than they polled in 1884, and a few thousand more than they polled in 1885. Their party is evidently compact, and determined enough to give the Republican managers warning not to attempt at Albany this winter the passage of further legislation in the interest of "protection to Republican saloon-keepers."

The most notable figures from this part of the country, however, are those from New Jersey. The Prohibition vote there has risen from 6,153 in 1884 to 19,579 this year. A careful examination of it, which we have made by counties, shows that it is drawn almost entirely from the Republicans. Of course, so long as this loss, or anything like it, continues to be maintained, the Republicans have no hope whatever of carrying the State.

In the five Western States for which we give the figures, the gains of the Prohibitionists are uniform and very large. In an off year, in which nobody expected much of them, the Ohio Prohibitionists have cast a vote nearly three times as large as they gave St. John, and slightly larger than they cast in the exciting campaign for Governor last year. In Indiana the Prohibitionists have nearly tripled their St. John vote; in Illinois they have increased it from 12,000 to nearly 20,000; in Michigan they have made the State an uncertain one by increasing their vote from 18,000 in 1884 to 35,000 this year, and have done the same thing for Minnesota by advancing from 4,600 in 1884 to 12,000 this year.

All these figures are significant, but when we take them by sections, and then by the country at large, their real meaning becomes more apparent. The increase in New England has been comparatively slight, but it has been sufficient to make Connecticut a hopeless State for the Republicans, and Rhode Island, which we have not included in our list because it held no general election this year, a doubtful one. In the three important Middle States the Prohibition vote has advanced from 46,000 to 87,000, and has gained strength enough to make the two "pivotal" States out of the three, pretty surely Democratic in almost any kind of Presidential contest in 1888. In the West, in five States, four of which have hitherto been strongly Republican, the total Prohibition vote has more than doubled, increasing from 49,000 to 104,000, and making at least two of the Republican strongholds "doubtful" for 1888. Taking now the three groups of States together we find the total for this year to be 211,968, against 113,404 in 1884. The *Voice* estimates the total Prohibition vote in the country this year at about 325,000, against 150,000 for St. John, and the estimate is entirely reasonable. The party has, therefore, more than doubled its numbers within two years, and the gain has come mainly from the Republican ranks.

SOME FURTHER ADVICE TO WELL-MEANING PEOPLE.

We have received several letters from supporters of the George movement, and from friends of "Labor" generally, remonstrating with us vigorously for asking them to furnish specific remedies for the evils they describe in the condition of what we suppose we must call "the working class"—for they insist on being a class—in this country. They particularly object to being asked to embody these remedies in legislative bills, and seem to think it shows a cruel and unfeeling disposition to propose such a thing, and, not only this, but incapacity for seeing the signs of the times. This latter charge is the one on which the purely philanthropic, or what some people have called the "crank," element in the George movement dwells with most relish. Some of them appear to revel in the belief that they see clearly the approach of an immense revolution, resulting in a complete reorganization of society from top to bottom, including the destruction or permanent redistribution of property, to which such wiseacres as the editor of the *Nation* are blind as bats.

With this latter class we do not argue: they are nearly all prophets. Their letters and sermons and speeches are simply predictions of wonderful things such as the world has been made familiar with by thousands of enthusiasts

during the last twenty centuries. It is well settled that there is no use in discussing with a prophet. All you can do with him is to disbelieve him. It is sufficient for us to know that no changes have occurred in the organization of human society during the historic period, except as the result of changes in human nature; that such changes in human nature as have taken place have been but slight, and have been very slow; and that at the rate at which we are now travelling, the change which would be necessary to abolish or greatly modify the institution of property would probably take at least 2,000 years, and would consist in an elevation in human character and an improvement in the human physique such as we now only dream of, or read about in "Utopias." In fact, we shall probably never give up property, or agree to distribute property according to a man's wants, and not according to his deserts or according to the benefits he renders to the community, until every man possesses the qualities which now render the acquisition of property easy.

But we must again urge on the other and saner class, who really believe that great improvements in the condition of manual laborers are possible through legislation, the solemn duty of abandoning vague declamation, whether in the pulpit, press, or platform, about the wrongs of labor. We do not say this by way of a jeer or a sarcasm, but in most sober earnest. They know as well as we do that the assumption that every manual laborer is an intelligent and enlightened person, entirely competent to form rational opinions about his own interests and those of the State, is simply a bit of politician's humbug. They know that the working class in every large city in the Union contains a very large element of ignorance—ignorance not only of letters, but of the Constitution and the laws, and of the central ideas of American society. A very large proportion of them are foreigners, who have either had no schooling at all or had no training whatever in the art of government. They have a childlike faith in the omnipotence of Government, and a childlike belief that the Government is a kind of providence, existing apart from the community, and possessing powers and funds which it does not draw from the community. On these men the vehement suggestions of educated or half-educated orators and writers that the Legislature could, if it would, relieve them from the necessity of pleasing employers with their work, and give them a share of the luxuries enjoyed by a few rich people, with more leisure to enjoy these luxuries, and exemption from the necessity of saving for times of sickness or idleness, and from the need of paying rent and railroad fares, act most mischievously. They are already producing on the minds of workingmen the effect of stock speculation or other forms of gambling—that is, a vague expectation of easily acquired wealth and security, and the always resulting dislike of steady labor and loss of interest in the daily task, to say nothing of envy and hatred of every one who seems more fortunate than they are. We are satisfied that two-thirds of the strikes and other labor disturbances, with all their barbarizing atrocities, which are working so much injury to business, are due to the unrest produced by vague declamation of people who think themselves benefactors of the race.

We therefore most earnestly urge upon all such to buckle down now, from this day forward, to the drafting of bills to be submitted to the public and the Legislature, showing the exact manner in which they think our existing social organization can be suddenly improved. Of course, nobody will expect these drafts to be anything but rough. They will necessarily, like all first drafts, be capable of revision, but they will give us all a tolerably good idea of the manner in which those who most occupy themselves with that mysterious thing, "the labor problem," expect to solve it. Let them assume that we all agree with them in thinking that the New York Legislature or Congress ought to relieve the workingman from everything of which he now complains as to land, wages, food and clothing, and education. This done, the machinery for the new era must, of course, be provided. The State can only act through laws, and the laws must be drawn up and discussed and enacted and on a certain day put into effect through officers appointed for the purpose. If house-owners are to be compelled to part with their property and lower their rents; if employers are to be compelled to pay higher wages for less work, or to have their laborers selected for them by others; if vendors are to have their prices fixed by public authority, or rich men are to be compelled to live in small houses on plain fare, and give up horses and carriages, of course it must all be set out in black and white by statute, with the penalties for non-performance. These things cannot be accomplished by sermons or public meetings. So let us have the bills. We promise them prompt and respectful criticism, if they come from reformers or philanthropists of note.

HOW NOT TO TAX.

THE next session of Congress will be confronted with a problem that has seldom disturbed the equanimity of a legislature, viz., How Not to Tax. Former reductions of taxation have presented themselves to us in the light of expediency. There has always been some part of the public debt to which surplus revenue might be applied, so that in case of failure to repeal taxes there would not be necessarily any considerable locking up of money in the Treasury. The difficulty confronting us now lies in the fact that there will be no part of the public debt redeemable at par after the 30th of June next. Any excess of revenue over ordinary expenditures after that time must be either locked up, or expended in the purchase of bonds at such premium as the holders choose to demand.

Neither of these alternatives is likely to produce much satisfaction in the public mind. A forced locking up of money would certainly be met by a popular protest, and a perfectly justifiable one. The evils resulting from an artificial contraction of the currency would be serious enough in themselves, but they would be magnified in imagination to an unknown extent. A check would be given to all new enterprises, and everybody whose business should not be as prosperous as, in his own opinion, he might think it ought to be, would ascribe his shortages to the locking up of money by the Government. Indeed, such a state of business is quite preposterous.

But are the American people likely to view with equanimity the purchase of their own bonds at rates of premium ranging from 12 to 37 per cent.? And supposing they are, how are we to know that the holders will limit their demands to those figures when they find a purchaser in the market who is under the necessity of buying at any rate? The language of the law would seem to authorize the Secretary of the Treasury to purchase a sufficient amount to meet the annual sinking fund if there are none redeemable at par, but it is certain that when the words "purchase or payment" were used in the law, no such thing was contemplated as purchasing bonds at a premium. The object of the sinking-fund clause was to improve the public credit, to make the bonds sell well, not to make the Government pay a bonus for the privilege of retiring them. While the Secretary might, therefore, and in the absence of fresh legislation probably would, buy or offer to buy bonds sufficient for the sinking fund, say $50,000,000 per year, such action would be sure to provoke criticism, and would still come far short of meeting the exigency, far short of getting rid of the surplus money after the 30th of June next.

There can be no further dodging of the question, How Not to Tax? If the present Congress does dodge it, the President will be obliged to call the new one in extra session before midsummer. Here, we presume, is the explanation of the chuckles of the Republican politicians over the happy circumstance that they did not get a majority of the next House. If they had got such majority, they would have been obliged to frame the measures for reducing taxes. This is just the responsibility they want to avoid. Whether the taxes are taken off liquor and tobacco, or whether the reduction is made on the tariff, or both together, they want to be in a position to take advantage of any discontent growing out of the reductions. For, strange as it must appear to foreigners, the only discontent that is likely to make itself felt in the premises will be among the protected classes on the one hand, and the temperance people on the other. We are in a condition which the author of Gulliver never dreamed of, although it would have delighted him if he could have anticipated it—a condition where the only effective outcry, the only one that as yet reaches the ears of Congress, is against any reduction of taxes, and where, accordingly, political parties desire that their enemies may carry the elections.

But the exigencies of politics will not stave off the issue. It must be met, and we shall soon see a rare fight. The protectionists have reached the jumping-off place. They repealed the duties on tea and coffee twelve or fifteen years ago. There is no large source of customs revenue now that does not serve for protection to somebody. But there is one source that offers irresistible temptations, because in the first place it is large and in the second place

the people protected by it are a good way off, viz., sugar. The duties on sugar and molasses yield about fifty millions per annum. By repealing these, the necessity of further reductions would not be obviated, but it would be much lessened. We observe with interest that one of the high-tariff associations has given a place in the discussions of the subject at its next annual meeting to be held at Pensacola, Fla., to the question, "Do the agricultural products of the South need further protection?" This is an interesting question certainly, and it might be supplemented by another, namely, "Do the agricultural productions of the North need further protection?" Is there any more need of a duty on wool than on sugar? Is there any need of a duty on rice, oranges, hemp, potatoes, codfish, lumber, coal, salt, or live animals? These questions open a fine vista for economical discussion. We trust that the Pensacola meeting will not shrink from its duty.

We presume that the attempt will be made to repeal all taxes on tobacco, except those on the imported article. It ought not to succeed. All the arguments that can support any tax, clamor for the retention of this. But if the moiety of the tobacco tax that yet remains is thrown off, there will still be a very great surplus in the Treasury. The elasticity of the revenue is so great, especially at the advent of prosperous times, that the repeal of the tobacco tax would probably not be felt as a relief one year later. There will then remain only the duties on distilled and fermented liquors and on bank notes—the latter an unconsidered trifle—in the internal-revenue system. The fertile mind of James G. Blaine anticipated this trouble some years ago when he proposed that the proceeds of the whiskey tax be distributed to the several States, but he did not go so far as to propose that the tax be repealed. The only persons in public life who have had the hardihood to advocate free whiskey are Judge Kelley and Mr. Samuel J. Randall of Pennsylvania, in whose eyes King Alcohol has no terrors in comparison with any reduction, large or small, of the duties on imports.

The protectionist junta will probably make up their minds in the end to sacrifice the sugar planters (but not the refiners) to the necessity, which can no longer be avoided, of tax reduction. This line of policy is foreshadowed by the *Tribune*, which says that the Louisiana planters have forfeited all claims to protection by voting the Democratic ticket! But that is what Sam Randall does. Has he forfeited all claims to protection too? We shall "view with alarm" the scene in the House of Representatives when the Republican protectionists attack their Democratic allies in this ungrateful fashion. If the sugar duties are to be repealed, we are satisfied that some other duties will be repealed at the same time. Meanwhile, there is scant encouragement for the wiseacres who are "organizing a movement" for a progressive income tax, the problem of the day being How Not to Tax.

ENGLISH SOCIALISM AND POLITICS.

LONDON, November 4.

AMONG the institutions to which the presence of a Conservative Ministry will give a few years more of life, the Corporation of London may probably be reckoned. Before long it may celebrate, if it is so disposed, its septcentenary. The first Mayor of London—antiquaries dispute about the matter, but they dispute about everything—is generally taken to have been Henry Fitzalwyn, who was named to the Mayoralty in the year 1189, in the reign of Richard I. Far outrunning his illustrious successor Whittington, he was Mayor twenty-four years in succession. He was not Lord Mayor, that title having first been given in the reign of Edward III., more than a century and a half later, though it did not come into general use until Richard III. found it for his interest to cultivate the affections of the city, as Shakspere has not failed to indicate. We are to have the Queen's jubilee next year. In 1889 we may have the Lord Mayor's (or the Mayor's) septcentenary. This, of course, is subject to the condition cautiously stated by an Irish member of Parliament. Eulogizing one of his colleagues, he stated that he had represented a certain Irish county for a quarter of a century, and, he added, would, he had no doubt, continue to do so for the term of his natural life, if he lived so long. The celebration of the Lord Mayor's septcentenary depends of course on the Lord Mayor, as Lord Mayor, living so long.

In the meantime, the Lord Mayor, who will enter upon his term of office on November 9, may not unnaturally have felt inclined to look for precedents not to Fitzalwyn, or to Whittington, but to Walworth. If the close of the fourteenth century had its Wat the Tyler and its Jack Straw, the close of the nineteenth century has its Hyndman and its Champion. Wat Tyler and Jack Straw did not select Lord Mayor's Day for their procession, and if Mr. Hyndman and Mr. Champion were content to "demonstrate" in Blackheath, or even in Smithfield, they probably would be allowed to do so. It will not be necessary for Sir Reginald Hanson to arm himself with Walworth's dagger. The threatened procession of the unemployed will not take place within the City of London, and it may be assumed that it will be prohibited in Westminster also. The pretext for continuing the Lord Mayor's progress for more than a few yards beyond Temple Bar, or, rather, beyond the Griffin which marks the spot where Temple Bar once stood—a more hideous memorial of a hideous predecessor—does not now exist. The new Royal Courts of Justice, whither the Lord Mayor goes to present himself to the judges, are close on the frontiers of the City, and he might reasonably be requested to keep himself within his own domain. Half the nuisance of Lord Mayor's Day would thus be abated. At present on every 9th of November free movement in the city and in Westminster is impossible; and the respectable and solvent citizen is reduced to the condition of the embarrassed Mr. Richard Swiveller, who was obliged to go half a mile into the country in order to get to the other side of the way.

Far more serious than the procession of unemployed, and far more likely to impress the minds of men as to the gravity of the social crisis, is the large number of votes polled for Mr. Henry George in the election of the Mayor of New York. The late Prof. Fawcett used earnestly to insist that, in a very near future, political parties in England would be broken up and absorbed, and that the division and conflict would be between Socialists and anti-Socialists, among the latter of which it need not be said that he ranked himself. The English Socialists do not possess among themselves any man of ascendant character, of impressive popular speech, or of that magnetic power of genius which sways the minds of men. Moreover, they are torn asunder by intestine feuds. The Socialist League, of which Mr. William Morris, the poet and artistic house-decorator, and Dr. Aveling, are the founders, has split off from the Democratic federation to which Mr. Hyndman and Mr. Champion belong; and from the Socialist League, again, the Socialist Union has severed itself.

Mr. Hyndman is a man of education and ability. He stood formerly as the Conservative candidate for Marylebone, and was one of the contributors to the *Pall Mall Gazette* when that journal was under the Tory editorship of Mr. Frederick Greenwood. He is a Cambridge man, and was a member of the New University Club in St. James's Street until his expulsion from it after the Socialist riots of last April. Mr. Hyndman was believed to be a man fairly well off, in the worldly sense. His father, he declared at a public meeting not long since, had spent more than £100,000, which his son thought might have been better employed, in building churches. A few days ago, however, an application was made to the Bloomsbury County Court for the committal of Mr. Hyndman to prison for non-compliance with an order of the Court for the payment of a debt, and his wife, after detailing their various embarrassments, stated that her husband went about the country lecturing gratuitously, that he went to dinners without paying, and that they were maintained by their friends and relatives. Mr. Hyndman, she said, contributed nothing to the support of the house; they took in lodgers, but could not pay their rent; and she had to borrow money in order to pay the servant's wages. The case was adjourned for a fortnight until it should be seen whether Mr. Hyndman could get any more remunerative employment than that of leader of the Social Democratic Federation. Mr. Hyndman has written an essay on "The Bankruptcy of India." It might have been supposed that Mrs. Hyndman and his own creditors had nearer claims upon him. His misfortunes may have been innocently incurred, and he may be deserving of sympathy rather than of reproach. But the facts are too much in harmony with the received, though often unjust, ideas as to the Conservative turned Revolutionist, and the gentleman turned agitator, to commend him to the confidence of those who have hitherto followed him.

Mr. Champion, who is supposed to be a man of fortune, was until lately an officer in the Royal Artillery, and served with distinction in the late Afghan war, but resigned his commission in order to devote himself to the Socialistic crusade. Mr. Burns, their workingman ally, is a man of imposing appearance and vigorous speech. During a recent visit to Paris, he did something to confirm the obstinate British conviction that one Englishman is more than a match for three Frenchmen, by knocking down and disabling in the streets of Paris three Frenchmen who had behaved grossly to his wife. There are limits to Mr. Burns's communism. The Parisian journals noticed with admiration *le vrai phlegme britannique* which distinguished Mr. Burns's demeanor on this trying occasion. Mr. William Morris has thought it right now and then to attend meetings in thoroughfares, and to be summoned for obstruction in the police courts; but apart from these sacrifices to the principles of anarchy and disorder, his socialism is not of the aggressive and combative kind. It does not cry aloud in the streets. His breach with the conventionalisms of wealth and culture, and his desire to be something more than "the idle singer of an idle lay," or to minister to the elegant caprices of *virtuosi* and *dilettanti*, deserve recognition as cordial as that which all the world has given to his genius. It is under-

stood that Mr. Morris, though not much of a spouting Socialist, is not exclusively a rhyming one; and that he has arranged his business relations with those who serve him on the theoretic principles which he professes.

Mr. Hyndman and his friends are, however, the aggressive party in the socialistic campaign. Their organ is a paper of four pages called *Justice*. Their bitter hatred of rival theorists is shown in their denunciations, among others, of Mr. Auberon Herbert, the most fantastically chivalrous of men, "as the champion of the sustainment of the weak by the strong," in consequence of the doctrines of individualism which he has adopted from Mr. Herbert Spencer. A poem in the last number of *Justice*, professing to be a translation from the German by Mr. W. L. Joynt, formerly an assistant-master at Eton, who has sacrificed his career to his convictions, probably gives a sufficiently correct idea of the state of mind of the readers of *Justice* and the followers of Mr. Hyndman, and of the results that they expect. After reciting the hardships of four typical workingmen, the poem concludes:

> "And Jack and George and Dick and Sam
> Cry all with one accord 'God dam';
> Last night, on bed of down, I deem
> A rich man dreamt an evil dream."

The organized forces of Socialism are not at present very formidable in England, and there is still time for those who know that the alleged antagonism between labor and capital is mainly the antagonism between thriftlessness and idleness pretending to be labor, and the labor which has earned capital, and continues to direct it, to consider their course. Forty years ago Mr. Disraeli said that beyond all questions of party was "the condition-of-England question." That is likely to be the question of the remaining portion of the nineteenth century. Yet there is no reason to think that the Cabinet meetings now being held are considering it. Lord Randolph Churchill and the Conservative associations at Bradford, Mr. John Morley and Sir William Harcourt, and the Liberal Federation at Leeds had nothing to say about it. It has a bearing, however, not remote upon the burning political questions of the day. The great evil of our centralized system is the way in which wealth, and culture, and all that gives stimulus to life are attracted to London. Where nearly all the rich are, the poor will be also, in excess of the demands of service. Where money is too lavishly spent, people will be drawn far beyond the numbers whom such expenditure can support. Edinburgh and Dublin have, in two senses of the word, been decapitalized. If, by a proper system of local self-government, whether in the shape of national councils or statutory Parliaments, the wealth of the unproductive consumers in Scotland and Ireland was spent during half the year in Edinburgh and Dublin instead of in London, the diseased aggrandizement of London might be stayed, and Edinburgh and Dublin might be relieved of the atrophy towards which they are tending. The balance between wealth and population would be more equally adjusted. A revision of the land system, allowing the acquisition of the soil by small owners or its tenure by small occupiers, would keep in this country, in healthy occupation, men who now add to the masses of the unemployed in London. If they could profitably work, they would remain where they are. If it is a question of choosing the place in which to live in a state of poverty and semi-starvation, they prefer London, with its crowds and bustle, the faces of men, and the lights of the shops, the sweet opportunities—begging, plunder, or casual job—of the streets, the penny gaff, and other solaces of existence, to the solitude and the weariness of the fields and lanes. Home rule, in its legitimate sense, as affecting the distribution of wealth and population between the three kingdoms, is a matter of primary and urgent importance. It is not purely or mainly an Irish question. It is a condition-of-England question. On this basis, it ought to be practicable not only for Unionist and Home-Rule Liberals, but for Conservatives too, to come to some understanding which, while maintaining the authority of the Imperial Parliament within the United Kingdom, and equally in all parts of it, shall devolve functions, and in devolving functions, redistribute population and wealth, within the three kingdoms. L. L.

DEMOCRACY IN SWITZERLAND.

LONDON, November 6.

POLITICAL speculation is preoccupied with two topics—the future of democratic society, the capabilities of federalism. Switzerland is the typical democracy of Europe, Switzerland is also the home of federal government; but politicians and jurists entirely neglect the study of Swiss institutions. The omission is to be regretted. Experience gathered from the petty squabbles of Geneva opened the eyes of Mallet du Pan to the real nature and the probable issue of the revolutionary struggles at Paris; and the idea constantly suggested by Swiss writers, that their country is a microcosm in which all the movements about to perplex the statesmanship of the great European world are anticipated and played out, rests on a foundation of substantial truth. But if the neglect of the lessons to be drawn from Swiss experience excites regret, it need not arouse any feeling of wonder. Switzerland is neither a terror to its neighbors nor is it their victim. Its prosperity evokes no alarm, nor do its troubles call forth sympathy. Innkeepers are a most respectable and, in Switzerland, it must be added, a most intelligent class of men; but a country in which innkeepers may be statesmen and statesmen be innkeepers, is not a country which, even though it boast of a traditionary Tell, captivates romantic sentiment.

The Swiss, moreover, it must be added, have with great merits always exhibited a singular incapacity for the dramatic side of public life. It is curious to compare them in this matter with Italy. The success of the movement in favor of Italian nationality was due in great measure to the dramatic instinct of the Italian people. Never was a revolution put upon the stage with such admirable good taste as was the drama of Italian liberation. Never did exiles play their part with such perfect dignity and perfect propriety as did the victims of Austria, of France, or of Bomba. Each scene was perfect in its kind. Mazzini will remain for ever the model of the patriotic conspirator. No representative of popular virtue will ever excel Garibaldi. Cavour is the admitted model of statesmanlike sagacity. Each scene in the contest for freedom was all that the most exacting of political artists could require. The siege of Rome remains to those who remember it the most effective exhibition ever exhibited on the theatre of public life. It won the heart of civilized Europe, and in the long run secured to Italy a national unity. Almost at the moment when the first efforts of the Italians to attain freedom and independence were arresting the gaze of Europe, the Swiss not only attempted but carried through with complete and lasting success the task of making themselves fully masters of their own fate, and of giving to Switzerland such a federal and democratic Constitution as was required by the wishes and the needs of the Swiss people. Swiss energy and prudence triumphed unaided over difficulties like those which in the United States were terminated only by the war of secession; and Swiss constructive statesmanship performed with success the task of constructing a new and elaborate constitution, at the very time when one country of Europe after another made failure after failure in the dangerous work of constitution-making. Yet, though Switzerland achieved almost unparalleled political successes, Europe took no interest in her fortunes. The very names of the Swiss statesmen who crushed the Sonderbund and formed the Constitution of 1848 are unknown beyond the limits of the Confederacy. Switzerland, indeed, is a small country, so also is Greece. Yet while no one's heart has ever been touched by the fortunes of modern Switzerland, the fate of Greece aroused for more than a generation the enthusiasm or the compassion of statesmen and poets. The Swiss have virtues, but they have not the talents of artists. The one scene during the last century in which the Swiss have played an impressive part was the defence of the Tuileries on the 10th of August, 1792. But the decorations and the effects were in this case provided by Frenchmen.

The lack, however, of the qualities which excite interest—a defect, which, if we may judge from history, lies deep in the Swiss character—though it accounts for public incuriosity about a people whose history and institutions are full of instruction for politicians, does not explain why it has happened that serious thinkers outside Switzerland have devoted little attention to the most singular and successful of the European experiments in democratic government. A few hasty notes by De Tocqueville, a few pages in Sir Henry Maine's 'Popular Government,' the as yet unfulfilled promise by Mr. Freeman of a history of federal government in Switzerland, are just enough to show that authors of first-rate ability know that Swiss political experience is a mine full of treasures, and also enough to make us regret that men so competent to explore the mine have chosen to leave it unworked. My aim in this letter is to point out in the most general manner some few of the difficulties which meet any student who attempts to draw from Swiss history or institutions the political teaching which, under skilful treatment, they could no doubt be made to yield. The difficulties to which I refer are not the external obstacles in the way of successful research. These, serious as they are, may all be summed up under the head of difficulty in obtaining trustworthy information with regard to the actual working of institutions which, like the *referendum*, are more or less peculiar to Switzerland. The hindrances which I have in my mind are, so to speak, of an internal nature, and have their roots in the history and the condition of the Swiss people. In another letter I shall point out some of the lessons which, in spite of the difficulty of studying Swiss institutions, may be drawn from a general view of democracy as it exists in Switzerland.

The circumstances which perplex an Englishman or an American who may wish to extract from Swiss experience inferences applicable to the politics of other countries, and especially of his own, are fourfold:

First. The smallness of the Swiss Confederacy. Swiss Cantons must be compared in size not so much with American States as with counties. The whole population of the country is considerably less than that of London, and, unless I am misinformed, is about equal to the population of Illinois. The country with which Switzerland may be fairly compared is Scotland. But whereas Scotland is a part of the United Kingdom, Switzerland is split up into twenty-two sovereign Cantons or States, each with its own separate constitution and each with its own separate character. Though the Swiss are a united people, they are a people who combine in the most singular fashion a strong sense of national

unity with an inherent tendency towards local subdivision. In at least three instances the unity of a Canton has been found insupportable to its inhabitants, and Cantons small enough one would think in themselves have split up into half Cantons, each with its separate constitution. How can any one without the most elaborate investigation and most careful thought draw precedents, from a country so small and so peculiar as Switzerland, applicable to England, to France, or to the United States? The European traveller who lands in America soon feels that the immense size of the States vitiates or perplexes many of the inferences which American institutions suggest to a man imbued with the experience of Europe; and the critic of Swiss institutions is equally perplexed by results due to the smallness of Swiss territory and the scanty resources of the Swiss people. He finds, for example, that the highest officials are paid salaries which fall far below the income of an English barrister in tolerable practice. He infers, according to his bias, either that popular government is economical or that democracies are parsimonious. Neither inference is justifiable. The salaries paid to the judges of the Federal Tribunal correspond fairly enough with the probable gains of a leading Swiss lawyer. No one, of course, would deny that the salaries of Swiss officials are low; all that need be insisted upon is the existence, at any rate, of a plausible doubt whether the low scale on which Federal officials are remunerated has any close connection with the existence of democratic institutions.

Secondly. The basis of Swiss institutions is the *Gemeinde* or *Commune*, and no one will ever thoroughly know the strength or the character of Swiss democracy unless he realizes the powers of local self-government possessed by the *Gemeinde*. He must further realize that there is, in one sense, no such thing as Swiss citizenship. You become a Swiss citizen by being a citizen of a Canton; and though on the whole of this point I write with some hesitation, from my consciousness of the errors into which a lawyer is always liable to fall when writing about the institutions of a country not his own, no one, I venture to assert, belongs to a Swiss Canton without belonging to a definite *Gemeinde*. This fact is very noticeable; it explains the importance in Switzerland of questions connected with those mysterious persons, the *Heimathlosen*, or the "Homeless." The "homeless man" has no proper place in the Swiss democracy; by some means or other he must be given a legal home in his proper *Gemeinde*. It explains, again, why Englishmen find it specially difficult to understand the structure of Swiss institutions. In spite of our boasted self-government, the most marked feature of the English constitution is that it recognizes no local body really corresponding to the true *Gemeinde*, *Commune*, or Township. Far be it from me to detract from the historical claims of the parish to recognition, but whoever will read any description of local government as it actually exists in England, will easily make up his mind that, whatever the parish may have been in the past or may become in the future, it is not now in any essential respect like the Swiss *Gemeinde*.

Thirdly. Democracy in Switzerland is, in a most singular way, at once old and new. No one can understand the existing constitution of the Confederacy, and still less the way in which that constitution works, unless he has studied the history of the country. The position, for example, of the members of what, to use American phraseology, we may call the Senate, is hardly comprehensible without some knowledge of the position of the delegates sent by each Canton to the old Diets. The religious condition of the country, the jealousy entertained by some Cantons of others, the extreme desire of the Federal Government to avoid conflicts with the Cantons, and other matters, can hardly be understood by any one unacquainted with the historical development of Swiss nationality. It may even be maintained (and not without reason) that the present state of Switzerland can only be fully comprehended by one who studies the strange, though little understood, story of Swiss politics from the time of the French Revolution to the War of the Sonderbund. But while everything in Switzerland is in one sense the growth of historical causes, we must put side by side with this fact the equally important fact that Swiss federalism, as it now exists, is a modern creation which dates back only to 1848, and has even since that date undergone large and fundamental changes. The Swiss constitution of to-day, further, is not the development of the old Swiss Confederacy in the same sense in which the English Constitution under Queen Victoria may be considered as the development of the English Constitution as it existed under Queen Elizabeth. The political history of England is one of unbroken continuity; in the political history of Switzerland the student may see a curious instance of historical connection between the present and the past without historical continuity. Whether the old *Bund* could by any possibility have been gradually developed into a modern federal state, is extremely doubtful. In any case, such continuous development did not take place. The influence first of the French Revolutionists, next of Napoleon, broke, so to speak, the links which might otherwise have bound together ancient and modern Switzerland. Reform and innovation was connected with foreign invasion and the loss of national independence. When historians sum up the claims of Switzerland to public respect, they will give no small praise to the statesmanship and patriotism which enabled the Swiss people, after troubles spreading over fifty years, to acquire a constitution under which the country enjoys the blessings of unity, of independence, and of good government. But no one who studies Swiss institutions must forget the defects of a system which, at the end of the last century, made the Swiss welcome foreign intervention as the means of overthrowing internal misgovernment, nor the effect which the political contests of half a century must have produced on the sentiment of Swiss citizens.

Fourthly. Hence the prevalence among the Swiss people of two sentiments, neither of which is known to the citizens either of the United Kingdom or of the United States. The first of these is a kind of conservatism which resembles in character the tone prevalent among French Legitimists. The old aristocracy of Bern have lost political power, but have retained the reminiscences of political supremacy. Their wealth is decaying, their weight in the country is nothing, but they hold themselves aloof from the crowd of merchants or politicians. Nothing is left to them but the pride of race; but this pride is sufficient to prevent their taking part in a scheme of government which does not recognize the superiority conferred by ancient descent. In the country Cantons the same aristocratic feeling takes a more wholesome form, and the democracy like to be guided by men possessed of ancient historical names. In either case, you see in different forms the surviving influence or traditions of the *ancien régime*. The true effect, however, of a state of things which has passed away, is the force given to a sentiment created by opposition to bygone abuses; for the second feeling of the Swiss people which finds no parallel in England or America is the democratic passion. The idea of equality, the hatred to privilege, the whole mass of sentiment which first made itself felt at the time of the French Revolution, has nowhere produced more striking consequences than among the Swiss people. Let any one read the arguments adduced by Swiss advocates of the *referendum*, or, in other words, of the principle that every law ought to derive its authority from the direct approval of the majority of the citizens, and he will at once have some notion of the power in Switzerland of what I have called the democratic passion. It is easy to find arguments both for and against an institution which will, it may be suspected, come sooner or later into existence in every democratic state; and it is easy to see what are the sort of reasons drawn from alleged expediency with which an Englishman or an American would combat or advocate the principle of submitting every enactment to the test of popular approval. The oddity of the mode in which this matter is reasoned out by Swiss writers is, that the favorers of the *referendum* at any rate appeal almost exclusively to general, one may almost say to *a priori*, dogmas of the democratic creed. The Swiss are a hard-headed and a very practical people, but their political views are clearly under the influence of the revolutionary spirit.

Nor to any one who knows Swiss history will this appear surprising. Switzerland was, when the French Revolution broke out, more under the influence of what may, for want of a better term, be called feudal institutions than any country throughout Europe. Each Swiss Canton was, it is true, a sovereign republic; but if inequality and privilege be the special marks of the *ancien régime*, then it is no exaggeration to say that the principles of that régime flourished more luxuriantly in Switzerland than in France. The thirteen Cantons were not equal among themselves, and large parts of the country were in vassalage to one or more Cantons. Moreover, feudal supremacy meant in Switzerland gross and palpable tyranny. The exactions of Bern are still, it is said, remembered in the lands which were subject to her sway. The description given by contemporaries of the despotism exercised by the governors set over the towns of what is now Italian Switzerland, recall in miniature the exactions of Roman proconsuls in subject provinces. Nor was it only the dependent lands which had reason to complain of ill-treatment. It would be difficult, towards the end of the last century, to have found a single Swiss Canton of which an oligarchy of one kind or another had not got all the powers of the State into its exclusive possession. The town of Bern tyrannized over the rest of the Canton, and the patriciate ruled despotically over the other inhabitants of the city. There is a curious though probably accidental appropriateness in the term patriciate as applied to the Bernese oligarchy. They must have been entirely ignorant of that distinction between patricians and plebeians which was revealed to a later generation by Niebuhr; but had they mastered, by some power of prophecy, all the discoveries made by the most original among the expounders of Roman history, they could not have chosen a term which with stricter accuracy described the relation of the Bernese oligarchy to their fellow-citizens. They were in the very strictest sense a body of patricians, and a body of patricians who, with some of the virtues, exhibited in an exaggerated form the political vices of the old Roman aristocracy. If we bear these and similar facts in mind, we shall not wonder for a moment that the doctrines of the sovereignty of the people and of the natural equality of men were no sooner proclaimed in France, than they commanded the warm sympathy of every man in Switzerland who did not himself belong to some privileged class or family.

Add to this that the Swiss aristocracy died hard. Its interests were to a certain extent blended with the cause of Cantonal independence,

or, as you would say in America, of State rights. Napoleon's act of mediation was from some points of view favorable to the power of the old families, and the overthrow of Napoleon in Switzerland as elsewhere heralded—in the triumph of reaction. The Sonderbund war itself was, like the war of secession, in some degree a struggle between democratic and anti-democratic principles. The defeat of the Sonderbund insured the triumph of democracy; but a democracy which has triumphed after an arduous contest is a very different thing from a democratic society which, as in England, has never broken with the aristocracy whose traditions and powers it inherits, or which, as in the United States, has grown up without ever needing to fight and overthrow an aristocracy already in possession of the field. The democracy of Switzerland exhibits, therefore, naturally, democratic passions or prejudices unknown to the English people on either side of the Atlantic. D.

VOLTAIRE IN SWITZERLAND.

PARIS, November 5.

MM. LUCIEN PEREY and Gaston Maugras have adopted the eighteenth century; they live in it. They have given us the correspondence of the Abbé Galiani, and published 'The Youth of Madame d'Épinay,' and the 'Latter Years of Madame d'Épinay.' They are not good critics, their erudition is sometimes at fault, they often use materials which are not their own, and, as the French proverb says, break doors which are already open. They seem to make discoveries in an unknown land, when the land has already been often visited. But we must not be too severe. They have always some "inedited documents" in their hands, and in our day a "document" covers a multitude of sins. They deal with interesting people and with an interesting time. It would seem as if there was nothing new to say on 'The Intimate Life of Voltaire at the Délices and at Ferney' (this is the title of their last volume). There is nothing mysterious in Voltaire. He lived, so to speak, in a glass house; he kept the whole world occupied with the most minute trifles of his existence, he had a hundred correspondents. We have read, however, this new volume with interest, not because the authors judged it necessary to subjoin to their title the inevitable formula, "from inedited letters and documents," but because we knew that we should find a sort of condensation of all we had read before on the subject.

Voltaire had fixed himself at Paris in 1749, after the sudden death of Madame du Châtelet. Madame de Pompadour, who was very anxious to acquire the reputation of a patron of art and literature, had obtained for him the office of *gentilhomme ordinaire* of the King's chamber, and of French historiographer. Voltaire was denounced to the King as an infidel, and soon lost his favor; he accepted the invitation of Frederick, and went to Berlin in 1750. He remained there two years, quarrelled with Maupertuis, the French President of the Academy, and wrote his satire called 'La Diatribe du Docteur Akakia, médecin du pape.' This was the origin of a quarrel with the King himself. Voltaire left Prussia under pretext of going to take the waters of Plombières for his health, carrying with him the letters which the King had written to him for three years as well as a volume of verses by Frederick. The King became alarmed, and wrote to his sister, the Margravine of Baireuth: "Voltaire is at Leipzig, where he distils new poison. . . . Many people are put to the rack who do not deserve it as much as he does." The Prussian Resident at Frankfort, Baron Freytag, arrested Voltaire, ransacked all his papers, and treated him with the greatest brutality. Voltaire never pardoned the insult which he had received in the "free town" of Frankfort. His niece, Madame Denis, had joined him there. Frederick, to whom Voltaire had written, did not answer him, but wrote dryly to Freytag: "One must never make more noise than a thing deserves. . . . This affair must stop. Let Voltaire and his niece go wherever they please, and don't let me hear any more of them."

Voltaire was free. He visited Mannheim, where the Elector treated him with much honor; Strasbourg, Colmar, and Lyons. Meanwhile, one of his friends was looking for a house near Geneva. MM. Perey and Maugras give an interesting account of the political organization of Geneva at the time, and of the social state of the little republic. Voltaire arrived in Switzerland knowing but little on the subject. The Government of Geneva was an oligarchy, the ordinances of the republic were puritanic, and sumptuary laws regulated all the details of dress and ornament. The citizens were divided in three classes, new fashions were severely interdicted, dancing was forbidden, theatrical representations likewise. At the end of the eighteenth century Calvin's severe rules were still respected, although there were a few Genevese who had travelled in France and lived in French society. These wealthy citizens were obliged, when they came back to their native city, to renounce lace, embroidered cloth, jewels, theatres. The reaction began first in architecture. The inner arrangement of the houses had been the subject of ordinances; at the end of the eighteenth century the rich Genevese began to build houses of a new style. "We have now *portes-cochères*," said a minister of the time, "and by these will luxury come in." A fever of speculation also seized these Genevese of the new school, but the government of the Republic still belonged to the old-fashioned, frugal, and severe representatives of the old families.

Voltaire, with his niece and his secretary, Collini, arrived at Geneva on December 12, 1754. He stayed awhile at Prangins, near Nyon. The secretary Collini writes: "What are we doing in this château? 1st. We are a little *ennuyés*. 2d. We are in a worse humor than common. 3d. We work much at history. 4th. We eat little, as usual, as we wish to be sober. 5th. We philosophize as badly as in a great city, and, finally, we don't know what will become of us." Collini was an Italian, and, as you see, a sceptic.

Voltaire bought a place called Saint-Jean, which ever afterwards was called Les Délices, for the sum of 87,000 livres from M. Mallet. He immediately called himself the "Swiss Voltaire," and prided himself on "having given an *entorse* to the fundamental law of Geneva, which says that no Catholic shall breathe the air of its territory." The struggle between Voltaire and Geneva began almost immediately. He made it the object of his ambition to have a theatre. The Council expressed some fears on the subject, and the poet answered at once "that he would not allow any piece to be played in his house, before ten people, though it was full of morality and of virtue, if it displeased the company." He lived in great style, and never went to Geneva except with four horses to his carriage—a spectacle unknown in the austere republic. He drew round him a part of the Genevese society, the famous Dr. Tronchin and the members of his family, the Cramers, the Pictets, the Vernes, the Chevalier Huber, Mme. Gallatin. These Genevese were sometimes witty. Somebody spoke once to Mme. Cramer of Mme. Tronchin (she was a De Witt, the grand-niece of the pensionary) who was extremely ugly. "And Madame Tronchin, que fait-elle?" "Elle fait peur," was the answer. The Cramers were great publishers. The Chevalier Huber was a painter, who made himself famous by his clever way of cutting profiles on paper. I cannot find anywhere if there was a connection between Mme. Gallatin (who was called Gallatin Vaudenet) and the American Gallatins.

In 1755 Lekain, the great actor, made a visit to Voltaire, and the opportunity was seized of giving a private representation of "Zaïre." Madame Denis played the part of *Zaïre*, and Voltaire himself the part of *Lusignan*. Soon afterwards Voltaire had a sort of rehearsal of a new tragedy, the "Orphan of China." The consistory of Geneva became alarmed and made some objections. Voltaire did not attempt any resistance, especially as he was in great trouble at the time about some manuscript copies of his too famous 'Pucelle,' which were circulating in Paris. Voltaire denied stoutly being the author of the poem, but he could lie as boldly and as often as circumstances required. It is painful to read the letters he wrote on this subject, and the story of his difficulties with the people from whom he bought back the manuscript copies which had found their way to Geneva.

The climate of Geneva is severe in winter, and Voltaire bought a winter house near Lausanne, called Monrion. He went there first in 1755, and became acquainted with the best society of Lausanne, chiefly composed of French families which had emigrated at the time of the revocation of the Edict of Nantes. The gentlemen generally took service in foreign armies, and brought back to the Canton of Vaud the habits and manners of the great capitals. The society of Lausanne was very hospitable, less austere than the society of Geneva, and Voltaire had more facilities for indulging his great taste for theatricals. He once played "Zaïre" before the famous Haller. Somebody asked the great naturalist what he thought of the play: "Well," said he, "it is the first time I ever saw people make a love appointment in order to get themselves baptized." "It is lucky," said Voltaire, "that the remark was not made in the parterre of the French Theatre; my 'Zaïre' would have been lost!"

The reputation of Dr. Tronchin attracted many people to Switzerland; among others came Madame d'Épinay, and Madame de Fontaine, who was a niece of Voltaire; Grimm joined Madame d'Épinay, and became, with her, an *intime* of the Délices. D'Alembert arrived in 1756. Voltaire presented him to all the distinguished people of Geneva and of the neighborhood. The Protestant ministers were hearty admirers of the Director of the 'Encyclopedia,' having a great leaning towards philosophical ideas; but they were much scandalized when, a year afterwards, they read the article "Geneva" in volume vii. of the 'Encyclopedia.' "Religion is there," wrote D'Alembert, "almost reduced to the adoration of one God, at least among those who are not the people. The respect for Christ and for the Scriptures is, perhaps, the only thing which distinguishes the Christianity of Geneva from pure deism." The excitement over this was great, and Voltaire hastened to leave Geneva for Lausanne. Dr. Tronchin had been charged with the mission of obtaining from D'Alembert a retractation. He entered into communication with Voltaire on the subject; but Voltaire wrote to D'Alembert: "The priests of Geneva are going to write to you. I beg you instantly to write to them, as your only answer, that you have received their letter. I assure you that with my friends I will lead them on well. *Ils boiront le calice jusqu'à la lie.*" He wrote to Tronchin: "You are not made to do the business of fools or fanatics; gain time, time, time." D'Alembert would retract nothing; the result was, that the article "Geneva" attracted the attention of the Sorbonne, and M. de Malesherbes

was ordered to name more severe censors for the 'Encyclopedia,' and a year afterwards the privilege of the 'Encyclopedia' was withdrawn. The King of Prussia and the Empress offered to Voltaire to print the remaining volumes in their country; but distance was in those times too great a difficulty.

D'Alembert in his article had touched the question of the theatre. "They suffer no plays in Geneva; not that plays are disapproved in themselves, but they fear the love of dress, the dissipation, the immorality which comedians bring with them." Rousseau wrote in answer his "Lettre sur les Spectacles." The theatre is a mere pretext for him, in these 400 pages, which few read now. He sets forth the strangest theories on love, on women, on literature. "The dramatists are obliged to heighten the interest of love; love is the reign of women, and the reign of women is the degradation of men. Women love no art, understand none, have no genius. The theatre has the great inconvenience of bringing together the two sexes, which are by nature destined to live separately," and so on. Voltaire was much incensed at this work of Rousseau, which was very favorably received in Geneva, except by the aristocratic families, and he resolved to make a new establishment out of the territory of the Republic. He succeeded in buying the estate of Ferney, and the neighboring estate of Tournay, which belonged to the President Debrosses. He took possession of his estates in great state, like a feudal lord. He found himself at Tournay in France, and at the same time in the diocese of a foreign Bishop, the Bishop of Annecy, under the jurisdiction of the Parliament of Burgundy, where he had many friends; on the frontier of the Canton of Bern and of Geneva—like a spider in the middle of his net. He felt more independent; he could laugh at his enemies in Geneva, print his books without a privilege from the King, and run in an instant from one country to another.

Correspondence.

THE DEMOCRATIC MUGWUMPS OF PENNSYLVANIA.

To the Editor of The Nation:

Sir: Now that professional Democratic politicians, like the Indianapolis *Sentinel*, have had plenty of time to explain their view of the recent defection of their rank and file, it may be useful to them, and ultimately to the public, to learn the real motives of the Democratic "Mugwumps" who, in this city and State, constitute a large and increasing body. There are hundreds of Democrats in this city, and thousands throughout the State, who I have reason to know refused to vote the ticket at the late election for the same causes that influenced me. Nevertheless I will speak in the first person, for brevity's sake.

I have been a Democrat for over thirty years, for what seemed to me good reasons, viz., because I believed that, notwithstanding the numerous shortcomings of the party, it could on the whole be relied on as faithful and united on at least three immortal principles, viz.:

(1.) Commercial and all other orderly freedom to the individual.

(2.) A sound, honest currency accepted throughout our own country, and commanding credit and equality in every other.

(3.) Local self-government as guaranteed to the States by the Constitution of the United States.

There are minor approved Democratic principles, such as an honest and capable civil service, the "least possible functions of government," and so forth, respecting whose definitions there may be shades of difference; but I have always understood that those who accepted the first-named principles were Democrats, and those who did not were something else.

Now, the party which has immemorially professed these views in this State, has fallen under the dominion of a "boss" who, though he has never defined his position in any great speech, writing, or argument on these public questions, or on any other, is known by his votes and acts to be hostile to the first, and unreliable or unpronounced upon the last two. His great power in Pennsylvania has been, in short, amassed not from any practice or profession of principle whatever, but by the adroit dispensation among his vassals and henchmen of the public spoils—a collectorship to one precinct, a scrubwomanship to another—every possible fraction of patronage that could be begged or bullied from the Federal Government, retailed out where it would do the most good, not to Government or to the public, or even to the party, but to the Congressman. The conscience and intellect of the party, which cannot be bought with office or contracts, has had no attention paid it, but has seen the essential and time-honored principles of the party muzzled or traded for official patronage. How the civil-service-reform legislation has been cheated by hostile Federal officials is partly shown by the statement of the Civil-Service Reform Association of this city, recently published, respecting the thimble-rigging with examinations in the Philadelphia Post-office.

Now, some of us life-long Democrats have got tired of this betrayal, and of seeing able and distinguished Democrats proscribed for preferring principles above ephemeral success; and if our "bosses" learned from the Republican "bosses" the method of consolidating personal power by the abuse of public spoils, we also have learned from the Republican "Mugwumps"—to whom be all honor and praise for the useful lesson—how to beat them. Many Democrats refused to vote the ticket prepared by the "bosses," though the candidates, except in their subjection to the "boss," were personally unobjectionable; and we are so well satisfied with the result that next time we may improve on it by voting the whole Republican ticket, if necessary. If the President had enforced strict obedience to the civil-service-reform legislation here, as he did in Massachusetts, we could, I believe, have shown a similar result. Why he allows it to be trampled under foot here by a "Democratic" boss, who is a Democrat only in name, we cannot tell; but as the *Nation* says he means right and will ultimately accomplish it, we wait in patience, without any resentment towards him as yet. W.

Philadelphia, November 11, 1886.

PROTECTION AND PURE WATER IN PHILADELPHIA.

To the Editor of The Nation:

Sir: Your editorial last fall upon "The Lesson of Philadelphia" attracted much attention here, and I have been reminded of it in reading a pamphlet recently published upon "The Legal Protection of the Present Water Supply for Philadelphia." It forcibly suggests the effects of an education in the protective system, and the growth of provincialism and lack of public spirit. It is bad enough that taxes upon the whole country should be demanded in order that Philadelphia manufacturers might grow rich; but to live among them is to know that their demands in the matter of protection do not stop there. The pamphlet I refer to, prepared by a well-known member of the Philadelphia junior bar, points out the sacrifice which has been made in public health to "protect" business.

Statutes to prevent the pollution of the water supply for Philadelphia were passed in 1828, fifty-eight years ago. That the Manayunk manufacturers have been openly violating them ever since has never been questioned; but, lest business interests should suffer, the laws remained lifeless. In 1868 an attempt was made to revive them and increase their scope, but the manufacturing interests defeated it. The remedies at law and in equity for pollution are by no means ambiguous, but legal measures have never been permitted to be effective. Several resolutions at different times have been passed by Councils, directing the City Solicitor to proceed, but in each instance the resolution has been afterwards rescinded by the influence of manufacturing interests, and the gross pollution of the city's water supply by manufacturing refuse continues. They have even sought to protect themselves from a free discussion of the subject, and last year secured the passage of a resolution in Councils censuring Col. Ludlow, who was then Chief Engineer of the Water Department, and whom they have since dismissed, because he had delivered an address before a medical society upon the subject of the water-supply in relation to sanitation, in which the evil results of using polluted water were stated.

Philadelphia drinking-water has become a commonplace topic to fill in gaps in polite conversation at home, or to smooth over a Philadelphian's stiffness at meeting outsiders. But, taken more seriously, it suggests a degree of selfishness which cannot be equalled in any of the other vicious results of the protective-tariff system. Analyses of the different drinking-waters have been published, showing the amounts of the two ammonias, and taking Loch Katrine, which supplies Glasgow, as the standard, at 0.03 and 0.67 for free ammonia, respectively. They give the Croton sample at 0.99, the Thames at 0.02 and 2.33, and the Schuylkill samples at 3.13 and 4.64 respectively. It may not excite surprise that Philadelphia has never yet been able to appreciate the problem which every other city of its size and importance has long since successfully solved. Distant sources of water-supply have been secured by London, Paris, Berlin, Rome, Glasgow, Edinburgh, Liverpool, Manchester, and many smaller European cities; and by New York, Brooklyn, Boston, Baltimore, Chicago, and numerous smaller cities in this country. Some day this city also will perhaps awake to the importance of such a step, and the manufacturers learn that some interest besides the "protection" of business shall be considered.

The question of supplying water to large cities is one of the most difficult in the complex conditions of modern municipal existence, and the predicament in which Philadelphia finds itself teaches a valuable lesson. G.

Philadelphia, November 13, 1886.

CHEMISTRY VS. PROTECTION.

To the Editor of The Nation:

Sir: In the very interesting address entitled "Lebensfragen," delivered by Prof. Ferdinand Cohn of Breslau before the fifty-ninth Convention of German Naturalists and Physicians—the Convention was held in Berlin on the 22d of September last—occurs the following passage:

"There is a prospect that, sooner or later, the last one of the substances which have hitherto been obtained only from particular plants, and that often with great difficulty and expense, will be synthetically produced. It is, indeed, true that those organic compounds which are of the most importance in the life of the plant, the hydro-carbons and the albuminoids, are the very ones which as yet have not permitted the monopoly of their production to be wrested from the plants. From an economic point of view, this is certainly unfortunate; for, from the day on which chemistry shall succeed in doing what the simplest algæ and mosses are able to do—namely, in producing starch from carbonic acid

and water—the bread problem, which is in fact the first of all social problems, will be solved. As long as we are confined to the cultivation of cereals, a limited area will suffice to support only a limited population; but of carbonic acid and water there is enough to furnish bread for an indefinitely large number of human beings. Further, when once the artificial production of the hydro-carbons has been accomplished, it is a much smaller step to make albumen by combination of these with nitrogen; so that it will then be easy to produce artificial milk and meat. Then will all *Nahrungssorge*, all struggle for existence and all the social evil which is connected with the struggle, be suddenly at an end. Let us hope that organic chemistry may soon succeed in bringing on the golden age, by learning from the plants the secret of their process for making starch, sugar, and albumen out of air and water."

Certainly we can all join in this hope. It is pleasant, also, to hear from so distinguished an authority that this hoped-for triumph of chemistry is not a mere chimerical dream, but a scientific problem which there is a "prospect" ("Es lässt sich voraussehen," are the speaker's words) of actually solving in the future. It would seem, however, that Prof. Cohn, as a sociologist, has allowed the wings of his imagination to carry him too fast and too far. Probably no product of the laboratory will ever excel air and water in respect of cheapness and abundance; and yet the procuring of these commodities in sufficient quantity and of good quality involves a struggle which is constantly driving the weakest to the wall in great numbers, and the aggregate effects of which are terrible to contemplate. And, again, in this portion of the world, at least, we certainly have good reason to expect that, when the chemists shall have succeeded with their laboratory milk and bacon, Congress will quickly lay a tax upon the product so as to "protect" the raisers of cows and hogs.

Yours respectfully, C. T.

Ann Arbor, Mich., November 9, 1886.

LET THE REPORTER BE NAMED.

To the Editor of The Nation:

Sir: The apology made for "journalism" by the professors of that art is that it is "demanded by the people" It is true these gentlemen are capital friends of the majority doctrine; indeed, they carry it to such an extent that, *ex uno plures*, out of a noisy minority they are often able to construct the public at large. But if they are right in the point, not only should they have all the advantages of their credit with either faction, but they ought also to satisfy the full faculties of their readers. No one is so beclapped as the author of a popular drama bowing over his own footlights; the artists and romancers of the daily press are modester than they themselves would be willing to admit. Those who peruse, for such is the term, a lively political descant, a well-blown scandal, a genteel disquisition on some unoffending person's private affairs, would surely experience much greater gusto did they know something of the author of their entertainment.

In view of these considerations, I propose that each newspaper shall conspicuously publish a daily list of its reporters, with brief notes upon the individual genius of each: whether college-bred or self-made; whether orthodox or agnostic; whether utilitarian, humanitarian, a satirist, or simply a brilliant man of letters. All articles of major importance being signed by their projectors, the delighted reader would then be at no pains to trace the circumstances at the origin of each trait of style or imagination. I need only commend to the logic of managing-editors the famous syllogism that who drives fat oxen should himself be fat. And surely to know that the gentleman who brought to public notice the President's late inhuman conduct on the occasion of the funeral of a near relative—it is true the story was directly proved false, but that does not vitiate the example—to know that this gentleman was an urbane, keen-sighted blonde, American in all his feelings, intimate with all the leaders of national thought, intolerant of foreign cynicism and luxury, a realist in literature, a true sympathizer with labor, a fond brother and son, an affectionate friend in all private relations, would be to see Sheridan brought on after the first act of the "School for Scandal," or Molière acknowledging the thunders of applause which greeted "The Misanthrope."

I am in hopes that this suggestion may not be without its weight in certain quarters. I might well elaborate further, but to a critical and cultured taste the advantages are so nice and obvious that I am positive I need not.

I am, sir, etc., T. W.

Philadelphia, November 12, 1886.

WHAT DO CONGREGATIONALISTS BELIEVE?

To the Editor of The Nation:

Sir: "K.'s" effort (through the *Nation* of November 4) to refute my claim that Congregationalists do not believe "those who have never known the teachings of Christ" are necessarily beyond hope, seems to me somewhat unsuccessful. Evidently he is no Congregationalist, and is only slightly acquainted with Congregational views; hence he makes three noteworthy mistakes, which, for the sake of brevity, even at the risk of seeming impoliteness, I will answer by denials.

I. A "confession of faith" was *not* adopted by a Congregational "conference in 1865 held in Boston." The "elders and messengers of the Congregational churches" there were careful to avoid that. Their "*Declaration* of Faith" was an informal and general statement of their personal beliefs at that time.

II. "The common laws of veracity" do *not* require those "Elders and messengers," or any other Congregationalists, either individually or collectively, to "repudiate" or "rescind" that "Declaration," or to admit that it expresses their "present belief." They used the present, not the future tense, and doubtless used it truthfully. Non-Congregationalists often speak of "*the* Congregational Church." There is no such collective national body. Congregational "churches" are independent bodies, united by an elastic system of mutual recognition and coöperation. Each local church formulates its own creed.

The householders of "K.'s" ward in Hartford would be just as much bound by "the common laws of veracity" to admit or to deny that they are Mormons if the householders there had said in 1865 that *they* were Mormons, as Congregationalists are now bound to endorse or repudiate the "Declaration" of those Boston gentlemen.

III. The Boston "Declaration" does not commit even its *authors* to the Westminster dogmas quoted by "K." For—

(1.) The name of "Westminster" was not in it.

(2.) It affirmed its authors' "adherence to the faith and order" of the fathers "substantially" as set forth in platforms of 1648 and 1680, while those platforms affirmed agreement, "in substance" only, with the "Westminster Confession."

(If Cleveland should affirm his agreement, "substantially," with Monroe in his views of government, and if Monroe had said his ideas were "in substance" those of Jefferson, would "K." insist that Cleveland had thereby endorsed every political expression of Jefferson's?)

(3.) In the discussion at Boston in 1865 Prof. Park said: "We can say . . . *not* that we swallow the entire Westminster catechism in every angle of it, but the great body of the doctrine." President Sturtevant said: "There is language in *every one* of those old standards which not a *man* on this floor receives," and "not a man" disputed the President's words! And what words were so universally repudiated? None more so than the very words quoted by "K."

But a national council *has* expressed dissatisfaction with all the old platforms. It was done at St. Louis in 1880. That council also provided for a committee of twenty-five to frame a new Confession of Faith and to publish it for the assistance of local churches. Twenty-two members of that committee published one creed, while Secretary Alden of the American Board and Prof. Karr of Hartford issued another, but neither indicated the least approach to the offensive dogmas quoted by "K."

Prof. George P. Fisher, no unknown or "mean" Congregationalist, declared only two years ago that "the old Protestant view adopted by the Reformers (except Zwingli), that all the heathen . . . perish, is *no longer held*." If, however, any one still thinks that the Congregationalists do hold it, let him name among its supporters:

(1.) One living Congregational theological seminary.

(2.) One living Congregational theological professor.

(3.) One living Congregational paper, or

(4.) One living Congregational minister of any note.

If he cannot do *one* of these four things, would it not be well to "repudiate," or to avoid making, that charge against "Congregationalists"?

L. F. Parker.

Iowa City, November 8, 1886.

THE MADISON POST-OFFICE AGAIN.

To the Editor of The Nation:

Sir: "Reformer," in your issue of October 14, uses my name as former Postmaster of Madison in connection with that of Louis C. Helm—a discharged clerk. Permit me to say that Mr. Helm was transferred from the "General Delivery" to be chief of carriers on account of his faithfulness and fitness for the place, and for his zeal during many years to do his duty as an employee at the Post-office; and not to appease any clamors, which I never heard. As a box clerk and letter-carrier, I have always thought that for expedition and correctness he had no superior. Long years of service made him a valuable public servant. He served faithfully in the army in Col. Wm. F. Vilas's regiment, and nearly twenty years in the Post-office. He was discharged from that service because he was a Republican and his place was wanted by a Democrat.

George E. Bryant.

Madison, Wis., November 12, 1886.

THE MILWAUKEE ELECTIONS.

To the Editor of The Nation:

Sir: In your issue of November 4, you seem to have gathered the impression that the labor movement in this city and State was solely an organized attempt to defeat Gov. Rusk for re-election, as a rebuke to him for his conduct during the riots in this city last May.

It is undoubtedly true that the labor vote was cast solidly against the Governor, but it seems to have been so cast more as a "showing of hands" than with any idea of being able by its agency to defeat the Republican candidate. Both the Democratic and Republican parties nominated full State tickets on platforms which were equally pronounced against the socialistic demonstrations in this city last spring. The Labor party immediately put a full ticket of its own in the field, this ticket receiving a support about equal

to the Prohibitionists', and, drawing as it did alike from both the old parties, could not hope to conduce materially to the defeat of Gov. Rusk.

In the Fourth (Milwaukee) Congressional District, however, the Labor party entered the field with a positive and determined purpose of effecting something more than a simple protest against the action of the constituted authorities last May. This district is composed of the city and county of Milwaukee, and is the most important in the State. It was also the scene of the May riots. The Democrats nominated Mr. John Black, who, by reason of his acting as foreman of the Grand Jury that indicted the leaders of the riot, was as much a representative of law and order as Gov. Rusk, and was quite as obnoxious to the leaders of the People's party. The Republicans made a nomination of their own, and the People's party nominated Mr. Henry Smith, a Socialist, and also a full county ticket. As the leaders of the labor movement were more or less outspoken Socialists, several of them having been indicted for complicity in the riots, and were conducting the campaign with the avowed purpose of punishing Mr. Black for his action as grand-juryman, it was fondly hoped that their following would be confined to those in strict sympathy with the riotous proceedings of last spring, and that the conservative and property-holding Knights of Labor and Union men would divide as of old upon the old party issues. The result of last Tuesday showed this hope to be an egregiously fallacious one. Not only did they succeed in defeating Mr. Black, but they elected their member of Congress and their whole county ticket, by majorities ranging from thirty-five hundred to four thousand, together with several Assemblymen and one State Senator. Out of a total vote of about thirty-two thousand, they cast thirteen thousand and over.

The result was not only a surprise to the managers of both parties, but, to those who remembered the troubles of last spring, a matter of grave solicitude. This anxiety is not found in the *personnel* of the newly elected officers. They seem to be perfectly honest, and several of them more than ordinarily intelligent. It is the possible result of the new movement that creates alarm. The fact that foreign socialistic and communistic elements have been able to use the whip of a great secret society to drive intelligent workingmen to join them in presenting a solid front against the action of the authorities, is considered ominous and significant. The most superficial student of our form of republican government cannot fail to see that the entrance of powerful secret organizations into politics upon a class issue is vitally dangerous to our institutions. Killing as it does the individuality of the man and the responsibility of the voter, it is the worst of all abuses into which popular suffrage can fall. Yet the eradication of old party lines and the raising of the class issue, dangerous and unrepublican as they are, seem to be the natural and inevitable result should the labor movement continue and spread. In this city it is already an accomplished fact. Party lines are broken down, and Democrats and Republicans will unite in selecting and electing suitable judges and municipal officers.

There are two positively beneficial results from last Tuesday's election. First, the creditable fact that the People's ticket was elected with little or no expense and an assessment per candidate of (it is said) but fifteen dollars will, it is hoped, enable us in the future to nominate candidates without reference to their financial ability to stand the drains of a canvass. Second, it has awakened the conservative, intelligent, non-caucus-going portion of our citizens to the fact that in a government based on popular suffrage, political apathy is a sin of omission of the gravest character, which will inevitably recoil upon themselves.

Yours truly,
BRADLEY G. SCHLEY.

MILWAUKEE, WIS., November 7, 1886.

THE DECAY OF NEW ENGLAND CHURCHES.

TO THE EDITOR OF THE NATION:

SIR: In the copy of the *Nation* for November 4 is an article on the decay of New England churches. This article contains a good deal of sense and information, but there is a question whether some of the facts are not stated in so dramatic a manner as to be misleading.

In regard to the old churches, there are many things which are to be deplored; but a statement of all the facts in many cases shows that, when an old church on the hill has fallen into ruins, a new one in the valley has taken its place.

In the article, the "dreadful example" is illustrated by the story of the church at "The Kingdom," in the town of Plymouth, Vt. I have been thoroughly acquainted with that place for nearly half of the eighty years since the church was built, and have never heard of the creeping in of the "doctrinal differences." In the beginning the building was called a "union church," and the ownership was divided among a number of denominations, even the Quakers coming in for a share and having a right to use the church at least one Sunday in each year.

Now, there are three things to be considered: First. "The Kingdom" is in the corner of the town, and villages have grown up in surrounding towns. In these villages are churches which would naturally accommodate those sections formerly represented in that old church. It was filled only when people came to it from a section which must have had a radius of six or seven miles. "The hamlet" described never was large; to-day there are only four dwelling-houses within half a mile of the church, and there were never more than a dozen.

Secondly. The population of Plymouth is now about eight hundred. Railroads built through adjoining towns have caused those towns to draw from Plymouth about one-third of the former population.

Thirdly. The "Plymouth Congregational Church," which formerly occupied the old church building on the hill, has for several years had regular services at Tyson, which is in the valley and within two miles of the old building. This society is now raising money to build a church, and a building will probably be erected within a year.

There is, it is true, in the town a second church building which is seldom used, but there is a small place near that at which services are frequently held.

Every man who is interested in the religious or even the moral standing of New England must regret to see churches deserted; but he has no right to vote the people of certain sections barbarians before he inquires whether physical reasons have not made changes, and also whether new churches have not taken the place of the old ones.

INHABITANT.

TYSON, VT., November 8, 1886.

THE BUCHHOLZ FAMILY.

TO THE EDITOR OF THE NATION:

SIR: Personal observation leads me to doubt whether the reviewer in your number for November 4 is right in saying that middle-class Germans recognize in 'Die Familie Buchholz' a perfect likeness, if not of themselves, at least of their neighbors. Last winter in Berlin I talked about Dr. Stinde's sketches to a number of people who apparently belonged to nearly the same social class as Frau Wilhelmine Buchholz and Dr. Wrenzchen. Many of these people would not admit that such characters as Frau Buchholz and her friends existed in Berlin at all. As for taking them as common types of Berlin women—as did the *Revue des Deux Mondes*—they were as loth to do that as most Americans are to accept Daisy Miller as a type of the average American girl. We must remember that Stinde does not represent Frau Buchholz as uneducated. She uses tolerably good grammar, does not confuse her *mir* and *mich*, and is even severe on others who make such mistakes. The extraordinary amount of Berlin slang that she utters seems to me incredible. It sounds as if Stinde had made a glossary of such expressions and were trying to see how many he could get in on a page. On the whole, I can hardly account for the popularity of Stinde's sketches except by his undeniable humor, which is none the less enjoyable if he does, like Dickens, introduce us to vulgar people.

H. M. C.

TALLAHASSEE, FLA., November 7, 1886.

HORSESHOE CRABS IN THE PACIFIC.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of October 28 a book entitled 'Our New Alaska' is reviewed. At one point the reviewer states that "he is somewhat puzzled by reference to a 'horseshoe crab,' as it seems as if a *Limulus* was intended, and we believe that genus has not been reported by naturalists, as yet, from those waters." Last summer the San Francisco *Evening Bulletin* contained a notice of the capture of a horseshoe crab in the Pacific, and remarked on the discovery. I remember cutting out the notice and sending it to Dr. Samuel Lockwood of Freehold, N. J., who has made a special study of *Limulus*.

Very respectfully, H. W. TURNER.

SAN FRANCISCO, November 4, 1886.

EVIL EFFECTS OF THE *NATION*.

TO THE EDITOR OF THE NATION:

SIR: Others are constantly sounding the praises of the *Nation*. Will you let me tell you the injury it has done me? It brought me to vote for Mr. Tilden in 1876, and thereby strained a friendship existing for years, from boyhood to manhood. Forced to farming by ill-health, I became through its teachings ambitious to do more than dig holes in the same old routine without thought, and thereby caused my neighbors to make me uncomfortable, since I endeavored to stir them up. As a bookseller I read and studied the *Nation*, and because I followed its teaching I failed to satisfy my public, and therefore failed financially. In both these cases if I had had capital I might have won in the end, I admit.

As a teacher—my proper place—it is for ever stirring me up and making me dissatisfied with myself, and prevents my resting as I otherwise would.

By teaching free trade and Mugwumpery it makes me lonely, living as I do in interior Pennsylvania.

Finally, it leads me to buy and read more good books than my pocket and eyes permit.

Knowing it was high time some one found fault, I do it.—Respectfully, X. Y. Z.

NOVEMBER 11, 1886.

Notes.

THE prospectus of *Scribner's Magazine* for the coming year embraces a series of characteristic unpublished letters from Thack-

eray, unsurpassed in autobiographic value, we are told, which will be accompanied by fresh facsimiles of his drawings. We remark, also, ex-Minister Washburne's Reminiscences of the Siege and Commune of Paris; Gouverneur Morris's pictures of social life in France at the Time of the French Revolution, as contained in the unpublished letters and papers of the then United States Minister to France; and a contemporary description of early New York and New England society by a brilliant girl of the period. The provision made for fiction includes Robert Louis Stevenson, H. C. Bunner, "J. S. of Dale" (F. J. Stimson), Harold Frederic, Joel Chandler Harris, T. A. Janvier, Prof. Boyesen, Miss Jewett, "Octave Thanet," and others. Special articles are promised by Gen. F. A. Walker on Socialism; by Dr. William Hayes Ward, on Babylonian Seal-Cylinders; by John C. Ropes, on Cæsar; by Capt. F. V. Greene, on Coast Defence, etc., etc.

We are glad to note the fact that all impediments to the resumption of the publication of Dr. Gould's *Astronomical Journal* are at last removed, and to welcome the initial number of the seventh volume, which made its appearance within a fortnight. The *Journal* will aim at the promotion of harmony and coöperation among astronomers, laboring for a common end, but will also afford opportunity for the expression of differences of opinion, founded on research. The publication of an article is consequently not to be understood as implying an endorsement of the views which it may express, or of the accuracy of its statements—a proviso which the editor well makes, as the *pièce de résistance* of No. 1 is the product of the pen of a worthy computer whom the higher analysis has confessedly led astray. Other articles relate to observations of variable stars, comets, and the eclipse of 1886. We congratulate Dr. Gould on the kindly assurances of approbation and welcome which have come in abundance from both sides of the Atlantic, and are glad to believe that there is no apparent reason why the resumption of the *Journal* may not now be regarded as permanent.

W. B. Clarke & Carruth, Boston, agents of the Appalachian Mountain Club, have now for sale the republished number one of the first volume of *Appalachia*.

Mr. Thomas Stevens's diary of his tour around the world on a bicycle remains the most interesting feature of the eighth volume of *Outing*. Yachting, by sail and steam, in American and in British waters, occupies a large space, and this branch of outdoor occupation is reinforced by tales of blockade-runners and of shipwreck. Rowing comes in for a small share; horseback riding, angling, mountain-climbing (and in this we may include the papers on the pursuit of Geronimo), ranch life and game shooting in the West (by Mr. Roosevelt), receive some attention. Bicycling has two papers of circumstance, but is no longer the chief end and aim of this diversified and well illustrated magazine.

In emulation rather of more recent French color-printing than of the ordinary English annual, the Christmas *Puck*, to appear the last week in November, will have illustrations scattered through its pages printed in varying tints.

Ivison, Blakeman, Taylor & Co, in a letter to *Science* for November 12, report that, as publishers of geographies and atlases, they felt it incumbent on them to settle the question of the ultimate source of the Mississippi. They accordingly despatched an expedition to Lake Itasca, which has made a thorough exploration of that body of water and Elk Lake, with their tributaries, noting drainage areas and elevations. The publishers in question are already convinced that they have exploded the baseless figment of a "Lake Glazier."

The Catalogue of the fourth part of the great American library of the late George Brinley is before us, announcing the sale during this week at the rooms of Geo. A. Leavitt & Co., 787 Broadway. It embraces collections in denominational theology, in law and government and political economy, in poetry, in the drama, in science and art, in education, with a department of masonry and anti-masonry, another of slavery and the negro, and a third of almanacs, etc. The bound volumes of pamphlets under all these heads are incomparably rich. We can only mention a few epoch-making works: the first edition of Jonathan Edwards on the Will; the fourth American edition of Thomas Paine's 'Rights of Man,' and the first edition of his 'Age of Reason'; the first edition of Webster's Dictionary; the first edition of Wm. Morgan's 'Illustrations of Masonry'; the first and second editions of David Walker's 'Appeal, with a Preamble to the Colored Citizens of the World'; Garrison's 'Thoughts on Colonization'; the first edition of the 'Book of Mormon.' There is a fine array of Mathers (Richard, Increase, and Cotton); the first edition of Anne Bradstreet's Poems; the colored astronomer Banneker's letter to Jefferson, elicited by the latter's 'Notes on Virginia' (as was also Walker's 'Appeal'); Motley's romance of 'Merrymount'; E. A. Poe's 'Conchologist's First Book,' etc., etc. It is easy to foresee the contest which will take place over these sections of Mr. Brinley's library, of which the numbers nearly reach 2,000.

Roberts Bros., Boston, will put on the American market the Life of Susanna Wesley lately reviewed by us.

'Harvard: the First American University,' by George Gary Bush, Ph.D., is in the press of Cupples, Upham & Co., Boston. It will be appropriately illustrated.

A translation of Laveleye's 'Balkan Peninsula,' lately reviewed in these columns, is announced by G. P. Putnam's Sons; also, nearly ready, 'The Recollections of a Private Soldier in the Army of the Potomac,' by Frank Wilkeson.

The fourth part of Prof. F. J. Child's 'English and Scottish Popular Ballads' is on the eve of being published by Houghton, Mifflin & Co., who have also under way 'The Heart of the Weed,' an anonymous volume of poems, and 'The Golden Justice,' by Wm. Henry Bishop, known already as a serial story to readers of the *Atlantic Monthly*.

Mathematical physicists will be interested in the announcement by Macmillan of a work on elementary dynamics by the Rev. J. B. Lock, to be ready next year, and of a more advanced treatise on kinematics and dynamics by Prof. J. G. MacGregor of Halifax, Nova Scotia.

A novel in Mr. Cable's field, entitled 'Towards the Gulf,' and said to be by a new writer, will shortly be published by Harper & Bros.

The second extra volume of the Johns Hopkins Studies in Historical and Political Science is announced to be a 'History of the Government of Philadelphia,' by Edward P. Allinson and Boies Penrose of the Philadelphia bar. It closes with what the authors call the Reform Act of 1885, by which a new and more liberal charter was bestowed upon the city.

Among the forthcoming publications of the Clarendon Press is Boswell's Johnson, with the 'Journal of a Tour to the Hebrides,' edited with copious notes, index, etchings, and facsimiles, by George Birkbeck Hill. Dr. Hill's book about Dr. Johnson's friends leads us to hope that we shall have at last what has long been wanted—an edition of Boswell with all the further information the reader needs, no more and no less. It is not a little surprising that Boswell's Johnson, which has been more overedited than perhaps any other biography ever written, has not yet found its final editor, in whom knowledge, exactness, and taste must be combined.

Among the books about the stage in preparation are Mrs. Kennard's Life of Mrs. Siddons (in the "Famous Women Series"), Mr. James Anderson's autobiography, and Mr. William Winter's critical sketch of Mr. Lawrence Barrett's career. It is also understood that Mr. Joseph Jefferson is engaged in writing his reminiscences, and his example is to be followed by Mr. Dion Boucicault and by Mrs. Bancroft (Miss Marie Wilton).

Houghton, Mifflin & Co. publish, under the title 'The Great Debate,' the discussions at the Des Moines meeting of the American Board on the question of future probation as affecting missions. To us the most notable speech is that of Dr. Ward, in its frank admission of a departure of the entire Church from the position of the founders of the Board, in its incisive showing that the whole debate was over a difference not as to fact but as to theory about a fact, and in its bold contention for liberty of thought within the Church. The most striking personality revealed in the discussion is that of the venerable President of the Board, Dr. Hopkins, whose serene strength of character and suave shrewdness of speech won unanimous approval for a policy to which at first the majority were bitterly opposed.

Mr. Washington Gladden collects, under the name 'Applied Christianity' (Houghton, Mifflin & Co.), six papers of his, first published in the *Century*, together with the address on "The Wage-Workers and the Churches," which he delivered before the Interdenominational Congress last December, and two added essays entitled "Is Labor a Commodity?" and "Christianity and Social Science." Dr. Gladden has long been conspicuous among clergymen for a sort of anticipatory sense of "burning questions." He was one of the first to introduce the discussion of the labor movement into the pulpit. We understand that some of his methods are regarded by ministerial brethren as irregular and undignified. Indeed, a staid Doctor of Divinity has declared that his plan of inviting the young men of Columbus to state their reasons for non-attendance at church, and his trying to find out the facts about the separation of the workingmen from the churches by actually asking the workingmen themselves, were "just like a newspaper reporter." On the other hand, Dr. Gladden can certainly point to growing public appreciation as a sufficient endorsement of his practical turn.

Mr. F. Donaldson, jr.'s 'Two Comedies; An Ill Wind, An Abject Apology' (Boston: Cupples, Upham & Co.), are rather scenes than plays. They represent fashionable love-making, and the special quality aimed at seems to be brightness in the dialogue. It is unfortunate that the wit is for the most part a matter of quotation. This is realistic, no doubt; but it was not Congreve's way. The structure of the scenes, as a whole, is so simple, however, that the action might carry them off very well if it were excellent. As literature, they can claim no higher rank than fragments of a novelette, cleverly arranged in a quasi-dramatic form.

In the latest issue of "The Book-Lover's Library," 'Old Cookery Books and Ancient Cuisine' (George J. Coombes), Mr. W. Carew Hazlitt has gathered an amount of information respecting the food of our ancestors and their habits in taking it, much more multifarious than is suggested by the title of the volume. The work is, in a sense, a bibliographical guide to the literature of the subjects, and is amply illustrated by quotations from that literature; but it contains also a brief view of the larder and kitchen, and the gastronomic prejudices of different ages, a history of the additions to the national bill of fare for lords, gentry, and yeomanry, descriptions

of various notable feasts, of utensils, of successive fashions and reforms, with much material that could not be set down under a heading. It is very agreeable and suggestive reading, and conduces to a feeling of satisfaction that one was born in the age of modern conveniences, and after the race had made the better acquaintance of the edibles of the planet and had outgrown the first crudities of culinary combination. The anecdotes tend to show how very recent are the modes of our own table. It was after Shakspere's death that Coryat was nicknamed *furcifer* because of adopting the Italian custom of the fork; and in the middle of the last century the old Duke and Dutchess of Hamilton ate at the head of the table from one plate, according to their life-habit.

Mr. Alden Sampson has printed an address delivered by him before the Association of the Haverford Alumni, at Haverford College, last June, on 'Milton's Sonnets' (New York: The De Vinne Press). It exhibits an understanding of the nature of poetry of the highest order, a sensibility to the severer charm of verse, and an altogether uncommon respect for Milton's epic in its wholeness, which argue a high power of criticism as well as genuine poetic cultivation in the writer. The subject is a peculiarly difficult one to treat, but we enjoy the pamphlet as much in its excursuses and its *obiter dicta* as when it keeps strictly to its theme. The spirit of the address is something wholly exceptional in current criticism, and reminds us that there is still a "remnant" which has not altogether fallen silent in the court of the muses.

In Mrs. Clara Erskine Clement's 'Stories of Art and Artists' (Ticknor & Co.) the "stories" are the traditional ones—the gossipy legends which make so formidable a part of the literature of art. Here may be read how Dibutades of Sicyon first modelled a profile in clay, in filling up his daughter's burnt-stick outline of her lover's features, how Callirhoe married her lover, and how he became a famous artist. Here is the tale of Zeuxis and his magnificences, and his contest with Parrhasius, and here the usual chat about Apelles and his sayings. Here is related how Aëtion's picture of the "Nuptials of Alexander and Roxana" was taken to Rome, and how "Raphael sketched one of his finest compositions from it," though how "it" came to be preserved until the year 1500 or so is not related. Here it is set forth that the two colossal groups of the Monte Cavallo at Rome "are said to be the united work of Phidias and Praxiteles," but the whimsical absurdity of that ascription is not hinted at. The youthful reader is informed that Torso "is a term used in sculpture to denote a mutilated figure." As to the pictures in this part of the book, although they are of all sorts and sizes and styles of work, they are not bad, each by each, and it is especially to be noted that the Laocoon is given with the more reasonable restoration of the right arm instead of the common one; though this is not mentioned in the text. But it is pretty hard on the youthful student of the past to be told that the "Biga" of the Vatican, with its modern horses and modern wheels and nothing antique about it but the late Roman body, which was once an arm-chair, is a specimen of "the most ancient form of Greek chariot." No doubt the more modern artists are more judiciously treated, the legends about them being one shade more probable and more easily understood by a modern. But it remains a fact that collection rather than selection is the make of the book, and that there is nothing of the author's own added to these promiscuous scissorings.

Scott's 'Lay of the Last Minstrel' (Ticknor & Co.), printed by the University Press, with a handsome, broad page, would be a pleasing edition of the much-loved poem, but that it has been shorn of the notes. The notes, nevertheless, are a part of it. Direct from the hand of the Walter Scott of 1805, thirty-four years old, and as hot about Border antiquities as about poetry, they are needed for the local color. One might as well leave the minstrel out, and begin the poem with

"The feast was over in Branksome Tower."

As for the illustrations, the costumes and armor can be looked at without a shudder, "admitting," as Mr. Ruskin says, "question of right and wrong." The little peeps of landscape are not so bad. It is only when the case is really a difficult one, as in the course of the hostile knights in the third canto (p. 83), that the action becomes impossible; and only when the action is varied and vigorous, as in the appearance of Deloraine in the lists, that dramatic propriety is badly violated.

The powerfully drawn story of Gloucester fisher life which Miss Elizabeth Stuart Phelps published in the Christmas *Harper's* last year, under the sensational title of "The Madonna of the Tubs," has been issued by Houghton, Mifflin & Co. in the form of a gift-book, with forty-three original illustrations by Ross Turner and George H. Clements. The illustrations are rude and sketchy, and without character; but the most has been made of them in embellishing the volume.

Three more issues in "Cassell's National Library" are characteristic of its editing—"Macbeth"; 'Early Australian Voyages,' by Pelsart, Tasman, and Dampier; and a second instalment of Pepys's Diary.

Many a man not a doctor may profit and be pleased by Dr. Fothergill's 'Manual of Dietetics' (Wm. Wood & Co.), which is animated in style and abundant in information. His views on alcohol are those of a *bon vivant*, tempered with knowledge, and he admits that it is a feat of judgment to use it without abuse. In our opinion sins of omission with that agent are more easily condoned than those of commission. Some of his dicta are sufficiently surprising to tend to incredulity rather than to prompt acceptance, the more since proof seems impossible. For instance: "All the bloodshed caused by the warlike ambition of Napoleon is as nothing compared to the myriads of persons who have sunk into their graves from a misplaced confidence in the food value of beef tea" (p. 52). That is not cheerful reading for the average family, and will at least weaken faith in what is almost a household god. The volume is attractive, as this author's works always are, but it is of hasty construction, and shows internal evidence, beyond its dedication to an eminent New York physician, of preparation with American readers especially in view. There are some pseudo-Americanisms, as if out of compliment to the popular taste, that are not successful imitations. The book has no index, which is simply an outrage, and it has but the most meagre table of contents.

Dr. Lauder Brunton, one of the first physicians in England, has assembled in a copiously indexed volume his lectures and other papers prepared within the last twelve years on 'Disorders of Digestion' (Macmillan). A man can transfer to his comrades neither his tact nor his talent, but he can expose his treasures of knowledge, and in this way Dr. Brunton has put the faculty seriously in debt to him.

'Insomnia and Other Disorders of Sleep,' by Dr. Henry M. Lyman (Chicago: W. T. Keener), is a medical book whose matter and style carry it into the higher grades of literature. It represents thought and knowledge, and to students interested in psychical research the last half of the book should be useful and attractive. The first half is limited in its adaptability to practising physicians.

M. Ernest Quentin-Bauchart has recently published two large octavo volumes, entitled 'Les Femmes bibliophiles en France, seizième, dix-septième et dix-huitième siècles' (Paris: Librairie Damascène Morgand). Of the 160 *femmes bibliophiles* of whom the writer describes the libraries, the tastes, and habits, the characters, and, with more or less detail, relates the lives, only one, a certain Madeleine Renard, was a plebeian; all the others were very great ladies, or princesses of royal birth, or queens—*reines de la main droite* or *reines de la main gauche*. The volumes which once made up these precious collections are now destroyed or scattered over Europe in public or private libraries, but the author has gathered them together again in his pages. Sometimes he relates the discoveries he has made in his search through little-frequented collections, as when he tells of the copy of the 'Office de la divine Providence,' which he found at Châlons-sur-Marne, with the royal arms that once adorned it defaced, but containing upon one of its leaves the last lines written by Marie Antoinette: "Ce 16 Octobre à 4 h. ½ du matin: Mon Dieu! ayez pitié de moi! Mes yeux n'ont plus de larmes pour prier pour vous mes pauvres enfans. Adieu, adieu! Marie Antoinette."

'The Book of Fortune' (Paris: Librairie de *L'Art*) consists of 200 drawings unpublished till they appeared in that periodical. In M. Ludovic Lalanne's introduction a detailed account is given of the manuscript upon which the book is based, and which lies in the library of the Institute in Paris. The drawings are accompanied by explanatory verses and a Latin title, which sets forth that this is the "Book of Fortune, one hundred Emblems and one hundred Symbols, with their *Partitiones*, Tetrastichs, and Distichs, and many Evidences and varied Explanations"; also, that it is published—but though the MS. was already for the printer, it seems as if it had never been put into his hands. That the drawings are by Jean Cousin is not proved, but shown to be very probable. That they are extremely interesting, as one more specimen of sixteenth-century book-illustration, cannot be denied. We can only regret that some pages were not given in actual facsimile. As it is, the original drawings were traced by M. Drouot, and the tracings photo-lithographed, so that the verses in different languages are lett out, and given only in prose translations of them in the Introduction. The local color is gone, and the pages do not smack of old Paris as we would have them.

Sir Robert Ball, Astronomer Royal of Ireland, in a communication to the Royal Irish Academy, publishes a calculation of the total quantity of heat received by each hemisphere of the earth during the summer and winter throughout the period of the varying eccentricity of the earth's orbit, which has convinced him that Mr. Croll's theory affords adequate explanation of the ice age.

At the opening meeting of the Liverpool Astronomical Society, the 11th of October, no less than eighty-eight candidates were up for election as members, of whom forty-three were from North and South America. The Society elected Profs. Asaph Hall and Simon Newcomb to be honorary associates. The Society was founded in 1881, and is now said to number 300 members.

—The Boston Public Latin School Association have published, as the work of many laborious years, a Catalogue of that School with an historical sketch by the Rev. Henry F. Jenks. It makes an octavo pamphlet of nearly 550 pages, most scrupulously edited and printed, and illustrated with portraits and views. Such a catalogue suggests a college, by its very bulk, and its appearance on the eve of Harvard's recent great anni-

versary was a just and happy coincidence. The School is a little older than the college, was its first feeder, and has remained if not the chief, at least one of the most copious and important. Its list of pupils embraces the names of Cotton Mather, Franklin, Sir William Pepperell, Admiral Isaac Coffin, Gen. Henry Knox, Robert Treat Paine, Hancock, Sam. Adams, Harrison Gray Otis, Robert C. Winthrop, Edward Everett, Charles Francis Adams, Wendell Phillips, Charles Sumner, J. L. Motley, W. M. Evarts, R. W. Emerson, Wm. H. Furness, Henry Ward Beecher, and many another light in law, divinity, letters, and politics. Its eighteen headmasters in two hundred and fifty years have averaged fourteen years of service—a term much surpassed in fact, since one master died the year of his appointment. Ezekiel Cheever, for example, author of a Latin Accidence which had a prodigious vogue and reputation for two centuries, held the office for thirty-seven years, and several of his successors for more than twenty. The School has produced many of its own masters, perfecting them generally by way of Harvard. Both Cheever and his predecessor, Daniel Maude, were educated at Emmanuel College, Cambridge, like John Harvard. Unlike college catalogues, this one lists the names of all who entered as well as graduated. With incredible diligence, whether one regards the early and more conjectural periods, or the more voluminous later, the editors have traced, so far as they were able, every individual, giving his occupation, honors, and date of death. The historical sketch is very ample, minute, and readable; there are numerous appendices. In short, the work is worthy of the oldest school in America. A year ago, in noticing the commemorative discourse of Dr. Phillips Brooks, we called attention to the breach in the traditions of the School, by which it had ceased to be a fashionable resort, and which we dated back some thirty years. After 1855, in fact, the connection of the successive classes with those that have gone before steadily diminishes—so far, at least, as this is indicated in foot-notes by the editors. We have not observed a single relationship of grandson; sons are infrequent; brothers are tolerably abundant.

— Every effort toward the invention or discovery of new optical glass cannot fail to be of the greatest interest to the physicist, the astronomer, and, in fact to all who use lenses as instruments of research. It is well known that, in the case of the refracting telescope, a limit is set to its size through the failure of the flint and crown lenses of the objective to make an image free from color. The blue light of what is termed the secondary spectrum becomes, in the larger telescopes, so excessive that, with a lens of about forty inches diameter, it more than counterbalances the advantages otherwise derived from the increased size of the objective. If we can discover a glass whose inherent property of dispersion shall correct what is known as irrationality of dispersion, the problem of a perfectly achromatic objective will be solved. Physicists in both Great Britain and America have sought to do this through the medium of a third lens for correcting the residual dispersion of the crown and flint; but within the last few years, Prof. Abbé of Jena has been systematically conducting a series of researches with a view to the discovery of new kinds of glass, whose dispersive powers would not involve the ordinary defects. The research involved the examination of the properties, optical, chemical, and physical, of all substances which may enter into glass-construction, and was begun early in the year 1881 by Prof. Abbé, and his coadjutor, Dr. Schott. The solution of the problem was first attempted from a chemical standpoint, and a series of fundamental facts in chemical optics was the first result of the experiments. These were then used as the basis for the production of actual glass possessing the necessary hardness, permanency, and freedom from color. As the result of these researches, theoretical and experimental, object glasses of a very high degree of achromatism have been produced, and a series of new glasses of graduated dispersive properties are now available to opticians generally. In so far as these new glasses have been practically tested, the advantages relate to improvements in microscope objectives, wherein much finer definition is said to have been obtained, and, among other advantages, the optical and photographic foci are practically identical. If the new glasses prove to have all the properties claimed for them, and it is found that no obstacles arise to the production of very large disks, the optical limit to the size of refracting telescopes will be practically removed, and the problem of the largest telescope will be reduced to one of mechanics simply. It is worthy of note that these researches in glass-construction have been made possible only through very liberal grants on the part of the Prussian Government.

THE TIMES OF EARLY ENGLISH DRAMA.—I.

The English Dramatists. Edited by A. H. Bullen, B.A. Boston: Houghton, Mifflin & Co. 1885-86.

WHEN we are coming to the group of English dramatists of nearly three hundred years ago, as, lately, to find Marlowe, and, by and by, one Middleton, among them, we bethink ourselves that our meeting with these people of the earlier time is much like any of Dante's meetings with some one of his flitting companies of unsubstantial beings in another world. Most of these writers are unknown altogether, even by name, except to a few, in this world from which they went out; and, indeed, only good scholars in our English easily recall bare names of any of them, with nothing else. There are no lovely airy visions of pure and tender, or holy, heroic, noble women, wives, or mothers, of their imagining; nor are there any such visions of higher manhood, and better, floating or fixed in our memories, or made into a part of our life and experience. There are few dear, few well-remembered lines or words of theirs in common use or treasured with the riches of our tongue; and the few that have come down to us have come from scarcely one or two among these writers. Something of Marlowe, had Shakspere never quoted from him, would not have been forgotten; something or other of Ben Jonson is known, for its own sake, or for its author's, or for some one else's sake; but, of the rest, though we may rehearse a list of them, how many can recall a character from a play? a scene? a word? Scholars in English may speak of them by their several names, and of their writings severally; but how few these scholars are!—and this, although the men wrote in our own every-day tongue, and sometimes wrote strongly, sometimes tenderly, sometimes gracefully and with beauty, often moving to laughter, and often to honest laughter, sometimes to good deeds. The men, moreover, made a considerable part of the literature of their times, and furnished entertainment for lettered and unlettered minds and hearts, old and young, and helped to form them.

One man's works, of all that were written by them all, grow better known and come more into the thought and life of reading and thinking people as time goes on; but the fact that Shakspere lived and wrote plays and acted at the same time with these play-writers and actors does not help the others. It only makes comparison of them with him the easier, and the more to their loss. They all stood much upon one footing—they with him and he with them—until he had risen in men's thought above the rest. Afterwards they were all hopelessly below him. The higher he has risen the more he has drawn our eyes away from them. A few hundred copies of their works are sent forth, from time to time, by the press; but a few hundred are enough for all the readers. To most eyes the forgetfulness is very thick which stands about and over the many that are gone, and hides them all

Those writers, like the writers of any time and of all time, had, of course, human nature to work out of—the greatness of it, the lovingness of it, the loftiness, the lowliness, the daring, the woe, the fun, the baseness; so much of it as they could occupy or possess or could reach to. They had way to the common store-rooms of material—so many as they had keys to unlock. They had histories; they had a knowledge of manners and customs—the πολλῶν ἀνθρώπων ἄστεα καὶ νόον; they had tales of travels and adventures and escapes; they had stories of happenings and seeings and witches and bewitchings and angels and devils. Even the old myths—the family handing-down, fancied, guessed, imagined, remembered—of the great races, if not made over straight into English, had come into it by some roundabout way, through other tongues. If they had not a hundredth part of the history that we have, or a hundredth part of the tales and stories, they were hardly the worse for the want; for what they had was incomparably more picturesque and more stirring to the fancy than all or any of what has taken its place to us. To set them on to work they had in them, of course, so much, more or less, of thought, tirelessly swelling and stirring, and of the strong and restless feeling that men have who live stories and write them. To draw those earlier writers out and to reward them they had, in the women and in most other men, that same waiting, wishful love of what is fanciful and imaginative and of what had been gathered up in memory—the stuff of tales and of history—to which all that is best was always sung or written. This same longing has drawn out and listened to and repaid all the makers and singers and tellers of all the ages of men.

They had also as many hindrances as most of those who write for others. If they were players, too, their handicraft or profession hampered them. Troops of actors, strolling, had a traditional ill name and suspicion hanging about them, brought down all the way from fifteen or sixteen centuries before. They had turned up out of the darkness as trilobites turned up alive from deep-sea dredgings, the self-same old trilobites, after having been taken for extinct by our good friends in science. After long disappearance, bands of actors came to outer day afresh, and the strollers showed themselves strollers right over again, after their kind, just such as the Greeks used to be in the Roman provinces. Even the fixed companies of English players, which often took in the "poets," bore a name a little smirched. Queen Elizabeth and her next follower were fond of pageants and shows and plays, and gave encouragement to players. The city, too, for the masques and processions of its great days or for some work in letters, sought one or other of the poets. On the other hand, many of the craft tried hard to have the world which they were living in as much set free from the every-day conditions of real life as that of the stage, and in some ways which others did not like so well; for these ways were often bad for the peace of families and for men who must have back their honest money to turn it.

The players were a lively set in their day, most of them, and so were most of the "poets" or

play-makers with them. Sometimes they were in trouble—one, or more, or all—sometimes out of it; generally under great patronage, but liable to be forgotten or abandoned at need; and others' need might mean hard things for them. Charles the First, as Herbert, who was "Master of the Revels," tells us, did not know that there was such a thing as a "Yeoman of the Revels." In that case no one was the worse for it; but Charles's way through life shows that it was easy for him to forget a greater man than any of his players or play-writers could well claim to be; and this when the forgetting might be very costly to the man forgotten. The patron's interest and the clients', the master's and the servants', might not always be the same. Then the stronger made the weaker take the consequences.

As a help to the understanding of the growth and making of the English drama, we may have leave, perhaps, to remind our readers what sort of times the players and play-makers whom we are handling lived in, and what sort of men they lived among; for, in some things, the world then was very different from that which we make part of. Authority, in those days, in the household, in the state, in the city—everywhere where any had it, or had any part of it—was used masterfully: it was personal, always, everywhere. Whosoever bore a sword, bore it not in vain, but found downright work for it, and allowed no time or room for whining or whimpering. Everybody under authority of any kind was, as far as possible, looked after and followed up; and that pretty sternly and hardly, for the most part. Privileges, too, were strongly set, were alive in every part, and ever watching, with a wakefulness that neither dozed, nor winked, nor looked away. Upper ranks and classes, as well as the uppermost, felt a right to be secure; as if rank, born to and begotten to, with leave to do whatever it found to do and had strength for, were inherent in human nature itself. The holders of rank or place were bound, by the having of it, to make sure that providence was plainly seen, pretty often, in its working on the side of divine right; this was one of their privileges, and it was the one duty that they felt most urgent.

Doubtless many whom authority, with or without trial, punished in those days were wicked people, and got only what they ought to get; but its machinery of infliction worked, with a fearful oiliness and glibness, on whoever happened to be just under it. If it caught many reeking murderers and made them give life for life, if it dragged many high-handed robbers to the gallows, it also laid hold on many a man who had uttered silly words, and speedily left him with no breath to make into words again. It went cheerfully about, putting out the fitful lives of "sturdy and valiant beggars," "whole and mighty in body," for the third offence of asking food for their felonious bellies. For a first and second offence of that sort, it whipped the wretches on the bare back, at the cart's tail, and slit or cropped their ears. It also often worked as summarily and fatally on the outside of all processes of law as within them. These were its ways; and what a risky thing writing or speaking might be! It must be added that in those days, as in days that have been lighted by later suns, there were sometimes back doors, open or shut, as need might be; there were loopholes sometimes; there were sometimes befriendings; sometimes there were even relentings; there were ways of escape and nooks of shelter which now and then saved, even when authority was hot after a victim.

Into this world of England, such as it was a generation or two before, and changing slowly, had—figuratively—come fleeing out of the church-doors, with bag and baggage, the earlier English actors of plays. The mysteries and miracle plays, which, under the Church's auspices, had given to the multitude, at the times of the great festivals, their spectacle, with dialogue and drama (and farce, too), had become very much worn out, and partly had been secularized, and partly had given ground to such and so much of secular plays as men of that time could make and the men of that time could like. Very little authorship was wanted for these unshaped and skill-less things, except what grew on the spot, out of the moment. That world was changing only slowly. In Elizabeth's time it had not changed much, though it was changing. So in the time of James it seemed the same, though the change was going on, and had really gone far. When the Church had turned players and playing out from within its walls, the actors banded themselves together to ply their handicraft (which took in the writing of plays) as best they might.

HOLIDAY BOOKS.

Reynard the Fox, after the German Version of Goethe by Thomas James Arnold, Esq. With sixty illustrations from the designs of Wilhelm von Kaulbach, and twelve India proof engravings by Joseph Wolf. Boston: Roberts Bros. 4to, pp. xxvii-342.

Sonnets from the Portuguese. By Elizabeth Barrett Browning. Illustrated by Ludvig Sandoë Ipsen. Boston: Ticknor & Co. Oblong folio, 90 pp., illustrations and text.

Dora. By Alfred Tennyson. Illustrated. Boston: Lee & Shepard. 1887. Sm. 4to, 31 pp.

A Mother's Song. By Mary D. Brine. Illustrated by Miss C. A. Northam. Cassell & Co. Sm. 4to, pp. 60.

THE ancient and popular story of the Fox and his wiles, of untraceable antiquity and endless variety of form, was put into shape by Goethe during the stormy times of 1792-93, when his family and social arrangements were overturned by invasion, when all the future was cloudy and uncertain, and he was naturally led to satirical expression of his contempt for mankind. The illustrations which the elder Kaulbach made for his 'Reineke Fuchs' were in accordance with its character. The creatures are rather human than beastlike and birdlike, though of a repulsive humanity indeed. Such designs, where beasts and birds are made to think and act as men, are apt to be ugly enough; but these are offensive even beyond the common run. The engravings were made by Rudolph Rahn and Adrian Schleich; they were smooth and sleek in the fashion of German engravings of fifty years ago, and in 1846 they appeared in a stately quarto with the text of the poem. Mr. Arnold's translation, in rhymed ten-syllable couplets, is nearly twice as long as his original, and is written in an off-hand, informal language, with free use of popular and even slang terms, well enough adapted to the subject; but much of this, and even very many of the remarks, the allusions, the sayings, the details, find no authority in the German poem. The English version appears to have been published in 1855, with a long introductory letter to John Smith Mansfield, Esq. It must have found readers, to be revived now, though it is hard to imagine any one finding pleasure in the dreary tale of court intrigue, brutal tyranny, the triumph of falsehood, and the sufferings of all the innocent creatures under a régime of mere club law, all in a setting of coarse jocularity. It is hard to imagine any one enjoying this, even if we can imagine any one failing to be repelled by the Kaulbach pictures. They have been revised a little, in reduction by wood engraving. Two or three of the most cynical have been left out: in one case a very comical alteration has been made in the interest of conventional propriety. But the greater number are unchanged, and twenty-five years of acquaintance with the originals does not make these reproductions seem any less repugnant, despite a certain power. The engravings by different artists after Joseph Wolf are not very interesting. The designs are not what one expects of that accomplished animal painter; if they appeared in 1855, they were of his early time, and their lack of interest may be so accounted for.

The 'Sonnets from the Portuguese' is a novelty, and very different from the Christmas books or picture books of the year or of the lustrum. It has almost no pictures, in the ordinary sense, but is as profusely adorned as it is possible to imagine a book adorned without color. Text and decorations have all been engraved together, apparently upon stone, in a way once more common than it is now, and printed on heavy paper of a very beautiful surface, not too lustrous, in brown ink of a pleasant tone. The page measures 13x15 inches; each one of the forty-four sonnets has a page to itself, is engraved in capital letters of a picturesque and well-chosen form, and is surrounded by a broad and rich bordering of a design which is nowhere repeated. To each sonnet is allowed a title-page, so to speak, on which the words "Seventh Sonnet" or the like are bordered with a circular design corresponding with the larger frame of the sonnet over page. The general title nearly corresponds, and this is preceded by a page on which is a portrait of Mrs. Browning in a roundel and on a background of laurel leaves. The uniformity of appearance, the same handiwork, arrangement, and color throughout is certainly a beauty, so far as it goes. The careful mounting of the heavy leaves *sur onglets* is an attention shown the book which inspires the student of it with respect. The fact that no two of the compositions are at all alike is a still greater charm; and one is brought to conclude that the work which has been so seriously done and so lavishly presented is worthy of a good deal of respect.

And so it is, if judged by any ordinary standard. If, for instance, we consider the sculptured decoration which an ambitious architect now and then finds means of adding to a building, then we find Mr. Ipsen's semblances of sculpture better than most of them; or, if we think of designs in metal work, then such a border as this of the twelfth sonnet, which suggests a grating of leafage in bronze, is worthy of a high place among them; or, if we recall book decoration in conventionalized leafage and the like, of which there has been a good deal of late years, then the borders of the seventh and twenty-seventh sonnets and of their titles seem very respectable, indeed. In fact, there is little contemporary decorative work so good. It is especially worthy of notice that by far the greater number of these designs are of no well-known and admitted style of decoration: they are not Renaissance (except one or two), nor Mediæval, nor (except one) Moresque, nor even Japanese. But it is easier to design well in an admitted style, which one has studied himself into and made a part of his existence, than thus in no style at all. We admire even tolerable work that seems independent of all styles; and we should admire Mr. Ipsen's work very much indeed if it were only a little more varied and free. These borders are too exactly balanced, the corners are turned too accurately, the rosettes are too precisely alike. One is reminded of the Viennese carpets copied from Eastern ones, very near in color and with flowers copied carefully, but the flowers are all exactly alike, the colors are uniform from end to end, and each corner has a leaf fitted neatly in, so that the border mitres exactly: peculiarities which are never found in Orient-

al work. The designs before us err in this way. Even the letters are too much alike. That is a pretty E that has been chosen from sixteenth-century work or designed new; but why should all the E's be the same? Even in printing with movable type a dozen forms of M or S will be found in a single book of the sixteenth century. And in hand-work—engraving or pen-work—the designer ought to revel in the chance of varying the forms of his letters.

'Dora' is an idyl of the sort which should lend itself well to illustration. Randolph Caldecott, Charles Keene, some artist who had studied the English farmer and laborer, village and country-side, would have made a charming thing of a little series of pictures to the gentle, tranquil, rather vague and feeble, but still genuine, poem. Mr. W. L. Taylor's illustrations do not seem to us full of English rural life: they are perfunctory; the smockfrocks and other costumes may pass, but the setting is not characteristic. The pictures are not uninteresting, even if there is a deal of false drawing in them. Dora standing on Mary's threshold, with the poor interior dimly seen through the doorway, is as pretty a bit as needs be. With it should be contrasted the large cut of William's quarrel with his father, where there is nothing that can be praised. The value of most of the illustrations lies between these two.

It is hard to award a place in literature to such very domestic and very maternal verses as these of Mrs. Brine's:

> "Gayly the robin his morning song sings,
> Pluming and stretching his feathers and wings;
>
> O! many the beautiful things that I see,
> But fairest of all things is baby to me!"

And these, when the baby goes astray in the fields—

> "Yonder I see her, my own straying lammie,
> Sun-kissed and breeze-blown; the bright tangled curls,
> Crowned with the blossoms and leaves she has gathered,
> This queen of all blossoms, my dearest of girls."

These are fair average specimens of the poem in question. The illustrations are easier to criticise. The seven full-page cuts are printed in black ink in the usual fashion, and are very sweet and refined compositions of no great originality of conception. The child who figures in them all is a very real and solid one; she is always alone with the landscape or with her playthings, until she is kissed "good-night" at last. We know her better from the pictures than from the verse, and we like her very much. The pages of text are "flourished around" with little scraps and sketches from nature, printed in the palest gray, not important nor very well drawn, but enclosing two or three little pictures in black which are sweet and dainty, and as many that are less good. But, on the whole, it is the pictures that save the book and make it worth buying and giving.

RECENT MATHEMATICAL WORKS.

Nos. 3 and 4 complete the eighth volume of the *American Journal of Mathematics*. It is alike difficult and unnecessary to characterize their contents in terms intelligible to the general reader. Its articles are mile-stones in the path of progress in the mathematical science of the nineteenth century. For the benefit of those whose training and pursuits fit them to understand the journal, and who, if any such there be, have not yet become subscribers, we will mention two or three articles.

Ten lectures on the theory of reciprocants by the former editor of the *Journal*, Prof. J. J. Sylvester, form the chief ornament of No. 3. A paper by Charlotte Angas Scott, of Bryn Mawr College, affords sufficient evidence that the female intellect is at least competent to treat questions which many a worthy college professor of the male sex might without shame confess were beyond his depth. The name of M. H. Poincaré is well known to the readers of foreign mathematical journals. A paper by him, in the French language, "Sur les Fonctions Abéliennes," is well adapted to those who seek recreation in the integral calculus, and occupies the larger part of No. 4. But the paper which, if we mistake not, will attract the widest attention, because of its practical bearing, is a "Generalized Theory of the Combination of Observations so as to Obtain the Best Result." It will be especially interesting to those who have read Mr. T. W. Wright's 'Treatise on the Adjustment of Observations,' which was reviewed in the *Nation* about a year ago.

When last year we noticed briefly the first volume of the third edition of Prof. G. M. Minchin's 'Treatise on Statics' (Clarendon Press Series, Macmillan), we ventured to predict that when the second and concluding volume of the work appeared, we should probably have the most complete and satisfactory treatise on statics in the English language. The second volume is now before us, and it not only justifies our prediction, but the limitation to the English language may, perhaps, be removed. The words "revised and enlarged" on the title-page have a more than ordinary significance. In its details and general plan it has been greatly changed for the better, and that is saying a great deal for a work on so abstruse a subject, the excellence of which had already enabled it to pass through two editions. To no mathematical treatise in the English language can the epithet "lucid" be more fitly applied. It is also fully up to date, so that we might justly add to its title: "A Résumé of what Men Knew of the Equilibrium of Physical Forces at the Beginning of the Year 1886." It presupposes an acquaintance with the highest branches of pure mathematics, especially the calculus, and one chapter (chap. xiv, vol. ii) will be intelligible only to those who have some knowledge of Quaternions. For those who have not the necessary preparation and yet wish to acquire a knowledge of the more essential parts of the science of statics, a little treatise of 270 pages, 12mo, by John Greaves, Fellow and Mathematical Lecturer of Christ's College, Cambridge (Macmillan), is well suited. It is constructed with special reference to Prof. Minchin's great treatise.

The name of Peirce still holds a high place in the list of American mathematicians. The latest contribution of the family to mathematical science comes from Prof. B. O. Peirce of Harvard, and is entitled 'Elements of the Theory of the Newtonian Potential Function' (Ginn & Co.). It treats, much more fully than would be inferred from its title, of the mathematical theory of attraction. The Professor says in his preface: "Although I have used freely the notation of the calculus, I have assumed on the part of the reader only an elementary knowledge of its principles." An examination of the work leads us to infer that "elementary knowledge" means considerably more at Harvard than it does at most colleges. The last chapter of the book applies the theory of attraction to the subject of Electrostatics. Although brief, it forms a very good introduction to the mathematical theory of a subject the importance of which is daily increasing.

Those who desire "information relating to the practical details of a magnetic survey" from one having extensive theoretical knowledge and great practical experience, will find it in a 12mo of 90 pages, by Prof. Francis E. Nipper of Washington University, entitled 'Theory of Magnetic Measurements' (D. Van Nostrand).

'Euclid Revised,' by R. C. J. Nixon, is one of the Clarendon Press Series. The original 'Euclid' is much altered, and there are many additions intended to illustrate modern methods. Some of these additions are very interesting, but, after all, the book has something of the appearance of patch-work. We presume Mr. Nixon did not avowedly write a treatise on geometry, because the English are so devoted to Euclid that the appearance of his name on the title-page seems indispensable to the success of such a treatise.

Mr. George Bruce Halsted, late Instructor in Post-Graduate Mathematics at Princeton and now Professor of Mathematics in the University of Texas, has published a treatise on the 'Elements of Geometry' (John Wiley & Son). In 1881, while at Princeton, Mr. Halsted published a treatise on mensuration, which was reviewed with some severity in the *Nation*. The defects pointed out as existing in that treatise appear in a somewhat milder form in the present one. Terms "new and strange," new and sometimes queer definitions of old terms, old truths uttered in new forms, and other peculiarities which we have no room to specify, give the book an air of awkwardness and clumsiness which will draw away the attention of readers from its real merits. To give a single example, how could any mathematician, with the least sense of scientific elegance and symmetry, read, without smiling aloud, the following definition of a straight line (p. 9)?

> "A *straight line* is a line which pierces space evenly, so that a piece of space from along one side of it will fit any side of any other portion."

The material form of the book is equally awkward and clumsy. Its giant size would lead one who only looked at its outside to infer that it must be a most extensive and exhaustive treatise. It is really no longer than ordinary text-books of geometry. The paper is very heavy and rather coarse, so that, thick as it is, it only contains 366 pages. The margins at the top and bottom of the page are of extraordinary width; the front margin is rather narrow.

We would not have our readers infer that Mr. Halsted is lacking in knowledge of his subject, or that his book does not substantially contain all that is desirable in a treatise on elementary geometry. His treatise on mensuration, his articles in the *Journal of Mathematics*, and the present treatise on geometry, give evidence of wide reading, of enthusiasm in the science, and of many qualities necessary to a successful teacher.

Prof. G. A. Wentworth of Phillips Exeter Academy has added to his series of text-books one on the 'Elements of Analytic Geometry' (Ginn & Co.). It is a small book, but contains quite as much as the most earnest professor will be able, with any profit, to force a class to go over in the time usually allotted to the study in those colleges which make it obligatory on all undergraduates. Its most marked characteristic is the astonishing number of examples. The treatise extends to only 221 pages, 12mo, yet it requires 26 pages inserted at the end, to record the answers only.

Quite a different book is an 'Elementary Co-ordinate Geometry,' by William Benjamin Smith, Professor of Physics Missouri State University (Ginn & Co.). From the title we inferred that this was only another text-book on analytic geometry, added to the multitude which have appeared in the last few years, and probably neither much better nor much worse than the rest. The motto on the title-page, "Maximum reasoning, minimum reckoning," with its double alliteration and slightly pretentious savor, did not promise favorably. But the concluding clause of a sentence near the end of the preface arrested our attention; it was, "determinants have been used freely." That certainly indicated something out of the ordinary run. Turning to the "Introduction," we found it consisted entirely of an exposition of the nature and

most essential properties of determinants. It concludes as follows:

"Under the hands of English and Continental masters, the Theory of Determinants has been of late years built up to colossal size and applied to almost every branch of mathematics; in fact, it has become well-nigh indispensable to higher research. An excellent English work is Muir's 'Theory of Determinants'"—

an opinion of Mr. Muir's work expressed in these columns about three years ago. Further examination showed that this work contains not only all the matters usually treated of in text-books of analytic geometry, but many others usually found only in treatises intended for professors, or those aspiring to become professors, rather than for ordinary pupils. Neither is the work confined to plane geometry. It invades space, and launches the student well into the geometry of three dimensions. Of course an octavo of 280 pages can only launch one into deep water, but one who has mastered these few pages will be well equipped to read with comparatively little trouble the four great treatises of Salmon on Higher Algebra, Conic Sections, Higher Plane Curves, and Geometry of Three Dimensions.

The author's name, William Benjamin Smith, is entirely English. But many of the idioms, the style, the general cast of the whole book, are exceedingly German. If he is of American birth, he must have resided in Germany much longer than the time usually spent at a German university, where he has certainly been, for he is a Ph.D. of Göttingen; or he has studied the works of German mathematicians until he thinks in their forms. We should hesitate a little about recommending his book to beginners. Our present impression is that it is rather strong meat for them, and that they had best for a while be satisfied with a lighter diet.

Luigi Cremona, Professor of Mathematics in the University of Rome, is one of the most learned and accomplished mathematicians in Europe. We say "learned," because he appears to have read pretty much everything worth reading about mathematics, and "accomplished," because he has the faculty of expressing other men's ideas in a form which, for artistic beauty and symmetry, is far superior to their own. A work of his on 'Projective Geometry,' which appeared in Italian in 1872, has, at the suggestion of his friends Profs. Sylvester and Price of Oxford, been translated into English, with the assistance of the author, by Mr. Charles Leudesdorf, Fellow of Pembroke College, Oxford, and published in the best style of the Clarendon Press. The work may, for our purposes, be sufficiently described as the whole science of perspective. In his preface Prof. Cremona disclaims all pretensions to having produced anything new either in matter or methods. Everything in it, he says, is old; most of it very old; much of it to be found in remote antiquity, in Euclid and Apollonius and Pappus. He places as one of three mottoes at the beginning of his preface the words of Ovid, Pont. iii, 9, 55:

"Da veniam scriptis, quorum non gloria nobis
Causa, sed utilitas officiumque fuit."

Yet it is really an astonishing work. Its learning is simply enormous. It gathers up everything pertaining to the subject from all times and places and languages, and moulds the vast material into a finished, symmetrical, and beautiful whole. Nothing seems borrowed; one would think, if he himself did not tell us the contrary by his scrupulous fidelity in referring to his authorities, that it all came out of one head.

Prof. Cremona presupposes, on the part of students of his work, only so much knowledge of triangles and the circle as is possessed by every boy who has studied an ordinary text-book of geometry—that is all. But to master the book is no easy task. It will require a long, determined strenuous effort. Most of the 252 figures printed in the text are complicated, many of them exceedingly so. The reasoning is not difficult; what is required, and what the book will cultivate, is power of conception. Any artist who could force himself to endure the labor of mastering the work would reap incalculable benefit. Whatever defects his works might afterwards have, they would not arise from want of knowledge of the relations of space and distance and form. But there is no royal road to the geometry of Cremona any more than to that of Euclid. The road to it is broad and smooth and open, but very steep.

The last book upon our table is, for the general reader of mathematical tastes and acquirements, the most interesting—provided he reads German: 'Die Lehre von den Kegelschnitten im Alterthum,' by Dr. H. G. Zeuthen, Professor of Mathematics in the University of Copenhagen (Kopenhagen: Andr. Fred. Höst & Sohn). We have only the first half of the volume, and defer any extended notice until we receive the remainder. But we can already say, from actual perusal, that few persons will read this first half without looking forward with pleasurable impatience to the appearance of the second. The title of the book is wholly inadequate to give a conception of its contents. It is by no means confined to the conic sections, but casts a flood of light over every part of the work of the ancient geometers. The first chapter, which shows in what way those wonderful men accomplished by geometrical methods many of the results obtained in modern times by means of algebra—how they had, in fact, a geometrical algebra and a regular system of rules for solving equations by the ruler and compasses—is a most admirable example of the attainment of new results in a department which was supposed to be exhausted. But all this we must leave for future consideration.

MAZZINI.

Della Vita di Giuseppe Mazzini. Per Jessie W. Mario. Milan: E. Sansogno. 1886. Quarto, with illustrations.

Joseph Mazzini: His Life, Writings, and Political Principles. With an introduction by William Lloyd Garrison. Hurd & Houghton. 1872.

When, in 1872, a Boston author edited the life of Mazzini from his own autobiography and political and literary writings originally published in England in six volumes by Mme. Venturi, *née* Ashurst, under Mazzini's own direction, we welcomed it as the most graphic and comprehensive history of Italy's great patriot and liberal reformer. The introduction, written in Mr. Garrison's most sympathetic vein, is so lucid, appreciative, and convincing, that nothing better can be said in illustration of Mazzini's brilliant talents, loftiness of mind, and aspirations for the freedom, not only of his own countrymen, but of mankind.

From his early youth Mazzini dedicated his life to the cause of the oppressed, and worked with the strong will of a martyr and the faith of a prophet for the fulfilment of his mission. It was the pitiful sight of the Lombard refugees who had conspired against Austria in 1820, begging in the streets of Genoa, that first awakened his mind to the miseries of Italy, when he was a mere boy of eleven. A few years after, he, with the brothers Ruffini—one of them the future author of 'Dr. Antonio'—and other fellow-students, began the clandestine work of republican propaganda by means of the secret society of "Young Italy," which, gradually spreading among the people, achieved finally the liberty of the nation.

One of the most remarkable incidents in Mazzini's patriotic aspirations was the following. He had been exiled from Piedmont in 1830 for the part he had taken in the liberal movement of that year. A few months after, on the death of Charles Felix, Charles Albert, who had been a conspirator against Austria, ascended the throne. On this occasion, the hopes of the patriots reviving, Mazzini addressed a letter to him, and published it under his signature, in which he openly asked him to take the lead of the liberal Italians, and drive the Austrians, the Grand Dukes, the King of Naples, and the other despots from Italy, and crown himself her only king. The textual words were:

"There is a crown brighter and nobler than that of Piedmont—a crown that only awaits a man bold enough to conceive the idea of wearing it, resolute and determined enough to consecrate himself wholly to the realization of that idea, and virtuous enough not to dim its splendor with ignoble tyranny. Moreover, if you do not put yourself at the head of the struggle for Italian independence, you may retard, but cannot prevent, the fulfilment of the destiny of the Italian people. If you do not do this, others will; they will do it without you, against you.

"Sire, I have spoken to you the truth. The men of freedom await your answer in your deeds. Whatsoever that answer be, rest assured that posterity will either hail your name as that of the greatest of men or the last of Italian tyrants. Take your choice."

What Charles Albert's feelings were when he read this letter—for he did read it—we know not; but he must have been startled at the rash conception and the daring of this youth of twenty-two in the face of all-powerful Austria and the other six despotic rulers of Italy, who, if they could have suspected such ideas in the new King of Piedmont, would have crushed him in a fortnight. Accordingly, whatever his internal feelings or aspirations might have been, he had to stifle them for the time, and his Government had to condemn the author and publisher of such ideas inimical to Austria and the other rulers in Italy. It was but seventeen years after, in 1848, that this very King took up Mazzini's patriotic idea, placed himself at the head of the Italian Liberals against Austria, fought for Italian independence, and lost his crown in the attempt. But his son, Victor Emmanuel, following boldly that ideal conception, carried it to its goal in 1870.

Mazzini's genius showed its almost prophetic insight in that letter; for from that day, throughout a long and laborious life of conspiracies and revolutions, he sought to destroy that monarchy of Piedmont and all monarchies, and he failed; but finally his original idea of the King of Piedmont wearing the crown of independent and united Italy succeeded in spite of all and in spite of himself. To him, therefore, is due the glory of first conceiving the unity of Italy, for before him the best that her most patriotic sons dared to aspire to and hope for was a federation of the several rulers of Italy independent of Austria.

The new life of Mazzini published in Italy by Jessie White Mario is of a more popular character. Mme. Mario, widow of the late eminent republican patriot and disciple of Mazzini, Alberto Mario, has gathered in this work all the details of his long and laborious life. It was published in numbers and in a very cheap form for circulation among the people. Mme. Mario, idolizing her hero, enters into the smallest details of his private life, his hidden workings, the secret societies he instituted both in Italy and in Europe, his coming and going in disguise, his hair-breadth escapes, his failures and successes, his triumvirate of the Roman republic—in fact, all the republican movement from 1830 to 1870, during which period Mazzini played a most prominent part; so much so that he became a sort of a spectre haunt-

ing all the monarchical governments of Europe. There happened neither an outbreak, a conspiracy, a plot or attempt to assassinate a king or a minister, that the name of Mazzini was not mixed up in it rightly or wrongly. In consequence of this, he was exiled or expelled from every State in Europe, even the republic of Switzerland. He took refuge finally in England, whose Tory Government, being unable to expel him, nevertheless opened his correspondence at the Post-office to spy his secret workings, in the interest of Austria. This incident was brought before Parliament with indignant protest. Carlyle wrote a famous sarcastic letter, denouncing this shameful transaction.

Mazzini's share in the latter years of the Italian regeneration, when the constitutional element took the lead, was only subsidiary. His life-long secret works of conspiracies and concealment had become with him a second nature, and, in spite of his very small following, he still conspired for the republic, even when his former followers and co-conspirators were generals, senators, members of Parliament, aides-de-camp to the King, all serving the constitutional Government of united Italy. This unity of Italy he had initiated, and had educated the young Italians to his ideal; but he conceived it possible only through the republic, so that, when the monarchical element took it up, he opposed it with his usual tenacity, and when it was actually realized by Garibaldi, Cavour, and Victor Emmanuel he still distrusted it. "I have lived, I live, and I shall die a republican," he wrote at the time, "bearing witness to my faith to the last. . . . The people of Italy are led astray by a delusion at the present day—a delusion which has induced them to substitute material unity for moral unity and their own regeneration. Not so I. I bow my head sorrowfully to the sovereignty of the national will, but monarchy will never number me among its servants or followers."

The superhuman labor which Mazzini endured in his clandestine crusade for the unity and liberty of Italy is marvellous, and is vividly brought out in its general scope by the concise and careful selections from Mazzini's own works in the American work whose title we give above, and by Mme. Mario in her extremely minute narrative, derived from original sources and documentary pieces, and written from a radical point of view.

A History of Parliamentary Elections and Electioneering in the Old Days, showing the State of Political Parties and Party Warfare at the Hustings and in the House of Commons from the Stuarts to Queen Victoria. Illustrated from the original Political Squibs, Lampoons, Pictorial Satires, and Popular Caricatures of the Time. By Joseph Grego. London: Chatto & Windus; New York: Scribner & Welford. 1886. 8vo, pp. 403.

MR. GREGO'S elongated title shows that his "Old Days" includes a very recent period, but it gives no indication of an interesting chapter, "Concerning Early Parliaments," which enlarges the scope of his work beyond the Stuarts, or of the fact that his final chapter carries the work *into* the reign of Victoria, breaking off in 1857. He does better, therefore, by his readers than he promises. The biographer of Gillray and of Rowlandson belongs in the same category of bookmakers with Mr. John Ashton, whose defects he shares. Both are antiquarians, rather than historians, and both revel in the field of caricature. Both are open to the charge of literary unskilfulness; their narratives are formless and given to repetition, and chronologically loose; and both indulge to excess in minute descriptions of unreproduced caricatures, than which there could hardly be more tedious reading. In naming his authorities Mr. Grego is much the more meritorious, though not always careful, and we confess to a decided preference, on all points—typographical in particular—in his favor. The present work is copiously illustrated. The author has had the good sense to give facsimile copies after the great English humorous designers, whereas Mr. Ashton makes laborious wooden tracings or reductions in outline, with a certificate of fidelity attached, signed by himself as delineator. In the examples in Mr. Grego's History, Hogarth comes upon the scene in 1754, Rowlandson in 1784, Gillray in 1788, Cruikshank in 1818, John Doyle and W. Heath in 1830, etc. It need not be said that the mere grouping of so many masters and styles in one volume creates of itself a work of value. A large folded colored plate after Cruikshank in 1853, a skit at woman suffrage, is highly characteristic of this satirist; and there is a little gem of John Doyle's—the King's Arms, with Cobbett and Burdett as lion and unicorn respectively—which ranks very near the head of the entire array.

Much cheer for the political reformer is to be found in this chronicle. Almost to the end of the period covered by it, "it must be admitted," says Mr. Grego, "that at least a considerable portion of the Commons, under the borough-mongering and patronage-monopolizing days, which reached to 1831, was not far removed from the condition of semi-vassalage." Gray's Reform Bill, introduced in 1797, initiated a contest lasting more than thirty years, and paved the way for the successive measures which have broadened the suffrage and equalized the representation in Parliament. In 1807 the return of Wilberforce from York involved a prodigious outlay, to which his friends alone were pledged to contribute more than $300,000, though it was left to their opponents to squander much larger sums in bribery and in providing transportation for voters. The nation has moved on from such practices to Sir Henry James's anti-bribery bill of 1881. In the early times it is worthy of remark that the travelling expenses of the representative, as well as a nominal salary, were paid by the borough for which he stood. This gave the sheriffs an opportunity to treat boroughs in a very arbitrary manner, returning many poor ones that were unable to pay their representatives. Salaries were abolished in the reign of Charles II., and Pepys records the contemporary judgment that this was a misfortune to Parliament. When wages were paid, men, he says, were chosen who understood their business and would attend it, and could be held accountable by the places that hired them, "which now (March, 1668) they cannot, and so the Parliament is become a company of men unable to give account for the interest of the place they serve for." In May of that same year, on a question of privilege arising between the two houses, the Lords held their heads high as "Judices nati et Conciliarii nati; but all other Judges among us are under salary, and the Commons themselves served for wages; and therefore the Lords, in reason, were the freer Judges."

On the riotous side of Parliamentary elections we cannot dwell here. One who reads what is described on pages 181, 182, 261, may bethink himself of the heavy vote lately cast for Henry George without a broken head. A whole chapter is devoted to Wilkes; and a speech of Sir Francis Burdett, on his final return from Westminster in 1837, is very advisedly quoted in full. The pictures illustrate many of the technical terms and peculiar customs of British elections—the hustings, the chairing of candidates, the processions, and the like—and form also an authentic portrait gallery of leading politicians. Mr. Grego has some observations on the shifting allegiance, now to Whigs and now to Tories, of his caricaturists, John Doyle being exceptionally consistent. A few words might have been given to the rise of *Punch*, and its influence on the profession of political satire.

The Virginia Campaign of General Pope in 1862. Papers of the Military Historical Society of Massachusetts. Volume ii. Boston: Ticknor & Co. 1886.

THE first volume of these papers, which discussed the Peninsula campaign, was one of the most valuable contributions that up to that time had been made to our war literature. The second volume, now before us, is not inferior to its predecessor, though the great amount of matter which has been published about the war, and especially about Pope's campaign, of recent years, may make its contents less novel. The ability, the research, the calm historical tone which characterize these papers, are most admirable. They treat briefly and clearly the Union side of the campaign, and the controversies which grew out of it in regard to the conduct of Porter, McClellan, and Halleck. The campaign itself is well sketched in one paper by Col. Horton and two by Mr. Ropes. These papers are supplemented by one from Gen. G. H. Gordon, discussing the operations of August 27. Two of the best papers in the volume are those of Gen. Walcott on Chantilly. Gen. Walcott gives a most admirable description of this last battle between Lee and Pope, and, with the assistance of excellent maps, has corrected the errors which have crept into most accounts of it. He is the first writer, we believe, to locate the scene of the fight clearly and accurately. His second paper is an interesting narrative of a visit to the field in recent years. Both papers are as charming in style as they are valuable in an historical point of view, and they constitute perhaps the most important contributions to the volume.

The Porter case of course comes in for a large share of attention. It, as well as the questions about McClellan and Halleck, is discussed by Generals Quincy and Weld and by Colonels Haven, Lyman, and Livermore in a spirit of great fairness. Porter and Halleck are acquitted of serious charges, while in regard to McClellan both sides are given. Mr. Ropes's concluding paper, on the "Hearing in the Fitz-John Porter Case," is an excellent summary as well as criticism of that matter as presented to the Schofield Board in 1878.

The data published since the preparation of many of these papers would have corrected some oversights. It is not proper, for instance, to say of Pope that "at last he was outnumbered, and the promised reinforcements failed." Fully one-third of the army with which Pope fought consisted of reinforcements from McClellan. There was no day of the campaign when Pope was outnumbered by his adversary, and during all the most critical part of it Pope had seven men to Lee's five. Pope's errors of statement in regard to this have been dissipated by the publication of the official returns.

Mr. Ropes criticises Lee's strategy while praising the admirable manner of its execution. He thinks Jackson's operations rash and not justified by the object in view. But this is not fully to appreciate the difficulty of Lee's position and the purpose of the Confederate leader. The movable Federal columns in eastern and northern Virginia on the 1st of August aggregated 150,000 men, exclusive of the garrison of Washington. Lee had, with which to oppose this force, not over 75,000 men, including the garrison of Richmond. When he became satisfied that McClellan was going to reinforce Pope on the Rappahan-

nock, he determined to strike the latter before the two principal Federal armies could unite. Foiled at first by Pope's retreat from the Rapidan and then by a storm, when about to cross the Rappahannock at the White Sulphur Springs, he conceived the bold plan which Jackson carried out, of seizing Manassas in Pope's rear. Lee thus effected his object, which was not, as is too often supposed, a mere raid on Pope's supplies and lines of communication. Had this been all, the advantage would hardly have compensated for the risk. The purpose of the movement was much wider. After forcing Pope from the Rappahannock, and disconcerting and distressing him by the destruction of his supplies, it was the object of the Confederate leader to give him battle. The skill and nerve with which Jackson managed Pope until Lee came up, will constitute one of the strong grounds on which his military reputation will rest. This feat of Jackson's must rank with his bold push between McDowell and Fremont at Strasburg, and with his final achievement against Hooker at Chancellorsville. There was no bolder or more successful strategy in the war.

That Jackson ran great risk is true, but we think that this view of the case has been exaggerated. Lee felt no apprehension about the fate of his lieutenant. Jackson was enveloped by a splendid body of cavalry, which completely screened his own movements, while they revealed to him all those of his adversary. Pope's cavalry was not efficient. These facts gave Jackson an immense advantage, and rendered the "bagging" operation which Pope proposed practically out of the question. There was no time when Jackson could not have retreated towards Aldie, for instance; no time when, with his quickness, he could not have eluded Pope's converging columns, even had these columns been directed with far more wisdom than was the case.

Two Thousand Miles through the Heart of Mexico. By Rev. J. Hendrickson McCarty, D.D. Phillips & Hunt. 1886. Pp. 288.

A BOOK destined not to fill a void, but to push its way into a plenum, ought to be one of positive merit. When it is remembered that no less than twenty-five volumes of Mexican travels and description have appeared in English since 1880, it will be conceded that a new work of the same class can have reason for being only by virtue of opening fresh fields, or of greatly improved handling of familiar matter. Dr. McCarty's book, unfortunately, does neither. If it stands out at all from the mass of kindred writing, it is solely in consequence of unusual inaccuracy, padding to the point of bursting, and a style whose dulness would be insupportable were it not for the relief it affords after the author's occasional disheartening attempts at wit. There should be some means of persuading ordinary tourists in Mexico, over the ordinary routes, that the world will willingly allow them to preserve their notes of travel unpublished. A good way would be to have placed in the hands of every traveller, as he crosses the river at El Paso or Laredo, Anderson's bibliography of recent works on Mexico, or Bancroft's list, ninety pages long, of authorities on Mexican history. This ought to deter all but writers conscious of genius from attempts to tell the old tales over again. Even in Mexico, however, comparatively virgin soil remains. The wilds of Sonora have been little explored and less written about; interior Yucatan has seen few successors of Stephens; Guerrero, Tabasco, and Chiapas are States practically unvisited. It is a pity that Dr. McCarty did not go to some of these places. By not doing so he missed his only chance of writing an interesting book on Mexico.

BOOKS OF THE WEEK.

A Demigod: A Novel. Harper & Brothers.
Anecdotes Illustrative of Old Testament Texts. A. C. Armstrong & Son. $1.50.
Arnold-Forster, H. O. The Citizen Reader. For the Use of Schools. 5th ed. Cassell & Co.
Arnold, T. J. Reynard the Fox. After Goethe. Illustrated. Boston: Roberts Brothers. $9.00.
Bert, P. First Steps in Scientific Knowledge. Complete in seven parts. Philadelphia: J. B. Lippincott Co. 60 cents.
Besant, W. Children of Gibeon: A Novel. Harper's Franklin Square Library. 20 cents.

Scribner's Magazine.

First (January) Number Ready December 15th.

SCOPE.—SCRIBNER'S MAGAZINE will be in the widest sense a magazine of general literature; and its main purpose will be to bring together not only good reading, but literature of lasting value.

ILLUSTRATION.—Each number will be fully illustrated, and in a manner which shall be in the best sense *illustrative* of the text. The artistic side of the magazine will represent the most spirited, sincere, and original work.

Among the many interesting and important papers to be printed in the Magazine during the first year are the remarkable series of

UNPUBLISHED LETTERS OF THACKERAY,

the existence of which has only recently become publicly known, and concerning which the greatest expectation and curiosity have been aroused. Their importance and interest will more than justify this. Nothing more characteristic or of greater autobiographic value has been published, and no such study of the great novelist's life has been hitherto possible. *Facsimiles of unpublished drawings will accompany the Letters.*

Several articles giving very striking personal views of great historic events and periods; notable among them

EX-MINISTER E. B. WASHBURNE'S REMINISCENCES OF THE SIEGE AND COMMUNE OF PARIS,

told by him from his papers, private diaries, and personal recollection of an experience absolutely unique, as he was the only member of the Diplomatic Corps remaining in the city and in communication with the changing governments during this whole period. The articles will all be fully illustrated from original material in the author's possession.

GLIMPSES AT THE DIARIES OF GOUVERNEUR MORRIS,

U. S. Minister to France at the close of the last century, will give an idea of the interesting and piquant pictures of social life and characters of the time of the French Revolution, which exist among the great unpublished portions of the Morris papers that relate to his residence in Paris.

In FICTION there will be many notable attractions. The publishers expect to begin during the present year the publication of a striking novel, which has been arranged for with

ROBERT LOUIS STEVENSON,

who will also contribute a shorter story to an early number.

With the earliest numbers will be begun a very strong and original

NOVEL, BY HAROLD FREDERIC,

entitled 'Seth's Brother's Wife,' the scene of which is laid in a new field—Central New York.

A STORY, BY H. C. BUNNER,

which has to do with a most interesting phase of New York life, will prove especially attractive and original in its subject and method. It is illustrated by A. B. Frost, Hopkinson Smith, and George Wharton Edwards.

Among the other interesting features of the first numbers will be:

A Novelette by
J. S. OF DALE (F. J. Stimson).

Short Stories by
JOEL CHANDLER HARRIS,
T. A. JANVIER (Ivory Black),
SARAH ORNE JEWETT,
OCTAVE THANET,
H. H. BOYESEN,
MARGARET CROSBY,

and many other well-known authors, besides notable stories by new writers.

FRANCIS A. WALKER contributes a striking article on Socialism.

REV. WILLIAM HAYES WARD (Editor of *The Independent*) writes of the Babylonian Seal-Cylinders—the paper will be beautifully illustrated.

JOHN C. ROPES gives an exquisitely illustrated paper upon the Existing Likenesses of Cæsar.

CAPT. F. V. GREENE, U. S. Engineers, a suggestive article on our Coast Defences.

EDWIN H. BLASHFIELD a most interesting study in art history, with drawings by the author.

Many other important illustrated articles and papers upon literary topics, etc., etc., are reserved for later announcement.

$3.00 A YEAR; 25 CENTS A NUMBER.

Persons subscribing now will receive the first number as soon as published. Remittances should be made by check or money order.

CHARLES SCRIBNER'S SONS, Publishers,
743 and 745 Broadway, New York.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

Containing Standard Works of European Literature in the English Language, on

History,	Theology,	Natural History,
Biography,	Antiquities,	Poetry,
Topography,	Science,	Art,
Archæology,	Philosophy	Fiction,

With Dictionaries and other Books of Reference, comprising in all Translations from the

French,	Spanish,	Anglo-Saxon,
German,	Scandinavian,	Latin and Greek.
Italian,		

$1.40 or $2 per volume (with exceptions). Complete sets in 677 volumes. Special prices on application.

The following works are recommended to those who are forming public or private libraries. The volumes are sold separately:

ADDISON'S WORKS. 6 vols.	$1.40 each.
BACON'S ESSAYS, MORAL AND PHILOSOPHICAL WORKS. 2 vols.	$1.40 and 2.00 each.
BOSWELL'S LIFE OF JOHNSON and TOUR IN THE HEBRIDES, &c. (Napier). 6 vols.	1.40 each.
BURKE'S WORKS AND LIFE. 9 vols.	1.40 each.
BURNS'S LIFE. By Lockhart.	1.40 each.
CERVANTES' DON QUIXOTE. 2 vols.	1.40 each.
CHAUCER'S WORKS (Prof. Skeat). 4 vols.	1.40 each.
COLERIDGE'S WORKS. 6 vols.	1.40 each.
DEFOE'S WORKS. 7 vols.	1.40 each.
GIBBON'S ROMAN EMPIRE. 7 vols.	1.40 each.
GOETHE'S WORKS. 14 vols.	1.40 each.
GOLDSMITH'S WORKS. 5 vols.	1.40 each.
HAZLITT'S WORKS. 6 vols.	1.40 each.
LAMARTINE'S WORKS. 8 vols.	1.40 each.
LESSING'S LAOKOON, &c.	1.40.
LESSING'S DRAMATIC WORKS. 2 vols.	1.40 each.
MILTON'S PROSE WORKS. 5 vols.	1.40 each.
MOLIÈRE'S DRAMATIC WORKS. 3 vols.	1.40 each.
PLUTARCH'S LIVES (new translation by Long and Stewart). 4 vols.	1.40 each.
SCHILLER'S WORKS. 6 vols.	1.40 each.
VASARI'S LIVES OF PAINTERS (with new appendix by Dr. Richter). 6 vols.	1.40 each.
BURNEY'S (Mme. D'Arblay's) CECILIA. 2 vols	1.40 each.
BURNEY'S (Mme. D'Arblay's) EVELINA.	1.40.
FIELDING'S NOVELS. 4 vols.	$1.40 and 2.00 each.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 25, 1886.

The Week.

THE death of ex-President Arthur, although not unexpected, seemed to come suddenly. He returned only a short time since from the country, where he had passed the summer, not improving, but not visibly failing in health. His friends were aware, and he himself knew equally well, that his disease was incurable. How swiftly this malady deals with its victims, Mr. Arthur's rapid decline illustrates in a very striking manner. It is but two years since he filled the Presidential office. A more glowing picture of health and vigor never filled the White House or challenged the admiration of the throngs who visit the national capital. It was an accident that gave him any place in history, but he is in the line of American Presidents, and it must be said that he filled the office, to which he had never aspired, with greater dignity, and discretion, and fair-mindedness than either his friends or his enemies had anticipated. The responsibilities of statesmanship, acting upon a groundwork of what may be called "gentle breeding," produced a respectable and safe administration of public affairs, in no wise inferior to the promise of the Garfield Administration, and in some important respects superior to it. The muse of history, let us trust, will not concern herself too closely with Custom-house politics and the beginning of Mr. Arthur's political life, but rather with the larger affairs of his career, which were crowded into the narrow compass of three and one-half years. These were not stirring times, although they might have become so if Gen. Garfield had lived and if Mr. Blaine had continued to be Secretary of State. The most important service Mr. Arthur rendered to the country was that of pouring water on the flames of foreign strife in South and Central America, kindled by our gratuitous and unnecessary meddling. Casting a glance backward, and seeing how all the bad blood of that time has cooled and settled without the expenditure of a dollar on our part, and how the old friendly feelings have taken the place of hate and fear, by no other effort than taking our hands out of other people's affairs, we cannot fail to appreciate Mr. Arthur's services in that crisis. Measured by what had gone before, and by all that had gone before in recent years, Mr. Arthur's Administration was certainly above the average that the country had known since that of Lincoln, and was not inferior to any.

The speech of Senator Beck before the Iroquois Club at Chicago called attention very forcibly to the need of reducing the surplus in the Treasury. "Reducing the surplus" may be considered Mr. Beck's strong point. He has made this subject the occasion of very fierce attacks upon the present Administration. He has now turned his fire in a new direction, and this time the right direction. He insists that taxes must be reduced, and that the reductions should take place in the tariff and not the internal revenue, the latter being now limited practically to liquor and tobacco, both of which he considers first-rate subjects of taxation. But Mr. Beck has little faith that Congress will make the necessary reductions. He thinks that private interests have so firm a hold upon Congress that the coming session is likely to drift away without adequate legislation to clear the Treasury of the surplus that will roll up after the payment of the last of the 3 per cent. bonds. In that case he says that he shall introduce a bill to authorize the Secretary of the Treasury to lend the public money, at 2 per cent. interest, to anybody who will deposit Government bonds as collateral security therefor. Anything, he says, is better than piling up money in the Treasury which cannot be used, and in this he is right. The difference between his present argument and that which he let fly against Secretary Manning with such disastrous rearward consequences last year, is a difference in the state of facts. Last year there was an outlet for all the surplus money in the Treasury, and next year there will be none. Last year the dispute was over the question what constitutes a surplus, Mr. Beck contending that he understood that conundrum better than Mr. Manning. Next year there will be no such dispute. Therefore everybody will side with Mr. Beck this time. There will be a surplus, and a monstrous one, unless there is a large reduction of taxes; and it happens, too, that the reductions must be the repeal and not the mere lessening of duties and imports on certain articles, since the mere lessening of duties often leads to increase of consumption and augmentation of revenue.

Now, in the event of non-action or of inadequate action by Congress, how far is Mr. Beck's remedy likely to meet the crisis? How many bondholders are likely to come forward as borrowers of money at 2 per cent. interest? The fact is, that persons who could offer Government bonds as collateral security could borrow money at 2 per cent. interest at almost any time during the past two years. Persons who can offer bonds as security at their par value will have very little difficulty in borrowing at 2 per cent. now. But they are, as a rule, the lending and not the borrowing class in the community. Instead of looking out for places to borrow money at 2 per cent., they are most commonly searching for parties to whom they can safely lend at that or some other rate. When it comes to putting out a hundred millions per year as loans from the Treasury to the class who can give Government bonds as collateral, everybody can see that Mr. Beck's remedy is no remedy at all. Moreover, the Secretary of the Treasury is authorized, under existing laws, to deposit any amount of money with national banks, and for any length of time, without any interest at all, upon the security of Government bonds. But the national banks cannot give this kind of security to any great extent. They could not do so even under the stress of the panic of 1873, when they had every possible inducement to turn their available assets into money. Neither the relief suggested by Mr. Beck nor the outlet supplied by existing law will meet the emergency, or come anywhere near it. Nothing but tax reduction will do it, nor is it desirable that it should be met in any other way. It would be better that the country should be brought to a knowledge of the need of tax reduction by the sharp pain of a monetary crisis, than not to gain that knowledge at all.

Plans for perpetuating the national-bank currency are multiplying as the session of Congress draws near. One such has been sent to us in the form of an open letter from Mr. John Thompson, Vice-President of the Chase National Bank, to Comptroller Trenholm. Mr. Thompson calls it a plan for perpetuating the "national-bank *system*," although it deals only with the national-bank *circulation*. Bankers ought not to lose sight of the fact that the issue of the national-bank notes may come to an end without destroying or impairing the other parts of the system, which are exceedingly valuable in themselves. It is highly important to preserve all the functions of the national-banking system even if the note-issuing function expires with the eventual payment of the national debt. These functions are the ordinary ones of conducting the exchanges of the country, through the instrumentality of deposits, discounts, bills of exchange, clearing-houses, etc., which may go on indefinitely without a single national-bank note in existence. The country has grown up with the system. All business has adapted itself to it. Laws and decisions have been built upon it so that the whole constitutes an essential part of a business man's education. No national bank is required to issue circulating notes. If it holds United States bonds to the amount of $50,000, it can go on under the protection and sanction of the national law. Even this requirement might be repealed without touching any essential part of the system; the bond-holding feature being now a mere matter of form. There will be bonds sufficient for this purpose for twenty years to come, whether Congress insists upon this requirement or not.

There is something very encouraging in the uniform tendency to turn out badly which has thus far characterized Mr. Blaine's recent efforts to keep himself before the public as his party's great leader. His Portland speech on the Irish question was the first signal disaster of this kind. Then he went to Pennsylvania and had a "triumphal progress" through the State. The only speech he made during the progress, that attracted attention, was one in which he sneered at civil-service reform. This had been forgotten, when what should he do last week but call fresh attention to it by saying the Massachusetts Independents had circulated a "singularly perverted" copy of it. The result has been that not only has the copy thus denounced been found to

be authentic, but the attention of the whole country has been called to the fact that not only Mr. Blaine did sneer at civil-service reform, but that in order to find a reason for the sneer, he totally misrepresented the condition of the English civil service. This performance, instead of injuring the Independents, has badly shattered Mr. Blaine's party. It has forced the Boston *Advertiser*, a devoted Republican paper, to administer a formal and crushing editorial rebuke to Mr. Blaine. This defection, coupled with the appearance of a fresh letter from Senator Edmunds, which is so pointed and unanswerable in its language that no Blaine organ dares to let its readers see it, makes the past week a disastrous one in Mr. Blaine's renomination campaign.

Nor were the misfortunes confined to the East. Two Republican papers in the West were more or less unsettled by the civil-service-reform letter. The St. Louis *Globe-Democrat* calls attention to it as a sign that Mr. Blaine and his friends are not sincere in their repeated declarations that he is out of politics and is not seeking a renomination. The Milwaukee *Sentinel* goes much further, and comes as near to open revolt as the Boston *Advertiser* does. It calls attention to the fact that Mr. Blaine's Huntingdon denunciation of our civil-service system as a mere copy of the British system does not harmonize with his letter of acceptance. We quote what the *Sentinel* says on this point:

"It is curious to compare this speech with the part of Mr. Blaine's letter accepting the Republican nomination for the Presidency two years ago, which related to the civil service. Mr. Blaine was then desirous of conciliating the voters who favored the reform. The whole passage of Mr. Blaine's letter upon this subject was good, sound civil-service reform doctrine. There was no intimation in it that he regarded the Civil-Service Law as an attempt to pattern after England, and therefore to be condemned. Any person who compares the Pittsburgh speech with Mr. Blaine's letter of acceptance must recognize that he was insincere on one or the other occasion, or that his opinions have been greatly modified since 1884. *The Pittsburgh speech was clearly an attempt to excite prejudice against the law itself*, and not to expose the sham methods of the Cleveland Administration. It by no means follows, because the English civil service needs overhauling, that there ought to be a return to the old system of favoritism in appointments in that country, or that those who oppose the spoils system here should become reconciled to it."

The letter from Senator Edmunds about his silence in the campaign of 1884 is the most outspoken utterance which has yet been heard from him on this subject. It was written last year, but is now made public for the first time. To Republicans like Senators Hoar and Hawley and ex-Gov. Long, who before the Chicago Convention were opposed to Mr. Blaine's nomination on the same grounds as those upon which Senator Edmunds opposed him, but who swallowed their objections and defended him upon the stump, this passage will be melancholy but wholesome reading: "I could not, under any circumstances or temptation, say that I believed something about a candidate that I did not believe; and if I were to make speeches and say what I did believe as to certain transactions, etc., or was (so speaking) to refuse to answer questions on these topics, it would be especially worse for the party than staying at home. I know, therefore, that I did the best thing for the party that an honest man could do." How many of the Republicans who took the stump for Blaine against their convictions can say as much for themselves as this? How many of them to-day have the courage to ward off from their party the blunder of another nomination of Blaine, by saying frankly that they will not again consent to say that they believe something about him which they do not believe?

As the official returns of the election in this State come in, the Prohibition vote mounts higher and higher. The important fact is made clear that the test of the third party's strength is not to be found in the vote for Court of Appeals Judge, since the aggregate for the Prohibition candidates for Congress is many thousands larger. Judge Daniels, the Republican candidate for the Judgeship, evidently received the votes of many Prohibitionists because of his reputation of personally favoring prohibition. Official returns from 35 counties and trustworthy statements from 5 others give Groo, the Prohibition candidate for Judge, 27,526 votes, while the same 40 counties give the Prohibition candidates for Congress 40,689. This indicates that Groo will be found to have received in the whole State about 35,000 votes, and the Prohibition candidates for Congress about 50,000 votes. On account of Judge Daniels's exceptional strength with the third party, it would be obviously unfair to regard the vote for Groo as the full strength of that party, which is evidently to be found in the 50,000 votes that it cast for its Congressional candidates. The size of this total will be a great surprise to the public, especially to the readers of those Republican papers which have thus far suppressed the figures, and treated the Prohibition vote this year as of no account.

An intelligent farmer in eastern Maine, who believes in the necessity of tariff reform, writes to us as follows:

"I am amazed at the stupidity of our farmers. Why, during the last State political canvass Mr. Frye told them, at a convention in my town, that under a protective tariff the foreigners paid our taxes. On the way home from the meeting some of my neighbors bantered me about it, and I asked them this question: 'Suppose Mr. Tasker (a horse dealer in Gardiner) had purchased for me that horse which I thought of getting last fall in Prince Edward's Island. That horse might have cost $100 there, tariff $20, freight something, his profits something, so that the horse would have cost me $150 to $200. Now who would have paid that tariff, I or the P. E. I. man?' 'Why, you of course,' after a few moments' pause. 'But according to Mr. Frye, the P. E. I. man did. How's that?' And yet they 'guessed Mr. Frye knew.' What *can* a man say?"

The liability of the agricultural class to be imposed upon and to lose their money in consequence has furnished a theme for comment and satire from the remotest antiquity. We should say that a farmer who could be made to believe that the tariff operated to compel foreigners to pay our taxes, would fall an easy victim to any confidence game, and that it would be extremely unsafe for him to visit any large city except under the guardianship of the police. Did it never occur to these guileless bucolics that foreigners can play the tariff game as well as ourselves? Canada is doing it now to the top of her bent. Are we paying the taxes of Canada? Are we paying in part the taxes of France and Germany? If tariffs operate in this way, why does not each nation compel all other nations to pay its taxes? Where should we stand if such a system were generally put in force? Europe could well afford to pay our national debt on condition of our paying her military and naval expenses.

Mayor Grace has made an excellent beginning in the admission of women to the Board of Education in the appointment of Mrs. Agnew and Miss Dodge. The value of women in the superintendence of education is now generally conceded, although they appear to have come to the conclusion in London that in this, as in other things, there are women and women, as well as men and men. But the new régime could hardly have a better start in New York than Mr. Grace has given it. Both the ladies appointed by him are already well known in the philanthropic field, Miss Dodge in particular having labored long and successfully in brightening the lives of young working women in this city.

While there is no direct evidence against Jacob Sharp and his associates in the extraordinary revelations made by Fullgraff and Duffy on Friday, the story itself constitutes a weight of circumstantial evidence which is little short of overwhelming. Who was it that made the offer of a half million dollars for the franchise? It makes very little difference, so far as moral evidence is concerned, whether the man can be produced who carried the offer from the Broadway Surface Railway Company's spokesman to the Alderman who announced it to the assembled thirteen. At the time the offer was made and for months afterwards the Broadway Surface Railway Company was Jacob Sharp. He had been in search of a franchise for thirty years. He engaged all the counsel for the company. He selected a President for it. He took, as the books showed, nearly all the stock when it was issued, and to him all the bonds and their proceeds, amounting to $2,500,000, were given. Who but he could have made that offer of a half-million dollars for the franchise, and who but he could have furnished the cash with which the offer was made good? Whether direct testimony of his guilt will be produced later remains to be seen. We are inclined to the opinion that the District Attorney has not yet disclosed his full hand.

Aside from the moral evidence against the Broadway bribers, there is other of the same kind against other railway companies. That $750,000 offer of the Cable Company ought to be followed up without mercy until it is traced to the men who made it. It makes no difference whether it could have been made good or not. The act of making it was a crime in the eyes of the law, and ought to be punished as such. Then in Fullgraff's testimony there is given a glimpse of another instance of bribery which has been hinted at a good many times since the Broadway scandal began to be mooted. Fullgraff admitted that he had been presented with evidence of bribery on his part in connection with another railway, and then stated that the amount which he had re-

ceived in that instance was $1,000. This, we have the best of reasons for believing, was the Forty-second Street Railway, and we have similar reasons for believing that there is, in the history of the way in which that road secured its franchise, a scandal scarcely less startling than the one which is now astounding the city. All this must come out, no matter whom it hurts. The District Attorney cannot turn back if he would, no matter how high may be the reputations which may be shattered by his going ahead. He must get at the bottom of all of this bribery business, and make such a lesson of it as will put a stop to further attempts like it for years to come.

In the remarks of Judge Manning, at the time of presenting his credentials as Minister to Mexico, occurred the following sentence: "I hope that the conflicts on the frontier will diminish, as a result of the prompt action of both governments in redressing wrongs and in repressing outrages; and if there is any latent cause of friction, in any law or custom, which may at any time cause discord, I am confident that the conciliatory spirit of both governments will do away with it, in the interest of both peoples and to the mutual satisfaction of both governments." This was taken by Mexicans to be a direct intimation that one part of the instructions of Mr. Manning was to secure the abrogation of article 186 of the Mexican Penal Code. The reply of President Diaz was thought to indicate a firm opposition to any such proceeding. After alluding to "the conflicts occasioned by contiguity of territory" as "petty," he said: "These will not be sufficient to disturb the relations of the two governments, provided that, as is to be hoped, their good sense shall give the first consideration to those important interests which depend upon the continuance of peace and harmony between the two nations, taking care, further, that the existing laws of either country are impartially executed and scrupulously obeyed."

There is an estimated loss, equal to $4,000,000, by abrasion of English gold coins now in circulation which constitutes a growing problem for the Treasury to deal with. The late Chancellor of the Exchequer, Mr. Childers, proposed to solve it by taking up all the half-sovereigns and reissuing them with new pieces containing one-tenth of silver, calculating to gain by this operation a fund sufficient to restore full weight to the worn sovereigns. This plan did not meet with favor, and nothing was done. The *Economist* now proposes that instead of adulterating the half-sovereign, that coin be abolished altogether, and that its place in the circulation, which is estimated at £20,000,000, be filled with £10,000,000 of silver token coinage and £10,000,000 of full-weight sovereigns. The Treasury would gain by this means £1,000,000 profit on the silver bought for the new token coinage, and the public, it thinks, would be better pleased with silver half-crowns than with the small, thin, and elusive half-sovereign now in use.

Lord Salisbury denied the other day, in his speech at the Lord Mayor's dinner, that Gen. Buller had exercised any "dispensing power" in any particular case of eviction in Ireland. What the Ministry have done, he said, "is in private as well as in public to exhort all who come within their influence to exert their legal rights with due consideration for their fellow-citizens." This simply means that when any landlord was going to carry out an eviction which seemed likely to call for the assistance of the police or the troops, the local authorities tried to dissuade him, and have in a large number of cases been successful. But it is also true that in some cases, whether through inadvertence or not, military aid has been flatly refused by subordinates, and Gen. Buller has not hesitated to express himself in very strong terms about evictions in cases in which the tenant was clearly insolvent. This moral pressure on the landlords from a Tory Government is of course very powerful.

The *Pall Mall Gazette* states that the late Fred Archer, the jockey, was, though not one of the greatest of Englishmen, "undeniably the most popular," and that "one may doubt whether after the Queen, the Prince and Princess of Wales, Mr. Gladstone, Lord Randolph, and possibly Lord Salisbury, there is any Englishman or woman whose death would be so widely felt in so many classes of the country as that of our premier jockey." As Archer was a perfectly illiterate man, whose sole accomplishment, intellectual or physical, was riding horse races, this seems an astounding assertion to make about the conditions of popularity in a great nation. It is not made any more comprehensible by the explanation that "to win a position like Fred Archer's, a man must have two qualities which are not so common as they might be in any station of life: he must have always been scrupulously honest, and must have his body under complete control." But to enable these qualities to raise a man almost to the highest pitch of greatness in the community in which he lives, they must be very rare—that is, most of the men must be knaves, carrying on the struggle of life with uncontrollable or at all events uncontrolled bodies.

Gen. Kaulbars, and with him all the other representatives of the Czar in Bulgaria, have been called back to Russia. The General leaves, hooted by all Europe—excepting the nation whom he has so strangely served and apparently compromised. But the exception is, in this case, of the highest importance. Russia does not feel humbled, and does not dream of considering herself caught in acts of folly. The Russian people—possibly also the Czar—may condemn the eccentric method followed by the undiplomatic envoy, but they are convinced that the Bulgarians, by their ingratitude towards their deliverers from the Turkish yoke, and still more by their leaning on the inveterate enemies of the leading Slavic empire—Austria-Hungary and England — have both provoked and fully deserved all the arrogance shown in dealing with their Regency and Sobranye—bodies unacknowledged by the Government of Alexander III. Gen. Kaulbars has earned the gratitude of the Panslavists of Moscow and St. Petersburg by trampling, in the service of the Panslavic idea, upon the honor and independence of Bulgaria, and contemptuously defying all Europe, just as Gen. Ignatieff earned it when, at San Stefano, he created in the same interest the ephemeral Great Bulgaria of 1878. The work of the one and the other ended in a *fiasco* in the eyes of Europe, but the Russians do not see the end of it, and they are determined, as Kaulbars expressed it, to be the last to laugh. According to them, Ignatieff's Bulgaria is to be, and a Russian proconsul like Kaulbars is to rule it. Russia will not acknowledge a prince chosen by the present Regency and Sobranye, were he the brother of the Czarina. She withdraws for the moment, because she does not deem it propitious, but she intends to reappear on the scene of action soon enough.

The real scene of action, in the Russian view, however, does not lie south of the Danube or on either side of the Balkans, but much further north, near the slopes of the Carpathians. Ever since the empire of the Hapsburgs, in 1867, was reconstructed on an almost federal basis of free nationalities, among which the Magyars and the Poles of Galicia, Russia's sworn foes, act leading parts; and still more since Bismarck and Andrássy, in 1879, concerted that line of policy for Austria-Hungary which rendered her both more pro-Slavic and more anti-Russian than ever before; the conviction has become general in Panslavic circles on the Moskva and Neva that the road to Constantinople—that is, to supremacy over all the east of Europe—leads through Vienna. Gen. Fadeyeff and others preached this doctrine immediately after Austria's first attempt to regain in Buda-Pesth and Lemberg the strength she had lost at Sadowa; but Prussia's triumphs over France in 1870 suddenly changed the aspect of affairs in Europe, and Bismarck's diplomacy, aided by Andrássy's sagacious Hungarian statesmanship, converted the Hapsburgs into stable allies of the Hohenzollern Power, which had just humbled them in the dust. The road to Constantinople "via Vienna" was now barred by the invincible bayonets of Germany, and Russia, in 1877, had to return to the traditional one, leading across the Pruth, the Danube, and the Balkans. But here her very victories — which were dearly bought and exhausted her—raised new barriers to her own future advance in independent Rumania and Servia and semi-independent Bulgaria, which, chiefly from fear of absorption by their very deliverers, soon began turning for support to Austria-Hungary. Backed by England, Italy, and also Germany—while France is still cowed by the remembrance of Sedan, Metz, and Paris into inglorious inactivity—the cautious diplomacy of Vienna has forced the blustering agents of St. Petersburg to withdraw from the Balkans. Russia retreats, but sullenly, undismayed and threatening. France, and perhaps others, helping in due time, she means to return to the Balkans, by the road pointed out by her Panslavic strategists. Both necessity and choice—as her press unmistakably indicates—lead her in that direction.

SUMMARY OF THE WEEK'S NEWS.

WEDNESDAY, November 17, to TUESDAY, November 23, 1886, inclusive.

DOMESTIC.

EX-PRESIDENT CHESTER A. ARTHUR died at his home in this city at five o'clock on Thursday morning. The announcement of his death created great surprise, for it had been reported that since his return from New London, Conn., a little more than a month ago, he had been steadily gaining in health. His death was not due to Bright's disease, from which he had suffered for a year or two past, but was caused by a stroke of apoplexy, combined with paralysis of the right side, and he was unconscious for nearly twenty-four hours prior to the time of his death. Chester Alan Arthur was the oldest of seven children, five of whom were daughters. He was born at Fairfield, Vt., one of the places in which his father was pastor of a church, on October 5, 1830. When fifteen years old he entered Union College at Schenectady, where he took the regular four years' course of study. He taught school, studied law, practised in the West and in New York city, and was Quartermaster on Gov. Morgan's staff in 1861. This position devolved upon him the exacting duty of providing for the maintenance of the thousands of volunteers who hurried towards the seat of war. He performed his duties faithfully and well. In 1863 he returned to the practice of law in this city and was successful, becoming also a power in city politics. He became an ally of Roscoe Conkling, and aided in building up the Stalwart Machine which so largely controlled affairs in this State. In 1871 he was appointed by Gen. Grant Collector of the Port of New York, thus combining in himself the political leadership of the Republicans in the city and the practical management of the patronage of the Custom-house, which during those years was regarded as the bulwark of Republican supremacy in the State. President Hayes removed him in July, 1878, which excited the approval of the Republican masses and the censure of the Stalwarts. In 1880 he was nominated for Vice-President by the Republicans, and on the death of President Garfield succeeded to that office on September 19, 1881. He greatly improved his reputation by his administration. In the Convention of 1884 he received a large vote for renomination, but was beaten by Mr. Blaine. Since the end of his term he had been living quietly in this city.

President Cleveland on Thursday morning issued a proclamation announcing the death of ex-President Arthur. In it he said: "Mr. Arthur was called to the chair of the Chief Magistracy of the Union by a tragedy which cast its shadow over the entire Government. His assumption of the grave duties was marked by an evident and conscientious sense of his responsibilities and an earnest desire to meet them in a patriotic and benevolent spirit. With dignity and ability he sustained the important duties of his station, and the reputation of his personal worth, conspicuous graciousness, and patriotic fidelity will long be cherished by his fellow-countrymen."

The funeral services of the late President took place on Monday in this city at the Church of the Heavenly Rest. The services were simple and impressive. President Cleveland and Cabinet, ex-President Hayes, and prominent men in the army, navy, and civil life were present. The body of President Arthur was then taken to Albany, where it was interred in the Rural Cemetery in his family lot.

Mr. Charles Francis Adams died at 1:57 o'clock on Sunday morning at his residence in Boston. He was the son of John Quincy Adams, sixth President of the United States, and grandson of John Adams, the second President, and was born in Boston, Mass., August 18, 1807. He received his early education abroad, and was graduated at Harvard College in 1825. Three years later he was admitted to the Boston bar. He served in the Massachusetts House of Representatives for three years and in the State Senate for two years as a Whig. From 1845 to 1848 he was editor of the Boston *Whig*, which was the organ of the Free-Soilers in that State. In 1848 he was the candidate for Vice-President on the Free-Soil ticket with Martin Van Buren. He was elected to Congress in 1859, and in the House made an able speech in defence of the policy of the Republican party. President Lincoln appointed Mr. Adams Minister to England in 1861, where he remained till 1868, winning the esteem of English statesmen by his courageous course in the trying war period. He was the American arbitrator at the Geneva tribunal, where he acquitted himself with great distinction. The Liberals mentioned him for the Presidency in 1872, but Horace Greeley secured the nomination. Four years later he was the Democratic candidate for Governor of Massachusetts, but was defeated. He sympathized with Mr. Tilden in the Presidential campaign of that year. Mr. Adams wrote and edited the memoirs of his father and grandfather, and was a contributor to periodicals. His mental powers have been gradually failing for several years.

President Cleveland on Wednesday appointed Pay Director James Fulton, U. S. N., to be Chief of the Bureau of Provisions and Clothing and Paymaster-General, U. S. N. On Thursday he appointed John Moore, now Assistant Medical Purveyor, to be Surgeon-General of the U. S. A.

The President on Wednesday reinstated M. E. Benton, United States District Attorney for Western Missouri, who had been removed for making political speeches during the recent campaign.

The report of the Postmaster-General shows that on October 1 the total number of post-offices in this country was 54,157, of which 51,886 were of the fourth class and 2,291 Presidential. There were 181 free-delivery offices, employing 4,841 carriers. The excess of local postage was $1,526,936 over the cost of the service. The public appears to have found the special-delivery system advantageous, and during the full year of its use, to the end of September, 1,118,820 letters were received for special delivery, of which 785,020 came by mail and 333,800 were drop letters. Taking the full year of the system, the amount of fees paid for special delivery is put by the returns received at $84,784.42, leaving a gross profit to the Government of $27,097.58, approximately. The report says: "The financial condition of the postal service for the past year has improved beyond expectation. The previous year closed with a deficiency of postal revenue to meet postal expenditures of almost $7,000,000, exclusive of the cost of transportation on the Pacific railroads. Both the reduction in the rate of postage on second-class matter and the increase of the unit of weight of first-class matter from half an ounce to an ounce, came into effect on the 1st day of July, 1885, and thus affected the revenues for the entire year, restricting by the probable amount of $2,000,000 the increase otherwise to have been fairly anticipated. Although the revenue falls short of the expected total by $64,000, the expenditures have been limited to less than $51,000,000, and the deficiency is diminished within that of the year before, being below $6,900,000, exclusive of Pacific-railroad service."

A letter has just been published which Senator Edmunds wrote in 1885 as to his attitude during the Blaine campaign. In it he says: "I felt that it was far better that the Republican ticket should succeed (whatever my personal opinion had been and was concerning a candidate) than that the Government should go into the hands of the Democratic party; but I could not under any circumstances or temptation say that I believed something about a candidate that I did not believe, and if I were to make speeches and say what I did believe as to certain transactions, etc., or was (so speaking) to refuse to answer questions on these topics, it would be especially worse for the party than staying at home. I know, therefore, that I did the best thing for the party that an honest man could do. I believe, then, that the sober-minded Republicans of Vermont will not condemn me because I could not and would not tell untruths or be a hypocrite, even to retain our party in power. I understand perfectly the bad sources, one *ab infra* and one *ab extra*, whence came the sort of things to which you refer, but there is nothing that I wish to do about it other than to go on manfully and try, as I have always done, to do my duty in the Senate, and, so far as I have the ability, to honor the commonwealth that has bestowed upon me, unasked, great trusts and honor. I can never be a 'wire worker' or beggar for the gift she has hitherto freely placed in my hands, not as the consequence of importunity, but (as she supposed) for the advancement of her own interests. If the people believe that these interests may be better confided to other hands, it is their right and their duty to act accordingly. My only ambition is that the honest and intelligent men of Vermont and of the country shall think that I am brave enough to walk according to the light that I have, and not to worry about consequences."

Regarding Mr. Blaine's letter, Mr. Martin Brimmer of Boston has published a reply, in which he says: "Mr. Blaine objects to a statement in a published letter of mine that he repudiates with a sneer the reform of the civil service, and he supposes that I based that statement on an address of the Massachusetts Independents. My statement was based on an extract from a speech made by Mr. Blaine at Huntingdon, Pa. Mr. Blaine there characterizes the demanded reform as an attempt to put the civil service of this country on a level with that of England, which, in Mr. Blaine's opinion, is rotten to the core, and must be torn up by the roots. If this is not a sneer, it seems dangerously like one. The reform of the civil service is asked for in order to remedy those defects in the present system of appointment to public office which are sources of serious corruption in American politics. We know those defects by our own experience. It is sought to remedy them by methods adapted to our own character and habits. I think I have done no injustice to Mr. Blaine in saying that to attempt to describe this reform as a mere imitation of England is equivalent to a repudiation of the reform itself."

Official returns from all the counties in California, with semi-official counts in San Francisco, give Bartlett (Dem.) a plurality for Governor of 632 over Swift (Rep.). The Republicans have elected the Lieutenant-Governor, the Attorney-General, the Superintendent of Public Instruction, the Surveyor-General, and two Justices of the Supreme Court. In the Legislature the Democrats have a majority of 10 on joint ballot.

The New York Court of Appeals on Tuesday confirmed the judgment of the court below in the case of Buddensiek, the New York builder convicted of manslaughter, having been declared responsible for the death of a workman employed on a row of buildings in course of erection under his supervision. He was sentenced to ten years in State Prison.

Mayor Grace of this city on Wednesday appointed seven School Commissioners, selecting women for two of the number, in accordance with the requests recently made to him by various societies and private citizens. The women selected, who will be the first representatives of their sex in the Board of Education, are Miss Grace H. Dodge, a daughter of William E. Dodge, and Mrs. Mary Nash Agnew, wife of Dr. Cornelius R. Agnew, the well-known oculist.

A sensation was caused in the trial of ex-Alderman McQuade in this city on Friday by the confession of ex-Alderman Fullgraff, detailing all the circumstances attending the bribery of himself and colleagues, and showing that thir-

teen of them held a formal meeting, and agreed that their price for granting the Broadway Railway franchise should be $20,000 each. Ex-Alderman Duffy corroborated this confession. The jury have disagreed.

Terrible gales prevailed on the lakes during the week, and resulted in the wreck of thirty vessels, valued at $724,100, and the loss of about fifty lives.

Mr. H. M. Hoxie, First Vice-President of the Missouri Pacific Railway, who has been ill for some time, died in this city early on Tuesday morning at the age of fifty-six. He came into special prominence during the great railroad strike, last spring.

FOREIGN.

The Czar on Thursday instructed Gen. Kaulbars to leave Bulgaria at once with all the Russian consuls, if his note to the Regency demanding the dismissal from office of Gen. Mutkuroff, the commandant at Philippopolis, for his conduct in arresting a Russian cavass is not complied with. Gen Kaulbars was ordered to place all Russians in Bulgaria and Eastern Rumelia under the care of the German agent at Sofia. On Friday Gen. Kaulbars bade farewell to all Russian officials in Bulgaria.

An official statement was issued by the Russian Government on Friday, explaining its action in recalling Gen. Kaulbars from Bulgaria. The document says: "In consequence of insults to Russian subjects, and also to persons under the protection of Russia in Bulgaria and Eastern Rumelia, Gen. Kaulbars has been compelled to notify Mr. Nacevics, the Bulgarian Minister of Foreign Affairs, that he and all the Russian consuls would leave the principality on the occasion of the first act of violence committed after said notification. On November 5 following, a fresh outrage was committed against a Russian cavass at Philippopolis, who was maltreated by soldiers and by a crowd of people armed with sticks, and was brought to the Russian Consulate insensible. Gen. Kaulbars, learning that the attack on this cavass had been made by order of the military authorities, demanded the dismissal of the local brigadier-general and prefect who were responsible, and the exemplary punishment of those who participated in the attack. He also demanded that the Russian who had been injured should receive the customary salute and reparation, and notified the Bulgarian Government that unless his demands were complied with he would depart on November 17. M. Nacevics having neither replied to the demands of Gen. Kaulbars nor given the satisfaction required, Gen. Kaulbars and all the Russian consuls in Bulgaria and Eastern Rumelia have been ordered to leave to-day."

Gen. Kaulbars and all the Russian consuls left Bulgaria on Saturday. The French Consul at Sofia will protect Russian subjects, the German Consul having refused to do so. This fact was regarded in European capitals as signifying that the triple alliance is dead. It is asserted that Count Kálnoky's second decisive statement concerning the close nature of the Austro-German alliance was directly suggested by Prince Bismarck as a hint to Russia.

The entire press of Germany expressed delight over the report of the Government's alleged refusal to assume protection of the Russians in Bulgaria. It was, however, officially denied on Tuesday that the German Consul at Sofia refused to take the Russians under German protection. The official denial states that what happened was this: "The Russian Government asked Germany if the official who remained at Sofia in charge of the Russian archives might, in case of necessity, ask the German Consul to protect Russian subjects, and Germany replied, Yes." Gen. Kaulbars has arrived in Constantinople.

The *Novoe Vremya* of St. Petersburg says: "If there is one thing upon which Russia will rejoice to exhaust her last blood, it is to uphold her independence against the Germans."

A sensational rumor was afloat on Sunday that the German Ambassador at Paris had been instructed to inform the French Government that their application to the Chambers for a credit of £28,000,000 for military and naval supplies would be regarded by Germany as a declaration of war. The statement, though utterly incredible, caused a sensation in Paris. The belief is, that the German Ambassador was only told to inquire into France's relations with Russia, and to ascertain whether the proposed credits have anything to do with those relations.

Count Kálnoky, Imperial Minister for Foreign Affairs, in closing the debate on the budget on Thursday before the committee of the Austrian Delegation, referred again at length to the Bulgarian question. He said the imperial Government's policy was to uphold so long as possible the Berlin treaty as the legal basis for the conduct of affairs in the Balkan States, and the basis on which peace was to be preserved. This policy would be pursued in order to enable the Balkan States which the treaty created to become independent. This policy, Count Kálnoky continued, had so far succeeded that Russia also favored now the maintenance of the status quo and the preservation of peace in the Balkan regions. Count Kálnoky said he regretted that the confidential nature of the negotiations in progress between the two empires prevented him from enunciating the conclusive arguments which he could otherwise employ to demonstrate the cordiality of the relations between Austria and Germany, which had remained unchanged since 1879. In his hands they had essentially developed and strengthened. The confidence and trust of both governments in the alliance was complete and mutual. He denied that Russia's joining the Imperial Alliance had prejudiced the relations between Austria and Germany. The friendly grouping of the three States sprang from the idea that it was most important that Austria and Germany should stand in the best possible relationship towards Russia. Immediately after the conclusion of Count Kálnoky's speech the budget was adopted without amendment.

The statement that all the Powers had sanctioned the candidacy of Prince Nicolas of Mingrelia for the Bulgarian throne is semi-officially declared to be untrue, as Austria and England have not yet assented.

The Conservative Government recently resolved on the revolutionary step of dismissing Sir Robert Hamilton, the chief permanent official at Dublin Castle. No words could exaggerate the esteem and respect in which he has been held by viceroy after viceroy, and under-secretary after under-secretary. His crime is having understood and sympathetically supported the aspirations of the Irish people. Sir Robert will be appointed Governor of Tasmania. Technically he has "resigned," but his resignation was forced.

A committee of the British Cabinet, composed of Lord Randolph Churchill, Sir Michael Hicks-Beach, Lord Ashbourne, and the Right Hon. William Henry Smith, is preparing a land bill for Ireland. The first draft is based upon an extension of the Ashbourne Act. It limits tenants' purchase of lands to holdings under sixty acres. If the Commission sanctions the transfer, the Imperial Treasury will advance the amount, the Commission paying four-fifths to the landlord and retaining the other fifth until the tenants' annual instalments amount to one-fifth of the stipulated sum. The tenants' repayments shall extend over thirty-nine years, with interest at 4 per cent. per annum, as in the Ashbourne Act. The total necessary to be guaranteed by the Treasury is estimated at £25,000,000. The sales under the Ashbourne Act having already exhausted the Parliamentary grant of £5,000,000, it is reported that the Government, trusting to Parliament's sanction, has ordered the Treasury to continue to make advances. This action exposes the Government to a critical attack for a breach of the Constitution

On the text of his speech to the London corporation, showing Radical tendencies on the question of local coal and wine duties, the London *Standard* bitterly attacks Lord Randolph Churchill for doing what he can to discredit the Conservatives, especially in casting imputations on the property-owning classes as distinct from the working classes. It says: "If the unfortunate owners of property are to be bullied by Conservative Finance Ministers, as well as by Radical Ministers, the prospect before them is gloomy indeed." The *Standard* fears that Lord Randolph has hitherto been judged with an excess of charity. The impression created by his latest effusion, it says, must be undone speedily, and the Conservatives will expect their leader to take the needful steps to disown in the name of the Cabinet the mischievous ideas promulgated by Churchill.

Mr. Gladstone has intimated to Sir William Vernon Harcourt, Mr. John Morley, and others his assent to the active agitation of the question of the disestablishment of the Welsh Church.

The British Government has arranged with the Inman Steamship Company to take Tuesday's American mails, with the North German Lloyd Steamship Line to take Thursday's, and with the Guion Line to take Saturday's. The German steamers are to wait at Southampton until Thursday night for the arrival of the mails for America. The vessels of the first and third-named companies are to stop at Queenstown, and the Guion Line are to use the *Alaska* and *Arizona* in carrying the mails under the new arrangement, which is only temporary.

The British Resident at Aden, in behalf of the Bombay Government, has annexed the important island of Socotra, in the Indian Ocean, and hoisted the British flag thereon.

There were present in Trafalgar Square, London, on Sunday, 5,000 Socialists, 25,000 unemployed workmen, and 20,000 spectators. The speakers included Messrs. Hyndman, Champion, and Burns. At each of the five platforms a resolution was adopted calling upon the Government to relieve the distress existing among the workingmen. The police cleared the square after the meetings, and made several arrests for stealing and fighting. There was no violent disorder.

Fire in Hampton Court Palace on Friday damaged the apartments on the Tennis Court to the amount of $50,000.

Princess Beatrice, wife of Prince Henry of Battenberg, and youngest daughter of Queen Victoria, has given birth to a son.

The Canadian cruiser *General Middleton* has seized four American vessels from Eastport, Me., for fishing inside the three-mile limit. The facts of the seizure were telegraphed to Ottawa, and fines of $20 imposed.

The Republican party in Spain is disappointed in the semi-conservative programme of the Government, especially in the delay of the Franchise Bill until other political reforms shall have been passed, which of course, the Republicans say, will tend to shelve the bill altogether.

The natives in South Africa have revolted against Portuguese rule. On October 23 in a battle 9,000 of both parties were killed. The Portuguese are abandoning the country on the east coast above the Transvaal to the natives.

Cardinal Jacobini, the Papal Secretary of State, on account of ill-health has asked the Pope to accept his resignation.

The National Liberals have carried the Rumanian elections.

President Santos of Uraguay has resigned.

CHARLES FRANCIS ADAMS.

Mr. Charles Francis Adams's death removes one of the few remaining examples of what may, with literal accuracy, be called "statesmen of the old school," in which individual leadership counted for more in the formation of opinion than it does now, and sensitiveness to newspaper criticism had less to do with the shaping of a political career. It would not be easy to find in our day a public man with so high a sense of the duty of independence, and of the value of being right in one's own eyes no matter in whose eyes one may be wrong, as Mr. Adams. This trait, in fact, may be said to have had a controlling influence on his whole political career. He was from first to last an independent. He had the old Roman idea about the conditions of political concert. He felt that in order to form a political party men must think and feel alike about the public weal, and that when they cease to do so, the public weal demands that they should separate without more ado. He acted on this principle when, in the earlier part of his political career, he came out as a "Conscience Whig," and when, still later, he joined the Free-Soilers.

The same quality of independence did much—his intellectual force and special learning did the rest—to make him the power he was at his post in London during the war. The news from home during a large part of that period was very conflicting; the fortunes of the struggle varied greatly from week to week; the wisest observers were often in doubt about the result, and Mr. Seward's despatches were often, in American as well as in European eyes, full of vapor. A man who stood less firmly on his own feet, or who felt more keenly the need of surrounding sympathy and support, would inevitably have allowed the cause of his country — sacred as it then was — to suffer in his hands in those trying days. But Mr. Adams was made of stuff that was abundantly stern for the crisis. He was never afraid, never disheartened, never chilled; he never minded what society said or the newspapers said. He met the English with a temper as dogged, and tenacious, and dauntless as their own, and they had at last to confess its power and see him return home in triumph.

The very qualities, however, which fitted him for his place in London, cut him off in some degree from receiving its rewards. He came back in 1868 to a much more effusive America than the one he had left in 1860. The war had broken up the fountains of national feeling and filled every home in the country with sentiment, which was poured out lavishly on all who had served the republic well during the struggle. Mr. Adams shrank from the expressions of popular gratitude to himself in a way which the public found a little chilling, and which undoubtedly had something to do with his subsequent retirement from political life. It was pure and unmitigated fitness, such as no other man had, which put him at the head of the Geneva Tribunal. His own indifference had undoubtedly much to do with the failure to nominate him in 1872 in Cincinnati, and to beget and spread the impression of his coldness, which for some years afterwards furnished the material for so many newspaper jokes. No candidate could possibly have been so difficult to "whoop up" as he was, and would have been so thoroughly disgusted at finding himself the central figure of any movement to the success of which humbug or gush was in the smallest degree necessary. Simplicity and sincerity were the notes of his character, and they were seasoned with a dry humor which kept his sense of proportion in beautiful order, and never allowed him to get into any position in which there could be any doubt about the nature of his aims or the meaning of his language. There has seldom been a man in public life less "magnetic," in any sense of that much abused term. Anybody who liked or admired him could always tell without difficulty why he did so. This is what he himself most desired.

Since his time, "magnetism" has played a larger and larger part in politics, but it has ended by palling on the public. There is a visible reaction in favor of the older and more austere type of statesman, of which Mr. Adams was an example. Over his career—especially the little-known period, on the eve of the annexation of Texas, when his pen composed some of the most remarkable State papers on the subject of the slave power that adorn the legislative annals of Massachusetts — readers of American history will probably linger with more and more admiration as the years go by, and as the demands of the commonwealth on the highest prudence, sagacity, and integrity of its public men grow in number and in solemnity.

A STEP BACKWARD.

Whatever be the merits of the Benton case, in which the President has restored a district attorney whom he had removed for offensive partisanship, the President's reasons for his action are pretty sure to cause him a deal of trouble. Mr. Benton, the District Attorney for the Western District of Missouri, made appointments for campaign speeches in various parts of the State from September 29 till about the end of October. On hearing of this the President treated it as a violation of his order of July 19, and removed him. Mr. Benton then came forward, and put in the plea that his official business did not suffer by his political activity, and the President thereupon restored him. He accepts the excuse that Mr. Benton did not permit "campaign engagements to interfere with the performance of official duty." But he accepts it with the following qualification:

> "I did not intend to condemn the making of a political speech by a Federal official to his neighbors and friends at any time and place where it was merely incidental, if the speech itself was decent and fair. But I do not think that such an official can enter as a business a political campaign, and, consenting to a long list of engagements to address political meetings, widely separated and of daily recurrence, fill such engagements without neglecting his duty if he holds an office worth having, nor without taking with him in the canvass his official power and influence. Therefore this course is condemned. The number of speeches that can be properly made cannot be specified, nor the time when, the place where, nor the circumstances in which they are proper; nor can their character be prescribed. But a correct line of conduct can be determined on without difficulty, I believe, in the light of a desire to follow the spirit of the admonition given, by divorcing the conduct of a citizen from the use of official influence in political campaigns, illustrating at all times the truth that official duty is paramount to partisan service, maintaining the dignity of office-holding, avoiding any pretence of control over the political action of others by reason of official place, and teaching the lesson to the people that public positions are not bestowed or held under a pledge of active partisan service."

Now, we submit, with all due respect, that under this ruling "a correct line of conduct" cannot be, and, by the great body of office-holders, will not be, "determined on without difficulty." In truth, it is hard to avoid looking on it as a virtual annulment of the order of July 19, for it to all intents and purposes restores the old state of things. Under the old state of things, we do not believe that any office-holder ever admitted that his official duty had suffered by his campaigning. He always maintained that his absence from his office, and the expenditure of his time and energy in political work, did not in reality cause any damage to the public service. He either got ahead in his work before he left home, or he got rid of the arrears after he got home, or he made ample provision for its performance by substitutes or subordinates. We may safely challenge the production during the twenty-five years of Republican Administration, unbounded as the activity of the office-holders was, of a single confession that the Government suffered through the campaigning of its officers or their attendance at conventions. Every one of them, if called to account, would have said exactly what Mr. Benton says in his letter of excuse. And if he be excusable and the order of July 19 does not cover his case, it ought to have been differently worded. It ought to have said that office-holders might be as active in politics as they pleased, provided that their activity did not, *in their judgment*, interfere with their official duty.

Now, one of the great aims of civil-service reform is to withdraw this matter as far as practicable from the judgment of the office-holders. The President's order was understood to mean that subordinate officers were not to be allowed any longer to determine how much of their time and energy they would give to official work, and how much to political work. It was supposed to settle it finally that the Government paid for the cream of each man's powers, and for his best work on certain days and at certain hours, and not simply for what vitality and capacity he might have left after running around the country making stump speeches and managing conventions. The restoration of Mr. Benton seems to us to plunge the whole matter once more into that vagueness and uncertainty out of which all the abuses sprang. We supposed that a positive and definite rule had been substituted for the interested notions of 100,000 office-holders, each probably holding a different view of his duty. We supposed, also, that a check had been put on the practice by small officials of publicly denouncing that portion of the community from which they draw half their salaries, and of candidates who may at any election become their superior officers.

But it seems as if we were just where we were last June, and as if the term "offensive partisanship" were again surrounded by the obscurity which, for some time after Mr Cleveland came into office, deprived it of a large part of its value.

GROWTH OF POLITICAL TOLERANCE.

PARTISANSHIP has always been exceptionally bitter in New England. The Puritan spirit, which made the people who considered themselves "orthodox" in religion hold the heterodox in such contempt and even enmity, colored their political relations when parties began to arise. Daniel Webster's father, for instance, who died in 1806, was a Federalist of the most intolerant type, and the story is told of him that, being taken ill once, a few years before his death, in a town of Democratic proclivities, he begged to be carried home, saying: "I was born a Federalist, I have lived a Federalist, and I won't die in a Democratic town." The spirit of Ebenezer Webster survived in a form but slightly modified through the whole ante-bellum period, and regained its pristine intensity during the war and the reconstruction era. In strongly Republican regions a man who espoused the Democratic cause often had to endure social obloquy, and suffered harm in his business relations. Even his religious standing might be injuriously affected. A case is within our personal knowledge where a Congregational clergyman in a Connecticut town, in speaking of a fellow-citizen, said, shortly before the election of 1884: "I cannot understand how a man who is a Democrat can be a Christian." It was rarely the case that a minister would put the case so baldly in words, but the impression made by the manner and bearing of many a clergyman was the same.

Since Mr. Cleveland's election there have been many signs of the growth in political tolerance which was so much needed in such a community. To fail in hearty support of the Republican party in a "crisis," such as always came when a President was to be elected, has been held an offence which should brand the guilty man as a criminal of the deepest dye, and cost him the future support of his party. Between 1860 and 1884 there was never a Presidential election in which a Republican United States Senator from a New England State could have refused loyal support to the Republican nominee, and failed to lose his hold upon his party so completely that he would have stood no chance of reëlection afterwards. Nowhere in the Eastern States during this era was devotion to the dominant party, or abhorrence of any course which might promote Democratic success, more pronounced than in Vermont. The Republican Convention in that State six years ago solemnly resolved that "the Republican party must be sustained as the only effective barrier to the success of treasonable schemes"; and if any Republican in Vermont had pursued a policy during the canvass of 1880 which evidently helped to break down this barrier, he would have sealed his political death-warrant.

One of the most potent causes which contributed to the election of a Democratic President in 1884 was the course of Senator Edmunds during the canvass. He made but a single speech during the campaign, and that a speech of the most brief and perfunctory character possible, in which he pointedly refused to say a word in behalf of the Republican candidate for President; and his known conviction that Mr. Blaine was a dishonest man undoubtedly helped to convert many a hesitating Independent into a Cleveland voter. The Blaine men have always claimed that Mr. Edmunds did most effective work for the Democracy two years ago, and the claim was well-founded. Yet, with this record of "apostasy," the Republicans of Vermont have just reëlected him to the Senate, only eight out of more than 200 Republican members of a Legislature chosen on this issue voting against him.

New Hampshire has been as close as Vermont has been one-sided in politics, but, perhaps on this very account, party spirit has run as high among the White Mountains as on the west side of the Connecticut River. Two years ago good Republican clergymen not merely "viewed with alarm," but contemplated with horror, the entrance into the White House of the Democratic candidate. They felt, and many of them did not hesitate to say, that such an event would give a terrible shock to the cause of religion. Many of them would have confessed if pressed—quite probably some of them did, like their Connecticut brother—that they did not see how a man who supported Mr. Cleveland for President could be a Christian. Only a belief in the wisdom of an overruling Providence could reconcile them to the verdict of the people in favor of the Democratic candidate.

An ancient custom requires the Congregational clergymen of every New England State to read from the pulpit on the Sunday before Thanksgiving the proclamation of the Governor setting apart the day for the family festival. Two years ago the people of New Hampshire elected as Governor Moody Currier, who is a free-thinker and a great admirer of "Bob" Ingersoll's views about religion. Gov. Currier recently issued his proclamation for Thanksgiving, but he took particular pains to avoid in it any reference to a Supreme Being. The paper was denounced as worthy only of a pagan, and last Sunday many clergymen refused to read what they considered the heathenish language of a Republican Governor with reference to the festival, and substituted the proclamation of a Democratic President as to the duty of giving thanks to the Deity.

To anybody familiar with the political attitude of the average Congregational clergyman in New England, the New Hampshire incident is full of humorous suggestions, but in its way it is almost as significant as the verdict of Vermont in the Edmunds case. Together they illustrate the marvellous change which has been wrought by the logic of events. It is a change which was imperatively needed. The notion that half the people of this nation were traitors plotting "treasonable schemes," and that no man could act with them and be a Christian, had become so deeply rooted that, unless overthrown, it threatened grave harm to the republic. It is not the least of the benefits which have flowed from Mr. Cleveland's election, that it has broken the reign of a political intolerance which had become really dangerous.

ONE PHASE OF "THE SOCIAL PROBLEM."

THE *Herald* has been investigating the subject of the wages paid young women who work in shops and factories and who do sewing at home, and finds that in very many cases they are shockingly low—$5, $4, $3, and even $2.50 a week. The main cause is, of course, the tremendous competition; the supply of women who seek such employment vastly exceeding the demand. Yet, while these branches of woman's work are thus terribly overcrowded, there is one branch in which the demand notoriously falls far short of the supply, in which the wages are remarkably high, and in which the conditions of existence are infinitely superior to the wretched life of the shop-girl, the factory hand, or the sewing woman. Domestic service offers a field in which tens of thousands of the women who are now starving on wages of $3 or $4 a week, and oftentimes without steady work even at such wages, can earn the same amount of money, in addition to good board and lodgings, by easier work and with the assurance of steady employment. A writer in the *Atlantic Monthly* recently called attention to the curious and striking fact that the wages of female servants still remain at the high rates which they reached during the era of a depreciated currency twenty years ago, and yet that at these high rates the demand so far exceeds the supply that the utterly green immigrant girl has no difficulty in finding a place at once.

Moreover, the field of domestic service is unique in this respect, that it is capable of almost indefinite expansion. In other departments of industry there is a limit to the number of persons who can be employed, since the demand for the products of such industry only requires the work of a certain number of hands. Thus, when "times are good" and the manufactories of the country are employed to their full capacity, no more operatives can find places. But this is not the case with domestic servants. The difficulty of obtaining, not merely good, but in many cases indifferent service of this character, is the universal complaint of housekeepers throughout the country. It is a potent cause in the rapidly growing tendency toward hotel life on the part of families who have wearied of the constant struggle with ignorance, incompetence, and impertinence. It keeps a multitude of housewives in a state of constant despair, between the difficulty of getting along with wretched servants and the impossibility of getting along without them

The last census showed that there were 938,910 women employed in domestic service in the United States. But this does not mean that in 1880 there was a demand for only 938,910 women in such employment. On the contrary, at the high wages now current (and these wages, it must be remembered, making allowance for board and lodgings, are higher than those received by tens of thousands of female school-teachers, copyists, type-writers etc.), there is a large unsatisfied demand. Be-

sides, if greater competition were to reduce the wages to a plane more consonant with the pay of skilled female labor, the present demand for domestic service would be vastly increased. If "hired help" could be hired for half what it now costs (and at that rate it would be well remunerated in comparison with other employments), a host of families, especially in the country, would keep servants who now feel it impossible so to do. There is not a particle of doubt that, at the ruling rates, tens of thousands of women can easily find places. There is as little doubt that at smaller but still good wages the number of women who could secure employment in the kitchen under comfortable conditions, exceeds the whole number of workingwomen in New York whose misery is periodically set forth by the newspapers. In other words, this misery might practically be ended by the victims themselves, if they would only give up trying to make a living at dying rates in overcrowded industries, and enter a field where they are sure of steady work at good pay.

And yet, incredible as it seems, it is strictly true that, if the alternative were presented to these women, ninety-nine out of a hundred of them would decide to keep on in their present distress rather than enjoy comfort as domestic servants in the country—since it is in the country that the opportunities for such employment must largely be sought. The *Tribune* printed the other day a plaintive note from a lady in a Connecticut village, which is worth quoting because it so concisely expresses the situation:

"Is there any way by which people living in the country can secure good, reliable help? We see advertisements by those who say they will live in the city or country, but I find that none of them really will go to the country, while there are plenty of places that good women could obtain where they would receive good wages and steady homes."

Anybody who has lived long in the country knows how truthful this picture is. Even if one can get a woman to do housework in the summer, it is more likely than not that she will insist upon running back to the city as soon as cold weather comes on, and taking her chances for the winter there.

The unwillingness—nay, the point-blank refusal—of poorly-paid workingwomen in New York city to take well-paid employment as domestic servants in the country, is the chief cause of the distress which prevails among them. The remedy is in their own hands, and yet they refuse to apply it. In a large proportion of cases the sole reason is because they would rather starve in the city than have plenty to eat in the country; because they would rather endure intolerable ills in a metropolis than enjoy comfort in a quiet town; because they would rather catch glimpses of the luxury of the rich in a great centre than live in a village where nobody is rich and nobody poor; because they would rather go hungry and cold amid the excitements of urban life than be well fed and well housed in a community which leads a humdrum existence.

As for the prejudice against domestic service which keeps so many women out of it, there is nothing to be said in the way of argument. The simple facts about such service are that it is perfectly respectable, thoroughly comfortable, and exceptionally well paid. A young woman has a right to refuse employment under such excellent conditions, and instead try to make a living in a factory or shop where she can earn only $3 or $4 a week. But after making this choice she has no right to complain because she does not fare well, nor have philanthropists any right to invoke the public sympathy in her behalf. It is charged that thousands of women go to the bad in New York every year because they cannot support life on the wages paid factory hands, sewing-women, and shop-girls. But the woman who, on the plea that she cannot earn a living by her needle, enters a brothel because she has a prejudice against entering a kitchen, is a woman who merits no sympathy.

The folly of the talk now so current with half-baked writers on the labor problem can hardly be more forcibly demonstrated than by contrasting their theories with the facts in this particular department of industry. They point out that workingwomen in New York get wages that are not sufficient to live upon, while in their immediate neighborhood are people who are very wealthy, and they insist that a great social problem is here staring at us for solution. So they start off on a wild-goose chase for some legislative remedy which will assure these women good wages, and very likely become captivated with the idea that Henry George's nostrum would secure first-class pay for everybody. All the time the solution of the problem is right under their noses—let the women abandon overcrowded and poorly-paid industries for an employment in which they can get good wages and live well. So long as the workingwomen prefer misery in the city to comfort in the country, and starvation wages in the factory or shop to good pay in the kitchen, it is they, and not society, who must be held responsible for their misery.

Correspondence.

THE EASTPORT COLLECTORSHIP.

To the Editor of The Nation:

Sir: As a former Republican who voted for Cleveland, and has, not always without difficulty, defended him ever since against bitterest attacks of Republican friends, may I protest most earnestly against the change just announced in the Collectorship at this port? The present officer, Mr. N. B. Nutt, has held the position, with a slight interval, through several administrations, with never a whisper against either the integrity or the ability of his service. Rather the accuracy and perfection of his reports have been, as I learn, probably *quite exceptional* throughout the range of the service in the United States. With clear head and careful judgment he has performed his duties, often (at this particular post) of a delicate and perplexing nature, and has been, if my informant's impression is correct, repeatedly consulted by the Department at Washington and called upon for technical information or opinion.

Was it necessary that such a man, looked up to by the whole community as a leader in all good activities, and whose official services must gain in efficiency with every added year of experience—could it be necessary that such a public servant should be supplanted by *anybody*, however personally worthy? And, it may be added, if the unwise policy of protection is still the law of the land, is it not better that it should be administered by a thorough believer in it, as Mr. Nutt is, than by a member of the party whose one professed distinctive doctrine looks to an essential change in that policy?

The positive suffering such dismissals may work is seen in this instance, where families, already more or less crippled by the recent terrible conflagration here, will be left without support through the local "clean sweep" no doubt to follow.

It will be hard to bear the reproaches of friends instancing this as an example of the "civil-service reform of this Administration." It is such things as these that strain the allegiance of the Independents who voted for Cleveland. All we can do is to fall back on the many grand things he has done, and the many, many things which, in spite of awful pressure, he has not done. We must comfort ourselves with the reflection that about all the solid gains to civil-service reform, as well as practical illustrations of it, have come since the beginning of this Administration. But oh, why these unnecessary blots and backslidings! One Higgins, as a political handle for reproach, outweighs a score of Pearsons. It is a grand thing that our Collector here has been undisturbed to this moment, and it ought to make Republicans thoughtful who reflect that it would have been almost inconceivable had a Republican administration succeeded a Democratic one a year ago; but *why disturb him at all*, if not for cause? Was it for this we elected Cleveland? It is such things as these that make the judicious grieve, and tempt the Independents, Hannibal-like, to register an oath not only of eternal hatred and warfare against the whole spoils system, but also, if the Democratic party, too, is to prove false to the great reform, then to form a new party on that main issue.—Respectfully yours, H. D. Catlin.

Eastport, Me., November 18, 1886.

MINNESOTA AND TARIFF REFORM.

To the Editor of The Nation:

Sir: In your issue of the 11th inst. you placed Minnesota in the Republican column for 1888. The Democrats of the State feel that the results of the late election justify them in claiming the State as at least doubtful in case the Democracy stand squarely for tariff reform in their national platform.

The late Democratic State Convention placed the following plank in their platform:

"That in national matters there should be a thorough and complete tariff reform. . . . Justice and sound policy alike dictate that the tools of the laborer and the mechanic, the raw materials of the manufacturer, the implements of the farmer, and all things necessary for the life, comfort, and enjoyment of the people, should not be excluded from our markets or enhanced in price by taxes imposed upon them for the profit of protected millions."

To show the Republican position on the tariff question in Minnesota, we quote the Minneapolis *Tribune*, the leading Republican paper of the State. The *Tribune*, a month before election, said:

"The Republican Congressional candidates this fall are more nearly in accord with the Republican party of the country than in times past. Not more than one of the five, the *Tribune* believes, will, if elected, vote with the Democratic Congressmen on tariff questions. . . . It is evident that Republicanism is becoming more robust in Minnesota, and that it will in good time endorse completely the policy of a protective tariff, as the Third and Fourth Districts have done."

The election resulted in three of the four candidates who "would not vote with the Democrats on tariff questions" being defeated by heavy majorities—Wilson, in the First District, having over 3,000 majority; McDonald, in the Third District, about 1,500 majority; and Rice, in the Fourth District, over 5,000 more votes than Gilfillan, the protectionist member of the present

Congress. The only protectionist in the delegation to the Fiftieth Congress is Lind of this, the Second District. He was elected by a greatly diminished majority, and would undoubtedly have been defeated had it not been for the 11,000 Republican majority in the district. The *Register* of this city is the leading Republican organ in the southwestern portion of the State, and all through the campaign advocated protective tariffs. In its issue of the 11th instant we noticed the following paragraph: "The Republican party leaders in the West must get down from their high-tariff horse or else bury their party."

We venture to say that in the election of Rice, Wilson, and McDonald the cause of tariff reform has achieved a most glorious victory.

J. A. NOWELL.

MANKATO, MINN., November 17, 1886.

WHAT PROTECTION DOES FOR THE IRON MINERS.

TO THE EDITOR OF THE NATION:

SIR: While the Eastern and the Western Ore Associations are endeavoring to have the Treasury Department recede from its recent decision in regard to the tariff on imported iron ore, it is of interest to workingmen to know what "protection" has done for their advantage in the State of Pennsylvania in the iron-ore business. The following figures are from the annual report of the Pennsylvania Bureau of Industrial Statistics, which was issued last month:

Year.	Num. Hands.	Average Number Days Worked.	Average Wages. Week.	Day.
1885.....	2,026	235	$4.06	$0.68
1884.....	2,428	215	5.00	.83

Tons of ore mined: In 1885, 811,709; in 1884, 829,011.

The year 1885 was one of the worst ever experienced in the Pennsylvania ore-mining business. The average includes the wages of a number of boys, whose pay was forty-eight or fifty cents a day; but, after making allowance for these, the men's pay will not average $1 a day.

In this connection the United States Census figures for the "boom" year 1880 may be quoted. In round numbers, a total force of 32,000 men employed in mining iron ore in the United States earned $301 for the year's work. This is also less than $1 a day.

The idle season with these workingmen is the winter, when freezing cold closes navigation, and makes it unprofitable to attempt to work most of the mines. The cold also greatly reduces the chances of the miner to eke out a decent living by finding other work while the mines are closed. It is hard to believe that these underpaid miners can be made to think that they are benefited and "protected" by the tariff.—Yours truly, B.

PITTSBURGH, November 16.

BRIBERY AT ELECTIONS.

TO THE EDITOR OF THE NATION:

SIR: Your article on "Bribery in Elections" is timely. This is certainly one of the monstrous evils of the day. The number of those who are ready to barter the "glorious privilege of citizenship" for filthy lucre is steadily increasing. The supply of venal voters fully keeps pace with the growing demand. In this matter there are no hopes of our being able to persuade men to be virtuous so long as we permit them to be tempted. Would it not be well, then, to try and remove the temptation? At all events, might we not devise some method by which this large amount of capital could be saved for the benefit of the whole community instead of being squandered on the least worthy class?

With much diffidence I am about to propose a method which seems worthy of careful consideration. It is a method not without the authority of classic precedent. It is related by Gibbon that the Prætorian Guards, after the murder of Pertinax, offered the Roman Empire for sale at auction to the highest bidder. Let us, then, turn our polling-places into auction-rooms; let us turn our inspectors of elections into vendue-masters; and let us knock down all the offices to the men who are willing to pay the highest price in brand-new In-God-we-trust silver dollars. Let the business be transacted openly and above board, not, as it is now, secretly and in the dark.

It is commonly reported that a young gentleman paid $7,000 for the privilege of sitting one year in the Assembly at Albany, with a salary of $1,500. I am informed, on good authority, that in a town not a thousand miles from here there is held by former supervisors a list of 200 mercenary voters in a total registry of about 600. The method we propose would save the honor of the vast army of men who sell their manhood; and it would also furnish a large amount of money—probably from $50,000,000 to $100,000,000 a year—to defray the expenses of government. We submit it to the judgment of all candid persons. Is not our plan far more practicable than Henry George's scheme for the nationalization of land? Is it not at least fully as sound and statesmanlike as Mr. Blaine's project, by which he proposed that the national Government should become a broker to transact business for the individual States? JOHN W. GARDNER.

NORTON HILL, N. Y., November 17, 1886.

LOCAL EDUCATION OF THE INDIANS.

TO THE EDITOR OF THE NATION:

SIR: The recommendation to abandon the task of educating Indian boys and girls in the East gives great satisfaction to all Indians and most whites on the reservations. I speak more particularly of the Sioux reservation, where I have lived for many years.

That Indians cannot be educated is not true. We have men who are college graduates, and women who have been thoroughly taught. There is a large number of young people who have had a common-school education and can read and write and speak English fluently. Two whole tribes have become self-supporting in the last four years, and have adopted the habits of civilized life, while there are many more who are working in this direction. Indian ministers and teachers abound, and are doing excellent work, and almost all these are home-bred. The desire for education is general among the wildest. They are, however, in favor of home and opposed to foreign schools.

Their reasons are worthy of respectful consideration.

First, so many die who are sent East. That many die cannot be denied, although when in ill-health they have been sent home, and so the school has been saved the odium of their dying there. It is not a question of comparison. The death of one child sent by force to the East should outweigh infinitely the death of a dozen who go of their own accord, and at their parents' desire, to a reservation school.

The second is, that as good and better work can be done in the West. Teachers of Eastern schools have told me that they could not do more for the children than we were doing in schools like St. John's, Cheyenne River Agency.

The third is, that there is all the difference between the two that there is between a plant of native growth and one transplanted. Results show that our home-bred children can take care of themselves after leaving school, while the foreign bred are far inferior in quality, and need the constant and anxious coddling of the authorities.

The demoralizing influences of camp-life are rapidly becoming a fiction. Through the efforts both of agents and of missionaries a healthy growth of the older people is apparent, and where our best work is being done the people are a set of peaceable farmers. The dances, conjurings, and wild customs have entirely ceased. What is more, there is no drinking, profanity, rowdyism, nor Sabbath-breaking. There may be demoralizing influences around the settlement of white people called an agency, but the influences are from the white and not the Indian element.

Educational work should be done in day schools, mission and Government boarding schools, on the reservation, and perhaps higher teaching in our frontier towns. If exceptional cases need a better training, it would be better for such to be sent alone to some white institution of learning in the East or West, where one Indian is entirely surrounded by white influences. We have done this with the best results. HENRY SWIFT.

AN ETHICAL PROBLEM.

TO THE EDITOR OF THE NATION:

SIR: I beg to submit to you a question in Applied Ethics—a question which often has puzzled me, and which to many others among your readers may also appear as a very difficult one. But let me first state a case which recently occurred in my neighborhood. A man lost his life in an unfortunate accident. Heavy weights of iron and of timber had fallen upon him, some of his limbs and of his ribs had been broken, the lungs and other inner parts had been cut into. The man was not killed instantly; he suffered indescribable pains from eleven in the forenoon till six in the evening, when he finally died. But for a number of hours after the accident had happened he had remained fully conscious.

It being impossible to save the man's life, would it not have been permissible to the attending physician, aye, would it not have been the duty of the same, to ease the sufferer's last moments by—let us utter the word—by applying a drop of strong poison, or a spark of electricity, or any other method whereby a more rapid advancement of the final death would have been accelerated? Could such a physician be declared guilty of murder before a criminal court? Could or would physicians, or teachers of religion and of morals, or teachers of criminal law, condemn such doings as immoral and inadmissible?

Respectfully, F.

NOVEMBER 17, 1886.

[We append the medical view of this problem, as stated in the last number of the *New York Medical Journal*.—ED. NATION.]

MURDER AS A MEDICINAL AGENT.

A newspaper item from Illinois, recounting the death of a child from supposed hydrophobia, states that "some months ago a boy in the same neighborhood had hydrophobia, and he was mercifully smothered with a pillow. Preparations were made to give Daisy the same relief, but the spasms suddenly ceased." A similar instance of therapeutic homicide was reported last summer from the northern part of the State, and there is some reason to fear that in many rural regions a barbarous practice, not uncommon in past generations, finds surviving advocacy, not only among the rustic populace, but even with some practitioners of medicine. To say nothing of the difficulties of diagnosis which might lead to the occasional smothering of simply hysterical patients, it may not be amiss to intimate that the law draws an arbitrary line beyond which the killing of patients becomes wilful murder, and even the tacit assent of a physician, or his subsequent condonation of the intentional taking of life, would render him an accessory. Despite the emotional argument which holds it as a doctor's highest duty to painlessly put an end to his clients when his prognosis is hopeless, the fact that a person is certain to die of disease is not acceptable as a valid excuse for killing him or her by adventitious means.

AN ANGLO-SAXON EXTRADITION TREATY.

To the Editor of The Nation:

Sir: Is there any excuse for the state of things existing through the imperfections of the extradition treaties between civilized nations? What objection could be made, for instance, to a treaty between the United States and Great Britain which should consist of these two simple provisions—(1) that the treaty shall include all acts which are punishable by the laws of both countries, political offences being excepted; and (2) that the treaty shall continue in force only while each of the contracting parties shall keep in force a statute declaring that in any prosecution for an act not punishable by the laws of the country from which the defendant was brought, it shall be a good defence that the accused has not, since his extradition, been set free, and so remained for thirty days continuously?

Beverly Wright.

Boston, November 19, 1886.

A BILL OF PARTICULARS RENDERED.

To the Editor of The Nation:

Sir: In response to an article in your paper of November 11, entitled "A Bill of Particulars Needed," I venture to suggest the following as tangible and particular grievances of the working portion of the community.

(1.) The existing system of taxation is such a grievance, for the following reasons. Of that part of it known as the tariff it may be said that:

(a.) It is for the benefit of special classes.

(b.) It is excessive.

(c.) It limits the opportunities of employment; and, as a consequence,

(d.) It lowers the rate of wages.

The weight of taxation is made to fall on the necessaries and commoner luxuries of life, rather than on realized property—in a word, on the poor and not on the rich. Free trade, heavy probate duties on large bequests, and a graduated income tax, increasing the rate per cent. in proportion to the amount of the income, would be changes helpful to the mass of the population.

(2.) A second grievance is, the approved and legalized methods of business. To be specific, Mr. A or corporation B has, by force of circumstances, control of the labor of say 1,000 men. The theory of the law is, that if they do not like their employer's terms, they can work for themselves or sell their service in some other market. The actual fact is, that in a multitude of cases there are no alternatives to the employer's terms but starvation or the poor-house. The case is substantially that of the rack-rented Irish tenant. The tenant could not benefit himself by his legal rights of free contract, but the law was obliged to recognize and enforce his equitable claims to a place on the face of the earth and a fair proportion of the products of his labor. In regard to the Irish tenant and his landlord, the American public is pretty well agreed that this principle is right, but it seems to have no thought of applying it to American mines, factories, and railroads. Without regard to the equities of the case, it allows an employer to make all he can from the labor of his workmen, and to pay them the lowest rate hunger compels them to accept. The profit-and-loss account may show unmistakably that the work of each man on the average is worth to the concern $1,000, $1,500, or $2,000; and the wages account may show as unmistakably that the average wages are $400, $600, or $800, yet there is no tribunal, such as that provided by Gladstone's Irish Land Bill, to which an appeal can be made for a more equitable division of the products of the common labor. Capital and labor here are as much business partners as landlord and tenant in Ireland, yet the law recognizes only the partnership interests of the senior member of the firm. If his capital is assailed by violence, the law is prompt and energetic in defence; but a coal, or a lumber, or a railroad king may at any time, for a personal advantage or a mere caprice, suddenly deprive a multitude of men of their means of livelihood, or may systematically harass and half starve them, and no court will entertain a suit of complaint. Look at the coal owners of Pennsylvania and the wages paid their miners, and say if it is not true.

(3.) Is it too vague a statement for "a bill of particulars" to say that public opinion approves of "demand-and-supply" wages, and that the Church feebly and inaudibly protests against them; that it rarely or never translates its central doctrine, Do unto others as ye would that they should do unto you, or, Bear ye one another's burdens, into such practical language as, Pay your workmen all your business will afford, or, Think it a theft to pay a man only half what his work is worth to you?

To the smaller extent of their power the workmen are often as unjust and unfeeling as their employers, but their wrong conduct does not alter the fact that great changes must be made in the laws and in public sentiment before they will conform to those Christian ethics that all men now profess to approve, before that finer spirit of justice which is called benevolence makes life to the mass of workmen not a weary struggle for existence, but a fair opportunity for growth and enjoyment.—Respectfully,

Charles W. Pearson.

Evanston, Ill., November 15, 1886.

[(1.) Mr. Pearson appears to have forgotten that what we called for was a list of the grievances of workingmen *as such*—that is, of manual laborers for wages—which were capable of remedy by legislation. The tariff or the general system of taxation is not such a grievance, because it affects all classes—farmers, lawyers, teachers, and doctors—as well as workingmen. We should think it very absurd if the farmers, as a protest against the badness of the tariff, should separate themselves from the rest of the community and organize as a class hostile or semi-hostile to the other classes.

(2.) Mr. Pearson has again forgotten that his bill of particulars must specify not wrongs or hardships simply, but wrongs or hardships capable of remedy by legislation. Has he ever known anybody who passed into control of the labor of 1,000 men by "force of circumstances"? Ability to employ labor means the possession of money. Has he become possessed of money by force of circumstances, and does he know any one who has? Possession of money comes in ninety nine cases out of one hundred through force of character—that is, industry, frugality, sagacity, and foresight. Is he prepared to enact a law providing for the regulation of wages in factories and mines? If so, to whom shall the work be intrusted; and on what force will he rely to keep capitalists in the business, after the control of the business in its most essential feature has been taken out of their hands, and given to politicians elected, say, annually? Suppose a factory, after being managed in the Georgeite way, were to fail, and the laborers left to "starvation or the poor-house." Would anybody be compelled to provide them with a new factory and good wages, and if so, who? If, moreover, the factories were not doing well, would it not be necessary to raise the prices of these goods by law, and compel people to purchase them so as to keep trade lively? Moreover, the analogy with the Irish land legislation is misleading. That legislation gives the tenant greater control over his farm, but it does not involve the Government in the work of superintending his mode of farming. The case would be parallel if the Government, after ousting the landlords, were to become a general landlord itself, and undertook to see that every farmer in Ireland kept his farm in good condition. People of the Georgeite persuasion are constantly suggesting changes in the social organization which, whether desirable or undesirable, involve additions to the work of public administration such as the world has never seen, or any branch of the human race ever even attempted, and they fail to tell us where the capacity necessary for them is to be found. Is it possible that Mr. Pearson has never thought out the mode in which he would provide for the State superintendence of all the mines, factories, and railroads? Let him consider for a moment the condition of New York manufactures if they were controlled by the Board of Aldermen. Does he seriously suppose that the men who have money in them would leave it there for one month?—Ed. Nation.]

WHAT CONGREGATIONALISTS SAY THEY BELIEVE.

To the Editor of The Nation:

Sir: Allow me, as a matter of historical accuracy, to give my authority for the statements made in the *Nation* of November 4 with regard to what Congregationalists profess to believe, called by your other correspondent, the Rev. Mr. Parker, "noteworthy mistakes."

(1.) As to the source of information. Though born and bred in one of the old Puritan Congregational churches, and almost learning my alphabet from its "Assembly's Catechism," I did not rely on that for my knowledge, but on 'The Official Record of the National Congregational Council Held in Boston in 1865.' This Council was composed of the representatives, as declared by itself, of nearly three thousand churches; and as such, to quote its own words, was "competent to testify in the form of a confession what system of doctrines is received and maintained in the churches which it represents" (see p. 50)—manifestly a very different body as to authority from Mr. Parker's hypothetical board of "householders."

(2.) As to the exact language used in its Declaration of Faith. It is, as adopted in the old Plymouth burial-ground, and then carefully amended the next day in Boston:

"Standing by the rock where the Pilgrims set foot on these shores, upon the spot where they worshipped God, and among the graves of the early generations, we, elders and messengers of the Congregational Churches of the United States in National Council assembled—like them acknowledging no rule of faith but the word of God—do now *declare our adherence* to the faith and order of the apostolic and primitive churches held by our fathers, and substantially as embodied in the confessions and platforms which our Synods of 1648 and 1680 [declared by the Council, see p. 31, to be in doctrine almost identical with that of the Westminster Assembly], set forth or reaffirmed. We declare that the experience of the nearly two and a half centuries which have elapsed since the memorable day when our sires founded here a Christian Commonwealth, with all the development of new forms of error since their times, has only *deepened our confidence in the faith and polity of those fathers. We bless God for the inheritance*

of these doctrines. We invoke the help of the Divine Redeemer that through the presence of the promised Comforter he *will enable us to transmit them in purity to our children*" (Official Report, p. 153)—

language, surely, which is ample justification of my statement that "it declared almost unanimously its adherence to the old Puritan Confession of Faith based on the Westminster Confession, and first adopted in this country in 1648."

(3.) As to whether the declaration was formally and officially made, or whether, as Mr. Parker says, it was "an informal and general statement of their personal beliefs at the time." The history of its adoption is as follows: First, there were two successive committees officially chosen "to consider the propriety of submitting to the Council a *declaration of the common faith* of our churches." The reports made by these committees were fully discussed at a regular meeting of the Council on the seventh day of its sessions, after which, to give the matter especial solemnity, the Council adjourned till the next day and to the old Plymouth burial-ground. In this hallowed spot, with all possible seriousness and formality, the report quoted above was adopted; and then the next day, at another regular session in Boston, and at an hour previously set apart for its consideration, it was again brought up, carefully amended as to its phraseology, and, to quote the exact words of the official report, was "solemnly reaffirmed and finally adopted by a rising vote, in connection with prayer and the singing of 'My faith looks up to Thee' and the Doxology"—only one person, the Rev. George Allen, protesting against it. If a declaration thus solemnly and repeatedly adopted by "the representatives of nearly 3,000 Congregational churches" was "an informal and general statement of personal beliefs," and only a "Boston declaration," it would be interesting to know what is the Rev. Mr. Parker's idea of a formal and particular statement and of a national declaration.

(4.) With regard to the existence of "Congregational churches," not "church" (the word "church" is Dr. Withrow's, quoted by your correspondent himself, not mine), and with regard to the use of "the present, not future tense" in the declaration, both are used, the Council praying that "we may be enabled to transmit them—these doctrines—in purity to our children," and promising that "with them we *will* carry the Gospel into every part of our land, and with them we *will* go into all the world," evidently meaning that they were declaring the settled, permanent beliefs of Congregationalism. It is indeed true that "at St. Louis, in 1880, a committee of twenty-five was appointed to frame a new confession of faith"; but as two different ones were framed, both of which have been severely criticised, and neither of which has ever been acted upon by any Congregational Council, the one adopted in 1865 remains as the latest official statement of Congregational beliefs.

(5.) Mr. Parker's request to name some one "living Congregational seminary, professor, paper, or minister" who holds the special doctrine of the old confession "that all the heathen perish," is entirely futile, for what weight would such a single instance have, either on the one side or the other, as compared with the formally declared adherence to it of the representatives of nearly 3,000 Congregational churches, most of them still living? Moreover, if no one holds now to such a belief—as Mr. Parker intimates—then, in the name of common sense, what is all this pother in the religious world about, all this struggle in the "American Board" and at Des Moines against sending out missionaries to the heathen who believe there will be a chance for them not to "perish" in the world to come? With a real difference of belief between the combatants on this point, the fight, to outsiders, seems foolish enough; but with only a Pickwickian difference between them, with only a "never" and a "hardly ever," the eloquence, learning, logic, and piety brought to bear on the subject are, surely, an exhibition of opéra bouffe which surpasses anything ever put on the dramatic or even on the political stage. K.

THE PERSISTENCE OF PROVINCIALISMS.

To the Editor of The Nation:

Sir: In reading a good many recent newspaper letters from different persons in one of our Southern cities, descriptive of late events there, I was struck with the continual occurrence of the Southern use of *will* for *shall* and *would* for *should;* especially in conditional sentences such as, "If so and so happens, we *will* find that he," etc.; or, "If so and so should happen, we *would* find that he," etc.

Let me hasten to explain that I am not one of those schoolmasterly people who are made wretched by other people's expressing their ideas in their own way. On the contrary, I am quite in sympathy with a person, nearly related to me, who began his college teaching with shocking and saddening a whole faculty, by printing the opinion that "it is me" is very pretty English in certain connections. I have never been able to feel that we shall either be saved or not saved by the orthodoxy of our philology or our grammar. The most important thing seems to me to be that our knowledge of philology should not involve our ignorance of literature, and that our neighbor's grammar should not hinder our getting his ideas. In the letters referred to, there was certainly much that was admirable for vividness and truth of description.

But the persistence in certain localities of distinct peculiarities or "errors" of speech is noteworthy, and becomes quite interesting when we reflect that these merely superficial and unimportant idiosyncrasies are doubtless accompanied by a multitude of deeper-seated characteristics, equally persistent, and persisting from the same cause. Opinions and points of view are geographical as well as dialects. When you hear the peculiar use of *will* and *would*, to which I have referred, you can predict with some certainty how the speaker will be found to feel on the question of public school vs. private school, or as to the co-education of the sexes. As when you hear the prominent final *r* of a particular section of the Middle West (not a trill, but a heavy sound made with the flat of the tongue, as in *watuR*) you are enabled to give a shrewd guess as to the speaker's view of loyalty to the grand old —— party, and of the candidacy of that blatherskite —— (himself an example, by the way, of a very persistent provincialism).

The cause, as we all know, of these local peculiarities of speech, as well as of opinion and prejudice, lies in the being more or less shut up to local influences exclusively. Whether or not it could be shown that human influences decrease in power exactly as the square, or the cube, of the distance at which they act, it is certain that there is some such remarkable inverse relation. Just as truly as the illusion of the vanishing perspective constantly imposes on the intelligence, so the diminished potency of human influences constantly cheats and stunts the character. We are all the time moulded, in spite of us, by forces close at hand. We reach out after books from England, and Russia, and Assyria, but in the meantime it is the local newspaper that does for us. While we are trying our best to push out and widen our circle, the circle itself seems elastic, and forcibly narrows in upon us. It begins in childhood. First the family industriously works to hedge in the child; then the little village clamps itself around him. The managers of the schools select the worst of the competing text-books, on the ground that it was prepared nearest home. They even pass a rule that no teacher shall be brought in from abroad so long as there is a home-made candidate. Thus in every way our views, instead of being renewed and enlightened from outside sources, are continually bred "in and in." The State of California has even gone so far in this belittling and mind-pinching policy as to have prohibited the use of school-books from other sources, such as those written by some of the foremost scientists, historians, and scholars, directing the Board of Education to "cause to be prepared," made, and sold text-books for their own use. Presently we shall have some distant State forbidding the importation of Shakspere, and undertaking by legislative enactment to produce him on the spot from local talent.

It is certainly a curious phenomenon that a peculiar use of an auxiliary verb should have such adhesive power as to remain for generations in the South, resisting the all but universal usage as found in other modern English written speech. Does it not go far to prove that the distant, even when brought *from* the distance in the shape of books, has little effect upon us as compared with the near? E. R. S.

November 12, 1886.

APROPOS OF HORSESHOE CRABS.

To the Editor of The Nation:

Sir: Mr. H. W. Turner refers in your last to the *Limulus* alleged to have been found off San Francisco Bay last summer, but which was not, so far as I have been able to find out, submitted to any naturalist for determination, and is the first recorded instance of the occurrence of *Limulus* on the west coast of America. There is a *Limulus* in Japan. The waters of Alaska belong in many respects to a different faunal area from that represented about the Farallones near San Francisco.

It is of the highest importance to know whether the Japanese *Limulus*, like many other animals, reappears on our western coast; or whether the San Francisco specimen was transplanted in its young state with Eastern oysters—like our common soft-shelled clam, now the chief mollusk of the San Francisco markets, but formerly unknown there. It would also be of great interest to know if one or the other, and which, reaches the shores of Alaska.—Yours respectfully,

Reviewer.

Notes.

J. B. Lippincott Co. have in press the 'Recitations' of Mrs. James Brown Potter; 'A Signal Success,' by Mrs. M. J. Coston, whose work is not a novel, but a bit of autobiography in connection with her invention of the Coston signal light; and 'Modern Idols,' biographical and critical studies, mostly of contemporary writers, by Wm. Henry Thorne.

The managers of *Lippincott's Magazine* announce a narrative poem by Miss Rose Elizabeth Cleveland, to appear in the January issue of that magazine. It is called "The Dilemma of the Nineteenth Century."

'Years of Experience' is the title of an autobiographical work by Mrs. Georgiana Bruce Kirby, one of the later members of the Brook Farm Association in 1844-46. The reminiscences of her acquaintance there and subsequently in some of the philanthropic movements of the time promise to be of no little interest. The volume will be published by G. P. Putnam's Sons.

Cassell & Co. have in press a holiday edition of

the 'Representative Poems of Living Poets,' and the two concluding volumes of Matthews and Hutton's "Actors and Actresses of Great Britain and the United States."

Wilbur B. Ketcham has nearly ready 'What Shall We Do with the Sunday-School as an Institution?' by the Rev. Geo. Lansing Taylor.

The last two volumes of Symonds's "Renaissance in Italy," on the 'Catholic Reaction,' will, in the American edition, bear the imprint of Henry Holt & Co.

D. C. Heath & Co., Boston, have in preparation Compayré's 'Lectures on Pedagogy, Theoretical and Practical,' translated and annotated by Prof. Payne of the University of Michigan, and accompanied by a special introduction from the author.

'Under Blue Skies,' an illustrated juvenile work, by Mrs. S. J. Brigham—verse and picture-maker in one—will be shortly produced by Worthington Co.

'Karma,' a novel by A. P. Sinnett; and 'Napoleon and Marie Louise (1810-1814),' a memoir by Mme. la Générale Durand, first lady to that Empress, are announced by Rand, McNally & Co., Chicago.

Ticknor & Co. publish immediately 'New Songs and Ballads,' by Nora Perry; a new edition of the same writer's 'After the Ball'; 'Mary Magdalene, and Other Poems,' by Mrs. Richard Greenough; 'Count Xavier,' by Henry Gréville; and 'Agnes Surriage,' an historical novel by Edwin Lassetter Bynner.

A new Egyptian romance, 'Die Nilbraut,' by Prof. Georg Ebers, is forthcoming in time for the holidays (Stuttgart: Deutsche Verlags-Anstalt).

From B. Westermann & Co. we have the prospectus of Dr. Freidrich Delitzsch's 'Assyrisches Wörterbuch,' to which we have already adverted, and which it seems will be between two and three years in course of publication; and from F. W. Christern that of 'Dessins d'Ornements de Hans Holbein,' photographed in facsimile from the original drawings in the best European collections, and annotated by M. Édouard His, Director of the Museum at Bâle. Only 325 copies will be printed.

A periodical or rather serial *Geographische Abhandlungen* is projected in Vienna by Dr. Albrecht Penck, editor, and Eduard Hölzel, publisher. It will consist of monographs which cannot well find hospitality in the existing scientific geographical organs. Three numbers in 1886 will relate to the Glaciation of the Salzach District (by Dr. Edward Brückner); the Orometry of the Black Forest (by Dr. Ludwig Neumann); and the Division of the Eastern Alps (by Dr. August Böhm).

'Australian Pictures, drawn with pen and pencil,' by Howard Willoughby of the Melbourne *Argus* (T. Nelson & Sons), belongs to a well-known series, and is no discredit to its predecessors. The pictures, chiefly from photographs, are attractive and well chosen, and the text fairly good. Mr. Willoughby is a thorough believer in his country, and aims at giving a summarized account of Australia's area, climate, people, and, most of all, possibilities. If many of his statements seem to Americans highly colored, they are usually true. One remark, however, is certainly misleading: "The chances of the new arrival are greater to-day, and are likely to be greater for years to come, than they were even in the feverish rush of the gold times." Clerical labor in the cities is little better paid than here or in London, and the penniless miner who hopes to find nuggets on the surface, as formerly, will need £100,000 to bore for gold, while the farmer who thinks he can in time rival the early squatter, will have as competitors stock companies with millions sterling at their back.

In a very pretty pamphlet we have 'English Actors: Their Characteristics and Their Methods,' a discourse by Henry Irving, delivered in the University Schools at Oxford on Saturday, June 26, 1886 (Oxford: Clarendon Press; New York: Macmillan). Mr. Irving takes up four of the greatest of his predecessors in the leadership of the English stage—Burbage, Betterton, Garrick, and Edmund Kean—but reveals no such sympathetic appreciation of their sufferings and their genius as gave a singular charm to Mr. Edwin Booth's recent essays on his father and on Edmund Kean. Indeed, the reader is inclined to doubt whether Mr. Irving has studied the careers and the characters of his forerunners, as we have them in criticism and memoir, with the loving assiduity of Mr. Booth. When we see Mr. Irving remarking casually that *Othello* was not one of Garrick's great parts, we fear that he does not know that it was the only one of Garrick's great failures, and that he performed the part only once. But, despite the feeling of uncertainty as to Mr. Irving's firm hold on the facts which must be the basis of his thesis, the lecture is interesting, like all that Mr. Irving does. Perhaps the most entertaining passage in it is the opinion of one of Mr. Irving's friends, "who prides himself on being practical," that Shakspere selected the part of the *Ghost* in "Hamlet" for his own acting "because it enabled him to go in front of the house between the acts and count the money."

A book of devotional thoughts for daily use, of a much higher order than common, has been arranged by Miss Lucy Larcom under the title 'Beckonings for Every Day, A Calendar of Thought' (Boston: Houghton, Mifflin & Co.). Each month has a brief introduction and each season a prefatory poem by the compiler; and by means of sub-titles for the months, such as "Toward the Heights" for August, "Among the Sheaves" for October, a certain coherency is given to each block of quotations. The authors cited are largely contemporary, and often obscure; but the great names of meditation in Christian literature occur with frequency, and the extracts in general have both dignity and freshness. The volume has not been hastily prepared, and is admirably adapted to its purpose.

Prof. Henry A. Beers's 'Outline Sketch of English Literature' (New York: The Chautauqua Press) is a handy manual of facts, which has been prepared under the auspices of the Chautauqua Council. In nearly 300 small pages a view of the works of English literature since the Conquest is given with great rapidity and due proportion. The size of the volume precludes anything more than a bare detail of the most necessary facts. The writer's predilections are discernible, but there is, properly speaking, no criticism, and, of course, no philosophical discussion of "developments." The work is not superior to others already accessible, but it takes good rank with them, excepting Mr. Stopford Brooke's incomparable primer.

Macmillan & Co. have brought out a new edition of Lanfrey's 'History of Napoleon' in four volumes of about 450 pages each, neatly bound. The typography is clear, though condensed. It is unnecessary to characterize a work which, whatever its shortcomings, dissipated the glamour of the Napoleonic legend. As it stops short where the author's death left it, on the eve of the invasion of Russia, it is excellent preparation for that greatest of historical novels, Tolstoi's 'War and Peace.'

The same publishers have issued a second edition of the late Prof. W. K. Clifford's 'Lectures and Essays,' edited by Leslie Stephen and Frederick Pollock, originally printed in 1879, the year of the lamented author's death. Two of the mathematical papers have been omitted, and there have been some slight modifications of the biographical sketch and of the extracts. The charming portrait is retained.

Mr. Howard Pyle, his pen keeping pace with his pencil, makes a bold mark in the volume of *Harper's Young People* concluded last month, and now lying bound before us. The graceful drawings of Jessie McDermott and Jessie Shepard also deserve to be mentioned. Mr. Frank French's exquisite engravings of children's heads are numerous and include a charming little Japanese. But above all one notices the freer use of mechanical engraving—"process" work, as we must vaguely call it. The degree of perfection attained on the average is considerably short of the highest, but we hope the publishers will persevere. Fiction in large quantity, some science, games, sports, and facetiæ compose the contents of this periodical, as usual.

St. Nicholas, in its two volumes for 1886, seems in its fore and main division to address itself to an older class of children than those kept in mind by *Harper's Young People*, and much of the writing differs very little from that intended for adults. Mrs. Burnett furnishes the leading story, "Little Lord Fauntleroy"; Mr. Frank Stockton figures as a cicerone for Italy and Paris; Mr. C. F. Holder discourses on natural history in a taking way; Mr. Horace Scudder relates the life of Washington; and there are papers describing the machinery of government at the national capitol and at Westminster. The most notable illustrations are Closson's engraving of Stuart's Martha Washington, and Johnson's of Mme. Le Brun's well-known portrait of herself.

The war papers tinge most deeply volume 32 of the *Century* (May to October), and are the occasion of some of the most interesting and valuable pictorial and portrait engravings. As heretofore, the physiognomies of the officers in the two armies tell, more forcibly than words, of opposite temperament, training, and institutions. Mr. Howells's "Minister's Charge" and Mr. Stockton's "Casting Away of Mrs. Lecks and Mrs. Aleshine" are the chief fiction of the six months. Apart from the illustrations already mentioned, Mr. Gaston Fay's engravings of fancy pigeons; Mr. Kruell's of Björnson; and those of Hawthorne and of Liszt, deserve remark. The portraits of Messrs. Hay and Nicolay come at the end of the volume, like a *Leit-motiv* announcing the approach of the great feature of the current volume, the Life of Lincoln.

Two of the most important volumes of the Census Series have just appeared—the eighteenth being 'Social Statistics of Cities,' and the twentieth being 'Statistics of Wages, Necessaries of Life, Trades Societies, Strikes, and Lockouts.' We hope to return to them hereafter.

Count Leo Tolstoi, in an article published in *Russian Wealth*, on the "Labor of Men and of Women," denies to women an equal right with men to education and labor, but admits of an exception in favor of widows, unmarried women, and childless married women. "These," he says, "will do well to share in the multifarious pursuits of man." He does not explain the method by which a woman may definitely determine to which of the four categories possible to her sex she will temporarily or permanently belong, in season to make or neglect her preparations for competing with men. His creed on other points is strict so far as women are concerned, and lax when men are in question. "A man," he says, "who has hundreds of obligations and betrays one, or even ten of them, does not thereby become a bad or a vicious individual, since he fulfils the majority of his duties. But a woman, who has only a small number of obligations, and betrays even one of them, immediately sinks lower than the man who has betrayed ten out of a hundred of his"—a singular calculation of duties by quantity instead of by quality.

In the Geodetic Conference which began its meetings in Berlin about three weeks ago, the principal nations of continental Europe were represented, while no delegate made his appearance from either England or the United States. Dr. Foerster, the director of the Observatory at Berlin, was chosen President of the Conference, and Dr. Otto Struve of Pulkova the Vice-President. Among the delegates from Germany were Helmholtz, Siemens, and Col. Golz of the Trigonometrical Survey. The delegates of France were MM. Faye and Tisserand. The opening address was delivered by Herr von Gossler, the Prussian Minister of Public Worship, who reviewed the progress and aims of geodetic science. The late Gen. von Bäyer was the first to convene an international meeting of geodesists, which was held in Berlin as early as 1864, at which time a central bureau of geodesy was established, and the chief work of the present conference has been to settle the organization of this bureau, which is to have its permanent seat in Berlin, in connection with the Geodetic Institute of Prussia. The Conference passed a resolution requesting the Prussian Government to invite other states than those represented to join the International Geodetic Society. Accepting the invitation of M. Bischoffsheim, the founder of the great observatory at that place, the next meeting of the Conference will be held in 1887, at Nice.

Early in October last the corner-stone of a new Astronomical Observatory was laid at Carleton College, Northfield, Minn. The structure is to be 80 feet by 100, and will be built of brick and stone, portions of it being two stories in height and surmounted by two domes of steel. The equipment of instruments is not yet announced, but it may be presumed to be an excellent one, since we are led to infer from a note in the *Sidereal Messenger*, conducted by Prof. Payne, the Director of this Observatory, that instruments will be provided better than those at Harvard College. If, in addition to these, his expectation of an ample observing corps, with abundant funds to maintain it, is realized, we may soon have to recognize our centre of astronomical research in the new Northwest.

A timely map comes to us from Dietrich Reimer, Berlin, the third and wholly revised edition of Dr. H. Kiepert's General Map of the European and Asiatic Provinces of the Ottoman Empire (Arabia excepted). It is on four sheets, on a scale of 1-3,000,000, and its authority is of the highest order. The first sheet shows admirably the future theatre of war if the Bulgarian spectre is not laid.

We have already taken occasion to speak favorably of Mr. Jehu Baker, who is to succeed Mr. Morrison in the next House of Representatives. We recalled his public service as Minister to one of the South American republics. A correspondent reminds us that Mr. Baker has earned, also, a literary distinction by his "new edition of Montesquieu's 'Grandeur and Decadence of the Romans,' embracing not only an excellent translation, but admirable notes, and an excursus relating to each chapter, and adding to the matter the main results of the best modern scholarship." Our readers will find a review of this work (published by the Appletons) in the *Nation* for June 29, 1882.

—The new monthly *Art Review* (New York: Geo. F. Kelly) has a square page, 9½x12 inches, and is printed on rough-surface paper of pleasant tone. The four full-page illustrations are, one an etching by Mr. F. S. Church, and three photogravures representing David before the combat, a statue by Geo. T. Brewster, and a good one, a head and bust "Vivian" (*sic*), by J. Carroll Beckwith, and a home scene entitled "Won't Play," by Francis C. Jones. There are five signed articles. Mr. Charles de Kay's is a sketch of Whistler the painter and etcher, rather personal than from the artistic point of view. Mr. George Francis Lathrop's, entitled "Novelty in American Art," is a plea for a reasonable naturalism in painting, and for its application to the decoration of public buildings—a well-put and well-urged appeal. "Our Public Monuments," by Mr. S. R. Koehler, is the kind of article one expects under that title, considering the quality of the monuments. Mr. Ripley Hitchcock, in "An Indigent Art Centre," exposes New York's poverty in art schools, and Mrs. Van Rensselaer, under the title "Wanted, a History of Architecture," makes the good point that some American ought to write it because having no national jealousies to hamper him in the matter of mediæval and later styles; and the very doubtful point that Mr. Freeman, the historian, could do it well. There follow, under the head of "Art Notes," nine pages of information about what is going on, what has been done, and what is promised. In this there is absolutely no perspective at all, we notice; but everybody's work and every artistic event, manifestation, and tendency is of equal importance and merit. It is to be hoped that these notes will grow more critical. Even reporter information about current events is better, if it be a little discriminating.

—The *Atlantic* for December is at its best in the appendix, which contains the leading literary exercises of the Harvard Commemoration; but there are some passages in the body of the number which unintentionally lead up to Mr. Lowell's address, and are notable in connection with it. Some of these are in the posthumous paper by Dr. Mulford upon "The Object of a University." He does not so much plead as roundly affirm the right of liberal studies to the formation of youth; he decides against specialties, practicality, and the apparatus of scholarship; but at the end of it all, one feels that his notion of a university is one that is evolved out of the brain of a learned man, and requires the unconditioned for its habitat. His agreement with and dissidence from Mr. Lowell are aptly expressed when he insists, as a primary aim, on discipline in "those studies which have an ideal end," and at once adds, "There is an ideal end in every science." It is not the humanist, but the all-comprehensive sociological and transcendental *philosophe* of the nineteenth century, that is speaking. It is noticeable, too, that he illustrates great defects in our higher education by citing the neglect of the master of Greek learning: "Every scholar knows that the study of Aristotle has not passed far beyond the work of the grammarian in any American university." One remembers this as he reads Mr. Lowell's periods; just as he could not help reflecting, if he was so fortunate as to hear their cadences, in how few of that cultivated audience, reared under the old régime, was classical learning still vital—nay, in how large a measure the orator's own culture, which was, as there expressed, his best argument, was not collegiate, but rather the fruit of such long service to the humanities as he recalled in his favorite example of Montaigne. But there is a comment which the upholders of the old order may think more pregnant in the close of Mr. Hungerford's article upon Saracenic learning: "In view of present discussions over great educational problems, it is incumbent on us to note that while the Arabian coveted Greek science, he could not be induced to acquire the language in which the science was preserved. . . . But early in its history Christian learning detected the error which had been committed by the Saracens. . . . The science which finally prevailed in Europe was that for which he [Roger Bacon] uttered his plea. It was founded in Greek culture. Such to-day is the science of the civilized world. What that of the Saracens might have become under a more thorough baptism in the Greek spirit, it is impossible to say. We only know what it failed to accomplish." The Saracens afford the curious example of a body of learning depending on its sources through translations; but isn't it a trifle humorous to interpret the intellectual fate of that race as an awful warning against a possible modern cultus in Bohn? The chances are, rather, as the classical school fears, that when Horace and Sophocles and Plato are gone, Bohn will not linger long behind.

—Prof. Thurston gives in the *Forum* a fuller discussion of the effect of oil on stormy waters than the question has yet received in *Science*, where it has been several times adverted to. He wisely prefaces the evidence offered by the Hydrographic Office with a reminder of the great importance of surface tenacity as a factor in matters of hydrodynamics. That a bag of oil with a few pinholes pricked in it, hung over a ship's side, should make the difference between safety and danger is so incredible that evidence in its favor cannot have its proper effect on a mind that has not been previously prepared to receive it. A drop of oil placed on the surface of water at first spreads rapidly in all directions, forming a film of very great tenuity; afterwards it breaks up into a lacework pattern so exactly characteristic of the kind of oil that it can be used in detecting adulterations. A continuous supply of oil gives a continually spreading sheet, covering the water as far as the quantity introduced will allow. It is as if a sheet or carpet of a thin, flexible, elastic, and yet tenacious substance, like rubber, had been spread over the waves. Its effect upon the surface is, in some manner not as yet well understood, to give it greater resistance to the wave-making power, and especially to prevent liability to the production of breakers, which are the chief source of danger in a storm. Water itself has a surface tenacity which escapes notice until one floats a cambric needle upon it, or until one blows into an expanding soap-bubble; according to Henry, it amounts to several hundred pounds to the square inch. But a layer of oil spread over water gives it a new surface, and increases very much its superficial tenacity. In this way, but perhaps also on account of diminished friction between wind and water, a rough sea is made comparatively smooth; and by regulating its course so as to keep well within the oiled surface, a ship can ride high and dry while the surrounding waters are lashed into fury. The evidence in support of this extraordinary state of things is not given with sufficient detail to make it convincing, but it is rather large in amount, and its lack of fulness is not sufficient to disprove it. Prof. Thurston himself takes a rose-colored view of the efficacy of this kind of libation to Neptune, and says we may well hope that before long the sea will lose many of its terrors. If this hope should prove to be well founded, the disinclination which the natural man feels to believing in seeming miracles, ought to be perceptibly weakened. In particular it would do much to undermine one of the chief arguments against thought transference, namely, that it is impossible that it should be true, for it is impossible that if it were true it should not have been discovered before.

—The paper of most general interest in the new volume of Proceedings of the Massachusetts Historical Society is the memoir of Emerson by Dr. James Freeman Clarke. It is an estimate of him as a writer and thinker rather than an account of his life, and is written, as might be expected, in a thoroughly appreciative spirit, although all will not agree with Dr. Clarke in the

"historical position" which he gives to Emerson. In his opinion, he was "to our day the prophet of God in the soul, in nature, in life. He has stood for spirit against matter"—a man who cared nothing for consistency, but "if to-day he said what seemed like Pantheism, and to-morrow he saw some truth which seemed to reveal a divine personality, a supreme will, he uttered the last, as he had declared the first, always faithful to the light within"—a teacher, whose two great lessons were self-reliance and God-reliance. Dr. George E. Ellis contributes a memoir of Nathaniel Thayer, and Dr. A. P. Peabody one of Mr. J. L. Sibley, both great benefactors of Harvard, the former by gifts of money, the latter by a life-long service in building up its library and perpetuating the memory of its early graduates, not only by his own labors, but by leaving to this Society his property to continue the work, which not failing eye-sight nor advanced age, but death alone compelled him to relinquish. The longest historical paper is "Sketches of St. Domingo from January, 1785, to December, 1794," written fifty years ago by Mr. Samuel G. Perkins. It gives a graphic account, full of anecdote, of the slave insurrection, which the author, then a resident merchant on the island, witnessed, together with an interesting story of his voyage home to Boston, in the course of which the ship was captured by pirates. This paper has a melancholy interest from the fact that the editing of it was the last literary work of the late Mr. C. C. Perkins. The other noteworthy historical matter consists of journals kept by two soldiers in Arnold's expedition to Quebec, an officer in Sullivan's campaign against the New York Indians in 1779, and the diary of a journey in the South in the year 1804, kept by the Hon. Jonathan Mason of Boston. He travelled in his "own carriage, with four horses and two outriders." At New York he put up "at Mrs. Avery's, opposite the Battery," and was "delighted with the display of vessels bound to sea as they have passed in succession. Six ships have been near the Battery at one and the same time, not one hundred yards from the window." The discomforts of travellers south of Richmond are very vividly pictured. Though the winter was extraordinarily cold, "we never laid down to rest in any room where we could not see the sky through a thousand cracks." There is also a collection of letters from Lord Cutts—one of William of Orange's generals, whom Macaulay styles "the bravest of all the brave"—to Joseph Dudley, then Lieutenant-Governor of the Isle of Wight, afterwards Governor of Massachusetts. They are entertaining, but not of especial historical value. The volume contains excellent portraits, among others, of Messrs. Sibley, Thayer, Emerson, and Governor Dudley.

—We have now from the English Dialect Society (London: Trübner & Co.) the third and concluding part of the 'Dictionary of English Plant-Names,' compiled by Messrs. James Britten and Robert Holland. This issue contains an Introduction, a bibliography, an appendix of additions and corrections, and a scientific botanical index. In this last what strikes one is the often extraordinary diversity of local English names for one and the same plant, in one case thirty being enumerated. The converse of this had already appeared in the Dictionary proper, where a single English name covers many plants of opposite characters and aspect, "but all, perhaps, agreeing in one respect," as, in the case of the Cuckoo-flower, that "they make their appearance about the time when we first hear the notes of the cuckoo in the spring." As to the derivation of the names, "Dr. Prior considers that only one name, Maple, can be distinctly referred to the language of the ancient Britons"; but our editors are disposed to add some half-a-dozen more to the list, including Wormwood. Of Anglo-Saxon, Scandinavian, Dutch, and French derivatives there is no lack; even the Arabic gives us Barberry, and the Persian, Lilac and Tulip. Animal names cut a large figure among the compounds: "The prefixes Bull, Horse, Ox, etc., frequently indicate size," but "Horse Chestnut may mean either a coarse or a spurious kind of chestnut." "Dog and Toad very often mean that which is worthless or spurious." The names of saints and of the Deity are abundantly employed, and mark the superstition of the nomenclators. Not alone, however, for at every turn one meets with vegetable charms and lunatic medicinal ascriptions, along with other primitive folk-lore property. There is a curious note on the various substitutes for the palm, for use on Palm Sunday, and another on the true shamrock.

—This ostensibly linguistic collection has here and there its contact with literature. Was Shakspere's "plantage," for example—true to the moon as steel is true—moonwort? Was Chaucer's "whipultre," mentioned in one line with "maple, thorne, berche, ewe, hasel," possibly the else unmentioned ash, seeing that "in several counties a *whipple-tree* is the cross-bar to which plough horses are yoked, and it is usually made of ash"? "Pervenke," another form of periwinkle, forms a handy bridge to the French *pervenche* and the romance of Rousseau's love for that flower—though our editors do not remark it. In an humbler literary connection they do suggest that the "pretty maids all in a row" of Mary the quite contrary's garden may be the flowers known by that name in Berks—"the double (garden) form of *Saxifraga granulata*, L." Let our nursery illustrators take heed of this. Also we observe that Miss Alcott's 'Little Men' is drawn upon for an explanation of "Stepmother," as applied to the garden pansy; and "boar-thistle" is cited from a letter of Cotton Mather's. Chivalry finds an ignoble memorial in "runcivals," "a variety of *Pisum sativum*, L.; probably the large marrow-fat kinds"—a huge pea, in other words; which name Tusser would derive "from Span. *Roncesvalles*, a town at the foot of the Pyrenees, where gigantic bones of old heroes were pretended to be shown; hence the name was applied to anything larger than usual." This may be neither better nor worse than the etymologizing over "parsnip": "The *nep*, which, from its size, requires to be chopped up or divided into small portions before it can be eaten, as school-boys are said to *parse* their lessons when they divide them grammatically." Or, again, of the *Pimpinella saxifraga*, L.: "Some call this herbe Saxifrage because it groweth amongst stones in many places, and cleveth them; and some call it Saxifrage for the propertye that it hath in breaking of the stone in a mannis bodye." We take leave of this entertaining vocabulary with a capital instance of the doctrine of "signatures"—an old meeting ground of medicine and superstition: Staggerwort "is held to be a certaine remedie to helpe the staggers in horses"; and "indeed it is not without a signature thereof: the unevennesse of the edges of the leaves being like unto those uneven motions which horses make in that disease."

—In his 'Whist Scores and Card-Table Talk' (Chicago: A. C. McClurg & Co.) Mr. Rudolf H. Rheinhardt has not only made a pretty book, but also done a new thing. He has prepared a whist score-book to contain the record of the play during 250 evenings, allowing ample space for all important data and for explanatory remarks. This is welcome and useful, but it is not the most interesting part of the book. These scores are introduced by a brief bibliography of cards and gaming, and by a more elaborate bibliography of whist. The latter is much the fullest list we have seen, and although the former might be amplified to advantage—especially by the inclusion of many more French works—it contains nearly all the chief books. Then on the back of the whist scores, which fill only the even pages, is an excellent collection of ana and anecdotes about playing-cards and card-playing, gathered from the best sources and carefully credited. This amusing miscellany is illustrated by numerous engravings, nearly all of which are original. Some few are taken from Chatto, Taylor, and Willshire, but the best and most curious have been copied from the originals in the National Museum at Washington. So far as we know, the king of clubs, knave of clubs, and knight of money (page 79) as found among the Apaches, and here copied from a buckskin pack in the National Museum, have never been reproduced before; and they are now adroitly contrasted with the coarse Mexican king of clubs (page 77) from a pack used at Puebla and obviously imitated by the Indians. It is to be noted that coarse as is the execution of the Mexican card, it has the latest modern improvement of a numeral at the upper left and lower right corners. One of the divisions of Mr. Rheinhardt's 'Card-Table Talk' is a glossary of the technical terms of whist with their etymologies. There is a good index.

THE TIMES OF EARLY ENGLISH DRAMA.—II.

The English Dramatists. Edited by A. H. Bullen, B.A. Boston: Houghton, Mifflin & Co. 1885 86.

THE "companies of actors" in those days were enrolled and licensed as "The King's Majesty's Servants," or "The Queen's Majesty's Servants," or "The Prince's," or "The Palsgrave's," or this or that great lord's. Thus we find, in the accounts of an old manager, as Dodsley gives them, entries of moneys furnished to "my g[ood] lord Strange's men," "the Earle of Sussex, his men," "my lord of pembrokes," "my lord admeralles," and "my lord chamberlens" men. At times these companies strolled, and sought licenses in their masters' names through the country. There was a Master of the King's Revels, or—with whatever title, for things changed—some one through whose hands, smoothed by golden guineas, every play must go to its licensing. He was to see to it that no harm should be, or should be left, in any play that got his license; for it was thought that, as of old, playwriters and plays readily fell to the harming of public morals and private character—"in vitium libertas excidit et vim"—so playwriters and players of any time were likely to be ready for the same work, if there were no strong check. The Master of the Revels held his office by letters patent, under the great seal; if office and royal grant of powers could keep the stage harmless, he had all that was needed for the purpose. He drew a large income out of the players when things went well for him.

These got such houses as they could—flimsy, cheap buildings, mostly—at first, perhaps all just outside the city. Next, when they could, they hired some private houses within the city limits; others they had, too, within old "sanctuary" bounds, once refuges from private blood-thirstiness and the sudden madness of mobs, and even from any too hasty and (as it might be) mistaken execution of the law by its officers. In these old sanctuaries a great many of the lawless, reckless, outlawed people herded, beyond the reach of every ordinary method of justice. Here, too, and near at hand, were houses of the worst character and name; and the playhouses, unhappily, did not redeem the reputation of the neighborhood, but rather shared it. The city magistrates were al-

ways seeking to stretch their authority over these disorderly places. The literary and the moral character of the plays, as used within or without the city, and so the time of beginning the acting, differed much. The difference of time was as great as between the middle of the day and the evening; and the low coarseness and baseness of the comedy and farce given at the houses of the cheaper sort were, in subject and language and action, even much worse than the foulness and coarseness of those of higher cost. For a penny or two one could go into pit or galleries, in leading playhouses, and into a box for sixpence or a shilling. A bloodless gown-and-town feud, often blazing, often, like most feuds, slumbering, existed between the citizens of London and the gayer of the courtiers; and this at times took in the players, as under the courtiers' shelter. The rabble was often on the side of the playhouses when some special indecency or immorality or mockery of the authorities had embittered the magistrates against them. The playwriters and players, on their side, took frequent revenge, and gave renewed offence by ridiculing, in their plays, the morals of the citizens in private life and in business, more often (we must think) grossly caricaturing them.

Against lewdness and wantonness and other wickedness on the stage, as in real life, were all good men and women, then as always; and against the acting of plays on Sundays, which great persons, royal and noble, were inclined to indulge themselves in, were all religious people. The Puritans, of whom for some generations there had been a good many, and a good many busy, were against plays of all sorts and all sorts of players. The character of most of the plays and the lives of many of the players furnished them ready and telling arguments, and their own boldness of speech went often far beyond the truth of facts. We can see how easily players, with the rest, bad men or good, could be brought within the range of sharp-sighted discipline, one way or other. An instance, excellently to the point, of the way in which authority took care of itself and asserted its claim a hundred years after the eighth King Henry had ceased to "wanton in the earth," we see in the diary of Sir Henry Herbert, Master of the Revels, under date of June 4, 1638, as quoted by Dodsley. Herbert gives an extract from a play for which a license was asked, thus:

"Monys? Wee'le rayse supplies what ways we please,
And force you to subscribe to blanks, in which
We'le mulct you as wee shall thinke fitt. The Cæsars
In Rome were wise, acknowledginge no lawes
But what their swords did ratifye, the wives
And daughters of the senators bowinge to
Their wills, as deities," etc.

Then he adds:

"This is a peece taken out of Phillip Messinger's play called *The King and the Subject*, and enterd here for ever to bee rememberd by my son and those that cast their eyes on it, in honour of Kinge Charles, my master, who, readinge over the play, at Newmarket, set his marke upon the place, with his owne hande, and in thes words:

"'*This is too insolent, and to bee changed.*'

"Note, that the poet makes it the speech of a king, Don Pedro, king of Spayne, and spoken to his subjects."

The hand there laid upon the offensive passage is that of the King, which had grasped tonnage and poundage and ship-money and a great deal more that did not belong to him without the gift of Parliament, and had turned the keys of the Tower and other prisons upon bishop and lay-patriot with impartial satisfaction and sureness. Fourteen years earlier, on the complaint of the Spanish Minister, King James had set the Lords of the Privy Council to hunting for and catching Thomas Middleton, Gent., and others of his Majesty's company of players, for the writing and acting of "A Game of Chess." For nine days, according to a private letter of the time, "all sorts of people, old and young, rich and poor, masters and servants, papists, wise men, etc., churchmen and Scotsmen," had been flocking to it; for all England was exulting in the falling through of the Spanish match (between the above Charles, when Prince of Wales, and an Infanta), and in that play some of the chief agents were shown up to the laughter and scorn of London and England. In the letter of the King's Secretary to the Lord President the play was represented as "a very scandalous comedy acted publickly by the King's players, wherein they take the boldness and presumption, in a rude and dishonorable fashion, to represent on the stage the persons of his majesty the King of Spain, the Conde de Gondomar, the Bishop of Spalato, &c. . . . His Majesty's pleasure is that your Lordships presently call before you as well the poet that made the comedy as the comedians that acted it, and upon examination . . . to commit . . . to prison, if you find cause, or otherwise take security for their forthcoming; and then certify his Majesty . . . what course you think fittest for the exemplary and severe punishment of the present offenders, and to restrain such insolent and licentious presumption for the future."

Gondomar, the "Black Knight" of the play, had been taken off to the life—looks, and ways, and clothes—and was bitterly aggrieved. The author and some of the chief actors went to prison, and this doubtless brought him comfort. We cannot but think, too, that a recollection of the fun which they had made of the ambassador and of the rest of them, together with "fifteene hundred pounde," good coin of the realm, which they had gained in nine days' run of the piece—equal to fifteen thousand pounds, perhaps, to-day—and the knowledge that all England was with them, lords of the Privy Council with the rest, softened the hard bondage of the prisoners.

This was one of the cases in which help came. It was the King's own Master of the Revels who (whether he had slyly yielded to a fellow-feeling with almost everybody else, or not, when he licensed) was plainly answerable, if anybody was, for the acting of the offending play; everybody, almost, in England, liked the play, and disliked or hated the Spaniards; Buckingham and Charles, soon after coming back, were against the Spanish match; King James was wont to yield; the King's Players were likely to be broken up as a body, and ruined severally.

Middleton did not cringe, though cringing, with bribing, was the only recognized way of getting out of the clutches of authority or privilege; but there must have been little need of cringing in this case. In "prisson hee laye, some Tyme, and then gott oute upon this petition . . . to King James,' says the letter before quoted:

"'A harmles game; coyned only for delight
was playd betwixt the black house and the white
the white house wan: yet still the black doth bragg
they had the power to putt mee in the bagge
use butt your royall hand. Twill sett mee fre
tis butt removing of a man thats mee.'"

Besides the more usual and regular methods of applying discipline and bringing players and others sharply up, the rabble, who most of the time were on their side, sometimes rose suddenly, after their way, a dozen or so, and next a hundred dozen, with about as much reason, or plan, or purpose in their heads as a gust of wind might be conscious of, or a cloud-burst, and, laying many strong and hasty hands upon a play-house, pulled it to pieces, and left none of the pieces on the ground. Even under the Tudors and the Stuarts, mobs generally used less thought and conscience than authority. It was well to be on the good side of both.

The time of performing at the play-houses, which began oftener near the middle of the day than otherwise, made it impossible for most men engaged in any daylight work of hand, or in any honest business, to be often present. Their audiences were mostly made of people of leisure, at the two ends of society, together with rich middling men of the city, and "gallants," and swashing fellows, and men from the country with full pockets or long rent-rolls and empty heads, and whoever, at any time, happened to have no other business than the "being about town," and men from the wars on land and sea. Different classes liked different houses.

Tragedy and melodrama must walk gingerly in those days, and take heed to themselves. Comedy might be expected, under these conditions, to make a great deal of its fun out of such of the safer subjects as the play-goers felt most interest in, or were brought into contact with—as merchants, dealers, watchmen, constables, officers of soldiers and sailors, gentlemen, knights, justices, money-lenders, bad women: the worst and easiest, most. There would be needed a strong conscience, and a pretty stout spirit, to venture truthful portraiture of king, queen, prince, or patron; we could not look into the plays of those times for anything that touched these, or came near them, except with utter adulation—unless he were a prince or other mighty being a great way off. English lords, if brought into plays, might be expected to stalk all through them in a careless immunity from the law and from conscience. Authority, of whatever sort, with all its officers (except the lower), we might expect to find treated with much mouthing reverence or great wariness.

Where there was something so broadly wrong, or silly, in the working of authority, or standing inside some fence of privilege, that all open eyes had seen it, or could see it if shown to them, and see the nonsense or the badness of it, then the makers of plays might slyly set a laugh going, or the players might do this on the stage, as they often did. One such thing was the royal "confidence game" played by several English sovereigns, male and female, including Elizabeth Tudor and the first Stuart, in the making of knights: the pitching upon men, in all directions, who had no earthly (or other) qualification for honor, unless money can qualify; and the raking in of pretty sums for the taking of the *accolade*, and pretty sums for the not taking. So the statutes for abstaining from flesh in Lent, "for encouragement of the fisheries," enforced by special officers, who lived out of the enforcement.

But particulars of any sort can be better shown in the particular writers.

HOLIDAY BOOKS.—II.

Well-Worn Roads of Spain, Holland, and Italy. Travelled by a Painter in search of the Picturesque. By F. Hopkinson Smith. Boston: Houghton, Mifflin & Co. 1886. 69 pp. small folio, and 16 full-page illustrations; also, 51 illustrations in the text. All made from the author's drawings by the Lewis Phototype Co.

The Vicar of Wakefield. By Oliver Goldsmith. With Prefatory Memoir by George Saintsbury and 114 colored illustrations. Routledge & Sons. 8vo, pp. xvi, 291. (The illustrations from drawings by V. A. Poirson.)

The Frenchwoman of the Century: Fashions—Manners—Usages. By Octave Uzanne. Illustrations in Water Colors by Albert Lynch. Engraved in Colors by Eugène Gaujean. Routledge & Sons. 8vo, pp. xxii, 273.

Days with Sir Roger de Coverley. Reprint from the *Spectator*. London: Macmillan. (The illustrations by Hugh Thomson.) Pp. x, 82.

Old Christmas. From the Sketch-book of Washington Irving.—*Bracebridge Hall.* By Wash-

ington Irving. One volume, illustrated by Randolph Caldecott. The engravings on wood by J. D. Cooper. Macmillan. Large 8vo, pp. xiii, 337.

Randolph Caldecott. A Personal Memoir of his Early Art Career. By Henry Blackburn. With 172 illustrations. Routledge. 1886. 8vo, pp. xvi, 216.

Les Misérables. By Victor Hugo. With illustrations by De Neuville, Bayard, Morin, and other eminent French artists. In 5 volumes. Vol. i, Fantine. Routledge. 1886. 8vo, pp. xvi, 365.

THE general introduction into modern art of photographic reproductive processes has not yet destroyed people's interest in wood-engraving or etching, nor does it seem likely to do so. What it has done is, to give to the community new and more complete ideas of what art really is, and to separate the notion of fine art in general from association with technical media. Now the technical feeling is a good one; it is partly thanks to it that the public still cares so much about etching and wood-engraving. Technical maxims are more quickly learned and more easily grasped; the notion of the peculiar excellences of an etched plate, for instance, are simpler than the notion of what is good art. One learns to distinguish this school or this etcher from that one, and cares for his knowledge; if he buys, or if he studies, he still keeps before him the idea of the etching as it ought to be, he compares all etchings with this ideal, and avoids the great error of misjudging one art because of its differences from another. That is as it should be, and we have to be grateful even to the dullest of wealthy collectors for the care which is taken for the collectors and in their name by dealers and catalogue-makers, to separate and discriminate, to keep up the multiplication of "states," and the enthusiasm about a very special and individual art.

On the other hand, here is the cheaper sun engraving which gives us, when rightly used, a facsimile of an artist's brush-work or pen-work. In this the technique of the original can only be seen by the well informed; even if the drawing itself is before him, the student who is not himself a workman can hardly understand how the work has been done. The handiwork is far less easily understood in examining a brush drawing than in studying a print from any copperplate. The general multiplication of mechanical and exact copies of such drawings is then a gain in this way, that a person who has learned from the study of etchings and engravings to go beyond technicalities and to care for art—that is, for the artist's conception no matter how embodied—has in these heliogravures and the like a nearly perfect means of obtaining it. Of course there is not color. Let us bar color: all that we are saying refers to black and white, or, better, to gray and white, to delineation, to light and shade. Take, then, one of the reproductions of Allongé's charcoals or Millet's chalk drawings, and you get very near indeed to the artist's mind; that is to say, to his *art*. Day by day these new processes improve; they begin to be very important indeed and to be recognized. As yet there is not quite the same rage for collecting and classifying sun-pictures that there is in the case of woodcuts and eaux-fortes, but that will also come when the former are made venerable by longer association. Already proof copies of some of these process pictures bring fancy prices as rarities. We shall wake up by and by to the fact that good copies of certain photo-engravings are no longer to be had, and *then* we shall know what they are worth.

But for complete success of the new form of art, one thing is needful: the original drawings must be made for their purpose. They must be monochromes, and their tint must be similar to that in which the copy is to be printed. We do not forget the capital photogravures from paintings made by Goupil in Paris, but the principle remains the same: the best results can only be had from drawings especially and very carefully adapted to their purpose of reproduction. The only fault we find with 'Well-Worn Roads' is that it seems probable that this was not done here, or not always done. Some, at least, of the drawings were in color, it would seem. Thus, in the plate called "A Venetian Pottery Shop," the load piled high on the arched bridge and against the old palace wall might be anything; it is not obviously made up of hard and rounded and lustrous units, nor in any way recognizable as being a mass of pottery. The text tells us about it what we should never have known. We suspect, then, that the drawing in this instance was a water-color, and that gleams of red and bluish gray helped to the understanding of the ceramic display; and we think that if the drawing had been made originally in india-ink or sepia, the artist would have found other means of explaining his facts.

But there is no other shortcoming to be urged, nor anything more said that is not praise. *De bonis nil nisi bonum;* nothing but good of such a good book. It is delightful to read and to contemplate text and pictures, and anything not quite to our mind is a mere question of more or less—of how high we put our standard, of what we exact. The large drawings are charming studies of effect, and yet are faithful portraits in those cases—not a few—where we are able to pronounce upon it. Anything more delightful than the two Venice views in pale gray, both on the Riva degli Schiavoni, one called "Along the Riva" and the other "A Wine Shop on the Grand Canal," we are not likely to meet this year nor the next. And especially delightful is the last of all, the bit of an unknown Bavarian town, of topographical exactness, but all the better for that to those who love architectural facts. And perhaps the plate before this, "Near Neighbors in a Bavarian Town," is the most valuable drawing of all. The small illustrations in the text seem to be from pen drawings, and are of great interest and merit; a certain tendency to meaningless touches and scrawling in the shadows being admitted. Particularly admirable, too, are the little head-pieces and tail-pieces, *fiaschi* and milk-jugs, a quaint lantern found in Holland at a police station, and the *tartana* or covered wagon of Cordoba. These smaller pictures illustrate a sprightly and picturesque narrative of odd adventures, quaint observations, and all the unexpectedness of tranquil days spent in strange lands. It is a book to get two copies of—one for your Christmas beneficiary, and one for your own comfort. The pretty cover, by the way, leaves one speculating as to that curious superstition of publishers about there being only one side to a book. On the parlor table, will this one lie front cover uppermost any oftener than the reverse way? Why should one side be more decorated than the other? Why, *a fortiori*, should one side have all the decoration?

'The Vicar of Wakefield' and 'The Frenchwoman of the Century' are of that curious species which has been discovered, or rediscovered, very lately, viz.: the book *à vignettes enluminées*, to risk a French appellative. The pictures in them have all the appearance of outline prints colored by hand. They who keep the run of the picture-books which each season offers them will know what we mean: the 'Gulliver' of a year or two ago, illustrated by Mr. Poirson, who has now given us the 'Vicar of Wakefield,' was of the style in question, and a good specimen of it. Delicate outline and indicated shade printed in black, and then bright colors printed upon this, with but slight gradation and very little suggestion of shadow superadded—this almost new process makes up a very pretty style of book illustration. But it needs delicate handling, and these pictures are not carefully printed; the registering is very poor and the general appearance too slap-dash for the style. As to the designs, the 'Gulliver' is more to be admired than the new-comer, for there were in the rendering of Laputans and Lilliputians very charming fancies of costume and small details, while the old English surroundings of Dr. Primrose and family are less successfully treated. There are some pretty out-of-door views, such as that at the head of chapter xiv; but with this should be compared that of chapter xviii, which is extremely feeble, and which has a fantastic setting or framing of really appalling ugliness. The book is a pleasant one to read, with paper of a soft and not shiny surface, and is not heavy in the hand for all it is a handsome octavo.

The pictures of Mr. Uzanne's book are of similar though not identical appearance; they are much larger, full-page plates, separately printed, and the color-printing is somewhat more elaborate—the black outline less prominent. They are very different from those of 'The Fan' and those of 'The Umbrella, Gloves, and Muff,' although those previous books of the same author are mentioned here as members of a series of which 'The Frenchwoman' is the latest. They just miss being very pretty and dainty, in their worldly way; and here again more careful handling seems to have been required. As for the book itself, text and pictures combine to make up a slight, chatty, very unreserved, and rather vulgar description of the changing oddities of fashion in women's dress and equipage for nearly a round century—from the ninth thermidor (July 27, 1794) to our own time. The chapters are entitled "Nymphs and Merveilleuses," "Our Goddesses of the Year VIII," "The Grand Coquettes of the First Empire," and so on. The effort to transfer such a text as this from one language to another, necessarily so great as to spoil its naturalness, is the greater here because the language of the original is that in which toilet affairs are most easily and most commonly treated of. But we need hardly insist upon "the miseries of enforced" translation. To call Death *le camus* is one thing; to call him "the flat-nosed" in an English book is another, and is just a little violent. Or when we read that "the Incredibles swore in their affected style, '*by their little word of honor striped*'" (italics not ours), we think that the original would be more easily understood by even a beginner in French.

The next book on our list is a very different one, different even from the 'Vicar of Wakefield' we have been considering, although another bit of eighteenth-century English. Those who love to dip into the *Spectator* now and then will be glad to be reminded of the numbers for the summer of 1711, in which appeared a long account of Sir Roger de Coverley's country seat, of his neighbors and his inmates, Will Wimble and the Squire of the Next Parish, the stop-hounds, and the final ride home in the coach, when the Captain wooed the ladies and was effectually put down by the Quaker. That is capital reading, and no doubt it is better to read it in the original, with all its turns and returns, meditations and interruptions. But in this little book, made up from the pages of the *English Illustrated Magazine*, the chief incidents are put together so as to make a connected story, complete in itself, and it is illustrated abundantly and admirably by Mr. Thomson, almost every page having a picture. Caldecott himself, of whom anon, could not have been more close to nature, more sympathetic, more faithful. Costume

and surroundings, expression of face and action of body, hounds in full cry and hounds at fault; Sir Roger riding between Mr. Spec and Will Wimble—all are so good that the general impression is one of perfect content; there is naught to quarrel with or even to question. When there is something to question, one hardly dares suggest it; but *is* it right for Sir Roger to take his friend down into Northamptonshire in a post-chaise? Would he not have had out his coach and six? Was he not a contemporary of Sir Charles Grandison's father, and would that gentleman have travelled post? Even forty years later, what did Sir Charles himself and Sir Hargrave Pollexfen think of the roads of England, and how did they travel? Six horses for the muddy roads and armed footmen for the highwaymen were needed then. And then, if Sir Roger were for once so economical as to take the humbler conveyance, as he is shown to do on page 1, would *all* his luggage have gone by carrier? The reader will see how good a piece of English antiquity we have here when such questions as these are all that arise concerning it.

Washington Irving's two sketches give us old England of a century later; and these were published with the Caldecott illustrations in 1875 and 1877 respectively, in neat little 12mo volumes. 'Bracebridge Hall' was condensed or shortened, but still remains twice as long as 'Old Christmas,' which is only one of the essays in the 'Sketch Book,' first published in 1820. Now the two studies are brought together in one octavo volume, being presumably more salable in that form, though it is hard to say why. Because there is more margin for the full-page cuts? But there are very few full-page cuts. We like the little volumes the better. But, that we be not suspected of deference to the reigning craze for first editions, let us add in haste that the present is a charming book. Caldecott, in these cuts, and in those made for 'North Italian Folk,' has worked more as a book illustrator than elsewhere; his pictures are finished up more completely, some of them elaborately, with definite backgrounds, and the text is followed closely. In fact, there have been few better book illustrators than he, as was soon felt after the 'Old Christmas' had become known. The comparison is interesting between the open-air, out-of-door pictures in these two books, and Mr. Thomson's in the Sir Roger. A more delicate sense of beauty seems to be Caldecott's greatest advantage over his rival, for, what seems strange, the fun of the situations is perhaps as strongly felt in one as in the other series. Caldecott's gift as an inventor and combiner of humorous situations is more shown outside of the line of these book illustrations, as in the 'Æsop's Fables.'

Mr. Blackburn's book tells the short story of Caldecott's short art life, from 1871, when a drawing of his first appeared in a London magazine, to about 1879. The few remaining years of his life are left to be treated of in another work. He had exhibited at least one picture and a few of his drawings had been engraved before 1871, but it was then that he was encouraged by permanent engagements, and it was in 1872 that he, being twenty-five years old and assured of his power, at least as a caricaturist and humorous designer, finally left the bank-clerk's stool in Manchester and came up to London. *London Society*, the magazine in which many of his sketches appeared in 1871 and thereafter, is so little the kind of magazine that one would be led to keep and bind up, that it is fortunate we have so many facsimiles here of the Caldecott sketches. His first drawing for *Punch* was also in 1872.

Two books, 'The Harz Mountains, or a Tour in the Toy Country,' and 'Breton Folk,' each by himself as draughtsman and Mr. Blackburn as writer, are hardly to be credited to Caldecott as among his book illustrations; his work in these is as independent as his fellow-workman's own, for he is not illustrating an existing text, but helping a colleague to work up a tour of observation. We are told too little for our wishes of the minor incidents and impressions of these two journeys. Of his 'Æsop's Fables' the peculiarity is that the illustrations to the Fables proper, however spirited, are the least important part of the book. The real thing is in the "Modern Instances," which are added, as comment on the text; as when, in further illustration of 'The Fox and the Crow,' a young gentleman is seen persuading the mamma to sing, and afterwards kissing the daughter while mamma's eyes are on her notes and her back to the lovers. Funnier than this is the "modern instance" of the Fox and the Stork. A hunting man at his breakfast is amazed by the appearance of a Christmas present, "with Mrs. Stork's kind regards," and inscribed as being Harvey's Meditations. *Per contra*, a tall and spectacled lady is receiving at the hands of her little maid a copy of *The Sporting Magazine*, "with Mr. Fox's respects, and many happy returns of the day." We have dwelt on the 'Æsop's Fables' because Mr. Blackburn says it was not very successful. He adds that Caldecott himself did not approve of the plan, whether it was his or another's, and a letter of his is quoted in which he regrets that he "did not approach the subject more seriously." It is a very curious question how he would have treated it "more seriously." The fables, by their very nature, are humoristic-satirical. Perhaps he had in mind a more profound tragedy concealed beneath the humor, when possible, as in illustration of the Horse and the Stag. Here a farmer is seen in a money-lender's office, borrowing money on a "Bill of Sale" which he is signing, with a paper inscribed "Rent-day Arrears" in his pocket.

But, to return to Mr. Blackburn's book, it must suffice to add that it tells much of the life of the artist for the few years it covers, and much of the daily details of his work. The numerous illustrations are all facsimiles of Caldecott's work, and although it seems a pity to take so many from books that anybody can get, and not more from almost inaccessible journals, yet all are worth having, and the whole book has only one serious fault, that there is not enough of it.

The new edition of 'Les Misérables' in English is to be in five handsome volumes, a really beautiful piece of printing by the De Vinne press. There are countless illustrations, some full-page and nearly all large; they are sufficiently explicative of the story, but not of especial merit, having little novelty or individuality. It is an odd instance of the changing value of reputations that M. De Neuville, whose name is printed first on the title-page, has but one cut in the volume—no better, by the way, than the others. It does not seem to be of his recent work, the vigorous and direct drawing of his battle studies since 1871. The translation is not free from awkward reminders that it *is* a translation from the French. But how would even a genius at the work manage with Victor Hugo's prose?

CHILDREN'S BOOKS.—II.

'The Children of the Cold' (Cassell & Co.) contains in collected form the very interesting and acceptable articles on the life of Eskimo children near Hudson Bay, which Frederick Schwatka has contributed to *St. Nicholas* during the past year or two. All boys and girls old enough to distinguish between different races of men will enjoy the vivid account of the games, toys, and manner of life of the little Eskimos, who seem, their climatic limitations considered, to have much the same tendencies as children in other lands. Here one may learn where and how they live, how their houses are built, what are their playthings, how they make sleds and coast on them, how the dogs are fed, what they have in place of candy, their work, hunting, and fishing, how their clothes are made, and much about their sports and exercises of skill and strength. The book contains nothing to which exception can be taken, and we can heartily recommend it.

The latest addition to Mr. T. W. Knox's series of books of travel for children is of special value at the present time, when the interest in all things Russian is so widely aroused. Youngsters who study with attention the account of 'The Boy Travellers in the Russian Empire' (Harper's) will know more about the subject than many of their elders. Nearly every book of any value in the English language dealing with the subject has been consulted, with the exception of D. Mackenzie Wallace's volumes, and the result is a vast mass of information on a great variety of subjects. This plan of giving as much solid information as possible necessarily imparts a rather dry, guide-book style to the greater part of the book, whereas the narrative of the author's own trip across Siberia is at once easy and likely to be remembered. A book of this sort, which attempts to give statistics, needs occasional revision to keep it up to the times. It is a pity, therefore, that it should start with any erroneous statements, such, for instance, as that the *Golos* is now the journalistic organ of the Ministry of the Interior (p.131), and that all foreign princesses who marry into the royal family of Russia are obliged to enter the Greek Church. The *Golos* has been dead these four years, and a ukase of the Emperor, issued several months ago, releases all princesses, with the exception of the Tzesarevitch's bride, from the necessity of abjuring their religion. The volume is profusely illustrated, which adds to its interest; but some of the pictures are so ancient that they will be apt to lead children astray in the matter of costume. The children will probably think that Russian ladies wear a national costume which includes the sugar-scoop bonnet of fifty years ago (p. 63), and that the dress of the children, on page 121, for example, is as truly national as the nurse-maid's kokoshnik and apron. There are other cases of antiquated pictures which will attract the attention of older readers. The Russian words and sentences quoted are not always strictly accurate, but as no one could extract much good or harm from them, this is a less important consideration than the pictures and the errors of statement. These last are trivial, on the whole, though worth mentioning, and the book should prove one of the most successful as it is one of the prettiest of the holiday volumes. Maps of the Russian Empire on both covers add to the value, and a colored frontispiece, representing a winter scene, enhances its beauty.

Mrs. Lydia Hoyt Farmer's 'Boys' Book of Famous Rulers' (T. Y. Crowell & Co.) contains the lives of fifteen distinguished rulers, from Agamemnon to Napoleon I. The list is selected with good judgment, and the stories are told in an interesting style, so that we have a near approach to a general history associated with the lives of great men—a very suitable way to teach history to the young. The author has, moreover, undertaken to accomplish this end more nearly by introductions, which fill up the gap between the lives; for example, the life of Charlemagne begins with Clovis. There are two or three drawbacks to what is in many respects an excellent work. The first is the entire absence of historical criticism. That the story of Agamemnon is told as if he were a wholly historical character, is perhaps pardonable, for it is professedly drawn from the poetic account. But the account of Cyrus is derived from Xenophon, with hardly a wor

to intimate that it is a fiction. A fondness for moralizing is another fault, which finds surprising expression in the judgment of Napoleon that, "from an earthly point of view, his was the greatest life of mortal man," and in the thoroughgoing eulogy pronounced upon him. We do not find any mention of the murder of the prisoners at Jaffa or of the Duc d'Enghien.

Miss Henrietta Christian Wright is favorably known by her volume of well-told stories in American history, and her 'Children's Stories of American Progress' (Scribners) is equally worthy of commendation. It consists of eighteen stories, or, as they are designated, chapters; but they have no special connection with one another except that of chronological sequence, so that each chapter forms a story by itself. Taken together, they present a series of pictures of great graphic interest, covering the period of the last hundred years—the last being "The South after the War." The illustrations are excellent.

The Roman boy whose adventures Prof. Church has narrated in 'Two Thousand Years Ago' (Dodd, Mead & Co.), is Lucius Marius, a nephew of the great Marius; and the scene of the story is laid in the years which followed the first civil war. Those were stirring times, and the story makes the most of its varied and exciting materials. Our hero is captured no less than three times—by Spartacus, the pirates, and Mithridates, and twice his life is barely saved. He also nearly perishes at sea, but he passes safely through all perils, marries a beautiful heiress, and obtains immense wealth from other sources also. Among the characters introduced are Verres, Deiotarus, and Pompey. One feels that there is something forced in crowding nearly all the historical events of the time into the career of this one boy—or young man, rather, for he is seventeen at the beginning, and the main action of the book occupies about ten years; in loading him, moreover, with all possible earthly blessings. But everything is worked out in a very probable manner, and the story serves as a background for a large amount of well-selected historical information. The illustrations are wretched—the hero at seventeen would certainly be taken to be twenty-five; and while they are derived from classical representations, they wholly miss the beauty and grace of classic art.

'The Land of Little People'—poems by Frederic E. Weatherly, with pictures by Jane M. Dealy (Scribner & Welford)—has faults which will be overlooked by the children it is meant for. The verses are of the right jingle or of the right rhythm to please the little people to whom they are to be read, and these critics will not mind the words that are dragged in to make up rhymes or eke out metres. The pictures of children are full of pleasant expression; the colored landscape backgrounds are agreeable to look at, and may please mothers as well as babies; the very imperfect drawing of limbs and bodies, dogs and baby-wagons, will disturb no one of all those for whom the book is made. There are some picture-books which one rescues from childish hands and puts away—to the extent, at least, of one copy—and there are some childish rhymes that are permanently valuable, and which one recalls in after years among the poems which he loves to remember. Now and then the *Nation* has the pleasure of calling attention to such a one. There are none such this year, so far as we have gone, and certainly 'The Land of Little People,' pretty as it is, has no such pretensions.

Neither does 'The Children of the Week,' by Mr. William Theodore Peters, pictorially aided by his brother, Mr. Clinton Peters, claim a place among the few masterpieces; yet, now that we have made our declaration to that effect, we can praise it heartily. The tale sets forth, in good prose, how a poor little crippled boy lived alone all day long, how he was nicknamed Alexander Selkirk, jr., by a pitying shop girl who, besides other little presents, one day left him a surprise penny on his window-sill; and how the red Indian on the copper cent turned around and looked at "Alexander," and proceeded to tell him stories. Pretty little stories they are, though they have not much to do with "the children of the week," that is, with "Monday's child," who was notoriously "fair in the face," and her sisters. It is a pity that the author did not know 'Karl Krinken's Christmas Stocking.' The idea of the book need not have been so very like that of Miss Wetherell's admirable story—one of the masterpieces, that one! But, again, no harm is done to the young readers or listeners by a resemblance which, if they detect it, will only gratify them and help them to pleasant thoughts of their own perspicacity. The illustrations, apparently in pen-and-ink, are spirited and interesting, though full of bad drawing. It is not easy to learn to draw in our land and in our day, and the half-dozen men who can draw cannot illustrate all our little books. Happy are we when they will illustrate one or two of them. No, these are not grave faults, these shortcomings. The real serious fault is in making the book so handsome and expensive with its thick paper and broad page. A "Rollo book" at sixty cents or so has more matter in it; and why should we have to pay so much for so little?

"Susan Coolidge" has neatly adapted from the French of M. Arnaud the text of his 'One Day in a Baby's Life' (Roberts Bros.), a pretty picture-book in colors, with very ingenious decorative borders. Mothers, of either nationality, may be glad to think there could not be many such days, what with grabbing for the goldfish in their globe (at the suggestion of the maid, who thus averts legitimate angling), gorging at the pastry-cook's, and dancing at a young folks' fancy ball in the evening. But the various scenes are cleverly drawn, and Jean and Jeanette are refined little people.

Ticknor & Co. give us still another edition of 'The Peterkin Papers.' In this one Miss Hale has omitted some of the doings of her amusing family of imbeciles, but has added a new and very good chapter, called "The Peterkins at the Farm." There are numerous illustrations, of which the few large ones are poor and the many small ones good.

It would seem as if Mr. George Parsons Lathrop were trying, in 'Behind Time' (Cassell & Co.), to emulate the scintillations of the author of 'Alice in Wonderland.' But as of all other things there are various grades, so also are there of nonsense, from pointless trash to really delectable fun; and, despite some amusing conceits and some fertility of invention, this book comes nearer deserving the former than the latter characterization. Moreover, there are various allusions which savor of trade and the humbugs of the day, and seem like "the trail of the serpent" where should be only flowers for children. It is high time that more idealism should enter into books written for them.

A sort of real-life fairy tale is Mrs. Burnett's 'Little Lord Fauntleroy' (Scribners). It tells of an American boy unexpectedly summoned to England as heir to an earldom. In ordinary hands this *motif* would have easily developed into commonplace. Not so with our author. Her story is full of spirit and originality, of bright surprise and captivating sweetness. It reminds one of some graceful allegretto or scherzo coming with gay relief and charm among slower and sadder strains—of life or art. The beautiful child-nature of the little hero is rendered with the utmost felicity. His small lordship is meant to be, and is, irresistibly winning. Perhaps the best thing in the book is the clear showing of his *innate* nobility—a strength and sweetness of character quite independent of circumstance or condition, which conquers even the hard-heartedness of the selfish old earl, his grandfather. This may not suit believers in total depravity, but to any other reader, old or young, we recommend the story as most fascinating; and though, as previously hinted, it is almost too charming for reality, there are not wanting touches of humor and pathos to make it lifelike. The young people who have feasted on it monthly in *St. Nicholas* will be delighted to see it in book form, embellished with gay covers and with the same good illustrations that appeared in the pages of the magazine.

The readers of Miss Alcott have at last got their long-wished-for treat in 'Jo's Boys' (Roberts Bros.), a finale to the various other chronicles of the March family. But they will hardly find it so much of a treat as they had hoped. It would appear to have been written with reluctance as well as slowness, and it shows its perfunctory character in lack of unity of interest. Otherwise, it has the usual merits and demerits of Miss Alcott's longer stories. Whatever her faults, it must be said that she earnestly tries to influence her readers for their good; but it is a pity that, like many other writers for the young, she fails to recognize how far from tonic are ordinary love stories. This volume contains a batch of them.

Commander Cameron has followed the example of Mr. Stanley, not only in crossing Africa, but also in writing a book for boys. His 'Cruise of the *Black Prince*' (Chicago: Belford, Clarke & Co.) is full of stirring incidents on land and sea. There are fights with highwaymen in England, with French and Spanish frigates, with Algerine pirates and negroes of the Gold Coast; and the ship, instead of being wrecked in the ordinary manner, is lifted high into the air by a capsizing iceberg, while romantic love adventures, of course, are not wanting. Yet with all this wealth of material there is a certain lack of life and "go" to the story, due, no doubt, to the matter-of-fact way in which it is told. The author is unquestionably right in the historical sense in making his hero, the captain of a privateer carrying slaves to the West Indies, utterly unconscious of the iniquity of the slave trade, but in the moral sense he is wrong. From the moment the *Black Prince* receives her living cargo every right-minded boy should cease to wish for the success of her voyage. If he does not, as we fear will be the case, the author has made a grave mistake.

Mr. Henty's 'With Wolfe in Canada' (Scribner & Welford) has a wider range than the title implies. After a description of life on the Devonshire coast, in which a wreck and a fight with smugglers are the principal incidents, the scene changes to America, where the hero, a lad of seventeen, is an aide of Washington in the Braddock expedition and a captain of scouts during the later operations on Lakes George and Champlain. In the last hundred pages only the story of the capture of Quebec by Wolfe is told, the young captain being the leader of the party first scaling the Heights of Abraham. The book is thoroughly interesting, and will give the reader a good idea of the military events preceding the conquest of Canada. For the greater part of his historical chapters the author acknowledges his indebtedness to Mr. Parkman's latest work.

The street-boy is taking in literature, through the stories of Mr. James Otis, a place very similar to that which the pictures of Mr. J. G. Brown are giving him in art. They both idealize him, no doubt, and dwell chiefly on the bright side of his hard life, but they do a good work in increasing the interest felt in a very important class of our fellow-citizens. His latest book, 'Silent Pete' (Harpers), is a pathetic story, in which the

gentle violinist is well contrasted with the manly, unselfish Jerry, who devotes himself to the welfare of his weaker friend. The scenes are laid partly in New Orleans and New York, and partly on board a brig which is wrecked off Cape Hatteras. Though the virtues of these boys may be somewhat exaggerated, yet the story is in the main true to life, and shows, what boys in other circumstances need to know, that true nobility of character does not depend upon station in life, nor great charity upon the possession of riches.

'Forest Outlaws' (Putnams), by the Rev. E. Gilliat, is a romance of the twelfth century, the principal historical characters being King Henry II. and St. Hugh, the Bishop of Lincoln. The character of this famous prelate, whose undoubted sanctity was tempered by a certain shrewd worldliness, is well delineated, as is also life at the great monastery of St. Albans and in the cities of London and Lincoln; but far less is told of Robin Hood and his band than we could have wished. The author has been at great pains to imitate the forms of speech of that period, and in some cases has put into the mouths of his characters their own words taken from their writings or contemporaneous records. In this way he has made a very faithful picture, but at the same time has lessened the interest of his excellent story by being often unintelligible. A glossary of unfamiliar terms and explanatory notes at least should have been added, for the ordinary boy can hardly be expected to read a story with a dictionary in his hand.

FROM THE CAPE OF GOOD HOPE TO LAKE NYASSA.

The Far Interior: a Narrative of Travel and Adventure from the Cape of Good Hope across the Zambesi to the Lake Regions of Central Africa. By Walter Montagu Kerr. With numerous illustrations. 2 vols. Boston: Houghton, Mifflin & Co. 1886. 8vo.

THE Basin of the Zambesi River is now one of the least-known parts of Africa; its pestilential climate, the tsetse fly, the scarcity of food, and the slave trade, combining to present almost unsurmountable obstacles to the explorer. It showed no ordinary determination, then, in a young man, without experience in African travel, to undertake alone to cross this dangerous region. Mr. Kerr left the Cape in February, 1884, and by the middle of May had reached the home of the King of the Matabeli, now the most powerful of the independent South-African native chiefs. His permission to pass through Matabeli-land was easily obtained, and the preparations for the perilous journey were soon made. Instead of a large and well-appointed expedition, such as all African travellers consider essential to success, he was accompanied by only five natives, one of whom could speak a little English.

His immediate aim was Tete, about five hundred miles to the northeast, on the Zambesi. The first half of the way was through the eastern borders of the "big game" region, a fertile country with great forests traversed by belts of prairie, but absolutely uninhabited. He travelled for nearly a month after leaving Inyati without meeting a single soul, although the land showed many signs of former cultivation. The Matabeli have driven out the old inhabitants, the Mashona, who find a precarious living in the mountains to the eastward. Their huts are built on the tops of isolated rocks, the only means of access being by a "notched pole, which they can pull quickly up in event of attack, or through innumerable intricate windings" in the rocks, while the gateways are barricaded before sunset with immense trunks of trees. Their tribal distinction consists in "filing out spaces between the two upper front teeth, the aperture having the shape of the letter A." A more curious instance of this custom was observed on Lake Nyassa, where Mr. Kerr saw a chief whose "upper teeth were neatly filed each in crescent form, with the horns downward." His reception by this persecuted and hunted race, inferior in every respect except morals to their warlike neighbors, was not unfriendly, but with them the real difficulties of his journey began. His wagon having to be abandoned as soon as he entered their country, he was obliged thenceforth to depend upon native carriers. These, however, were extremely unwilling to go far from their homes, and it was necessary to persuade them to take his goods to the next town, where new carriers could be engaged. In this manner he made his way slowly and painfully towards the river through an uninviting land, over vast undulating plains, and amid granite hills which at times break "into a wild and indescribable confusion of gigantic blocks and obelisks, rent, torn, tilted, and turned in every direction, or piled one above the other in a chaotic grandeur of fantastic and grotesque disorder." The chief prospective value to the world of this region seems to be the gold which is found here in considerable quantities. The natives were continually bringing into the camp large quills filled with gold-dust, which they were anxious to barter for cloth and beads. They set an extraordinary value on it, often making signs "that they had worked very hard to procure it." Although our traveller, who had had some experience in gold-mining, used every opportunity to search for the gold-bearing quartz veins, he was unable to find any traces of them, the natives getting their gold by washing the earth in the beds of the rivers. There are also iron and copper in these hills, and beads are made of them, but not of the gold, which is apparently all sold.

Beyond this people are the Makorikori, a hitherto undescribed race, who resemble the Mashona, but are of a higher grade of intelligence, having a few arts, as pottery and wood-carving, as well as making a poor but serviceable gunpowder out of the efflorescence of saltpetre mixed with charcoal made from the bark of the mufati tree. "Many of the men had flintlock rifles decorated in a wonderfully ornamental manner by means of brass-headed tacks and brass wire." "Their tribal mark is their mode of tattooing the face." Mr. Kerr succeeded in passing safely through their territory, though at one time in great danger from the anger of a chief whose consent he had neglected to ask, into that of a Portuguese half-caste named Rubero. This man is one of a small class who have got possession of most of the country claimed by the Portuguese, as a result of the custom "that when a native of Portugal marries a black woman the Portuguese Government gives or rather lends him a large piece of territory for three generations." These kings, though nominally acknowledging the supremacy of Portugal, are practically independent, and, it is hardly necessary to add, are generally far worse rulers than the pure-blooded blacks whom they have superseded. "Senhor" Rubero treated Mr. Kerr kindly, and, the last of his original followers having refused to go further, furnished him with carriers for the remainder of his journey to Tete.

This once flourishing place, situated at the head of navigation on the Zambesi, he found nearly in ruins, its prosperity having departed with the slave trade, which has been diverted from this part of the coast to the interior. A Portuguese Governor resides here with a small garrison of negro soldiers, the whole number of Europeans, including officers, priests, and merchants, being about thirty. There is some trade with the interior, as "thousands of native hunters still leave Tete every year. . . . Success in hunting, however, is slight, and year by year the results are diminishing." After a short stay in this town, Mr. Kerr made a fresh start for the final goal of his journey, Lake Nyassa, a hundred and fifty miles distant, due north. The Portuguese in recent years have made several attempts to explore this region, but, their expeditions meeting with great obstacles from the hostility of the natives, have only been able to penetrate about one hundred miles to the northwest. It was accordingly into a comparatively unknown land that the young Englishman plunged, accompanied by a few natives to carry his scanty supply of beads, cloth, and provisions. Two-thirds of the distance was safely passed, through a region very similar in its natural features to that south of the Zambesi, when his followers again deserted him, leaving him stranded and absolutely destitute in the town of Chikuse, a savage despot and noted slave-hunter. His very poverty, however, was probably his safety, the greed of the King not being excited by the sight of coveted goods. But, unable from want of these either to advance or retreat, he was in despair, and would have undoubtedly been put to death as a spy, when there suddenly appeared, "as though dropped from the clouds," a Portuguese elephant-hunter, who enabled him to escape by generously supplying him with both goods and men. This place is "one of the greatest slave-trading centres of Africa," 2,000 of Chikuse's men being at that time absent on a kidnapping expedition in the valley of the Shiré. "Every village shows the familiar sight of the slave in the yoke" awaiting the departure of a caravan. This yoke "is made from the forked branches of a tree; about five or six feet long—some are much longer—and from three to four inches in diameter at the thickest part. Through each prong of the fork a hole is bored for the reception of an iron pin. This ready, a soft fibrous bark is wrapped round until the whole forms a thick collar of bark, making a sort of pad much rougher than a horse's collar. The forked branches vary in thickness, to suit docile or fractious subjects." It is "often allowed to remain upon a slave for nine months or a year, night and day, without being once taken off." When a caravan is ready to start, "the men are coupled by the yokes being lashed so as to form a rigid pole, binding the pair from neck to neck together. With loads on their heads, they then turn their faces to the eastward, and leave their homes for ever."

Mr. Kerr reached Lake Nyassa only to find that the missionaries had abandoned the station at its southern end. It was a cruel and nearly fatal disappointment. His men, with a single exception, left him, and, prostrated with dysentery, he had barely strength to get enough food to sustain life. At the end of sixteen wretched days, his stock of cartridges being reduced to five, he was startled one night by cries of "Mzungo [whites]!" He sprang to his feet and saw far out on the lake a faint light. A bonfire was quickly made, and soon he could see "the bows of a small steamer emerging slowly and cautiously from the gloom." With all the energy which he could summon for a last effort, he hailed her, and fortunately was heard. It proved to be a steamer on its way to the River Shiré, having on board M. Victor Giraud, who was returning from his perilous journey to Lake Bangweolo, during which he, too, had been deserted by all but six of his men. With his rescue the special interest of Mr. Kerr's narrative ceases. Together with the French traveller, who speaks of him in his report as "a charming companion, with information as varied as it was extensive," he descended the Shiré as far as Blantyre by steamer, the remainder of the way by canoe. The river voyage was hardly less full of incident than the previous land journey. There was an ex-

citing and dangerous elephant hunt. Herds of playful hippopotami continually threatened to capsize the frail boats, while at one place they barely escaped with their lives from the natives living on the banks, who were then at war with the Portuguese. Eleven months after leaving Cape Town, Mr. Kerr was at the mouth of the Zambesi, having been "the first white to traverse, throughout, the great extent of territory stretching between Cape Colony and the Lake Regions."

The impression given by Mr. Kerr as to the value of this part of Africa to the civilized world is very unfavorable. None of it is extraordinarily fertile, and a great part is absolutely sterile. There seems also to be a gradual decrease of the rainfall, as the rivers are drying up and the water in the lakes is diminishing. Still, there are not yet sufficient data to prove that this is a progressive desiccation. The tsetse fly, which is to be found in myriads throughout large sections, renders agriculture and cattle-raising impossible, though, with the extinction of the large game, the fly may also disappear, as it is said to breed upon the buffalo dung. The climate of the Zambesi basin is fatal to most white men who remain long in it. It is remarkable that a few hours before sailing for England Mr. Kerr was seized for the first time with fever. This extraordinary immunity during a journey of 3,000 miles, the greater part through a fever-stricken country, often with insufficient shelter and proper food, shows a wonderful constitution in our traveller. It is probably also due in part to the fact, stated in his address before the Royal Geographical Society, but not in his book, that he "never tasted alcohol" during the whole of his journey. From a purely geographical point of view, the results of Mr. Kerr's explorations are not of special importance. The general features of the country through which he passed were already well known, and he has done little more than add some details as to the courses of rivers, the character of certain mountain ranges, and the names and positions of towns. As a traveller he deserves to take high rank for his unusual powers of endurance, his courage, and his tact in dealing with the natives. Of them he speaks more favorably than most writers, especially in regard to their honesty, to which he gives this remarkable testimony: "From the time I left the Cape of Good Hope till I arrived on the shores of Lake Nyassa I was never robbed of a single bead or a yard of cloth, although for months the goods were completely at the mercy of the natives." Had he possessed more literary skill and told his story, which at times is of almost dramatic interest, with greater simplicity, and omitted his tedious and commonplace reflections, his book would have been far more entertaining. A good map, some fair illustrations, and an excellent index add much to the value of this latest account of African travel and adventure.

The Follies and Fashions of Our Grandfathers. (1807.) By Andrew W. Tuer. London: Field & Tuer; New York: Scribner & Welford. 1886-7.

We have here an original and very ingenious conception, faultlessly carried out with all the art of the author-publisher in his best estate. Given twenty-four British magazines of a single year in the early part of the century, to make from them twelve numbers of a supposititious magazine bearing the title of the work before us. In solving this problem, Mr. Tuer has really Galtonized his originals, and produced what we may call a composite likeness of the periodicals of the year of the Peace of Tilsit. The illusion is complete, and the skilful literary compilation has been heightened by copies of the fashion-plates of the date in question, and by other illustrations less strictly contemporaneous, of no little interest and value—several of Romney's fancy portraits of Lady Hamilton, portraits of Wordsworth and Byron, engravings after Hogarth, colored sporting scenes, and the like. The sufficiently archaic (and very elegant) typography is reinforced by a buckskin binding, with embroidered labels on back and side, and embroidered book-mark. The humorous introduction and the index are almost the only "modern" features.

As for the contents, fashions for men and women are carefully recorded, and proper glimpses are given of society's interest in boxing-matches, bull-baitings, cocking, racing, and shooting. Feats of pedestrianism are noted beside the miracle of the Chester gooseberry that has fruited for twenty years in winter, and the curiosity of a hedgehog littering in a scratch wig. Reports of a thronged execution for murder ending in the crushing of thirty-four onlookers—many fatally—or of a fire panic at Sadler's Wells, with half as many victims; bell-ringing extraordinary; the first successes in lighting with gas; the hubbub of Bartholomew Fair; a list of mail coaches, and the robbery of one of them; two pages of song-music, and two of advertisements, among which Macassar oil figures along with a soap well known at the present day; an apology for the navy press; sales at Christie's—such are some of the elements out of which the physiognomy of the time is evolved. Politically, we meet with the abolition of the slave trade by the House of Lords, and are told, while it is still fresh, of the duel between Sir Francis Burdett and Mr. Paull, which one may see caricatured by Gillray in Grego's 'History of Parliamentary Elections'; and attend Fox's funeral in Westminster Abbey. Scott, Byron, and Wordsworth are subjected to very frank criticism, and Byron adjudged no poet. At Bath, Master Betty is acting and Braham singing; and elsewhere Mme. Catalani is the favorite primadonna. Mrs. Jordan is acting at Drury Lane; Kemble's *Hamlet* is criticised; the actor Jefferson passes away. We see Fuseli in the flesh, and bid farewell to the painter Opie. With this, and much else, Mr. Tuer amply repays his readers, and whets their appetite for more of the same kind of manufactured article. We should add that the Index is both to the *Follies and Fashions* and to the sources from which it is derived, page for page.

BOOKS OF THE WEEK.

Abbott, Dr. E. Easy Greek Reader. Macmillan & Co. 75 cents.
A Book of the Tile Club. Boston: Houghton, Mifflin & Co. $25.00.
About, E. Le Buste. W. R. Jenkins. 25 cents.
Adams, Sarah Flower. Nearer, My God, to Thee. Boston: Lee & Shepard.
Bache, R. M. The Young Wrecker of the Florida Reef; or, the Trials and Adventures of Fred Ransom. 6th ed. Boston: Lee & Shepard.
Baker, G. M. The Reading Club, No. 17. Boston: Lee & Shepard.
Barr, Amelia E. Between Two Loves: A Tale of the West Riding. Harper's Handy Series. 25 cents.
Bigelow, M. T. Mistakes in Writing English, and How to Avoid Them. Boston: Lee & Shepard.
Blake, J. V. Poems. Chicago: Charles H. Kerr & Co.
Book of American Figure Painters. Philadelphia: J. B. Lippincott Co. $25.
Braddon, Miss M. E. Mohanoks: A Novel. Harper's Franklin Square Library. 20 cents.
Brandes, Dr. G. Eminent Authors of the Nineteenth Century: Literary Portraits. Thomas Y. Crowell. $2.00.
Buchanan, R. That Winter Night: or Love's Victory. Harper's Handy Series. 25 cents.
Buchheim, Emma S. Niebuhr's Tales of Greek Heroes. Macmillan & Co. 50 cents.
Buckland, Anna. Our National Institutions. Macmillan & Co. 30 cents.
Burnham, S. M. Precious Stones in Nature, Art, and Literature. Boston: Bradlee Whidden. $6.00.
Bynner, E. L. Agnes Surriage. Boston: Ticknor & Co.
Carnarvon, Earl. The Odyssey of Homer. Books I-XII. Macmillan & Co. $2.00.
Champlin, E. R. Heart's Own Verses. Chicago: Charles H. Kerr & Co. 75 cents.
Chrystal, G. Algebra: An Elementary Text-Book for the Higher Classes of Schools and Colleges. Part I. Macmillan & Co. $3.75.
Clayton, G. Among the Hills: or, Scenes in Piedmont, Virginia, and other Poems. Richmond: J. W. Randolph & English.
Clayton, G. Otterdale; or, Pen Pictures of Farm Life, and Other Poems. Richmond: J. W. Randolph & English.
Clifford, Prof. W. K. Lectures and Essays. 2d ed. Macmillan & Co. $2.00.
Conway, Prof. W. M. Early Flemish Artists and their Predecessors on the Lower Rhine. Illustrated. Macmillan & Co. $2.50.
Corson, Prof. H. An Introduction to the Study of Robert Browning's Poetry. Boston: D. C. Heath. $1.50.
Daily Morning and Evening Calendars, 1887. Boston: Roberts Brothers. $2.00.
Deland, Margaret. The Old Garden, and Other Verses. Boston: Houghton, Mifflin & Co. $1.25.
Dick's Mysteries of the Hand. Dick & Fitzgerald.
Encyclopædia Britannica. Vol. xxvi. Rot-Sia. Boston: Little, Brown & Co.
Erckmann-Chatrian. L'Ami Fritz. W. R. Jenkins. 60 cents.
Five-Minute Sermons for Low Masses on All Sundays of the Year. By Priests of the Congregation of St. Paul. Vol. ii. The Catholic Publication Society.
Fobes, W. K. Five-Minute Readings for Young Ladies. Boston: Lee & Shepard.
French—Sangster. Home Fairies and Heart Flowers: Twenty Studies of Children's Heads, with Floral Embellishments, etc., and Poems. Harper & Brothers.
Frith—Allen. The Language of the Hand. Illustrated. George Routledge & Sons.

The Nation.

NEW YORK, THURSDAY, DECEMBER 2, 1886.

The Week.

THE annual report of the Comptroller of the Currency, so far as it has been given to the public, makes no specific recommendation of plans for replacing the present basis of national-bank notes with any other kind of security. The process by which the foundation of the bank-note system is disappearing, and the consequences thereof, are pointed out with sufficient distinctness. The distinction between the purely banking functions and the note-issuing functions is also drawn with clearness and precision. The dependence of the former function upon the latter is also thoughtfully discussed. Mr. Trenholm adverts to the question that has been more than once raised, "whether there is power under the Constitution for the charter of national banks except as instrumentalities for a money circulation." He does not advance any opinion upon this point. The question is important. Congress has certainly committed itself to the doctrine that it has the power to give such charters, by authorizing any bank to retire its circulation without forfeiting any other right or power that its charter may confer. The Supreme Court has more than once decided that the national-bank act is constitutional, and the language employed in these decisions goes to the length of holding that Congress is the sole judge of reasons moving it to pass the act. If Congress is the sole judge of the reasons moving it to issue legal-tender notes, as the same court has held, it is clear that the power to grant bank charters, with or without circulation, and with or without the present requirement that the banks shall hold a certain minimum amount of United States bonds, will not be controverted by the court as it is now constituted. If things run on as they are now going, the time will come when all the bonds will have been called in and redeemed. Will a bank's charter have been forfeited in that case by an act in which the bank itself has had no part? Can a forfeiture in law be effected by an act of the Government which is not even a direct but only a collateral act? It seems as nearly certain as anything can be that the national-banking system will never be overthrown by the judiciary. The note-issuing power will come to an end in due course of the payment of the national debt, but all else that is valuable in the system may last indefinitely.

The absence of any specific recommendation of means for replacing the present basis of bank circulation with other security, is the Comptroller's acknowledgment of the extreme difficulty of the problem. Taking into consideration the uniform hostility of the majority in Congress to any enlargement of the powers of the national banks, it may be considered certain that the law-makers are not going to give themselves any great trouble to overcome a difficulty which the wisest friends of the system are unable to solve. What we have to look forward to under existing laws is a gradual extinction of the bank-note system, and the substitution of gold and silver certificates in place thereof—gold probably for everything above the denomination of $10, and silver for the denominations of $10 and less.

The exulting testimony of Mr. James M. Swank, Secretary of the American Iron and Steel Association, to the activity of trade and the prosperous condition of the steel-rail makers, as published in the *Tribune* on Tuesday morning, leads us to inquire whether this remarkable state of affairs has occurred under a Democratic administration or not. "The situation," says Mr. Swank, "is extremely satisfactory, and in fact has not been so generally satisfactory for years." Contracts, he added, had already been made for 800,000 tons of steel rails for delivery in 1887, and the price was advancing. No mill was willing to contract for less than $36 per ton. One mill had refused orders for less than $37. In fact (but Mr. Swank did not make this statement), the price is now up to the English price plus the American duty, $17 per ton, plus freight, commissions, etc. Things are going on swimmingly, and "it is exceedingly probable that steel rails will bring $40 per ton in the early part of 1887." The situation is so extremely flattering that although "the members of the steel-rail combination have not stated what their course will be in regard to *enlarging the limit of production*, there are general statements that there will be a considerable enlargement."

The impudence of these statements, when we take into account the enormous tariff bounty of $17 per ton given to the "steel-rail combination," ought to excite the indignation of every laborer and taxpayer in the United States. But the point to which we wish to direct a moment's attention is that these people and a great many others were, only two years ago, predicting ruin to every kind of business in case the Democratic party should come into power. The worst of it was that they were sincere in what they said. They had worked themselves up to the belief that one-half of the people of the United States were bent upon the destruction of this country. An honest belief of this kind is more dangerous in fact than the ordinary game of false pretences by which politicians seek to gain votes, because the politicians who go about during the campaign wearing daggers of lath and masks of illuminated pumpkin to frighten the common people, drop their paraphernalia after the votes are counted, and become very good friends; whereas the people come in time to believe what they hear so often, and really cherish the idea that half the country is composed of traitors and maniacs. It thus came about that a great multitude of ordinarily sagacious men of business, some of them of large wealth, some of them professors in colleges and instructors in logic and moral science, looked upon their Democratic neighbors as aliens and foreigners, either purposely bent on the destruction of the country, or so ignorant and besotted that the destruction of the country would come as a matter of course if they should get control of the Government. The common expression of this idea was, that if Cleveland were elected, property would be worth nothing, and from this belief the corollary was drawn that it were better to elect the worst Republican than the best Democrat—a maxim certain to demoralize any party, by teaching it that nothing it might do in defiance of good morals would shake its hold upon the most moral of its followers. Well, the thing which they most feared was done, and now we have their own testimony that the condition of trade "is extremely satisfactory, and, in fact, has not been so generally satisfactory for many years."

Volume XX. of the reports of the Tenth Census contains statistics of wages and the prices of the necessaries of life for a number of years, ending with 1880. Besides these there are short reports upon trades societies and strikes and lockouts. The rates of wages are given without any attempt at collation, but precisely as they have been returned by the employers. Prices of commodities, too, are given just as received from the correspondents. It is unfortunate that no digest of these figures has been made, as in their raw condition it is difficult to draw general conclusions from them. It is not difficult, however, to trace the fluctuations of business in those of wages, while withal there has been a general increase in the amount of wages all along the line. The average pay of the working classes was 40 per cent. greater in 1880 than in 1850, and 20 per cent. greater than in 1860, while the cost of the necessaries of life was not materially different. In 1870 the rate of wages expressed in paper was higher than in 1880 by about 10 per cent., but, measured in purchasing power, the workingman is at present receiving more pay for his labor than ever before. If Mr. Henry George had had access to these figures, he would never have written 'Progress and Poverty.' He would not have assumed it to be an axiom that "the rich are daily becoming richer and the *poor poorer*," and have wasted his time in endeavoring to explain and correct a social evil which has no existence. Moreover, it is not in the matter of wages alone that the condition of the laboring man has improved with the advance of civilization in this country. In the past half century the number of hours of labor has been greatly reduced, as is shown by the following table:

	Percentage of Laborers.	
Hours of Labor.	1830.	1880.
8— 9	5.4	5.1
9—10	13.5	8.8
10—11	29.7	59.6
11—12	5.4	9.6
12—13	32.5	14.6
13—14	13.5	2.3

The chapter, or the report, upon trades societies is unsatisfactory in that it presents no statistics of membership. The number and distribution of societies (which are given) present little idea of the fulness or completeness of organization of the laboring classes. The report upon strikes and lockouts is necessarily very incomplete, owing to the difficulties encountered in obtaining statistics of the subject. It appears that there were 762 strikes during the year, which were confined almost entirely to the manufacturing and mining industries. Nearly three-fourths of these related to the rate of wages. The result of 354 strikes was ascertained, and, of these, 34 per cent. were successful, 44 per cent. were unsuccessful, and the others were compromised. Concerning the cost of strikes to the laborers, statistics have been obtained regarding 226 strikes, in which there was lost in idleness the sum of $3,711,097. If the same ratio extends to all the strikes of the year, the total loss was in excess of $13,000,000. The question may well be asked, "Do strikes pay?"

It never occurs to Mr. Blaine to investigate a subject before passing an opinion, but there are men who occasionally take that trouble. One such man, whose testimony no good Republican can disregard, has been making a tour of the South with a view of learning the facts about the question of wages. Mr. William D. Kelley of Philadelphia, the great champion of protection, has just made a study of this matter in the mineral and manufacturing regions of the South, and he thus summed up the results of his observations in an address at Birmingham, Ala., on Saturday: "Touching the wages paid common labor, Mr. Kelley said he would go back home and tell his people that the negro laborers of Alabama and Tennessee were as well paid as white laborers in Pennsylvania. Mr. Kelley's attention had been called to Mr. Blaine's statement that the negro workers in the South were paid as low as sixty cents." The correctness of Mr. Kelley's conclusion is confirmed by a very striking occurrence just reported from another Southern State. The negro stevedores employed by a steamship company at Norfolk, Va., struck for higher wages the other day, and the company immediately sent to New York and got a force of white men, who were glad to work for the pay which the negroes rejected as insufficient. To argue against this Norfolk incident and Mr. Kelley's confession would be too much even for a Blaine organ.

The official version of the meeting between Mr. Blaine and Mr. Edmunds appeared in the *Tribune* as follows: "On Sunday afternoon Mr. Blaine paid a visit to the house of ex-President Arthur, and, as he entered the parlor, Senator Edmunds came forward with great apparent cordiality, extending his hand and saying, 'How do you do, Mr. Blaine?' Mr. Blaine stood with hands holding his hat in front of him, in the position familiar to all who have met him, and made no response, simply looking Mr. Edmunds in the eye. Seeing some embarrassment, Clayton McMichael said: 'You know the Senator, Mr. Blaine?' Mr. Blaine remained perfectly silent, and Mr. Edmunds, at length apparently comprehending the situation, retreated to the sofa from which he had risen. A few minutes later Mr. Blaine expressed to Mr. McMichael and Mr. Miller his sincere regret that an act imperatively demanded from him should have occurred in the house of mourning. Mr. Blaine made no explanation of his motive, but the presumption is that he was not anxious to shake hands on Sunday with a man who had gratuitously slandered him on Saturday. The marvel is that Mr. Edmunds made the approach. It was on Saturday that Mr. Edmunds's letter was published by his friends, and apparently with his approval, distinctly intimating his belief that Mr. Blaine was a dishonest man."

This is not entirely satisfactory, and evidently needs to be supplemented by an Edmunds version. It does not make clear why Mr. Edmunds, who is a decidedly cold, reserved man, should wish to shake hands with a man of whom he held the opinion which he undoubtedly holds of Mr. Blaine, and of whom he felt it necessary to speak publicly as he has spoken of Mr. Blaine. Mr. Blaine's conduct as described was, however, eminently proper. He ought not to shake hands with anybody who feels as Mr. Edmunds feels about his "transactions." In fact, nobody should shake hands with anybody whom he considers a knave, and no knave should shake hands with anybody who, he has reason to believe, considers him a knave, and who has publicly denounced him as such. In the present condition of modern society such persons are often brought together under neutral roofs, and are often unwittingly introduced to each other by innocent hosts. Under such circumstances civility to the host calls for some sort of momentary recognition, but a bow will always answer the purpose. The "handshake," as the French call it, should be reserved for people whom one neither hates nor despises.

It is another illustration of the fact that little things often count with the public far more than large affairs, that this performance of Mr. Blaine's appears to have damaged him with many Republicans more seriously than all the revelations of his demagogism and dishonesty. Republican newspapers which supported him in 1884, do not hesitate to speak of him in the most contemptuous terms. Thus the Rutland *Herald*, one of the most prominent Republican journals in Vermont, concludes an editorial article entitled "Mr. Blaine's Blunder," with these sharp words: "Perhaps Mr. Blaine thinks he can afford to treat with disrespect George F. Edmunds; but he cannot afford to make a fool of himself." The feeling which is now rapidly growing towards Mr. Blaine is well expressed by the Boston *Saturday Evening Gazette*, which loyally supported him in 1884, but which now says:

"Mr. Blaine is rapidly becoming the spoilt child of the Republican party, and is sorely trying the indulgence and the patience of his best friends. Explaining away his mistakes, finding excuses for his indiscreet utterances, and hanging on tenterhooks in fear of what mischief he may do next, are growing to be tiresome occupations. Mr. Blaine is doing more to injure himself than was accomplished by all of the campaign attacks that were made upon him."

Mr. Theodore Roosevelt has been interviewed in London, and his confessions, as published in a cable despatch to the *World*, confirm the severest criticism which has been made upon his candidacy for Mayor. "Mr. Roosevelt," says the correspondent, "paid a high tribute to the honesty and ability of Mr. Hewitt. He said that he was compelled to enter the race against Mr. Hewitt because, since he was selected, it was necessary that he should make a sacrifice for the sake of maintaining the party organization." Of the large George vote, he said: "It does not mean a new party, but, unfortunately, a new element to be bid for by the old parties." Mr. Roosevelt confesses that he sacrificed his oft-expressed conviction that it made no difference whether a candidate for Mayor was a Democrat or a Republican so long as he was an honest man, in order to hold the Republican organization together; he confesses, also, that by making this sacrifice he helped to build up "unfortunately, a new element for both parties to bid for." That is, the sole outcome of his candidacy was the addition of a new and powerful incentive to "deals" in future elections, thus contributing directly to the cause of misgovernment and to the prosperity of every political gambler who gets his living by this kind of politics.

The Republicans of Connecticut are convinced that there was a great deal of bribery practised in the recent election by the Democrats in their endeavor to carry the Legislature and to secure the Senatorship. The suspicion is, we think, well founded. We doubt if there has ever been an election in this country in which the use of money was more brazen and infamous. The Republicans, having carried the Legislature, are in possession of the means to make a searching investigation of the charges of corruption that have been made. If they will appoint a committee for this purpose, they can undoubtedly get a great deal of convincing testimony. They may be able to secure the indictment of a number of their political opponents and send some of them to jail. Failure to take steps for an investigation will lead to the suspicion that Republican politicians are exposed to the same danger also. There ought, however, to be a sufficient number of honest men in the Legislature on both sides to carry a motion for an investigation. It would be helpful if they would make the attempt even though the motion were voted down.

The latest question connected with Virginia's "bonds" is, whether the State is entitled to the coupons which have once been refused by its officers when offered in payment of taxes In order to understand the importance to the State of this question, it is necessary to remind our readers that in nearly all cases these coupons are offered by the taxpayers of Virginia to the county treasurer, who, in compliance with the law of the State, declines to accept them in payment of taxes. Property of the citizen is then levied upon and sold by the treasurer,

who, out of the proceeds, pays the tax and gives a receipt therefor. The next step is an action in the United States Court against the treasurer as a trespasser, and a judgment for damages. This means that the treasurer is required to pay back to the taxpayer the money collected from the sale of the property, which, as a matter of fact, is always "bought in" by the owner for the amount of the taxes, and to settle the costs of the suit. Thus far the State is evidently out of pocket. But worse yet remains, if the opinion of some of the ablest lawyers in Virginia is sound. The State, according to this opinion, actually receives and receipts for the taxes; the judgment of the national court, which enables the taxpayer to recover damages, is given against an individual trespasser. It is true that there is an "indemnifying fund," consisting of public money, out of which treasurers are permitted to pay these judgments and the costs of the suit, but it is very doubtful whether the treasurer's receipt for taxes given as an officer could be explained away. There would be something ludicrous about an effort on the part of Virginia to obtain these rejected coupons, but should it be held that the State is not entitled to them, it would be a very great, although probably a deserved disaster. In that event taxes would be really unpaid, the exchequer of the State reduced by reason of costs paid, and all the coupons still outstanding. Then, perhaps, the wisdom of the advice once given by a crafty man of the world would be admitted by Virginia: "My son, honesty pays better than dishonesty—I have tried both."

The Washington gossips are talking about the chances of Congress making new States at its approaching session, and a good deal of silly guessing is indulged in. One story is that the Democrats in the House may attempt to seize a partisan advantage by passing the Senate bill admitting Washington Territory as a State, the theory being that the new commonwealth would send two Democrats to the United States Senate next year, and contribute three electoral votes to the Democratic candidate for President the following year. This theory is based upon the fact that the Territory elected Mr. Voorhees, a Democrat, as Delegate to Congress in 1884, and reëlected him last month. But everybody who knows anything about that region is aware that Mr. Voorhees won his two elections solely on personal and local questions, and not at all on national issues, the proof of which is found in the fact that the same voters who chose him as Delegate in 1884, elected a Legislature which contained twenty-four Republicans to twelve Democrats. There is not a particle of doubt that, on a straight fight between the two parties, Washington Territory is Republican by from 3,000 to 5,000 majority; and if the Democrats should make it a State in the expectation of capturing either a brace of Senators or a trio of electoral votes, they would be pretty sure to fare as badly as in 1876, when they let Colorado into the Union because they thought her election of a Democratic Delegate in 1874 insured her proving a Democratic State, and thereby failed of the undisputed majority in the electoral college which they would otherwise have had.

At the American Institute at Bar Harbor last summer, by the shrewd manipulation of Mr. E. C. Carrigan, a resolution was passed, without discussion and with apparent unanimity, endorsing the scheme of national aid to Southern education. A similar resolution was introduced at the Massachusetts Teachers' Association in Boston last Saturday, and Mr. Carrigan was present in person to "see it through." The result shows that the teachers have had time to ponder their previous precipitancy. It was found impossible to carry the measure without discussion, and, after a short but sharp debate, the motion was lost by a vote of ten to nine. The fact that, after a spirited argument, only nineteen persons in the whole audience felt interest enough in the matter to record their votes, casts a world of light on the action at Bar Harbor last summer as "the unanimous expression of the teachers of New England."

The death of H. M. Hoxie was, in the estimation of his nearest friends, hastened by the severe labor and anxiety imposed upon him by the great Southwestern strike of last spring. It is a fact that, although he held up bravely till the last, and saw victory securely in his own hands, he became immediately thereafter a prey to an ailment which brought great physical suffering, and to which he finally succumbed. If he had not been subjected to the terrible ordeal arranged for him by Martin Irons and his misguided followers, Mr. Hoxie would undoubtedly be alive and well to-day. He has fallen a martyr to high duty, and his name and example will be long cherished by his countrymen as those of a true hero. Before Hoxie took his stand against the extensive and multiplying system of boycotts by which all industry, and especially railroad transportation, was plagued and threatened, it was customary for everybody to yield to it. After he had fought against and beaten it, everybody else fought against it, and presently courts and juries sat down upon it. No finer instance can be found of the wholesome effect of splendid although unintentional leadership in a great crisis.

Dr. Bryce, Superintendent of the Insane Hospital of Alabama, has been investigating the question whether insanity is increasing among the negroes since their emancipation, and concludes that there can be no doubt on this point. The whole number of insane negroes in the United States, by the census of 1850, was only 638, and in 1860 but 766 The returns for 1870 showed one insane negro to every 2,695, and in 1880 the ratio had increased to one in every 1,096. At this rate by 1890 the proportion would reach one in every 500, or the same as among the whites. Dr. Bryce overlooks the fact that much of the increase between 1870 and 1880 is only apparent, being due to the fact that the later census was taken with much greater accuracy in the South than the earlier one; but there is no reason to doubt that insanity really became much more common among the blacks during that decade, or that ultimately there will be no marked difference between the two races in this respect. It is one of the misfortunes of civilization that the increase of mental activity among a people is accompanied by an increase of mental disease, and the negroes are only obeying the common law of humanity.

President Robinson of Brown University, in an article which he publishes in the *Forum*, entitled "How I was Educated," uses some plain language about the kind of young men who are sent to college as being especially fitted for the ministry. He speaks first of the disadvantages which he labored under upon first entering college because of the incompetence of the teachers who had prepared him, and then says:

> "To add to my misfortune, the most intimate of my friends, though pure in their lives and morally wholesome as associates, were low in their aims as scholars, satisfied with very little and very superficial work. They had been sent to college to prepare for the ministry, and were fair specimens of the average of a class of men not yet wholly extinct. Selected, and aided by beneficiary funds, as 'candidates for the ministry,' they seemed to regard themselves as absolved from the duty of high aims as scholars, and dropped into the wretched cant of 'laying aside ambition as unworthy the servants of the Lord.'"

That this is true of a larger part of the men who go to many of our colleges to-day under similar conditions, is well known. Dr. Robinson stops with the effect which the companionship of these men had upon him, but if he had followed them out into life, he would have had little difficulty in showing that their effect upon the moral and intellectual influence of the pulpit has been also a misfortune.

The subject of remunerative employment for educated women in England has been much discussed in the London press of late. The immediate occasion was the fact that the *Daily News* opened its columns to the complaints of "lady companions" as to the wretchedness of their lot, and the correspondence thus elicited shows a melancholy state of things. It appears that there are thousands of middle-class women in London "who," in the *Spectator's* words, "are almost in despair for money, who rush in hundreds for any vacancy, who inundate advertisers with letters till honest selection is rendered almost physically impossible, and who, if only they may keep their caste and not do manual labor — for which, poor things, half of them are physically incapacitated—will take any wages and accept any kind of situation." An offer of a "companionship" at £20 a year brings literally hundreds of applicants, while £14 is a common salary, and scores of letters are received where the advertiser offers nothing but a "Christian home." The *Spectator* concludes that in England "hardly any one is so ill-off as the educated woman who has no money and no positive right in a home," since unless she has special capacities, she can find no work to do. The only remedy that the *Spectator* can see is for the English father to imitate the French custom, and insure a daughter's independence by giving her a "portion" of at least £100 a year. But at best this would not cover the cases of those women whose fathers, through early death or pecuniary misfortune, were unable to provide this portion, nor of those women who would infinitely prefer honorable self-support to a competence only procured through the sacrifices of over-burdened fathers.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 24, to TUESDAY, December 2, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND has written a letter explaining that he cannot restore William A. Stone (Rep.), United States District Attorney for Pennsylvania, to office as he did M. E. Benton (Dem.), both of whom were suspended for making political speeches.

Col. Philip W. Downes, who was on Tuesday appointed by the President Appraiser at the port of Baltimore, is a native of Caroline County, Md., and is forty-nine years old. He was educated at Dickinson College, Pennsylvania, and studied law. He began the practice of law at Denton, Md., and still occupies the office he first opened twenty-six years ago. He has always taken an active part in politics, and is considered to be one of the best stump speakers in the State. For fifteen years he has been a Caroline County member of the Democratic State Central Committee. He is understood to be Senator Gorman's choice.

Owing to the heavy payments, amounting to over $12,000,000, it is thought at the Treasury Department that there has been very little if any decrease in the public debt for November.

Reports from persons holding different official positions who would be likely to know the facts, agree that the President and the Secretary of the Treasury will recommend to Congress the enactment of some customs legislation similar to that which is proposed by the Hewitt bill. This was substantially done at the last session.

The Secretary of the Navy on Monday signed the awards for the following new ships of war: Cruiser No. 2, the *Charleston*, to the Union Iron Works of San Francisco. Gunboat No. 2, to the Columbia Iron Works and Dry Dock Co. of Baltimore, Md. Cruiser No. 3, the *Baltimore*, to Cramp & Sons. The award on gunboat No. 1, for which the Cramps are the lowest bidders, is temporarily withheld, to allow further consideration of a bid relative to the machinery. No award is made for cruiser No. 1, because all the bids exceed the limit fixed by Congress.

The report of the General Superintendent of the Life-Saving Service says that the number of disasters to documented vessels within the field of station operations during the last year was 322. There were on board these vessels 2,726 persons, of whom 2,699 were saved and 27 lost.

An important decision in a liquor case was rendered in Dubuque, Iowa, on Friday by Judge Shiras, of the United States District Court. It was the case of Sheer vs. Gross Brothers, who conducted a retail saloon in connection with their brewery in Chickasaw County. On a motion to remand to the State Court, on the ground that no Federal question was involved, the Judge decided that a Federal question was involved, and that the case would have to remain in the United States Court. This means, if Judge Shiras is upheld by the United States Supreme Court, that saloonkeepers and brewers cannot be deprived of their property without just compensation.

The Secretary of Assembly No. 80, Knights of Labor, comprising the miners of the Monongahela and Youghiogheny Rivers, has addressed a letter to the coal operators requesting an advance in wages, giving them until December 2 to reply. There are 7,000 miners in the four pools which comprise the district. The operators are willing to confer with them, but say the market will not justify higher wages.

Prof. Egbert C. Smyth and his accused fellow-professors of Andover Theological Seminary, who are charged with heresy, have made reply to the charges of the Board of Visitors. Some of the charges Prof. Smyth pronounces "irrelevant," and others too indefinite to be answered. To the specification of his heresy, "That there is, and will be, probation after death for all men who do not decisively reject Christ during the earthly life; and that this should be emphasized, made influential, and even central in systematic theology," he answers: "In this unqualified form I do not admit that I 'hold, maintain, and inculcate that there is and will be probation after death for all men who do not decisively reject Christ during the earthly life; and that this should be emphasized, made influential, and even central in systematic theology.' God as revealed in Christ is to me central in theology. Whatever encourages hope that all men will have opportunity to be influenced by the motive of an offered Saviour is chiefly valuable in theology as a reflection of the character of God. That this opportunity does not come in any intelligible way during this life to very many of our race seems to be evident. That it will consequently come to such beyond this life, is a reasonable inference. It seems to be implied in the universality of Christ's person, atonement, and judgment. I deny that such an inference, or anything affirmed in the citations adduced by the complainants, is inconsistent with the creed of the Seminary."

The Rev. Elias Lyman Magoon, an eminent Baptist minister, died in Philadelphia on Thursday at the age of seventy-six. He worked his way through college by his trade, bricklaying, supervised the college education of Gen. B. F. Butler, and was ordained a Baptist minister in 1839. He was the pastor of churches in Albany, Cincinnati, and Philadelphia. Among the works of his pen the best known are 'Proverbs for the People,' 'Orators of the American Revolution,' 'Republican Christianity,' and 'Westward Empire.' He was an enthusiastic collector of valuable books and works of art. A few years ago he sold his art collection to Vassar College, of which he was a director, for $20,000.

Erastus Brooks died on Thursday at his home in West New Brighton, Staten Island. Mr. Brooks was born in Portland, Me., on January 31, 1815. When eight years of age he was sent to Boston, where he worked in a grocery store and attended an evening school. He learned the printer's trade, taught school, and edited the Haverhill *Gazette*. His elder brother, James Brooks, established the *Evening Express* of this city in 1836, and employed Erastus Brooks as its Washington correspondent. Soon afterwards the latter became associate editor and part proprietor of the paper. In 1853 and 1855 he was elected to the State Senate as a Whig, and in 1856 he was the candidate of the American party for Governor. During the latter part of his life he was a Democrat. He was a member of the Constitutional Conventions of 1867-68 and 1871-72. In 1878 he was the Chairman of the Democratic State Convention. Elected to the Assembly from Richmond County in 1878 and 1879, he was in each year the candidate of his party for Speaker. After the death of his brother James, in 1873, Mr. Brooks assumed the full editorial control of the *Express*, in which he retained the chief interest until the sale of the paper to John Kelly, Augustus Schell, and others in 1877. Since the organization of the State Board of Health in 1880, he has served as one of the State Commissioners.

FOREIGN.

Coercion was suddenly reëstablished on Friday in Ireland, and caused intense excitement. It was announced on good authority that the Government had resolved to suppress promptly all anti-rent and other illegal combinations; to curtail the license of the press; forcibly to suppress intimidation; to enforce the laws governing the processes for the collection of debts; to proclaim all meetings called for certain purposes, and to arrest certain prominent agitators of the anti-rent policy. The first positive steps taken were the proclamation of a National League meeting called for Sligo on Sunday and the prosecution of Mr. John Dillon. He was summoned to appear in court on Tuesday, the charges against him being that his language at the meeting held at Longford on the 7th inst. led to an assault upon a bailiff and resistance to the execution of decrees; that at the Myroe meeting on Monday last he made a speech calculated to intimidate. The affidavits on which the summons was issued were lodged by the police inspectors and stenographers who were present at the meetings referred to. The citation calls upon Dillon to find sureties for his good behavior, in default of which he will be committed to jail.

Reduced to its simplest form, the Government procedure, which is precisely that which was formerly taken against Messrs. Healy and Davitt, amounts to offering Mr. Dillon the choice of holding his tongue or going to prison. He will, of course, promptly accept the latter alternative. Then Mr. O'Brien will denounce the Government in *United Ireland*, which will be suppressed. By this time Mr. Parnell will be compelled to appear upon the scene in defence of his lieutenants and take the leadership in the struggle. If the Government venture to arrest him, there will be war. The "plan of campaign" of the Irish leaders which led to the renewal of coercion is that rents be paid, less the deductions claimed by the occupiers, to a trustee chosen by themselves, the landlord to get nothing unless he accepts what is originally offered him. The troops in Ireland will immediately be reinforced with 4,000 men.

The first skirmishes in the Irish war took place on Sunday, and were on the whole of a highly amusing character, being little more than a game of tag between the police and Nationalist leaders. The monster meeting at Sligo was prevented, but several smaller meetings were held by energetic speakers getting a few minutes the start of the police. In the first case the meeting lasted one minute, in the second rather less. At the Town Hall the police were too quick for the Nationalists and got there first, at half-past one in the morning. O'Brien, O'Kelly, and the reporter of the *Freeman's Journal* gave the Sligo police the slip. Although they were missed almost immediately, and all the telegraph offices of the county were set to work to find them, as they had wisely proceeded to a little place called Riverstown, where there is no telegraph office, they held their meeting with no other interruption than the protest of the village constable. Several meetings of this kind were held, the authorities finally finding them at Ballymote, to which place 100 constables immediately hurried in a special train. A warrant will be issued for the arrest of O'Brien.

The London *Times* says the anti-rent campaign in Ireland has been too long allowed headway. The Government will not be able to defeat it merely by disarming its astute authors and violent advocates, but they can insure victory over the movement by steadily carrying out the decrees of the courts. The *Standard* attacks the Government for its decision to summon Parliament on January 13, a month earlier than was expected, and to monopolize immediately private members' days for the discussion of the procedure. "This," it says, "is a harsh precedent, an act of unprecedented rigor, and capable of being represented in unpopular and even odious colors."

The case of the Government against Mr. John Dillon was on Tuesday, at the request of Mr. Dillon's counsel, postponed to December 11.

Gen. Buller has been appointed provisional successor to Sir Robert Hamilton in Dublin Castle after all, notwithstanding the use he has made of his discretionary powers in Kerry. The appointment does not particularly please the landlords and the Tories, whose views were expressed by the *Times* on Tuesday morning, when it said: "Were the appointment a permanent one it would be open to grave objection on several grounds—his military occupation, want of official Irish experience, etc.

But when the Government have not got the men they want they must, we suppose, do what they can with the men they have." Gen. Buller's appointment is taken to mean, first, a severe pressure on all landlords to compel them to make a temporary reduction of rents; secondly, the employment of horse, foot, and dragoons without stint and without mercy to evict tenants who refuse to pay after their landlords have made adequate reductions. It is semi-officially announced that Gen. Buller will return to the War Office early in March, and resume his duties as Deputy Adjutant-General. His services will be required in Ireland only while the department is being reorganized. The Under-Secretary will in the future occupy a seat in the House of Commons.

Parliament will meet on January 13. The Government will ask for the whole time of the House to deal with procedure rules.

Mr. Gladstone declines every request to speak until Parliament reassembles. He has sent letters to several of his late colleagues stating his programme for the coming session. He approves an immediate challenge of the Government to state its Irish policy in the debate upon the address, although he expects that the Unionists will maintain their adhesion to the Government. Afterward he will assist in an effective settlement of the procedure question. The Scotch home-rulers will hold a conference and mass demonstration at Edinburgh on January 12. Their platform urges that national legislatures be granted to the respective nationalities of the United Kingdom, each legislature to control all local affairs, with an executive responsible only to the national electors.

Mr. John Morley, speaking on Tuesday, said that order would not exist in Ireland until the Government dealt with the land problem; and the Government could not deal with that problem without a central body acting between the peasant and the State, which was impossible without home rule. Mr. Morley said that Mr. Gladstone had no liquor of heart or weakness of word on the Irish policy. He appealed to the Nationalists to join the Liberals and help to free Ireland from the nightmare of confusion and destruction in which she walked.

A volume has been published in London called 'The New Liberal Programme,' contributed to by representatives of the Liberal party, and edited by Andrew Reid. Mr. Gladstone's remarks have already been published. The other contributors, among whom are the Earl of Aberdeen, Sir Wilfred Lawson, Sir Walter Forster, and Mr. Jacob Bright, reply to the questions, Why was the Liberal party defeated at the last general election? Second, What ought it to do in order to win the next time? The programme Mr. Labouchere lays down, which is the most advanced in the book, is as follows: (1.) Home rule for Ireland, with Irish representatives at Westminster for imperial affairs, and no land purchase. (2) A free breakfast-table, a progressive income tax, and a progressive succession duty. (3.) Disendowment and disestablishment, the Church funds to be devoted, after the recognition of private endowments of the last fifty years, to educational purposes. (4.) The right of every parish to purchase the land at its actual value, and lease or sell it to small occupiers; the abolition of entail and the confiscation to the State of lands owned by private individuals which may be cultivated but are not, and are not a part of the amenities of residence. (5.) The abolition of hereditary legislation. "The above," he adds, "are only a few of the reforms now necessary." The tone of the volume is confident almost to defiance.

James Anthony Froude is now preparing for an extended tour in the West Indies, with the object of writing a book of similar scope and purpose to his recent 'Oceana.' Before leaving England, he will have prepared a full and authoritative statement of all his financial relations with the Carlyle family.

A verdict has been rendered in favor of Lord Coleridge in the libel suit brought against him by his son-in-law, Mr. Adams.

The election for the rectorship of St. Andrew's University resulted in the choice of Mr. J. B. Balfour, Secretary of State for Scotland, who received 108 votes against 88 for Sir John Lubbock.

The British troops in Burmah, in a recent encounter with the forces of Boshway, killed 143 of his followers without losing a soldier. But three of the British troops were wounded.

Gen. Roberts has demanded 4,000 additional Indian and native troops to reinforce the British army of occupation in Burmah.

The Paris *Journal des Débats* says: "France has no desire to replace England in Egypt when Egypt is evacuated, but if evacuation is to be conditional upon England remaining absolute mistress of the country, agreement is impossible. British pleas for time are equivalent to indefinite occupation. France does not make this occupation a *casus belli*, but declares that her interests and rights are prejudiced by it."

The French Chamber of Deputies on Thursday, by a vote of 388 against 142, adopted a motion for a reduction of 1,650,000 francs in military pensions. The Chamber of Deputies also adopted various reductions previously agreed upon by the Governing Committee.

In addressing the Chamber of Deputies on Saturday, Premier de Freycinet said that the policy of France was for peace. Nevertheless, he continued, France must not entirely abdicate her position as a great Power. She must prevent the dismemberment of the Ottoman Empire and must not admit that any Power may take possession of Egypt. The Suez Canal question would soon be settled in a satisfactory manner. Referring to colonial subjects, he said France must content herself with organizing her present colonial possessions. The general policy of the Government comprised prudence and firmness. The foreign budget was passed without opposition, an amendment which implied a vote of censure on the Government being rejected by 185 to 313.

The Tonquin credits were voted on Monday, after a special appeal by M. de Freycinet, by 278 to 249. The Tunis credits were also passed, and the Madagascar credits by 289 to 100.

France and Mexico have concluded a treaty of commerce.

It is announced in Paris that Russia does not insist upon the selection of Prince Nicolas of Mingrelia as the candidate for the Bulgarian throne.

The London *Standard* says it is seriously proposed at Sofia to nominate an American for that throne.

It is affirmed in Russian circles in Berlin that the Czar is willing to accept any arrangement that Emperor William advises for the settlement of the Bulgarian question.

At a court dinner given recently to sixty Delegates, Emperor Francis Joseph remarked that the situation in the East had improved. He expressed himself as completely satisfied with the work of the Delegation.

Another conspiracy against the Bulgarian Government has been discovered. Two officers, one of them a Russian, organized a plot to kill Col. Nicolaieff, Maj. Popoff, and the Regents. The crime was to have been committed at five o'clock on Thursday morning. Maj. Popoff discovered the plot, and caused the arrest of the two officers and of two others who are also implicated. Forty-one cadets are implicated. All of them, including the Captain, assisted in the deposition of Prince Alexander, but were subsequently pardoned.

The German Consul at Sofia has informed the Bulgarian Government that the German flag at present covers all persons entitled to Russian protection in Bulgaria.

The Berlin *German Gazette*, in an exhaustive article on Russia's financial condition, compares it with that of France before the great Revolution. The Russian debt is 5,600,000,000 rubles. The interest thereon has risen in a decade from 104,000,000 to 261,000,000 rubles. The paper circulation is 716,000,000 rubles, of which only 171,000,000 is covered by bills convertible into currency. The *Gazette* warns Germans to avoid the new Russian loan.

A plot was recently discovered to kidnap King Milan of Servia while hunting near Vrana, and carry him into Montenegro. He escaped by an express train to Belgrade.

The Rumanian Chambers opened on Saturday. In the speech from the throne King Charles expressed himself as hopeful of the continuance of peace. He announced that Prince Ferdinand of Hohenzollern had been definitely selected as the heir to the throne of Rumania, the King being childless.

The German Reichstag was opened on Thursday by the reading of the Emperor's speech from the throne. In it he said: "The object of the policy of the Empire, which enjoys peaceful relations with all states, is to exert in favor of the maintenance of concord among all the Powers the influence which accrues to Germany from her love of peace, from the universal confidence reposed in the Empire, owing to the fact that Germany is not concerned in pending questions, and from the Emperor's close friendship with two neighboring courts." That part of the Emperor's speech relating to the Septennate Bill is as follows: "By the law of May 6, 1880, the peace effective was fixed until March 31, 1888. Our military system therefore requires renewing on a legal basis. The army is a guarantee of lasting protection and of the blessings of peace. Although the policy of the empire is always pacific, Germany, in view of the development of the military establishments of neighboring states, cannot longer defer increasing her defensive force, especially the peace effective. A bill, therefore, will be submitted providing for an increase, to take effect from the beginning of the new financial year." The Septennate Bill fixes the peace effective of the army until 1894 at 468,409 men, not including the single-year volunteers. The permanent expenditure of the army is placed at 23,000,000 marks, and the special and non-recurring expenditure at 24,000,000 marks.

The annual report on the siege of Berlin has been presented to the German Reichstag. It describes the Socialist movement among workingmen as still lively, and tending more and more in a radical and extreme direction, which gives it a very provocative character. Hamburg and Altona are the chief centres of the movement.

The Spanish Cortes on Monday unanimously voted the extra credit of $45,000,000 to improve the navy. The principal part of this sum is to be devoted to the purchase of torpedo-boats and cruisers. The Government have presented a bill for trial by jury to the Chamber of Deputies.

The United States mail for Russia, while passing through Belgium on Saturday, was robbed of 141 registered packages containing money and diamonds probably worth several hundred thousand dollars. This is believed to have been the mail that left New York on November 17 on the steamer *Eider*, and left London for St. Petersburg on the 26th.

Eugene Rambert, the Swiss writer, is dead. He was born at Montreux in 1830, studied theology at Lausanne, and was appointed Professor of French Literature at the Academy of Lausanne in 1854. In 1860 he accepted a similar position at the Polytechnic School in Zürich. Among his works are 'Mme. de Staël,' 'Corneille, Racine et Molière,' 'Poésies,' 'Ecrivains Nationaux,' 'Les Alpes Suisses,' etc.

The Superior of the Oblate Fathers in Montreal has announced that no Knight of Labor will be allowed to partake of the sacrament

LIKE CASE, LIKE RULE.

We intimated last week that the President's action in the Benton affair was pretty sure to cause him a deal of trouble. Accordingly, as soon as a Republican district attorney, Mr. Stone, dismissed, like Mr. Benton, for partisan activity, sought to take advantage of the prece dent thus established, it was found that it would not hold water.

Benton went off stumping in a political canvass, in direct violation of the President's order of July 19, but on the Democratic side. Stone went off stumping, also in direct violation of the President's order, but on the Republican side. According to all sound rules of administrative efficiency, both were wrong and deserved punishment. Both were, therefore, most rightfully dismissed. But Benton put in a plea that his stumping had not interfered with the proper discharge of the duties of his office, and was thereupon restored. Stone promptly asked for his restoration on the same ground, and was refused, for the reason that *his* stump speeches were made on the wrong side. Lest we should be suspected of any perversion or misunderstanding of the President's meaning, we shall quote his exact words :

"I shall accept as true the statement of Mr. Stone, that the time spent by him in thus demonstrating his willingness to hold a profitable office at the hands of an Administration which he endeavored to discredit with the people, and which had kindly overlooked his previous offences, did not result in the neglect of ordinary official duty. But his conduct has brought to light such an unfriendliness towards the Administration which he pretends to serve, and of which he is nominally a part, and such a consequent lack of loyal interest in its success, that the safest and surest guarantee of his faithful service is, in my opinion, entirely wanting. His course, in itself such as should not have been entered upon while maintaining official relations to the Administration, also renews and revives, with unmistakable interpretation of their character and intent, the charges of offensive partisanship heretofore made and up to this time held in abeyance.

"Mr. Stone and others of like disposition are not to suppose that party lines are so far obliterated that the administration of the Government is to be trusted, in places high or low, to those who aggressively and constantly endeavor unfairly to destroy the confidence of the people in the party responsible for such administration. While vicious partisan methods should not be allowed for partisan purposes to degrade or injure the public service, it is my belief that nothing tends so much to discredit our efforts, in the interest of such service, to treat fairly and generously the official incumbency of political opponents, as conduct such as is here disclosed. The people of this country certainly do not require the best results of administrative endeavor to be reached with such agencies as these."

Now we think the dismissals in both cases were perfectly justifiable; that the restoration of Benton was a great mistake, and that the refusal to restore Stone was correct. But the precedent set in the Benton case compelled the President to give reasons for his action in Stone's case which, if adhered to, must ruin or seriously damage, before his term is out, the reform which we are sure he has at heart, and which he has done so much to promote.

We must, in order to make this clear, go back to the fact, which is occasionally forgotten, that one of the great objects of civil-service reform is to put an end to the practice of changing all the subordinate officers of the Government every time a new administration comes into power. On this point the friends of the reform obtained what seemed to be a satisfactory pledge from Mr. Cleveland when he came into office. Office-holders not guilty of offensive partisanship were to be retained, provided there was nothing to be said against their honesty and efficiency. That this pledge has been kept in its entirety we do not mean to say. There have been many violations of it, but we believe most of them have been more apparent than real. In short, we are not afraid to maintain that the President has kept it about as well as the existing condition of human nature and of American political morals and manners would permit. No one President can put the civil service on a proper footing, or avoid frequent failures to maintain his own standards. We cannot recall any case until now, however, in which any member of the Administration, either in making a removal or appointment, put forth a reason for its action that admitted everything which the advocates of a quadrennial "clean sweep" contend for. That the President has done so in the Stone case, it is difficult to deny.

We applauded the order of July 19 in the belief that it was a warning to all office-holders of every party, given in the interest of permanence in office—that is, we supposed it to mean that, inasmuch as subordinate officers might have to serve under different parties, it was an essential condition of good administration that no office-holder should engage in public denunciation of either party. Benton ought not to have done so, because the next President may be a Republican, and the interests of good government require that the district attorneys whom he finds in office shall not be persons who have been abusing him and his supporters on the stump, and whom his self-respect will therefore not allow him to keep in office. Stone ought not to have done so, because Stone is an officer of the present Administration, and his speeches really attacked both the honesty and sagacity of his superior officers, and this is something to which in the interest of discipline they ought not to submit, even if they care nothing about his criticisms personally. If either Benton or Stone, or any other man in office, considers it a hardship not to be able to take the stump in political campaigns, the answer is that public office comes to no man against his will. Nobody is bound to become a district attorney or an appraiser any more than to become a clerk in holy orders. Therefore, anybody who does not like a place one of the conditions of which is abstinence from speech-making during campaigns, has only to refrain from office-seeking, and his liberty will be secured. Silence in campaigns, too, as a grievance, has a somewhat ludicrous aspect when we remember that not over one in ten thousand of the American people ever opens his lips as a stump orator, or finds his life in any manner clouded by reticence about "the issues of the day." The notion that office-holders suffer more than other men through inability to orate in political contests, is one of the traditions of the spoils system, which always made political activity a condition and accompaniment of office-holding. The fact is, that there is no more necessary connection between them than between political activity and banking or dry-goods jobbing.

From the Benton and Stone cases taken together, something in the nature of a new rule may be, and doubtless will be, extracted both by office-holders and by friends of the spoils system. In fact, the latter are extracting one every day. That rule is, that moderate partisan activity which does not interfere with official duty will be overlooked in Democrats, but not in Republicans. The reason given for overlooking it in the President's letter about Stone, too, will undoubtedly furnish the next Republican President with full justification for making a clean sweep of every office-holder who has ever made a speech in public on the Democratic side. This means, of course, that we are in great danger of seeing every trace of the good things President Cleveland has done swept away by his successor, no matter to which party he may belong, for every new President is in a measure forced to seize every plausible excuse for making vacancies.

We would, therefore, ask most respectfully but most earnestly, who is Stone, or who is Benton—who are all the district attorneys in the United States rolled into one—that the country should be exposed to these risks, and the friends of good government so signally disheartened, on account of anything they say or do on or off the stump? No one has studied this question of reform in the American civil service without being astounded by the mistakes which are committed in the exercise of the appointing power, for comparatively trivial objects. Public sentiment is often shocked, and tens of thousands of honest and admiring supporters are disheartened and disgusted, in order to provide a small place for a trumpery adventurer, whom no private employer would take on any terms, and who is probably as sure to disgrace the Government as he is everybody else who trusts him. This, too, is often called good "politics," as if human nature changed and the moral government of the world was suspended in the work of looking after the general weal.

DR. McGLYNN'S PESSIMISTIC PHILOSOPHY.

The Rev. Dr. McGlynn is a Roman Catholic Mugwump of a very pronounced type, but he has not hitherto been accounted a pessimistic philosopher. We judge that he must be put in that category if the interview with him in Friday's *Tribune* is authentic. The *Tribune* has been collecting opinions regarding the condition of workingwomen in New York, and the necessary measures for its amelioration. Dr. McGlynn was called upon for his views. They are given in a very methodical way, and are apparently the result of much reflection. They are, we must say, extremely depressing, for at the outset the reverend gentleman throws cold water upon all charitable movements, regarding them as ineffective, sporadic, and illusory. Since no synoptical treatment of Dr. McGlynn's sayings can do them full justice, we reproduce them in the original. He said :

"I have not much sympathy and but little time for any temporary measures for the relief of

social distress. You may go on for ever with hospitals and orphan asylums and St. Vincent de Paul societies, but with them you can't cure the trouble. They relieve, not eradicate. In a right state of society there ought not to be any hospitals or asylums or charitable societies, or else very few of them. The Women's Protective Association and the few laws which defend wage-working women, and needle-workers especially, are good things in their way, but they are only superficial in their results. They are palliatives in which I take but a languid interest. Let a woman complain justly against an employer who, through his foreman, has withheld unjustly a good part of her scanty earnings, and she gets no more skirts to sew out her life blood on from him, nor from any other like him. She may have gained her case against him, but she has lost her wages for many weeks to come, because she is thrown out of work, and for her vacant place there are scores and scores willing to toil and take their chances in the system of petty robbery by the factory-owner."

There is much more of the same sort. The reverend gentleman does not think that liquor prohibition, or coöperative industry, or labor combinations, or better education, or all together, will help much, since none of these things would raise the rate of wages or prevent a reduction "when the supply of sewing hands becomes far more in excess of the demand than it is now." As for the consolations of religion, he holds them to be quite inappropriate to the discussion. In fact, he sets at defiance the recent pastoral letter of Archbishop Corrigan, in these words:

"Nor is there much comfort in the condescending advice to the slaves of poverty and oppressed toil to remember even that Christ proclaimed the poor blessed, and bade them hope for reward of eternal happiness. That is not the doctrine to preach to honest laborers of this century. That is not the doctrine which shall increase the belief in God and the followers of the Church. Such practices will not lead men and outraged cheated sewing-girls to stop calling out, 'God has forgotten us.' So long as ministers of the Gospel and priests of the Church tell the hard-working poor to be content with their lot and hope for good times in heaven, so long will scepticism increase and 'Bob' Ingersoll have many believers."

Dr. McGlynn's remedy for the ills of poverty is the abolition of private ownership of land. It is not fair to say that he offers no substitute for private charity, prohibition, co-operation, education, etc. He offers Mr. Henry George's 'Progress and Poverty' as such a substitute, so far as relates to the evils resulting from inequalities of wealth in this world. It is his view, apparently, that if everybody could have land who wants it, all those evils would disappear. But that is what everybody can have now. It would not be maintained by him, we presume, that the farmers should be taxed to support all the laborers in cities who are in distressed circumstances, at a time when there is still plenty of land to be had rent free. If that is what he means, we do not understand his logic. Nor does Mr. Henry George's 'Progress and Poverty' help us. When brought face to face with the fact that arable land is still plentiful for the disinherited sons of men, Mr. George contends that a very short time will see all the agricultural land occupied. This is as much as to say that the bulk of Mr. George's book is crass nonsense, since it is the present condition of society that he seeks to account for by the injustice of private ownership of land, and not a future condition, to be reached when no good land can be had for the asking and taking.

But it is not Dr. McGlynn's bad political economy that calls for examination, but the view he takes of those measures for the relief of human suffering for which his church in all ages and countries has been distinguished. When a clergyman makes light of these agencies, and says that he takes only a languid interest in them, he inflicts the greatest possible harm upon the religion he has espoused, because he enfeebles the highest emotions of the human soul. He tells those who are charitably inclined that what they are doing will not accomplish much good; that relieving the poor and distressed around them is only attacking the evil in spots; and that if they succeed in curing it in one place, it will presently break out somewhere else. Such teachings are so extremely pernicious that it is hard to characterize them in terms of moderation. They are calculated to confirm and harden all the selfish instincts of human nature. They set at naught the governing principle of the higher life which teaches that man, with the limitations set upon his vision, is responsible only for the right use of the powers that have been given him; that for these he is responsible, and that he cannot escape responsibility for the little evil that he might cure, by contemplation of a greater one that he cannot reach. It is as though we were told that we should take only a languid interest in the army hospital to-day because there will be another battle to-morrow, and that we should give our thoughts rather to the prevention of war. This is a pessimistic philosophy, as inconsistent with the dictates of common humanity as it is with the religion of Christ. And yet we think that Dr. McGlynn is a better man than his philosophy would make him. He has been upset by what Archbishop Corrigan rightly denominates "a freak of the imagination," viz., Mr. George's 'Progress and Poverty.'

THE TORY FOLLY IN IRELAND.

It is over fifty years since the Government in Ireland undertook to collect Protestant tithes at the point of the bayonet. The situation, too, strikingly resembled the present one in its main features. There was a profound conviction in the minds of Englishmen, and especially English Conservatives, of the importance of maintaining the Irish Protestant Church establishment, and an equally profound conviction that the tithes were the property of the Protestant clergy, and that the Government was bound to collect them at any cost from the Catholic farmers, if for no other reason, to vindicate the majesty of the law The attempt was accordingly made with the whole force of the Crown. Wherever a Protestant rector thought proper to have the goods and chattels of his Catholic neighbors seized in order to secure payment of his tithes, the bailiff was reinforced by armed police or soldiery, and the goods were remorselessly put up at auction, or carried off. The consequences were frightful. The peasantry were roused into madness, and flung themselves in fury on the muskets of the troops. They were slaughtered in considerable numbers, and they slaughtered in their turn when they caught small bodies of police unawares. Every seizure became the occasion of a bloody riot. The sales under the distraints were mockeries. Nobody who cared to buy dared to do so.

After a year of these disorders the effort to support the Protestant Church in this way was abandoned as hopeless. The tithes were "commuted," that is, were converted into a "rent charge" on the estates of the landlords, each of whom paid in a gross sum. In a few years even Orangemen wondered that anything so flagitious should ever have been attempted in the name of law and order. It would, however, have been very speedily forgotten in the excitement of the other agitations which followed, but for one thing, and that was the suggestion it contained of the feasibility of a strike against rent. The pertinacity and the success of the resistance to the tithes were, to a great many careful observers, even among the Conservatives, a startling revelation of the force which the tenants might bring to bear against the payment of rents, if the land question was ever brought to an acute crisis. There is, of course, no power which can compel the population of the whole island to pay its debts. The powers of the Government are exhausted when it sells the goods of the debtor to somebody else who is willing to buy, or puts him out of his house in order that somebody else may occupy it. The social organization, in fact, in Ireland, as well as elsewhere, rests on the assumption that recalcitrant debtors will always be a small minority. When they become the vast majority, they really have both the Government and the creditors at their mercy.

Consequently, the wisest observers of Irish affairs, in both parties, have always shrunk from any action which seemed likely to produce organized resistance among the tenants to rent paying. It seems now, however, as if the Tories had got on an inclined plane, down which they are shooting with fatal speed towards an attempt to coerce a whole community, with horse, foot, and dragoons, into paying money by distraint. At present the resistance of the tenants is confined to the offer of rent reduced in proportion to the fall in the price of produce, and this resistance seems to have secured something very like sympathy from Gen. Buller, who has been saying hard things to the landlords, and is reported to have recommended something like the payment of rent in kind instead of in money, so as to protect the tenant against fluctuations in price. But a vigorous attempt to overcome this, made on behalf of men as worthless from every point of view, social as well as political, as the Marquis of Clanricarde for instance, and accompanied by wholesale arrests of political leaders and the suppression of public meetings, must rapidly develop general resistance, and bring into the movement, through sympathy, tenants who have nothing, or comparatively little, to complain of.

The end of course is very certain. This rigor will have about as much effect on Irish discontent as Mr. Forster's imprisonment of the "village ruffians." It will undoubtedly reveal more clearly than ever to the tenantry the extent of their power over the landlords' property, and help to diminish or to destroy the scruples of those who are able to pay and have agreed to pay what is demanded of them. It is a serious thing in any country to help people to give the

gratification of their own greed the air of patriotic sacrifice, and more serious in Ireland than in most others.

The landlords at the same time would, if their reliance on brute force had not always been so great, be entitled to a good deal of sympathy. Probably very few have it in their power to make any reduction in their rents without reducing themselves or their families to absolute penury. Their estates are generally mortgaged, or charged with annuities which cannot be reduced. The mortgagees are mostly English insurance companies which have no bowels of compassion, and the annuitants are widowed mothers and sisters, who have nothing but the annuity between them and the poor-house. Hundreds of delicately bred Irish ladies are, in fact, to-day in a state of utter destitution, or dependent on subscriptions raised by charitable people in England. The crisis is truly an awful one for all concerned. The appearance in it of infantry, cavalry, and artillery, far from promising a cure, simply lends a touch of fresh horror to the scene.

ITALY IN THE "PEACE COALITION."

THE declarations made last Saturday by the Italian Minister of Foreign Affairs in the Chamber of Deputies leave no doubt that the Government of King Humbert has unequivocally joined the coalition now forming, under the virtual guidance of Prince Bismarck, against Russian aggression in the east of Europe Italy's relations with Germany and Austria, Count Robilant declared, were "most intimate"; with England she desired to cultivate a frank friendship. She wished to follow the peace policy of these Powers. What this peace policy means, everybody knows from the utterances of Salisbury and Kálnoky: it means war if Russia dare to invade the Balkan territories. The Count was more than explicit in explaining his Government's "vigilant attitude" toward the Empire of the Czar; he even glorified Prince Alexander, whose gallantry "the whole civilized world admired." That such would ultimately be the decision in Italy's foreign policy has seemed highly probable from the beginning of the present threatening complication in Europe, but to reach it required a balancing of interest and patriotic proclivities by King, Government, and people.

Ever since Prussia's victories at Sadowa and Sedan gave successively to Italy Venetia and Rome, the Government of the latter kingdom has found it wise to cling to the friendly accord established between the courts of Florence and Berlin in 1866. There were moments of wavering and doubt in 1870, when Victor Emanuel was tempted by his son-in-law, Prince Napoleon, to make common cause with the Emperor who, at Solferino, had conquered for him Lombardy; and when Napoleon III. had surrendered to the Prussian arms at Sedan, Garibaldi and his sons and friends fought bravely for the new French Republic, the popular heart of Italy beating in unison with its liberal and race sentiments. But these sentiments were chilled by the fall of France, and still more by the terrible epilogue to the Franco-German war drama, enacted at Paris in the name of the Commune. When a few years later the insurrection in Herzegovina and Bosnia, and Servia's declaration of war against Turkey, brought about a state of affairs threatening a general war, Italy sympathized with the revolted Slavs, and began speculating upon the territorial spoils on the eastern shores of the Adriatic which the dismemberment of the Turkish Empire might procure her; but the general war was averted, and the contemplated descent upon the Albanian coast from Brindisi remained a dream of the future. The Government readily joined the other great Powers in the peace negotiations at Berlin, but when the treaty there concluded gave Austria-Hungary Bosnia and Herzegovina, without granting Italy the wished-for compensation in Tyrol, Istria, and other parts of "Italia Irredenta," Garibaldian patriotism blazed against Austria and Germany. It led to Oberdank's plot to kill Francis Joseph in Trieste in 1882, and Irredentism would probably have swept the whole peninsula had not the occupation of Tunis by the French, in 1881, given a more decisive and lasting anti-French turn to the Italian foreign policy.

Italian patriotism seeks expansion in the north, where Austria is expected to be persuaded or forced to cede the districts of Trent and Trieste as Cisalpine territories; in the east, where Ragusa, Cattaro, and other Dalmatian towns are claimed as Italian-speaking and whilom Venetian, and the Albanian coast-land around Avlona is considered one of the gates of the Italian Adriatic; and especially in the south, where, opposite Sicily, ancient Rome conquered Carthage and ruled the province of Africa. For the annexation of this anciently Carthaginian, now Tunisian, territory the Italians had been preparing since Rome became their capital, devoting money and energy without stint to the construction of naval armaments able to cope with first-class fleets for the control of the Mediterranean, to wrest Tunis from its Bey, and defend it against its nominal suzerain, the Sultan. But before the work had been completed, and the moment for action arrived, France, desirous to add to her Algerian possessions and achieve cheap military glory, suddenly pounced upon Tunis, and snatched away the prey. Italy now felt betrayed, robbed, and humbled by the French Republic. Bismarck found it an easy task to win her for a third partner in his "peace alliance" recently concluded with Austria-Hungary, and the Italian Government found it equally easy to disarm the Irredentists. It hastily lent aid to England in her operations in the Sudan, expecting from her in return help in conquering Tripoli as a compensation for the lost adjoining Tunis. But when the Czar also became a member of Bismarck's coalition, and this seemed to be converted into a kind of new imperial holy alliance, Italy began asking herself what she was in it for. The anti-German sentiment reawoke, and for a time counterbalanced the exasperation against France. In the beginning of the Bulgarian imbroglio Italy turned her eyes toward England, and when the latter roused the Vienna Government to dissolve the "Three Emperors' Union," and, with the tacit connivance of Bismarck, to break a lance with Russia, she felt that her position in the coalition, from which the Czar was being forced out, was again becoming natural, honorable, and presumably profitable. France's attitude toward England being more than ever one of hostile rivalry—on account of Egypt—and Turkey's suspiciously equivocal, Tripoli and Albania again loomed up as possible rewards for a coöperation like that which Cavour carried out in the Crimean war; and Robilant and King Humbert did not hesitate long in choosing their course.

VOLTAIRE IN SWITZERLAND.—II.

PARIS, November 17, 1886.

VOLTAIRE, who had been at first so enthusiastic about Geneva, had completely turned round after two years. Geneva was no more now than the "petitissime, parvulissime, pédantissime République." At Lausanne he also begins by being almost lyrical: he finds in it "the politeness of Athens with the simplicity of Lacedæmon." After three winters he refuses to go to Lausanne, and remains in the winter at Ferney. "The Socinians of Geneva, the Calvinists of Lausanne, the fakirs, and the bonzes, all belong to the same species. I let alone those of Paris; but as for my Swiss and my Allobroges, I correct them, and I have amused myself by having a castle with moat and drawbridge, so as to hang in it on the first occasion a priest of Baal."

It is fortunate that Voltaire employed his time otherwise in his château. The first thing he wrote was 'Candide,' which he had begun at the Elector Palatine's residence. He shut himself up for three days, not allowing anything to pass his door but his meals and his coffee. The fourth day Mme. Denis became frightened and forced his door. Voltaire threw the manuscript at her head. "There it is for you, you curious creature." 'Candide' will be read as long as the French language exists. It is, in a light form, a very profound and philosophical criticism of the theory of final causes. It might be called the gayest expression of pessimism; but it is, above all, a model of style. Never did Voltaire write with more sprightliness and simplicity—no useless adjectives or adverbs, no vain ornaments; the phrase runs like a transparent rivulet in the mountains; it is perfection itself.

As usual, Voltaire at first denied the paternity of 'Candide.' "I have written 'Candide' at last," he writes to Vernes, "and as for 'Joan of Arc,' I declare to you that people must have lost their senses who attribute to me such a *cochonnerie* (piggery)." Nevertheless, many copies found their way to Geneva; it was decided by the Council of the Republic that the book should be immediately burned. A regular war began between Voltaire and the Consistory; Voltaire organized secretly a company of actors, composed of his friends and of the members of his family—the Duc de Villars, to whom he had offered the hospitality of the Délices; a few gentlemen of Geneva, Cramer, Pictet, Constant; Mme. Denis, Mme. de Constant, etc. The company played "Tancrède," the last tragedy written by Voltaire. "The play drew tears from the French and the Allobroges." Another representation took place before Chauvelin, the French Ambassador at Turin, who was on his way to Italy, and Mme. de Chauvelin. "Mérope" was also played.

Marmontel made a visit to Voltaire a little afterwards, and he gives a very charming account of it in his interesting memoirs, which are a most valuable document for the history of society in the eighteenth century. The theatrical representations continued, sometimes at Ferney, sometimes at the Délices. Great consternation prevailed in the Consistory, but Voltaire had powerful allies, and public attention became entirely engrossed by the appearance of Rousseau's

'Nouvelle Héloïse.' This novel, which was the signal for a literary revolution, was devoured in Geneva as well as in Paris. Voltaire, of course, did not admire a work which was totally at variance with his own instincts and his own genius; there was nothing romantic in him. "Every man paints himself in his novels," he writes; "the hero of Jean Jacques is a preceptor who pays himself with the virginity of his pupil." D'Alembert tried in vain to hinder him from attacking Jean Jacques: "I do not approve of your declaring against him as you do, and I must repeat to you your own words: 'What will become of the little flock if it is disunited and dispersed?' Jean Jacques is an invalid of great talent, who has talent only when he has the fever; we must neither cure him nor insult him." Voltaire, in his answer, complains of Rousseau for having tried to deprive him of his theatre at Tournay: "C'est l'action d'un coquin, et je ne lui pardonnerai pas." Rousseau was not very partial to Voltaire. Here is his judgment on him: "His little verses, his letters, are charming, and you may burn all the rest. He has the most brilliant reputation, a large fortune, friends, all possible pleasures about him; he is nevertheless the most unhappy of men. The smallest author can disturb his felicity; if he speaks of him with contempt, he will be in despair; if he has any success, Voltaire will be in despair also. The fear of death martyrizes him." Voltaire was full of contrasts: he quarrels with the President Debrosses about some wood (the value of which was some 300 francs)—and, by the by, Debrosses had the best of it in their correspondence on the subject; and the next moment, hearing that a descendant of Corneille is in distress, he sends for Mlle. Corneille, receives her, and treats her like a daughter.

A regular theatre had been built at Ferney, and the Consistory, having no authority over the place, forbade all the Genevese to play; the company was thus broken up, and Voltaire tried to find provincial actors to take men's parts. Mlle. Corneille became one of the players. He invited the famous Lekain to come to Ferney and to pass judgment on his company. Lekain himself several times went upon the stage. Soon afterwards came the Duc de Richelieu. It was a great event in the little French colony, as well as at Geneva. Richelieu was a marshal, and no French marshal had been in Switzerland for a very long time. For Voltaire it was a great triumph to receive the conqueror of Mahon in his own little domain, surrounded by a sort of little court. The Marshal remained for five days the guest of Voltaire; his visit was a succession of festivities. Richelieu had the reputation of a Lovelace to sustain, and naturally paid court to the beautiful Mme. Cramer, "a Parisian lost among the Genevese."

Voltaire resolved to make a new edition of all the tragedies of Corneille, for the benefit of the niece whom he had adopted, and all the kings and princes of the time placed their names on the subscription list. Cramer was charged with the printing. This edition has many notes which are still read with profit; it is, in fact, a long commentary. Galiani is rather severe on these notes; he becomes quite angry when Voltaire finds fault with the French of Corneille. "It seems to me as absurd as if somebody told me that Cicero and Virgil, though they were Italians, did not write as good Italian as Boccaccio or Ariosto. What an impertinence! We don't know what will happen to the French tongue when it is dead; but it might just be that posterity would prefer to write in French after the style of Montaigne rather than after the style of Voltaire." Voltaire himself wrote to his friend D'Argental: "What an execrable *fatras* is found in fifteen or sixteen plays of this great man! . . . How could people prefer to a man like Racine a *rabâcheur* of such bad taste, who, even in his best parts, which are only, after all, declamations, continually sins against the French tongue, and who is always either trivial or unnatural?" The notes bear the marks of this ill-humor, but they are not always so unjust. After the original copies of the plays of Corneille, the only edition which is now valued by bibliophiles is the edition with the notes of Voltaire and the illustrations of Gravelot. The commentaries of Voltaire procured Mlle. Corneille a sum of 42,000 livres, which enabled her to find a husband.

At the end of 1763 Voltaire had a visit from the Prince de Ligne, so famous for his *bons mots*, "a favorite of all the kings, a courtier in every court, a friend of the philosophers." The Russian Empress once wondered, in talking with him, why the cabinet of St. Petersburg caused so much alarm in all the other cabinets. "So do I," said the Prince de Ligne, "especially as it is the smallest cabinet I know: it has only a few inches; it goes from one of your temples to the other, from your nose to your hair." The Prince has left a lively picture of Ferney:

"Voltaire always wore gray shoes, gray stockings, a long coat which came down to his knees, a large wig, and a little cap of black velvet. . . . He was sometimes the man of letters and sometimes the gentleman of the court of Louis XIV. He was comical when he played the country gentleman. He spoke to his peasants as he would have done to ambassadors of Rome or to princes of the Trojan war. . . . Everything, even his faults, his false knowledge, his injustice, his want of taste in the fine arts, his caprices, his pretensions, what he was and what he was not—all was charming, new, piquant, unforeseen. He wished to pass for a profound statesman or for a savant. . . . He liked the English Constitution. I remember telling him: 'Monsieur de Voltaire, add to it, as its support, the ocean, for without this it would not last.'"

After the Prince de Ligne came the Chevalier de Boufflers. His mother, the Marchioness, had been a great friend of Mme. du Châtelet. She was the favorite of the little court of King Stanislas at Lunéville. The Chevalier Boufflers was a poet: his little *conte*, "Aline reine de Golconde," is a model of the light style of the age. Boufflers remained several months with Voltaire, who received him like a son. "His printers may do as they like," wrote Boufflers to his mother; "Voltaire will always be the best of his books."

We come now to what may be called the most glorious episode in the life of Voltaire. For many years Voltaire had been moving heaven and earth for a revision of the trial of the Calas family; he had finally succeeded. This trial is well known. Calas, a fervent Huguenot, had been accused of assassinating his own son, whom he suspected of leaning towards Catholicism; he had been put to the torture, he had been condemned and stretched on the rack, his daughters had been shut up in a convent, his second son had been banished. Voltaire had received a visit from a merchant of Marseilles, who told him the true facts: the eldest Calas had really hanged himself and had not been hanged by his father. Voltaire saw in this affair an admirable opportunity; his conviction of the innocence of Calas was soon the conviction of all. A man called Sirven, also a Huguenot, was accused of having killed his daughter in order to hinder her from turning Catholic. Voltaire took these two affairs in hand and first obtained the rehabilitation of the Calas. Carmontelle made an engraving, representing the Calas family in prison, which was sold by the thousand. The word Calas became synonymous with tolerance, with religious liberty. It cannot be denied that all this movement, which shook society to its foundations, was the work of one man, of Voltaire. Élie de Beaumont became famous at once as the lawyer intrusted with the defence of Sirven. The cause of Calas and of Sirven had become the cause of all the oppressed in Europe. Voltaire, from his little retreat at Ferney, had really the eyes of the whole world on him. His personal failings and even ridiculousness disappear. His enemies will find many stones which they can throw at his statue in this work of Lucien Perey and Gaston Maugras, but the statue is immortal, and the sardonic smile is still there; and many a man will say in vain with Musset,

"Dors-tu content, Voltaire," etc.,

before the world will forget the great services rendered by the defender of Calas and of Sirven.

Correspondence.

BLAINE'S TACTICS.

To the Editor of The Nation:

Sir: Mr. Blaine has a singular fatuity in having his public utterances misconstrued. He is continually saying one thing and understood to say something else. Even the stenographer who takes his language as it falls from his lips, is liable to fail in correctly reproducing it. It is strange that so great a statesman should have such difficulty in making plain his opinions or, indeed, the simplest statements of facts to others. The truth seems to be that Mr. Blaine is never sure himself what he says, until he knows the effect it will have. If a deliverance delights his friends and at the same time gives his opponents no advantage over him, its success secures it from any question as to its genuineness. But if a rash venture should prove ill-advised, and he cannot successfully meet the criticism which it excites, he wastes no energy in trying to defend his position, but hastens to disclaim its utterance. This is Mr. Blaine's peculiar stratagem, and in it lies one of his chief claims to "smartness." It gives him a great advantage over his critics, for it reduces all discussion with him to a question of veracity; and as his reputation for veracity is beyond injury, it hurts neither his own feelings nor his standing with his supporters to fasten a lie upon him.

His letter concerning his speech in Pennsylvania on civil-service reform is on a line with these tactics. It proves that Mr. Blaine's afterthought has convinced him that he went too far in allowing his resentment towards the supporters of civil-service reform for opposing him in 1884 to lead him to an attack on the reform itself. His letter is equivocal as to his real attitude on this subject, and was doubtless meant to be so. He protests his never-dying attachment to civil-service reform, but is opposed to the English system. What system he favors he does not say. That which the Independents of 1884 favored, and which is now enacted into a law, differs in many details from the English law, but Mr. Blaine is opposed to that also, because in its main lines it corresponds with the English. He is also opposed to free trade because it is English. These reasons will likely win him more votes than any other reasons could do, hence it is not necessary to give any others. As pointed out in the *Nation* a short time ago, the corruption in the English civil service, the animadversion on which by Lord Randolph Churchill furnished the text for Mr. Blaine's diatribe, pertains to features which are omitted from the scheme of the American reformers, and Mr. Blaine was fighting the air. But he knew that his hearers were not aware of these distinctions, and his purpose was just as well accomplished.

When, however, he falls foul of the Massachusetts Independents, the only ignorance in them on which he can rely is their ignorance of what he said in Pennsylvania, because they were not

there to hear him. He now thinks it wise to declare his devotion to civil-service reform, but not the civil-service reform which civil-service reformers advocate. His interpretation of civil-service reform would doubtless resemble that given to it by the wing of the Democratic party of which the late Mr. Hendricks was, by reason of his official position, the leader and type. These gentlemen, for many years before the accession of their party to power, proclaimed from the stump and incorporated in their platforms, as a cardinal principle of Democracy, the reform of the civil service. Mr. Pendleton was so impressed with the prevalence of this sentiment in the Democratic press and among Democratic orators, that he sought eternal renown as the apostle of this great Democratic doctrine by procuring the passage of the law now in force. It seemed as though the millennial era would dawn upon the votaries of this cause with the advent of Democratic supremacy. But when that event happened, Mr. Hendricks made haste to announce that what he and his co-partisans meant by civil-service reform was putting Republicans out of office and putting Democrats in their places. Mr. Blaine gives every indication that he is juggling with words in like manner when he says he is in favor of civil-service reform, while at the same time denouncing the only scheme which has been formulated into a system, or suggested, together with all who support it. This is his style of statesmanship. It is his usual flippant manner of dealing with public questions, reduced to the extreme of triviality.

Now, the phrase "civil-service reform" has a definite and universally received acceptation. It means the abolition of fealty to the party in power as a necessary qualification for the ministerial offices, and the substitution of the test of fitness alone. If Mr. Blaine is in favor of civil-service reform in this sense, he has never said so, and carefully avoids saying so in his letter. For the only law in force, or suggested for carrying this design into effect, he has only denunciation, and he proposes nothing to the same end. To say at the same time that he is in favor of civil-service reform is not simply self-stultification; it is an indignity to every reasonable person in the country over which Mr. Blaine is so anxious to preside. So sorry a trifling with language is beneath the condescension of a punster, and will likely repel more votes than the anti-English dodge will catch. This is of more concern to him than logic or self-respect. It is not so remarkable that Mr. Blaine should thus treat grave questions of public policy, as that a respectable number of voters should accord a standing as a serious candidate for the Presidency to a man who constantly makes game of their intelligence.

M.

WICHITA, KANSAS, November 23, 1886.

RELATION OF ECONOMY AND GOOD HABITS TO LABOR REFORM.

TO THE EDITOR OF THE NATION:

SIR: I regularly read your excellent journal. I am a workingman—a printer. It strikes me that one good way in which to help "settle the labor question" is for work-people, in whatever trade, profession, or occupation engaged, to seriously adopt some of those methods and habits by which good business men usually succeed. "Seest thou a man diligent in his business? He shall not stand before mean [obscure] men; he shall stand before kings." The world owes no man a living; but every man is entitled to a chance to *earn* a living, and to an opportunity to acquire property. Henry George's panacea for the cure of the ills of which many laboring people complain—the nationalization of land, abolishing private ownership of lots and acres—is just what intelligent, progressive workingmen do not want. Every enterprising toiler likes to possess something—either houses, lots, lands, horses, cattle, or some species of property—which he can call absolutely his own.

The negro slaves of the South were freed as a military necessity. So those workmen who are slaves of the intoxicating cup must be freed from that bondage as a basis of genuine prosperity and happiness. If work-people were to withdraw their patronage from the saloon, it would be one of the most important business measures which they could adopt. It is not a mere matter of taste or of opinion to say that a workman, in order to materially improve his estate, shall spend neither time nor money in saloons; it is *business*, it is a necessity. The liquor saloon is the greatest obstacle to progress among laboring people. Miss Frances E. Willard, in her recent annual official temperance address at Minneapolis, truly said:

"The central question of labor reform is not so much how to get higher wages as how to turn present wages to better account. Until our friends, the Knights of Labor, study this problem they will have learned but half their lesson. Already in seventeen States their children are learning truths that will save dimes enough per day from the accursed poisons which form the attractive ingredients of the cigar and mug of beer, to enlarge the family income from poverty to plenty."

Why does not every workingman simply consider *himself* a capitalist and a business man? Why does he not do his best to improve his general condition through honesty, industry, sobriety, economy? No liquor saloon has a right to exist on the patronage of laboring people. Workmen should let the big capitalists do all the liquor-drinking. Successful men in business are generally those guided by intelligence and honesty, industry and good habits. Increased wages, without these four elemental principles, will not especially better the condition of the workingmen.

ADALBERT BEACH.

CHICAGO, November 25, 1886.

THE VIRGINIA ELECTION.

TO THE EDITOR OF THE NATION:

SIR: The assertion that the President is responsible for the losses of the Democratic party in Virginia is a strange one, in view of the fact that there was not, at the time of the late election, a Republican in any office of any consequence in this State. The internal-revenue officers of this State are, without exception, Democrats. The same may be said of the custom-house officers. No post-office which pays is filled by a Republican. So that as far as the Federal offices of this State are concerned, the Administration may be said to have made a clean sweep.

Again, Mr. Cleveland has been liberal in his recognition of the claims of citizens of Virginia. To Mr. Goode he gave the place of Solicitor-General; to Gen. Johnston, the office of Railroad Commissioner; to Mr. Withers the Consul-Generalship to China; to Mr. Keiley the office of Minister to Italy; to Dr. Curry the place of Minister to Spain; and to many other Democratic citizens of Virginia he has given places of honor and profit. So that it will not do to say that the President has been to blame in the matter of dispensing patronage to the Democrats of Virginia. It might, in view of the facts above cited, be said that a liberal distribution of offices has been found to be wholly inadequate to strengthen a party.

The course of the Administration has had nothing to do with the losses experienced by the Democrats in this State. An entire want of organization, an apathy wholly unprecedented, a confidence that all was well, begotten by recent victories, were the prime causes of Democratic losses in this commonwealth. To which may be added that in several districts the Democratic candidates pursued a shilly-shally policy on the tariff issue, endeavoring to stand on one platform while attempting to run on the other.

Very respectfully, H.

MADISON C. H., VA., November 21, 1886.

WATER IN PHILADELPHIA POLITICS.

TO THE EDITOR OF THE NATION:

SIR: I am disposed to agree with the *Nation* in many of its arguments upon the tariff question, but your correspondent's views as to the subject of Philadelphia water, of November 18 last, are altogether erroneous.

I have seen Mr. W. W. Carr's pamphlet upon "The Legal Protection of the Present Water Supply for Philadelphia," and have no doubt that the facts as he states them are true, for from Mr. Carr's notes they appear to have been taken from official and public sources. I do not understand, however, that they warrant the conclusions drawn by your correspondent. In fact, the real reason why no change has been made in our source of water supply is entirely political, and has nothing to do with manufacturing interests. For instance, at one of the recent meetings of Councils a report of a geological survey was presented, which has been going on for three years, at a cost of over $30,000, of the Perkiomen and Delaware water-sheds, having in view the procurement of a distant source of supply. The survey was begun under the former Chief Engineer of the Water Department, whose method of conducting the office without regard to the wishes of our political bosses led to his dismissal; and his more subservient successor, in a few lines annexed to the survey report, denies there is any necessity of making a change.

Of course, the Water Department as it now is gives great political power, and is no small item in helping to swell Republican majorities or to furnish material for Blaine enthusiasm; but the water difficulty is one of the evils of our political bossism, and is not connected with manufacturing interests.—Yours truly, I. A. W.

PHILADELPHIA, November 26, 1886.

CAREY BOWDLERIZED.

TO THE EDITOR OF THE NATION:

SIR: Have American readers grown too "nice," that the editor of *Harper's Magazine* for December found it necessary to substitute "And then how happily we'll live" for "O then we'll wed and then we'll bed," in the last line but one of "Sally in our Alley"? Mr. Palgrave found no such necessity in compiling his 'Golden Treasury,' and what his taste and judgment have approved, even the editor of *Harper's* might safely have accepted. The literary effect of the change is obvious from a comparison of the original and spurious lines. Poor Henry Carey!

CHAS. F. BENJAMIN.

WASHINGTON, November 24, 1886.

CIVILIZATION AND POLITENESS.

TO THE EDITOR OF THE NATION:

SIR: I have just read with amazement these lines in Mr. Lowell's admirable Harvard oration:

"The very names of civilization and politeness show that the refinement of manners which made the arts possible is the birth of cities," etc.

In the name of etymology, what would he have us think? That "civilization" finds its origin in *civilis* is sound learning, though it be common. But is it accepted Harvard doctrine that "polite" has any other relation to πολίτης than an accidental likeness of sound and spelling? If yea, it might well be deemed that Dr. McCosh has let

pass his best opportunity for grim revenge, in urging that not yet does it seem time altogether to dismiss the humanities from the Harvard *curriculum*—or could Mr. Lowell have been thinking "urbanity," when he wrote "politeness"?

But, "Quandoque bonus dormitat Homerus!"

T. B.

ROCHESTER, November 22, 1886.

BUTADES VS. DIBUTADES.

TO THE EDITOR OF THE NATION:

SIR: From the review of Mrs. Clement's 'Stories of Art and Artists' in your last number, I notice that Dibutades, after having been deprived of existence over thirty years ago, is again assigned a place in art story; and thinking it about time that he be expunged from art literature in America, as he has been in Germany, France, and England, I beg the indulgence of your readers for the following account of the matter, as between the names Dibutades and Butades, the latter being the name under which he is now exclusively known among *archæologists* abroad.

The person in question, the Sicyonian potter to whom is ascribed the invention of modelling portraits in clay, occurs twice in a passage of Pliny's 'Natural History' (Book xxxv., chap. 12, paragraph 43). Of this work there have come down to us some 200 MSS., most of them more or less fragmentary; the more important ones have been divided into two classes, the very fragmentary "vetustiores" and the more complete "recentiores." All the old editions of Pliny are based upon the latter, and in these the potter in question appears as Dibutades in both places where the name is mentioned, although one of them (Codex Riccardianus of the eleventh century) does give *Butidis* in the second mention of the name. By far the best MS. of the first class (the vetustiores) is the Codex Bambergensis of the tenth century, which contains only Books 32–37. This MS. was first collated by Jan and Sillig; in the first passage it has *Butares*, for which Sillig (second edition, 1851–1858) very properly conjectures Butades (which is also the reading in the second passage), and this reading has been universally accepted by later editors of Pliny: *i. e.*, Urlichs, 'Chrestomathia Pliniana,' 1857, Jan, 1864–1865, and Detlefsen, 1866–1873.

So much, then, for the editors; turning now to archæologists and art historians, we find the following state of affairs. Brunn, in the first volume of his 'Geschichte der griechischen Künstler,' published in 1853, uses Dibutades on p. 23, Butades on p. 403; but that he was fully convinced of their identity and the correctness of Sillig's conjecture is shown by turning to the index in vol. ii., published in 1859, where he refers Dibutades to Butades, and cites both passages of vol. i. under this name. Overbeck, in 'Die antiken Schriftquellen zur Geschichte der bildenden Künste,' etc. (1868, p. 46, Nos. 259, 260), gives Butades in both passages, and he figures under the same name in Overbeck's 'Geschichte der griechischen Plastik' (third edition, 1881, vol. i., p. 69). As Butades, likewise, do we find him in Lübke's popular 'History of Sculpture,' translated by F. E. Bunnètt (vol. i., p. 76). Of the Germans, Wittstein alone, in his translation of Pliny (1882), holds to the old text, and gives Dibutades in one place, Butades in the other.

Turning to England, it may be interesting to state, that on the Albert Memorial in London, among the ancient sculptors, there is figured our Sicyonian potter. He is there called Dibutades, and I remember the sarcastic remarks made at the expense of the English by a young German archæologist, when we stood before the resurrected Dibutades last year. Murray, in his 'History of Greek Sculpture' (1880, vol. i., p. 72), knows only Butades, and his work may well be taken as an embodiment of the present state of archæological knowledge in England. W. C. Perry, on the other hand, in his 'Introduction to the History of Greek and Roman Sculpture,' gives in his text (page 47) Dibutades, while, strange to say, the citation from Pliny, at the bottom of the same page, gives the name correctly as Butades. It is difficult to account for such inconsistency, but Perry's book is hardly a standard work on the subject.

In France, too, Butades is firmly established, as is seen by the latest comprehensive work on the subject, Collignon's 'Manuel d'Archéologie,' where, on page 102, *Boutades* and his invention are duly noticed.

Coming now to our own country, we find the research of the last thirty years entirely neglected. Mrs. Mitchell, in her 'History of Ancient Sculpture,' p. 172, places Dibutades once more upon the stage. Her error is easily accounted for. Note 254 shows us that she received her information from Brunn's 'Geschichte der griechischen Künstler,' p. 23, where, as stated above, he does use the name Dibutades. Had Mrs. Mitchell merely taken the trouble to consult the index of the book, she would have ascertained that Brunn himself repudiates that name. And now we find Mrs. Clement also reviving Dibutades; and, as her book will find readers, who may unfortunately obtain their knowledge (?) of art history from it, I thought it proper to protest against Dibutades, and to urge that this supposed inventor of modelling portraits may in the future be called by his proper name, *Butades*.—Yours respectfully,

J. C. MORGENTHAU.

NEW YORK, November 20, 1886.

RAILROAD EXTENSIONS.

TO THE EDITOR OF THE NATION:

SIR: It is currently reported that the Atchison, Topeka and Santa Fé have determined to extend their line from Kansas City to Chicago. This, of course, will benefit Kansas City, and in that respect I am glad of it; but having, as a stockholder and investor, been a victim of the railroad building of 1873, I really pity the innocent lambs who are now likely to be shorn of their wool by these unwise and uncalled-for extensions. There are already three direct lines from Kansas City to Chicago, viz., Chicago, Burlington and Quincy, Chicago and Alton, and Rock Island, with a fourth, Chicago, Milwaukee and St. Paul, in course of construction and soon to be there, to say nothing of the more indirect route via the Wabash, making practically five roads between Kansas City and Chicago. What in reason another road is needed for, it is hard to tell.

If the Atchison has no hidden ulterior purpose to serve in building a new road, could it not easily have arranged with one or more of these five roads, either by purchase (Chicago and Alton) of the whole or part interest, or by permanent traffic arrangements, and thus save the useless expenditure of $20,000,000 in a country already gridironed with roads?

The result may be great injury to existing lines between Kansas City and Chicago; but does any sane man suppose that the Chicago lines will not recoup themselves by extensions into the Atchison territory and paralleling all their most profitable lines? It will not be in railroad human nature not to do so. The same argument that carries the Atchison to Chicago would hold good to extend it, or any of the Granger lines, to New York. Years ago there was a rule on some road (the name of which I do not now recall) that no purchase or extension involving more than $200,000 interest per annum should be made without the assent of stockholders previously obtained. With such a rule in force, and the matter properly explained, I doubt if the Atchison extension would go through.

The facility with which syndicates and banks now take loans and put them off on the public, as was the case with the West Shore bonds, aids greatly in this unwise railroad construction; but if they all held themselves to as strict a responsibility as the Barings did after the negotiation of the Eastern Railroad loan, when they paid the defaulted interest for a number of years, I doubt if bankers would so readily father the loan for the commissions they make.

The negotiation of this loan will temporarily let loose a good deal of idle capital for use on call to the bankers and brokers in New York and Boston, but when called in, having been used up in unprofitable railroad construction, then will come the crash, and the poor victims will call on "the heavens to cover them." Our railroad managers of to-day are truly Napoleonic: "After them the deluge." For another quotation I would say: "Those (railroad investors) whom the gods would destroy they first make mad."

A VICTIM OF 1873.

Notes.

THE Essex Institute has begun the publication of a series of etchings of old houses and places of interest in and about Salem, Mass. These etchings are 3¼x5 inches in size, and are for sale at the rooms of the Institute. The set comprises the following: Roger Williams House, built in 1635, as it appeared in 1828; Pickering House, built about 1650; Turner House, a favorite haunt of Hawthorne's, and sometimes called the "House of Seven Gables"; Peabody House, described by Hawthorne in 'Dr. Grimshaw's Secret'; Birthplace of Hawthorne; Gallows Hill; Custom-house; Rebecca Nurse House; First Church in Salem, built in 1634; Gen. Gage's Headquarters. Orders may be sent to George M. Whipple, Secretary.

Ginn & Co. will be the American publishers of Prof. Jebb's work on Homer, soon to be issued by James Macklehorse & Sons, Glasgow.

D. Lothrop & Co., Boston, will issue 'The Young Folks' Golden Treasury of Poems,' illustrated; and 'Faith and Action,' selections from the writings of F. D. Maurice, with a preface by Phillips Brooks.

Thomas Whittaker publishes directly a symposium on 'Future Probation,' or the possibility of salvation after death, by a number of leading English clergymen; and 'Sermon Briefs,' suggestive outlines for every Sunday of the year.

John E. Potter & Co., Philadelphia, publish immediately 'How He Lost Her,' a society novel, by Jonathan Barrett.

Joel Munsell's Sons, Albany, will undertake a work having for its title 'American Ancestry,' and for its aim the exhibition of the male lineage of every citizen of the United States who can trace his descent from families settled in America previous to 1800.

The American Economic Association have ready 'Coöperation in a Western City [Minneapolis],' by Albert Shaw. Dr. Richard T. Ely, Johns Hopkins University, Baltimore, is the publisher.

Two new aids to the study of Browning have been issued, one in the well-known Rolfe school-series (Harper & Bros.), the other by Prof. Corson, under the title 'An Introduction to the Study of Robert Browning's Poetry' (Boston: D. C. Heath & Co.). The first contains twenty poems, including "Pippa Passes," with an introduction made up mainly of extracts from eminent critics in praise of Browning, and with full notes at the end explaining the geographical, his-

torical, and artistic allusions, and recording the textual changes made by the poet. The selections show good judgment, and have a wider range than those of Prof. Corson. He is more interested in the "thought" of Browning, and elucidates it in thirty-three of the poems by means of several brief introductory essays, by paraphrases of the poems, and by foot-notes on the text. The principal essay, on "The Idea of Personality in Browning's Poetry," was noticed by us on its first issue; the others are attempts to excuse Browning from the fault of obscurity, to maintain that his harshness is a part of his art, to declare him a master of blank verse, etc. The volume is more valuable in its expository portions, which pupils in Browning will find serviceable.

The Shelley Society's proposed publications for 1887 follow the same lines as the issues of 1886. The latter were twelve in number, and included five type facsimile reprints of early editions, Rossetti's 'Memoir,' the 'Note Book,' part one of Forman's 'Shelley Bibliography,' and reprints of some of Shelley's minor work. In 1887 the same number will be issued, if the funds permit, and among them will be type-facsimiles of 'Posthumous Fragments of Margaret Nicholson,' 1810; 'Refutation of Deism,' 1814; 'A Letter to Lord Ellenborough,' 1812; 'Masque of Anarchy,' 1832; and 'Proposals for an Association of Philanthropists,' 1812; Robert Browning's essays and poems on Shelley; the biographical articles by Stockdale, Hogg, Thornton Hunt, and Peacock; a facsimile of Forman's copy of 'Laon and Cythna' as corrected by Shelley's hand into 'The Revolt of Islam'; a Shelley Primer, two volumes of Papers, and part two of the 'Note Book.' Several of the volumes of the first year were presented by members, but presumably the Society means to be self-supporting. The number of members needs to be increased by about one hundred, and subscriptions for the second or for both years are solicited. The fee for America is $5.25, and may be sent to Prof. J. M. Peirce, No. 4 Kirkland Place, Cambridge, Mass. This entitles the member to a copy of the publications free; and they have been so well selected and executed that any one interested in Shelley cannot fail to be gratified by their possession, especially as original editions of Shelley are of excessive rarity and price.

Macmillan & Co. send us two more volumes of Mr. Saintsbury's admirably annotated French text-books (Oxford: Clarendon Press). "Esther," like the other masterpieces of the French drama published by the same editor, has good notes, and is preceded by sixty pages of interesting prolegomena on the life and writings of Racine, the progress of French tragedy, and the circumstances that led to the production of the play. The 'Scenes of Travel,' by Théophile Gautier, is a new venture as a text-book. It contains a very readable selection from the various 'Voyages' of this highly gifted, eccentric, and difficult author, whose picturesque style, varied and rich vocabulary, and wealth of allusion afford ample opportunities to puzzle even very advanced French scholars. Mr. Saintsbury has not been lavish of his notes. He explains so well that he makes us regret that he has not treated Gautier as liberally, as to the abundance of annotations, as he has older and more classical writers.

The advance sheets of the *Century* for December contain the second instalment of the Life of Lincoln. The story moves rapidly, and this division carries the reader through the store-keeping days of the hero, the Black-Hawk war episode, the first unsuccessful canvass for the Legislature, the surveying job, the election to the Legislature and service there, down to the Lincoln-Stone Protest. The narrative is of absorbing interest, and is remarkable for its strong and crowded pictures of the general life and social conditions of the community, for which the topics of the improvement of the Sangamon River, the Indian war, and the internal-improvement legislation of 1836-37 offer capital opportunities. The sketch of the condition of public opinion in regard to slavery also has telling touches. The ease with which Lincoln in his youth came to the front in whatever he undertook, is as noticeable as is his bent both for duty and for success; and it is interesting to observe in his first political writing, his candidate letter, the same markedly individual style in literary construction and mental tone which was to characterize him in maturity.

The October number of the *English Historical Review* contains four articles. The first, by Mr. John B. Bury, is upon "Euboia before the Lelantine War." "No continuous history," the writer remarks, "has been written of the island of Euboia"; the article contains, therefore, a real addition to our available knowledge. The same may be said of the second article, "The Origines of the University of Paris," by Rev. H. Rashdall, although it professes to be only a review of Denifle's great work. The theme of the article is that the real organization of the University consisted in the establishment of the four nations of the Faculty of Arts (a system borrowed from Bologna), and of the Rector of the same Faculty, who speedily came to be the head of the corporation. These steps were taken early in the thirteenth century. The writer pronounces his article dull; but all who are interested in the history of education will find it far from being so. Rev. Nicholas Pocock treats of "The Restoration Settlement of the English Church," pointing out the contrast between this and the work of the sixteenth century. The development of Calvinism in the Church of England, and its antagonism to the Lutheran spirit, are lucidly analyzed. The fourth article, "François Joseph Dupleix," by Sidney J. Owen, will be of interest to all students of the growth of the English power in India. Among the "Notes and Documents" we will especially notice Mr. Walter Rye's very damaging examination of the authenticity of the Squire Papers.

The November Proceedings of the Royal Geographical Society opens with the paper on the "River Systems of South India," read by Gen. Rundall before the British Association. The greater part is devoted to a description of the four great delta rivers emptying on the east coast and draining five-sixths of the peninsula. The rapid growth of the delta formation is shown by the fact that Point Godavery, at the mouth of the river of the same name, "had extended nine miles to the north in thirty years." The Government has spent about twenty-two millions sterling on irrigation works, but has done "very little yet in utilizing the upper waters of the great rivers." Gen. Rundall thinks if storage basins should be constructed on these, the recurrence of famines would be greatly diminished. Following this is a vigorous plea by Mr. D. W. Freshfield for a better geographical education. Regarding geography as "the connecting link between natural science and history," he contrasts the indifference shown to it in England, and the consequent ignorance, with the attention paid it on the Continent. There are twelve university professors of this science in Germany and not one at Oxford or Cambridge, with this result, that the German merchants and clerks are more intelligent than the English, while "the German soldier has learned to read maps, so that not only officers, but every third man in the ranks on a campaign is supplied with one." He refers, also, to the "caravanes scolaires," or geographical tours, taken by school children in Switzerland and France. There is an interesting account of a land journey by Lieut. Kund into the almost unknown region to the east of Stanley Pool in the Congo Basin. Beyond a river which forms the trader's limits, he travelled for two months through a vast forest without reaching its eastern edge. Living in it he discovered a very remarkable semi-civilized tribe of "brownish-red" men, called Zenge. These men—he saw no women—wear their hair "in most cases long, parted in the middle, and plaited into tresses, which were first wound round the neck and tied into a knot upon the chest. Their villages consist of long streets with gable-roofed huts on either side, with neatly kept gardens at their back. The huts were large, carefully built, and clean, and "the village street was swept, and there were round pits for refuse of all descriptions." "They had mostly an intellectual cast," and showed great skill in wood-carving. Fetish and idol-worship seemed to be unknown, as was also cannibalism, which prevails among the tribes west of them. It should be added that they possessed no European articles.

The *Scottish Geographical Magazine* for November prints M. de Lesseps's brief paper on the Panama Canal, sent to the British Association. He estimates its cost at £50,000,000, and that an aggregate tonnage of about twelve million tons will annually pass through it, and confidently expects that it "will be finished by the end of 1889." Dr. Felkin's paper on the question, "Can Europeans become acclimatized in tropical Africa?" is a very valuable contribution to this important subject. He believes that if the dangerous coast region can be quickly passed by means of railways, there are many parts of the high central plateau and mountain regions where Europeans can become acclimatized—a conclusion with which some African travellers, as Mr. J. Thomson, do not agree. Mr. A. S. White contributes a carefully prepared article, which fairly bristles with statistics, on the Balkan States. It is accompanied by two excellent maps, the one orographical, the other political.

Lady John Manners has followed up her 'Advantages of Free Libraries and Recreation Rooms' with a pamphlet of 'Encouraging Experiences of Reading and Recreation Rooms' (Edinburgh: Blackwood; New York: Scribner & Welford). It is very praiseworthy in its intention, but so hopelessly British, not to say parochial, in its attitude, that it is not likely to be useful to those in America who are interested in starting free libraries and reading-rooms. The lists of books are calculated for the latitude and longitude of London, and do not include those likely to be most appropriate and profitable here. The patronizing benevolence of chapter iv, on books for household servants, is delightfully insular.

The separate system of sewerage might better be known as the exclusive system. It is a general term applied to the arrangements designed for the water carriage of liquid refuse without the admixture of storm water, except as far as that is required for special purposes. Sewage can thus be disposed of at much less cost for construction and repair of apparatus, and with far better sanitary results, than when the older-fashioned large conduits are built and maintained. It is probable that for nine-tenths of the towns in the United States which require sewerage at all, the adoption of this general plan, of which there are several varieties, would result in an average pecuniary saving to the community of four-fifths of the cost of the older and grosser method, and with marked sanitary advantages besides. Engineers and corporations contemplating such works will find in Messrs. Staley and Pierson's 'Separate System of Sewerage' (Van Nostrand), a very practical account of what may and what may not be done, with good working-tables, plans, estimates, contracts, and a dozen plates, all based upon extensive experience. We have not verified the calculations, but we do not doubt their substantial correctness, nor that the

book is, as it seems, a trustworthy publication. Were it only properly indexed, its value for reference would be greatly increased. As published, a moderate table of contents is the only key to its included material.

'An Elementary Treatise on the Theory of Determinants: A Text-Book for Colleges,' by Paul H. Hanus, formerly Protessor of Mathematics in the University of Colorado, comes to us from Ginn & Co., Boston, and deserves mention, if for no other reason, because it is the first regular treatise on the subject published on this side of the Atlantic. It is also worthy of notice that this first American treatise was, as the author informs us, written in that part of the United States which may still be called the "Far West." The author has endeavored, and with good success, to adapt his work to the use of those students who have no assistance from a teacher. This is a most important point, because the opportunities for obtaining the services of a teacher of the theory of determinants are, in this country, as yet very limited. The great majority of those who wish to become acquainted with this comparatively new, but already most extensive and important, branch of mathematics, must rely wholly upon books and their own efforts. The work seems to us very skilfully adapted for this purpose, and is abundantly supplied with examples of the practical application of theory.

In a paper before the Massachusetts Teachers' Association in Boston last Friday, Mr. Samuel Thurber of Milton Academy discussed "Some Tendencies of Secondary Teaching in Europe." From a wide reading of the recent pedagogic literature of Germany, Mr. Thurber concludes that the gymnasia are rapidly losing ground in the affection and respect of the German people. In the revival of learning, the classical authors were eagerly sought because they offered what could not be found elsewhere—works of supreme literary excellence—and were thus the only open roads to culture. Now, although other paths are open, the classics still hold their place in the schools, but the old humanistic ideal has become confused with modern philology, which studies the languages for their own sake. The result is serious complaint of the overpressure imposed on pupils, increased by a knowledge of scanty attainment and weakening appreciation of classical literature. Great changes in the plan and programme of German schools are under vigorous discussion. The result cannot be predicted in detail, but it is safe to say that the ancient languages will eventually be far less prominent than they now are in German upper education, and that natural science and the modern languages will receive increased attention.

In the furtherance of its enlightened policy with regard to the prosecution of astronomical and physical research, the French Government has lately sanctioned a grant of the funds necessary to the completion of the observatory at Algiers, which is expected to be in full operation next spring. Two assistants have already been assigned to M. Trépied, and the observatory is expected to take an active part in stellar photography and spectroscopic research.

Under the direction of M. Beuf, late of the French navy, a new observatory has been erected in La Plata which has a fine instrumental equipment, including an equatorial of the "coudé" pattern, now quite common in France, a large meridian circle, an apparatus for celestial photography similar to that of MM. Henry at Paris, and a number of geodetic instruments. At first the efforts of M. Beuf will be directed to a geodetic survey of the vast territory of the province, and will include a measurement of an extensive meridian arc in the plains of Chaco and Patagonia, of which the latter may be expected to afford valuable results in the direction of further knowledge of the size and figure of the earth.

The recent discovery of the "curse of patronage," and that "the only way to be without enemies is to be without patronage," is (writes a correspondent) nothing new, but only a fresh illustration of the fact that there is no new thing under the sun. Byron, though he declared that kings never learned anything well except riding on horseback—and that only because horses are not flatterers—yet must have admitted that Louis XIV., two centuries ago, knew well that the power to give offices must be pernicious to popularity: for he must have read. in Voltaire's 'Siècle de Louis XIV.' that sovereign's pathetic exclamation: "Toutes les fois que je donne une place vacante, je fais cent malcontents et un ingrat." To feed to the full five thousand men with five loaves and two fishes, is the exclusive prerogative of superhuman thaumaturgy.

—There are out-of-the-way bits of life in a great city, as there are out-of-the-way corners, which one may live long without ever seeing or hearing of. It is curious to have wandered much through London streets and looked over innumerable London journals, illustrated and not, and to first learn of the Apple-Tree Restaurant from a Frenchman. Philippe Daryl relates in *L'Illustration* his visit to this eating house in the Poultry. Its full name is Apple-Tree Restaurant (vegetarian) and City Temperance Rooms. It aims to combat intemperance both of food and drink, to get the better both of carnophagy and œnoposis by giving to those who believe that meat and alcohol alike brutalize man a place where they can get more healthy foods without the temptation which, in the general restaurant, sight and smell offer to the imperfectly regenerate. The bill of fare certainly promises well:

"*Porridges.*—Oatmeal. Hasty-pudding. Buckwheat.
Soups.—Bean, Tomato, Rice.
Entrées.—Pâté of haricot beans. Broiled potatoes. Rice with curry. Lentil fritters.
Vegetables.—Potatoes, fried, stewed. Fresh carrots. Lima beans with parsley sauce. Haricot beans. Brussels cabbage. Spanish onions. Green peas with mint. Beets.
Pâtés.—Macaroni. Tagliarini.
Puddings.—Cabinet. Date. Custard.
Dessert.—Blanc-mange. Pine-apple. Gooseberries. Apricots. Apples. Peaches. Plums. Cherries. Strawberries. Cranberries. Candied ginger. Bananas.
Miscellaneous.—French salad. Cheese. Cucumbers. Celery.
Drinks.—Milk. Milk with beaten egg. Milk and Seltzer water. Lemonade. Seltzer water. Orange champagne."

—Here, surely, was enough to please the palate and fill the stomach. But, unfortunately, M. Daryl implies that though a shilling bought him all that he needed to eat, there was no pleasure in eating it: the artistic element was wholly wanting. The vegetables were substantial enough, but unspiced and flavorless—a serious mistake if the object of Apple-Tree is to win converts to vegetarianism. If the dishes had been prepared with that skill which one finds in the smallest French eating-house, where a plate of beans may be a dinner fit for a prince, the ranks of the consumers of dead flesh might be speedily depleted, for no one can supply a meat dinner for a shilling. M. Daryl complains, also, as a Frenchman would be sure to do, of the absence of wines. The Apple-Tree might at least furnish cider. It certainly is strange that neither tea nor coffee is on the bill of fare. Our Holly-Trees and Oriental Coffee-Houses find coffee a most powerful weapon with which to fight alcohol. We have heard men rejoice that since their establishment they were able to get along without whiskey. It is true that it is fighting fire with fire: there are some dangers in the unintoxicating beverages, but they are vastly less. However, the food and drink, such as they were, attract customers. There were about fifty in the room when M. Daryl entered it, two or three clergymen, several professors or doctors, apparently, and the rest clerks. The latter, no doubt, were glad to get a satisfying meal for a shilling, and possibly indulged their carnivorous tastes at breakfast elsewhere. But they all, he says, had a melancholy air, and seemed to be performing a duty rather than enjoying a pleasure.

—In his address at the last meeting of the British Association, Sir James N. Douglass, President of the Section of Mechanical Science, presented many matters of interest in the development of lighthouses, light-vessels, buoys, and beacons, together with their mechanical and optical apparatus. The rapid growth of commerce during the last century has required such an increase in the number of coast lights that, while in 1860 the total number throughout the world did not exceed 1,800, it is at present not much less than 4,000. In 1759 Smeaton's lighthouse on the Eddystone was illuminated by a light whose intensity was about sixty-seven candle units, and no optical apparatus was employed for condensing the radiant light of the candles and directing it to the surface of the sea. The efficiency of this illuminating apparatus appears, according to experiments which Mr. Douglass has been conducting, to have been about 1·2400th part of that of modern lighthouse apparatus occasioning the same expenditure. Tracing the development of apparatus for lighthouse illumination through the invention of the cylindrical lamp-wick, by Argand, in 1782, the dioptric system of Fresnel, and the introduction of illuminating gas in various forms, we come to the first important application of the electric-arc light at the South Foreland High Lighthouse in the latter part of 1858, which was sufficiently encouraging to lead to the permanent installation of the electric light at Dungeness in 1862, and at Cape La Hève by the French lighthouse authorities in the following year. These lights met with varying success, which was on the whole far from encouraging, as frequent extinctions of the light occurred from various causes, and the oil light had at such times to be substituted. In 1876 a series of trials of various dynamo-electric machines was made by the Trinity House at the South Foreland Light, the results of which brought out a machine that has worked satisfactorily for several years. The successful development of the electric-arc light for lighthouse purposes acted merely as a keen stimulus to inventors of burners for producing gas and oil luminaries, and, with the subsequent reduction in the price of mineral oil, the efficiency of the latter as an illuminator was very largely increased.

—In 1881 it was considered by the lighthouse authorities of Great Britain that the time had arrived when it was absolutely necessary that an exhaustive series of experimental trials should be made, on a practical scale, for the exact determination of the relative merits (both as regards efficiency and economy) of the three lighthouse illuminants, electricity, gas, and mineral oil. This question was, in July, 1883, referred by the Board of Trade to the Trinity House, who accepted the responsibility of carrying on the investigation, and formed a committee of members who secured the friendly coöperation of the Scotch and Irish Lighthouse Boards, and of many distinguished men in Great Britain and elsewhere. The Trinity House Committee courted the fullest inquiry. All their arrangements were open to public inspection. Many engineering members of scientific societies visited the station, and officers from the lighthouse services of France, Germany, Denmark, Norway and Sweden, Russia, Italy, Spain, Brazil, the United

States, and Canada were present to witness the experiments. During a period of more than twelve months the experimental lights were on exhibition, and were watched by numerous observers, trained and untrained, scientific and practical, and a vast amount of valuable evidence was collected, by the aid of which the Committee were subsequently enabled to state their conclusions with definiteness. It was demonstrated that the electric arc had the most important requisites of a lighthouse luminary, viz., maximum intensity and minimum focal dimension; and, in all states of atmosphere, from clear weather to thick fog, the incontestable superiority over the utmost efforts of its rivals, gas and mineral oil. With the best gas and oil luminaries as employed in haze and fog, when maximum intensity only is required, the question of merit resolved itself into one of pure economy, and mineral oil at the present market prices was found to have a considerable advantage. The relative penetrability per unit of light of the best gas and oil luminaries in haze and fog was found to be practically identical. In certain conditions of thickened atmosphere the electric-arc light appears at some disadvantage, being absorbed more largely by haze and fog than either the oil or gas light, while all three are nearly equally affected by rain. The final conclusion of the Committee on the relative merits of electricity, gas, and oil as lighthouse illuminants is, that for ordinary lighthouse purposes mineral oil is the most suitable and economical illuminant; while for salient headlands, important landfalls, and places where a very powerful light is required, electricity offers the greatest advantages—conclusions which, it may safely be asserted, cannot fail to assist in the development of lighthouse illumination, and will thus tend toward the reduction of loss of life and property at sea.

—Grimm's new 'Life of Raphael' incidentally shows Cicero's *commune vinculum* between one art and another. Nothing, according to Grimm, has aided him so much in Raphael research as photography. Passavant, after many a journey to inspect sketches by Raphael which are dispersed all over Europe, was unable to see them all. Besides, he had often forgotten one sketch before he arrived at another with which he wished to compare it. The copies he had were all more or less unfaithful. He died without the sight of photographic reproductions. But the collection in photographic facsimiles of Raphael's drawings, one and all, which Prince Albert brought together, was epoch-making. Then first could comparative study of the great master commence. Spurious works, confronted with genuine, betrayed their true character. "What the Prince Consort," says Grimm, "had accumulated so laboriously, everybody everywhere can now possess at small cost. Every student in a single semester can learn more about Raphael than the foremost connoisseurs knew fifty years ago. It almost seems as if the rôle assigned by fate to the great Umbrian was now just beginning." In a personal way, also, photography has been of no small service to the prince of painters. It has strangely brought to light the vera effigies of Raphael as he drew it himself. In fresco painting it is necessary that the colors be laid on the mortar while it is fresh and soft. The outlines cannot be drawn with a pencil, but must be swiftly scratched with a sharp instrument on the yielding ground. So Raphael formed them when, in painting the "School of Athens," he introduced his own likeness in the right-hand margin. In the lapse of centuries no part of the picture had suffered so much as this—all the more because of constant attempts to cleanse and to restore the portrait, which at last had destroyed its identity. The photographer Braun of Dornach, however, observed that the outlines graved in the hard plaster, though often daubed over, were still discernible. He then caused a strong side-light to strike the wall, which made all colors and later drawing to disappear, while it brought out in deep shadow only the roughnesses which Raphael's tool had raised on the wall. He was thus able to photograph the genuine original outlines. The likeness thus coming forth in resurrection turns out not to resemble any of those passing for authentic except the woodcut prefixed by Vasari to his second edition (1568), and which had been generally discarded as incorrect. The Italian representations of Raphael have usually been derived from the bust set up over his tomb in the Pantheon by Maratta. Those in Germany have come from the so-called Florentine portrait, which, all but mouth and nose, has been spoiled by retouching, and which lacks proofs of genuineness.

ABBOT'S BLUE JACKETS.

Blue Jackets of '61: A History of the Navy in the War of Secession. By Willis J. Abbot. With illustrations, principally by W. C. Jackson. Dodd, Mead & Co.

We have been waiting for some time for a boys' book on the navy in the civil war. The subject is almost unique; it is recent but not too recent, it lends itself readily to spirited treatment, and the facts have been ascertained with substantial accuracy and are within easy reach. The boys want to know all about it, and the older generation wants them to have the knowledge. It is a fresh subject, instructive and at the same time intensely real and dramatic, full of thrilling episodes, of heroic endeavor and performance.

In the 'Blue Jackets of '61' Mr. Willis J. Abbot has essayed to cover this field. The title-page describes the book as a history, and its style, its treatment of the subject, and its holiday appearance mark it as a book for boys. While the author has given an animated story, it cannot be said that he has made the most of his opportunity. His battle-scenes are somewhat lurid, and he loses rather than gains in picturesqueness by a turgid style and profuseness of epithet. Occasionally he is guilty of forcing his facts for the sake of effect. Exaggeration of this kind, whether verbal or historical, is not a good thing for his boy readers, and it may be doubted whether it is much to their taste. The best way to tell a great story is the simplest way—to let it tell itself. Nothing is gained by calling the *Brooklyn* a "grand old frigate," when she was a screw-sloop just four years old, and represented the most modern type of naval vessels of the period. By the same process the sloop *Cumberland* is transformed into a "towering frigate," and Preble's little squadron at Mobile into "huge frigates"—a squadron actually composed of a third-class sloop, a gunboat, and a schooner. Among the elements of description at the author's command are many little harrowing devices, which he calls into frequent use, such as the "shrieking" of shells, and the laying out of instruments in the cockpit. A ram-thrust always—at least on three separate occasions—"hurls" to the deck all the people on board the ram, "with blood streaming from their nostrils"—from which one gathers that the ram is a most sanguinary weapon even to those who use it. After the *Hartford's* passage of Port Hudson, "all on board watched eagerly, save those who lay moaning on the surgeon's tables in the cockpit below." The brilliancy of the *Hartford's* exploit cannot be denied, but the fact remains that her casualties were only one man killed and two so slightly wounded that they immediately rejoined their divisions: and a chance venture at a bit of fictitious detail thus leads to a most unnecessary misrepresentation.

If it were only on points of this kind that Mr. Abbot was at fault, there would be little occasion to dwell on them; but the singular thing is that his lapses occur not so much in obscure technical matters as in those that are known of all men. Most of them would have been avoided by a reference to books as accessible as the well-known "Campaign Series," which the author certainly had, and of which, in some of his descriptive passages, he has made a liberal use. Many of them, indeed, would imply a lack of the most cursory knowledge of the main events of the war, and can only be accounted for by an inexcusable carelessness. Thus, on page 115, Mobile is mentioned as one of the places captured early in the struggle, while on page 156 it is said that Farragut only succeeded in passing the forts below New Orleans late in the war; and conclusions are drawn from both statements. As every one knows, the battle of New Orleans was fought in April, 1862, and that of Mobile in August, 1864. On page 291 it is said that the *Florida* was not allowed to refit in Cuba because the "fortunes of the Confederacy were waning fast," which was certainly not the case in September, 1862, when the *Florida* was at Havana. Many statements are distinctly the reverse of the truth. Thus it is twice said that some of the United States vessels at the beginning of the war were surrendered to the Confederates through the treachery of their officers, when it has always been a source of just pride to the service that, in spite of the temptation, no such case occurred. The *Metacomet* is said to have received her "baptism of fire" at the battle of New Orleans, although at the date of the fight she was not launched. On page 131 the destruction of the fleet at Elizabeth City is credited to Goldsborough instead of Rowan. Foote's wound is said to have "led to his leaving the service," when it is well known that he died on his way to assume command of the South Atlantic Squadron. On page 5 it is stated that all revenue cutters are "officered by navy officers," which is desirable, but is not true; and on page 292, that "in the career of the *Florida*, after her escape from Mobile, there was nothing of moment," though she and her tenders captured or destroyed forty-three vessels, valued at four and a half millions of dollars.

Not only does the book bristle with these minor errors, but the descriptions of important events in several cases are confused and twisted to such an extent that even the participants would fail to recognize them. The accounts of the relief of the *Constitution*, of the abandonment of the Norfolk Yard, of the breaking of the obstructions at New Orleans, are thoroughly misleading; while the confusion and blundering in reference to such well-known actions as Port Hudson and Grand Gulf make it difficult to believe that the writer has ever read a coherent and trustworthy account of the operations on the Mississippi. The effect of each misstatement is increased tenfold by embroidering it with fictitious details. One case of this kind will serve as an illustration. The cruise of the *Shenandoah*, after she was put in commission at Madeira, is thus described:

"Her course lay to the northward, and she was soon in fields that Semmes with his *Alabama* had never ravaged. This made the hunting all the better for the *Shenandoah*, and she burned vessels right and left merrily. She even ran up within a few miles of Portsmouth, N. H., and captured several unsuspecting coasters who came sailing out of port. But the captain knew that such spots as that would soon get too hot for him, so he crowded on sail and made for the Behring's Straits, where he hoped to catch a few returning whalers and see the glorious bonfires made by the barrels of whale oil that the poor fellows had been industriously gathering amid the Arctic ice-floes for years. Capt. Waddell was not disappointed in his expectations, for he reached the straits just as the returning whalers were com-

ing out of Baffin's Bay. One day he captured eleven in a bunch. . . .

"After cruising about the whaling grounds until cold weather drove him away, Capt. Waddell began a tour of the world, visiting Japan, India, South Africa, and finally returned again to the Arctic seas nearly a year later to recommence his war upon the whalers. He had captured and burned several, when the captain of a brig that had but recently left home told him that the war was over; that the Confederacy was crushed, Grant was in Vicksburg, Butler in New Orleans, and Jefferson Davis in a prison cell. . . ."

As a matter of fact, the *Shenandoah*, after leaving Madeira, instead of going to the northward, which would have been exactly in the fields that Semmes had "ravaged," went in the opposite direction, crossed the equator, and proceeded to Melbourne. So far from capturing "unsuspecting coasters" near Portsmouth, N. H., she was never within 2,000 miles of that port. From Melbourne she went to Behring Strait to catch whalers, as the author says, but *not* whalers "coming out of Baffin's Bay," seeing that in order to reach the Strait they would have been compelled, as plenty of his boy readers will be able to tell him, to make the northwest passage—a feat which no whaler has as yet accomplished. The *Shenandoah* had begun her cruise in October, 1864, and she was at Melbourne in January and February, 1865. She reached Behring Strait early in June, and started on her return at the end of the same month. Soon after leaving the Strait she received the news of Lee's surrender and the collapse of the Confederacy, upon which she proceeded directly to Liverpool without touching land. The news may have included the statement that Butler was in New Orleans and Grant in Vicksburg, but it must have been rather old news to Waddell, as he had left Liverpool two years and a half after the former occurrence, and more than a year after the latter. His informant, having got possession of this supposed Rip Van Winkle of the Arctic, to whom nothing was a "chestnut," might with equal propriety have told him that George Washington had been gathered to his fathers. Waddell's "tour of the world," in which, according to Mr. Abbot, he visited "Japan, India, South Africa, and finally returned to the Arctic seas nearly a year later," where he "captured and burned several" whalers, is therefore as mythical as the voyages of Sindbad the Sailor or the Flying Dutchman.

No doubt a work of this kind, written for boys, should be judged by a lenient standard. It is permissible to pad it with anecdote, which is always more or less apocryphal; and if the anecdote is good, nobody need complain. Even if an author, in producing his scenic effects, puts on the red paint somewhat thickly, he may be pardoned. But no one, whether he writes for boys or men, can be excused for perverting facts, even when he does it in this writer's aimless and slovenly fashion.

The illustrations show the same faults as the text. In one, the "Attack on the Hatteras Forts" is being made by a fleet of modern English ironclad rams, bearing no resemblance to the "fine old frigates" that actually conducted it. In another, the *Monitor* is deprived of that useful and conspicuous feature, a smoke-stack, while the *Merrimac* has one whose dimensions are nothing less than colossal. The "Charge of sailors at Hilton Head" is an exciting scene, but a purely imaginary incident; while in many of the pictures the arrangement of sails, flag, smoke, and sea, while it may secure an artistic effect, represents a physical impossibility.

CHILDREN'S BOOKS.—III.

'Down the Snow Stairs,' by Alice Corkran (Scribner & Welford), is among the best of the juvenile books this year. The illustrations, by Gordon Browne, are workmanlike and not without a pleasant humorous quality. The story is a dream of the land where children are naughty and are punished—some visibly in Punishment Land, some indirectly in Daddy Coax's domain of kisses and candy, some in a real inferno of punishment in kind. Kitty, with a star to guide her, with a good spirit on her right shoulder and a bad one on the left, meets temptations of flattery and greediness and the like with a childlike unconsciousness of being tempted, and an almost too-late waking-up to the danger, which is well imagined. There are conventionalisms too, and so there are in the illustrations, where the guardian angel is never well managed; but these are not in great excess. The obvious drawback is the strong resemblance of the whole story to the Alice books—a resemblance which is insisted on, as it were, in the chapter where I and Myself use almost the words and are pictured in the attitude of Tweedledum and Tweedledee; but it is not to be forgotten how little youthful readers will object to that, while, for the older lovers of children's books, the resemblance is so frank and naïf that it is as if the preface or the title-page had said, "Imitated from 'Alice in Wonderland.'"

We have still another such imitation, 'Keyhole Country,' by Gertrude Yerdon (Roberts Bros.), a little book full of illustrations which are anonymous, and also rough and careless enough, though not uninteresting. This book is amusing reading; we like the Caller Herring, who was always being pursued by the fishwives, but never really in danger, because there's "not a word about his having been sold in the song"—as indeed there is not! And the Caller Herring wore at his watch-chain a Sixth Sense, wearing which one heard the flowers talk; but this was not needed to hear the birds and beasts talk—"the upper fifth sense is enough to hear them." Some of the jokes are pure English, or rather London, allusions—like the fun about the Agony Column, which the artist has pictured as an obelisk, in a moment of forgetfulness. All this is amusing reading for grown people, and probably children will like it, too.

'Ginevra, or the Old Oak Chest,' by Susan E. Wallace, with illustrations by Gen. Lew Wallace, is the story of Rogers's heroine, the lost lady of Modena, told in rather grandiose style, in prose. The illustrations are quite unreasonably bad. One feels vexed with such things, nowadays, when fairly good pictures are common in even cheap books. The addition at the end of Rogers's own poem, "Ginevra," is the best thing about this book; the illustration copied from the engraving in Rogers's 'Italy' is not a success.

The same publishers send us 'From Meadow Sweet to Mistletoe,' by Mary A. Lathbury, with large pictures reproduced from drawings by the author. The poems are very far superior to most of the amateurish productions, which are so hard to read and so much harder to qualify properly. This, for instance, is good, solid work, free from gush, and the metre and rhyme coming naturally:

> "Little people, if you'll rise
> While the stars are in the skies,
> Waiting for the day to break,
> And the sleeping world to wake;
> If you'll go, while yet the day
> Only blushes through the gray,
> Down the hill and through the brake
> To the misty mountain lake,
> Maybe you will see the daughter
> Of the sunshine and the water.
> Lili is a water maid," etc.,

—but we should like to quote it all. And the "Shipwreck" is still better, but must be quoted entire if at all, and therefore not at all here. And the pictures, are they of equal merit with the verse? Not quite that, but they are far from being contemptible. There is something very unpleasant in the style and the very tints of their reproduction, but the designs themselves are not to be despised. Conventional, no doubt; rather feeble than strong, of course; but with a pretty and childlike grace and simplicity.

There are some pretty verses also in 'All Round the Clock,' by Robert Ellis Mack (Dutton & Co.); for example, these:

> "When I am very big and old
> I'll write a book all bound in gold.
> . . . . . .
> "I'll tell about my pussy cat,
> Who goes to sleep upon the mat;
> "Of my new shoes, and dolly, too,
> I won't forget to 'member you.
> . . . . . .
> "I'll write a book all bound in gold
> When I'm a big man, five years old."

Nor are the above any better than others in the book. It would seem as if children would like these when read to them, and that mammas would find the reading not disagreeable. The illustrations, by Harriet M. Bennet, lithographed and printed in colors by Ernest Bister of Nuremberg, are too red and green, cheeks too rosy, hair too yellow; but underneath this unprepossessing surface there seems to be a sympathy with children, and a certain sense of their ways of moving and standing and lying down, which is very agreeable.

'Christmas Roses,' by Lizzie Lawson and the author of 'All Round the Clock,' and 'Under the Mistletoe,' by the same two writers, are similar collections of verses for children, some better, some worse. There are poems among them which remind one of the 'Original Poems' of Jane Taylor's book long years ago, and others (especially 'A Mistake') which have the ring of "Aunt Effie's" poems for children, both of which we give as resemblances that do credit to the newer writers. The illustrations in both books are of the character of those in 'All Round the Clock.' As they are signed L. L., we are left wondering whether "Lizzie Lawson" is not the artist and Mr. Mack the writer in both these little books. In the three last-named books there are, besides the colored full-page illustrations, a host of little marginal sketches, printed in brown. Now we are fully persuaded that these have no attraction for the childish mind. Vignettes, sketched sprigs of flowers on title-pages, semi-decorative margins, are not what children care for. The art they demand is historical and not decorative; they wish to see people or animals doing certain things clearly and plainly set down. The attempt to make children's books pretty in the eyes of grown people is probably made with a view to the hurried purchaser in the bookstore amid the holiday crowd. For the children themselves, all this is nearly useless.

'Pictures and Songs for Little Children,' also from Dutton & Co., would seem to be a gathering made from some periodical—at least it is strange to find all these bits of verse by different authors filling the book like a scrap-book, without preface or table of contents. Some of the little poems are very pretty indeed, and there is a good deal more matter than there is in the more showy little books we have discussed above. The illustrations are woodcuts printed with the text, and are very numerous, though not to be praised.

Mr. G. A. Henty is well known as a writer of boys' books of an interesting and healthy character, most of them belonging to the class of historical fiction. In 'The Young Carthaginian' (Scribner & Welford) he enters a field new to him—that of classical antiquity—and carries his reader through the Second Punic War. Mr. Henty knows very well the tastes of boys—and it would seem that English boys are not very different from American in their craving for exciting adventure—and the book is crowded with incident and peril. With the historical sketch we have no fault to find. Livy is followed pretty closely, as was natural; and if there are any details which are incorrect—in the passage of the Alps, the Italian battles, etc.—later study will

correct the errors. The lesson of the book is sound—that the triumph of Rome was in the interest of civilization; but we think that the corruption of Carthage is exaggerated, and also the degree of perfidy and cruelty to which Hanno and the peace party of Carthage carried their opposition to Hannibal. As a picture of ancient life we feel more doubtful about the book. It is very hard to appreciate or criticise the delicate touches in which the truthfulness or untruthfulness of an historical picture consists, especially when obscured by the difference of language; but the men and women of this book impress us as moderns masquerading in ancient costumes. And not unreasonably so. Mr. Henty tries his hand in too many fields of history to be really at home in all of them. He is a good classical scholar, but he does not *live into* classical life. To take a petty illustration: no person who really understood Roman family life would use such impossible nomenclature (at this period) as "Lady Flavia Gracchus," Julia the daughter of Gracchus, "The prætor Publius," "The military prætor," or address a young man as "Sempronius," or allow this Sempronius to speak of himself as a patrician. For all this, the book is a good one for boys. What they want is inspiration and the quickening of the imagination, rather than antiquarian precision, which they can get afterwards.

RECENT NOVELS.

John Jerome. By Jean Ingelow. Boston: Roberts Brothers.

The Terrace of Mon Désir. Boston: Cupples, Upham & Co.

The Master of Tanagra. By Ernst von Wildenbruch. Translated by Marie, Baroness von Lauer. London: H. Grevel & Co.

Crime and Punishment. By Feodor M. Dostoyevsky. Thomas Y. Crowell & Co.

MISS INGELOW has incorporated a good deal of the miscellaneous matter in her commonplace book into the form of a novel, of a very unconventional type, under the title of 'John Jerome, His Thoughts and Ways,' and in this manner succeeds in conveying her opinion on a variety of matters which would have been awkward to handle in the ordinary form, and which hardly had sufficient substance to furnish the groundwork for a series of essays. Among the most prominent of the ideas which she airs is the advisability of forming extensive plantations of the *Ailanthus glandulosa*, and providing the Japanese silk-worms which feed upon that tree, with a view to raising silk in England. Another is as to the propriety of men and women of the upper classes living a life resembling that of the gypsies, if their instincts incline them in that direction, and of the duty of women to engage in the work of their own houses. The range of topics which are touched upon at more or less length is very extensive, and although the reader may not appreciate either the theories thus broached or this back-handed way of telling a story, he will find a good deal of wit and not a little common sense in John Jerome's rambling talk.

The author of 'The Terrace of Mon Désir' is evidently a novice in the art of romance, and it is not surprising, therefore, that the general effect is rather that of dim memories of the writings of others than of vigorous individuality, in spite of the fact that the central idea is not a copy. The story of beautiful Nadia Laskar's betrothal to André Rototsky, the murder of the latter for the sake of his money, by his ungrateful cousin, the search for the murderer by Gerald Read, and the final happiness of Gerald and Nadia, is very good in itself, but it needs more skill than the author at present possesses to give the characters due relief. The same may be said of his attempts to introduce what is called "local color." Although the book is labelled "A Novel of Russian Life," there is very little flavor of anything distinctively foreign, or of anything which would not fit any other country—given a palace and gardens to describe—quite as well, with the exception of the names of people and places. The transitions of feeling are rather abrupt and awkwardly managed, but with more experience the author will probably be able to produce pleasant summer novels.

The charming little Tanagra figurines evidently inspired Ernst von Wildenbruch's dramatic and poetical story of ancient Greece, 'The Master of Tanagra.' It is the story of Myrtolaos of Tanagra, the pupil of Praxiteles, who won success only when he took for his model the beautiful Hellanodike, the woman who followed him to Athens from her Bœotian home, and nearly fell a victim to Athenian vice in her innocence and her love for him. It is extremely dramatic, and the description of the orgy in which Phryne takes part goes to the very verge of propriety. The translation is spirited and the language good and varied, though the translator's foreign origin is betrayed, here and there, by peculiar words and idioms. The only one of these which is really puzzling is the unvarying use of "once" as the equivalent of "einmal," which produces sentences like the following: "Hermes of Tanagra, thou who shalt once live with Olympic Zeus, anew I greet thee."

It is safe to say that any one who begins Dostoyevsky's famous novel, 'Crime and Punishment,' will not lay it down until he has read every word of it. Such a psychological study of the murderer who is not a hardened criminal, it would be hard to find in the literature of any other country than Russia, or from any pen but that of Dostoyevsky. The murder is committed by a poverty-stricken student, Raskolnikoff, who has evidently been driven half crazy by want, though rational enough in the ordinary sense of the term. It occurs to him that it will be a meritorious act to rid the earth of an old harpy of a pawnbroker, who is reputed to be very wealthy; and he is confirmed in his belief that he is appointed to the task, and that it is a righteous deed, by overhearing a parallel suggestion from another of the old woman's clients, in a public eating-house. He plans to commit the deed while the woman's half-witted companion is out of the way, but circumstances force him to burden his conscience with this victim's blood. The agony of mind which he has endured for a month while plotting the deed, is now intensified to the highest degree. This forms the leading motive, though the fates of others are entangled with his in a way which renders it a tale of action, and not alone of analysis. Even in its present very much abridged form, the effect which it produces can only be expressed by the word tremendous. What the American reader would think of it in its original form, it is hard to say. As Dostoyevsky ranks preëminently among the authors, not too numerous in any country, who cannot be read by dipping into each page at railroad speed, the diminution of power in the present case must be apparent.

As a specimen of ingenious hacking down one-third and paraphrase rather than translation, it is creditable compared with some books which have appeared; but the best Russian critics object to this process, as is quite natural. Every page, and nearly every paragraph, is more or less cut. The English translator, evidently a Cockney, indulges in the vulgar, "Wherever have I come to?" "Whatever have you done?" and the like use of "however," not to mention such constructions as; "It is a great pity, my deer fellow, you did not be more careful with her," and so on. As if to let the translation seem to have been made directly from the Russian, instead of from the French, the Christian names of all the characters have been altered from their French form into what is fondly imagined to be pure Russian. The most prominent instance is furnished by the name of Raskolnikoff's sister Dunia. In the original she is called Avdotya throughout, except when the familiar form, Dunya, is employed. Avdotya is the popular form of Evdokhya (Eudoxia). In the translation it figures, without exception, as Euxodia. The French is correct. The French André becomes Andreas (Russian, Andreï); Porphyrius usurps the place of Russian Porfiry, and so forth; it is useless to catalogue all these bits of linguistic mosaic. On the other hand, the proofs, if proof were needed, that the version was made through the French, are furnished by the singular coincidences in the excisions, by the use of "paquitos" (as in the French) where the original said "cigar"; by a coincidence of mistake with the French in cases of minor errors, as in the use of "lodgers" instead of "landlords," and by various other equally significant signs, of different degrees of intensity.

The Volcano under the City. By a Volunteer Special. Fords, Howard & Hulbert.

UNDER the above somewhat startling title is given the fullest account of the draft riot of 1863 that has ever been published. The author's name is not revealed. He says that the police, from the beginning to the end of the riot, did not so much as attempt to keep their usual record of occurrences; that, being too busy with the club to use the pen, the books of the Department are almost a blank as to the deeds of that dark period. The sources of information for the work are the contemporary newspaper accounts, which were necessarily fragmentary; the author's own observation, the observation of other eye witnesses whom he has consulted, and the telegraph-books of the Police Department containing the brief despatches that passed between police officers. The survey of the field presented by this book is—necessarily, no doubt—from the police point of view, but full credit is given to all the military and civil forces engaged in restoring order.

The account of these riots, which lasted from Monday, July 13, 1863, to Friday of the same week—four days and nights—is the blackest chapter in the history of New York city. The author recalls its horrors to warn us that "there is, and always will be, a volcano under the city," and that if we would prevent eruptions, we must take proper precautions. Up to the day, to the very hour, of violence in 1863, people could not believe there was danger. Even after men were assaulted and houses were in flames, many could not realize that the outbreak was serious. It came in a moment, without plan and almost without design, and a mob for four days and nights worked its sweet will on the metropolis of the republic. The loss of life and property was enormous, and the agony caused by the atrocities of those four lawless days is beyond all power of computation. And by whom, one naturally asks, was all this evil wrought? Not by workingmen, the author tells us, but by the idle and vicious, who congregate in New York city from all quarters of the globe, and seek by violence to share the fruits of other men's labor and thrift. The draft merely afforded a pretext in 1863, as any novel measure might do now, for bringing those vicious elements together as a mob. A mob's power for mischief, the author very properly maintains, can be neutralized by proper precautions. Under any circumstances its reign

will be short, and its punishment sure in New York city, all parts of which can be reached by the shells of our gunboats as well as by the bullets of our land forces and the clubs of the police. The streets of all the lower part of the city, where the great business and treasure-houses are located, if a desperate remedy were required, could be literally swept clean by guns from the water-front around the Battery and up the East and North Rivers.

There seems to be an impression abroad that dynamite has strengthened the mob as compared with the forces of the law, and the word dynamite in some quarters produces an effect like that which followed the cry of "Masked battery" and "*Black*-horse Cavalry" in the early part of the war of Rebellion. The impression has, perhaps, found some support in the injury done to Chicago policemen by dynamite bombs last year. It is true that an assassin working in concealment may do greater momentary mischief with dynamite than with the stiletto, the pistol, or the torch; but the advantage from dynamite is on the other side. There is no form of force against which the dynamite bomb can be used with so much ease and effect as against a mob. It is only necessary that the forces of the law shall know how to use it when necessary, as they use their fire-arms or their clubs.

There are many personal items of interest in the book. The part taken by Gov. Seymour, by Gen. Wool, by Gen. Sandford, by Gen. Harvey Brown, and others, is told in more or less detail. Superintendent of Police Kennedy, knocked down and badly beaten by the mob at the beginning of the riot, barely escaped with his life, and did not recover till long after order had been restored. The control of the Police Department fell upon Mr. Acton, President of the Board. He remained on duty day and night, and he and Gen. Harvey Brown, of the regular army, acting in concert from Police Headquarters, directed the police and most of the military forces. In matters relating to enrolment and draft, the book contains some errors, but they do not affect the account of the riot and need not be pointed out. The last two chapters of the book, entitled, "The Opportunity" and "Then and Now," are written with a clearness and vigor not to be found in the rest of the work. It is all timely, however, and teaches that we should first remove, as far as possible, all cause for riots, and, secondly, recalling our own experience, be prepared to crush them at the beginning if they come upon us.

The Philosophy of Words: A Popular Introduction to the Science of Language. By Frederic Garlanda, Ph.D. A. Lovell & Co. 1886.

MR. GARLANDA tells us that the aim of his work is "to explain as plainly as possible some of the most important results of the Science of Language." He deprecates the fact that the generality of people know so little and think so little about the words they use, whereas "the main results of geology, physiology, chemistry, and other sciences are already a possession of the public at large." In the hope, evidently, of helping to remedy this condition of affairs, and with an apology for the necessary imperfections of a work designedly popular, the author goes about instructing the general public upon the "philosophy" of words. He writes with ardent enthusiasm for the "science" of language and for the majesty of phonetic law; he has the eye of a Trench or a Max Müller for what is curious and striking in the history of words; and he says a great many things which are true and which do indeed deserve to be more generally known. It is, however, our painful duty to remark that these good things have all been said before, and that, too, in easily accessible treatises. Furthermore, Mr. Garlanda's presentation of them is so mixed up with crudities and inaccuracies as to prevent his book from being really useful to any one. Its authorities are the familiar classics of twenty years ago, and it reflects correctly neither the spirit nor the conclusions of present philological scholarship. Numerous word-lists are quoted from many different languages for the purpose of comparison, and the appearance of these words is often such as to indicate that the writer does not understand the subject he is dealing with. At any rate forms are often misprinted, phonetic laws are asserted where no such laws exist, and etymologies are propounded with entire *sang froid* which are now generally repudiated or else labelled *non liquet*. A few illustrations must suffice.

"The phonetic laws," says Dr. Garlanda, "must be our sheet-anchor in linguistic researches. It is this which gives to the new science of language the exactness and the precision of the physical sciences." For substance of doctrine this is certainly good enough, but how can the "public at large" be expected to doff their hats to it as exemplified in the following? "There is a phonetic law in the French language according to which a *c* or a *g* which in a Latin word stands between two vowels disappears in the evolution of that word from Latin into French." Will not some of them commence saying over to themselves: *seculum, siècle; species, espèce; regula, règle; agere, agir*, etc.? And what will even the less learned of this same public be likely to think when it is asked "why the *th* is 'preserved' in English *Catharine* and German *Kathrine*, but not in Italian and Spanish, where we have simply a *t*?" This is probably the first time that the German *th* in *Kathrine* ever troubled a writer on phonetics. Elsewhere we have it that "the Sanskrit *pattram*, 'wing,' corresponds normally to the Gothic *fadar*, English *feather*"—a statement which contains not less than three different blunders. All things in this line are, however, to be expected from one who can write thus: "If we check with our lips the current of air, we have the sound *b*; if we do the same thing with a little more strength, we have the sound *p*." After this the reader is also prepared to hear that *father* is "he who protects," *mother* "she who forms (the family)," *daughter*, "the milkmaid," *brother*, "he who guides (his sister)," and *sister*, "she who dwells under the same roof." There is probably not a living authority of the modern school who would defend a single one of these old guesses. Even in the domain of generalities, the favorite medium of popular science, Mr. Garlanda does not show to advantage. The best classification of the Germanic languages he can offer is one which groups Gothic, Frisian, Dutch, and English together as Low German dialects. So, too, he does not hesitate to say boldly that our proethnic Indo-European ancestors "once lived on the high plains of Central Asia." The truth is, we do not know where they lived, and there is at present a strong current of opinion to the effect that they lived in Europe.

In fine, to popularize successfully the results of learned research requires the hand of a master, and Mr. Garlanda is evidently no master, but a learner who has much to learn.

BOOKS OF THE WEEK.

Alton, E. Among the Law-Makers. Charles Scribner's Sons. $2.50.
Ashley—Sterry, J. The Lazy Minstrel. Scribner & Welford.
Aulard, F. A. Les Orateurs de la Législative et de la Convention. T. i and ii. 8vo: Boston: Schoenhof.
Barnard, F. Character Sketches from Thackeray, from Original Drawings, Reproduced in Photogravure. Cassell & Co. $7.50.
Bickerdyke, J. The Curiosities of Ale and Beer. Illustrated. Scribner and Welford.
Brooks, Rev. A. The Life of Christ in the World. Thomas Whittaker. $1.50.
Brooks, Rev. P. Twenty Sermons. Fourth Series. E. P. Dutton & Co. $1.75.

Champagne

ANALYZED.

Champagne, with a minimum of alcohol, is by far the wholesomest and possesses remarkable exhilarating power.

THOMAS KING CHAMBERS, M.D., F.R.C.P.
Honorary Physician to H. R. H. the Prince of Wales.

Having occasion to investigate the question of wholesome beverages, I have made chemical analyses of the most prominent brands of Champagne.

I find G. H. Mumm & Co.'s Extra Dry to contain in a marked degree less alcohol than the others. I therefore most cordially commend it not only for its purity, but as the most wholesome of the Champagnes.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. Chemistry, Bellevue Hospital Med. College, N. Y.

Champagne, whilst only possessing the alcoholic strength of natural wines, is useful for exciting the flagging powers in case of exhaustion.

F. W. PAVY, M.D., F.R.S.,
Lecturer on Physiology at Guy's Hospital, London.

Champagne containing the smallest percentage of spirits is the most wholesome.

JOHN SWINBURNE, M.D.,
Former Health Officer of Port of New York.

Now Ready:

THE PARTHENON FRIEZE and Other Essays. By Thomas Davidson, M.A., author of 'The Philosophical System of Antonio Rosmini-Serbati,' 'The Niobe Group,' 'The Place of Art in Education,' etc. 12mo, pp. xi, 224. Price by mail, $1.60.

This volume contains, besides a long essay on the Parthenon Frieze, essays on "The Relief on the Front of the Base of the Pheidian Zeus at Olympia." "The Pelasgic Wall on the Athenian Akropolis," and "The Œdipus Tyrannus of Sophocles." The first essay, which is much the longest, endeavors to show that all interpretations of the Parthenon Frieze thus far offered are mere guesses, destitute of any foundation, and to substitute for them one which really interprets it.

THE PHILOSOPHICAL SYSTEM of Antonio Rosmini-Serbati. Translated, with a sketch of the Author's Life, Bibliography, Introduction, and Notes. By Thomas Davidson, M. A. 8vo, pp. cxvi, 396. Mailing price, $2.75.

The nucleus of this book is the summary of his own philosophy, which Rosmini, the greatest philosopher of Italy and of the Roman Church since Thomas Aquinas, wrote for Cantù's 'Universal History.'

The London *Athenæum* says: "This book . . . has the merit of introducing us to a thinker whose very name will be new to most educated Englishmen; the translation, of which it in a great part consists, is excellently done; . . . altogether, the student of Rosmini will find it indispensable to him."

ANNOUNCEMENT:

DANTE HANDBOOK. By Giovanni A. Scartazzini. Translated from the Italian, with notes and additions, by Thomas Davidson, M.A. To be published about January 1, 1887.

This Handbook, written by the first of living Dante scholars, contains everything necessary to enable the student to study intelligently the supreme Christian poet—"the voice of ten silent centuries."

GINN & COMPANY, Publishers,
Boston, New York, and Chicago.

MACMILLAN & CO.'S

NEW BOOKS.

The Carlyle Correspondence.

EARLY LETTERS OF THOMAS CARLYLE. Edited by Charles Eliot Norton. With Two Portraits. 12mo, $2.25.

"These are family letters, it is true, and affection for one's family is a quite natural thing. But devotion like this is less common in families than it ought to be, and Carlyle can safely be held up as a shining example. But he was as true as a friend in those times as he was as a brother and son. A great many letters to young men of his own age bear witness to this. They are altogether delightful reading. . . . The whole effect is cheering, wholesome, and gratifying. . . . The literary side of the letters is, after all, a strong and interesting one. They show the early growth of Carlyle's mind and the circumstances in which his thoughts took their peculiar direction as nothing else does or could. The germs of many later works are found here. His mind is already on Cromwell. He has read a life of Frederick the Great; Goethe has profoundly impressed him, and 'it is one of my finest day dreams to see him ere I die.' Before he is twenty he has met with the writings of Voltaire, and formed an estimate of him in which is seen the beginning of the famous essay. . . . The reader scarcely needs further assurance of the peculiar and absorbing interest and importance of these Carlyle letters. They show the better side of their author, and certainly, for the period covered, they show the true side of him. As for the later time, it is more than obvious that the true side has never been known to those who have placed confidence in the Froude portrait."—*New York Times.*

HISTORY OF NAPOLEON I. By P. Lanfrey. Translated with the sanction of the author. New and Cheaper Edition. Four vols., 12mo, $9.

"So excellent a work deserves to be studied by every one who cares about modern European history."—*Athenæum.*

DAYS WITH SIR ROGER DE COVERLEY. From *The Spectator.* With Illustrations by Hugh Thomson. Small 4to, cloth elegant, $2.

OLD CHRISTMAS AND BRACEBRIDGE HALL. By Washington Irving. With numerous Illustrations by Randolph Caldecott. *Edition de Luxe*, on fine paper, in one volume, royal 8vo, cloth gilt, $5.

"'Days with Sir Roger de Coverley' and 'Old Christmas and Bracebridge Hall' will, by the beauty of their illustrations as well as the interest of their contents, take foremost place among the best gift books of the season."—*Boston Commercial Bulletin.*

SIR PERCIVAL: A Story of the Past and of the Present. By J. H. Shorthouse, Author of 'John Inglesant,' &c. 12mo, $1.

"An atmosphere of spiritual, ideal Christianity pervades the story, the influence of which the most careless reader can scarcely escape."—*Sun.*

NEW BOOKS FOR THE YOUNG:

FOUR WINDS FARM. By Mrs. Molesworth, Author of 'Carrots,' 'Herr Baby,' &c., &c. With Illustrations by Walter Crane. 16mo, $1.25.

"'Four Winds Farm' is one of the most delicate and pleasing books for a child that has seen the light this many a day. It is full of fancy and of that instinctive sympathy with childhood which makes the author's books so attractive and so individual."—*Boston Courier.*

MADAME TABBY'S ESTABLISHMENT. By Kari. With Illustrations by L. Wain. 16mo, $1.25.

THE TALE OF TROY. Done into English by Aubrey Stewart, M.A. 16mo, $1.25.

"The tale begins with the carrying off of Helen, and concludes with the fall of Troy; and nothing could be more admirably simple than these concise chapters, which will furnish the young readers with a clear idea of the story of the great classic epics, while at the same time affording them the means of entertainment."—*Boston Courier.*

Christmas Double Number, Price, 25 cents. (Annual Subscription, $1.75.)

The English Illustrated Magazine (December)

Contains, besides numerous other illustrations, eight full-page plates by

Alma Tadema, R.A., Miss Clara Montalba, Du Maurier, Hugh Thomson, Buxton Knight, W. Biscombe Gardner.

1. IN A GARDEN. By A. C. Swinburne.
2. VENICE. By H. F. Brown. With Illustrations.
3. A SIEGE BABY. By J. S. Winter.
4. SURREY MILL-WHEELS. By Grant Allen. With Illustrations.
5. THE YOUNG PRINCESS. By Geo. Meredith.
6. JACQUETTA. By the Author of 'John Herring.'
7. LIKE LIKES LIKE. By D. Christie Murray.
8. NOCTURNE. By Geo. Du Maurier. With Illustrations.
9. IN THE HEART OF LONDON. By D. Rice Jones. With Illustrations.
10. "COLONIAL PAPERS, PLEASE COPY." By the Author of 'John Halifax, Gentleman.'
11. HOPS AND HOP PICKING. With Illustrations.
12. A SECRET INHERITANCE. By B. L. Farjeon.

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 9, 1886.

The Week.

SENATOR SHERMAN'S interview, transcribed by Mr. Robert P. Porter and published in the Philadelphia *Press*, must be taken as the matured intentions of the leading Republican Senator on the great financial question of the day, viz., How shall the public revenue be reduced to the limit of the public requirements after the 3 per cent. bonds are all paid off? Mr. Sherman says, Repeal the sugar duties and the tobacco tax. This remedy has been "going the rounds of the press" for some time, in a way which indicates that it is the settled plan of the protectionists for meeting a great crisis in their system. The two measures would reduce the revenue $70,000,000 to $80,000,000 per annum. This is a pretty large reduction, and its seriousness is enhanced by the fact that it will be impossible to restore these taxes at any future time, except in the improbable contingency of a war. It may be presumed, however, that the growth of the country will swell the remaining sources of revenue to such an extent that when the 4½ per cents fall due in 1891, they may be paid off as rapidly as public opinion seems now to require. The stumbling-block which Senator Sherman and his interviewer find in their way is the outcry and resistance of the Louisiana planters, who will immediately become free-traders, just as the quinine manufacturers did after the duty on their product was removed. The quinine manufacturers are a feeble folk, but the sugar-planters are numerous and powerful, and the South is likely to make common cause with them. Accordingly, Senator Sherman suggests in a tentative way the payment of a bounty to the sugar-producers to compensate them for the repeal of the duty. This, he says, would not be a subsidy, because a subsidy means a payment to one person, while a bounty is a payment to a whole class of producers. We presume that the planters will not stickle over the name of the thing provided they get the money, and we advise them to go for it with all their might. A bill to provide for the payment of the bounty would open the eyes of a great many people who are now hopelessly tariff-blind.

Bearing upon the question of the constitutionality of the National Banking Act considered apart from the note-issuing function—a question touched upon by Comptroller Trenholm in his annual report—the December number of *Rhodes's Journal of Banking* publishes a brief résumé of all the decisions of the Supreme Court relating to that particular subject. The conclusion of the writer is that these decisions go to the length of conceding to Congress full and unquestioned power to grant charters to national banks, quite irrespective of the note-issuing function, since the decisions virtually leave Congress the sole judge of its reasons for granting such charters. In other words, although the original purpose of the National Banking Act was to aid the Government to borrow money, yet the power is not exhausted when the original purpose has ceased to operate. This is the only construction that is free from legal absurdities and paradoxes and also from very great business embarrassments; for if a bank charter should expire by the calling in of the bonds held by the bank, complications would arise which the law never contemplated or made any provision for, and which the shareholders and depositors could never have foreseen. A corollary results from this, that if the Government calls in a particular lot of bonds held by a national bank as the basis of its charter, it cannot compel the bank to go into the market and buy other bonds at any premium that the holders may ask. It might happen that the holders would not sell at all. That is what will happen eventually, and certainly the law does not require impossibilities. It follows that Congress ought at once to repeal that clause of the law which requires national banks to invest a certain portion of their capital in United States bonds, whether they issue circulating notes or not. Philosophers of the Beck school, who take it in dudgeon that the bonds should stand at such a high premium in the market, should be active in securing the repeal of this clause, since the compulsory purchase of bonds by the banks to replace their called bonds is one of the contributing causes of the high premium.

It is reported from Washington by the *Times* correspondent, that the President is going, when he gets time, to examine Benton's speeches again, to see whether they were as hostile to himself as Mr. Sullivan, the editor of the Missouri paper, reports one of them to have been. This will, we respectfully submit, make the situation worse than it is, because it will make it a little ridiculous. The examination of the foolish speeches of a ranting ignoramus such as Benton appears to be, is surely no part of the business of the Chief Magistrate of the American republic; and every minute he gives to it is either wasted, or taken away from the American people who are entitled to it. There is only one way out of the existing muddle that will restore the somewhat shaken confidence of many of the President's supporters in the President's judgment about the reform of the civil service, and that is, to issue an order warning every subordinate officer in the service that he will be dismissed if caught stumping in any electoral canvass, and that the profoundest thinker and the greatest blatherskite of them all will have exactly the same measure meted out to them.

If the President be still in doubt about the effect of his Stone-Benton letters, he has only to read the comments thereon of those Democratic newspapers which have hitherto opposed, ridiculed, and vilified him. There is not one of them which is not to-day rejoicing over what they consider a breach of the pledges to which he undoubtedly owed his election. There is not a base, time-serving, corrupt politician in the Democratic party to-day who has not been made happier by these letters, and who is not open and ostentatious in his chuckling. Every enemy Mr. Cleveland has made by what is best in his career, both as Governor and President, is to-day ready to forgive him and cleave to him. The spectacle is a melancholy one, and deserves prayerful consideration by somebody.

The most interesting portion of Secretary Lamar's report is that which treats of the Indian question. He states that there has been a steady improvement in the moral, material, and intellectual condition of the mass of the Indian population during the past year, and that the average attendance of children at schools is 1,600 greater than heretofore. The estimates presented for the Indian service during the coming year are $422,386 less than those of last year, which in turn were $1,296,790 less than those of the previous year; and Mr. Lamar considers this reduction of expenditure, at the same time that the race is advancing, good evidence that past work is bearing fruit. The work of locating the Indians on land in severalty is being pushed as rapidly as possible, and during the past year about 800 have received titles to allotments of land for individual occupancy, while a large number have taken up homesteads on the public domain under the Indian homestead laws, and a large number have been located who have not yet been furnished with a title to their selections.

Secretary Endicott makes the very sensible suggestion that the fitness of any army officer for promotion should be ascertained by examination, to be conducted by officers of a higher grade. The ordinary method is seniority, but nothing does more to destroy hope and enterprise and desire for improvement than the seniority rule in all services in which it prevails. Mr. Endicott does not propose a competitive examination, but simply an examination to ascertain whether a man is in any particular case qualified to go up higher. At present, seniority in most cases gives a right to promotion, fitness or no fitness.

Mr. Blaine's recent exploits, his attack upon civil-service reform and his refusal to shake hands with Mr. Edmunds, have made serious breaks in his following in the press of his party. There are now no less than eight Republican journals of large influence which have sharply criticised him for those acts. These are the Boston *Advertiser*, the Providence *Journal*, the Milwaukee *Sentinel*, the St. Louis *Globe Democrat*, the Philadelphia *Telegraph*, the St. Paul *Pioneer Press*, the Rutland (Vt.) *Herald*, and the Burlington (Vt.) *Free Press*. To this formidable list the Buffalo *Express* shows signs of allowing itself to be added. In fact, if the real sentiments of the Republican journals of the country could be ascertained to-day, we be-

lieve that it would be found that, with the exception of five or six papers, all of them are hoping that some chance or other will relieve them of the necessity of supporting Mr. Blaine again. We believe the same thing is true of the great majority of the leaders of the party. They have not the courage to speak out frankly, and say that Mr. Blaine ought to take himself out of the way, but they would rejoice mightily to see him do it.

We regret to observe that a recent attempt of the Hon. William E. Chandler to restore harmony throughout the length and breadth of the Republican party is likely to end in failure. He published a card a few days ago in which he pronounced "baseless" a statement made by the Chairman of the National Republican Committee, Mr. B. F. Jones, at the close of the campaign of 1884, to the effect that President Arthur and his Cabinet had shown a want of fidelity and zeal in the Blaine canvass. After thus, in a sufficiently explicit way, calling Mr. Jones a liar, Mr. Chandler proceeded to deprecate, in a beautiful passage, the tendency among the leaders of his party to indulge in personal quarrels. He thought Mr. Blaine acted "from sudden impulse" when he declined Mr. Edmunds's hand at the Arthur funeral, and "thereby widened a breach which, like that with Mr. Conkling, ought never to have existed." Then, holding behind him the club with which he had just hit Mr. Jones over the head, Mr. Chandler continued: "While our great Republican leaders quarrel, the party suffers, and by reason of such differences loses a Presidential election. It is for the interest of the country that such purely personal controversies should not arise or continue between prominent leaders of either party."

Mr. Jones appears to have been more deeply impressed with the club than the olive-branch portion of Mr. Chandler's letter, for in an interview which was published on Friday he says that his statement of 1884 was not "baseless," but entirely true, and then makes these pointed and decidedly unfriendly personal allusions to Mr. Chandler:

"So far as Mr. Chandler's reference to me personally is concerned I do not feel called upon to defend myself. I have no taste for, nor do I see any present occasion for, a discussion as to political methods with one whose plans and proposals, during the brief intercourse I had with him in the campaign of 1884, were not such as to commend him to those having the success of the Republican party at heart. His criticisms at that time of men then the most prominent in the party, do not seem to me quite consistent with his present expressions of regret in regard to bad feeling between public men. I would not like to feel called upon to make public the facts upon which my opinion of Mr. Chandler is based."

We trust that Mr. Chandler's anxiety to heal party breaches will not induce him to remain silent under the imputation in this closing sentence. If Mr. Jones's opinion of Mr. Chandler is anything like that which the intelligent public has long held of him, it would be interesting to see it set forth with ample specifications. Mr. Chandler should let party harmony look out for itself long enough to call upon Mr. Jones for a bill of particulars.

The temperance attachment of the Blaine organization in this State, hitherto known as the anti-saloon party, will henceforth be known as the New York State Temperance Republican League. The change of name was accomplished at the Convention on Wednesday week, under the leadership of the Rev. Dr. Ball of Buffalo. One reason given in favor of the new name was that "anti-saloon" was not broad enough, and we think this was a sound view. Anybody who has read Sheridan Shook's telegram will see why. "Anti-saloon" means war upon the saloon without distinction of politics. It means the suppression of Republican as well as Democratic saloons, or, as Mr. Shook would put it, it takes away from "Republican saloon keepers the protection to which they are entitled." The new name is much less specific, and is broad enough to make even Mr. Shook feel at home under its protection. It simply means that the League is made up of persons who are desirous of running the temperance cause in the interest of the Republican party.

The Republican leaders in Boston appear to be imitating the methods employed by their party in the late municipal election in this city. They have secured the nomination of a Labor candidate, and have put up as their own nominee a thoroughgoing Blaine Republican. Their hope is to draw from the Democrats enough votes for the Labor candidate to defeat the reëlection of Mayor O'Brien. There is no pretence made of desire for the public interest in this scheme. Mayor O'Brien's record as an upright official and consistent civil-service reformer is the strongest possible reason why he should be reëlected. His defeat would be a victory for partisan and corrupt influences in politics. He will be supported by the Independents, and, it is believed, will also receive the votes of many Republicans who are too public-spirited to sustain their party managers in their partisan project.

A noteworthy illustration of the extent to which the South has already outgrown the era of the Confederacy has just been furnished in Alabama. A proposition was made that the Legislature should make a liberal appropriation for the erection of a marble monument at the capital in memory of the Alabamians who lost their lives in the Southern army. But the new Governor, Thomas Seay, himself a soldier on the Confederate side, in his inaugural address takes ground against such use of the public funds, at least until ample provision has been made for the care of surviving soldiers, and even questions the wisdom of such an appropriation under any circumstances, recalling the fact that there were those among the ancients who opposed the erection of monuments in commemoration of the triumphs of civil strife, and that at one time some of those that had been erected were razed to the earth. The Mobile *Register*, one of the most prominent Democratic newspapers in the State, goes still further than the Governor. It argues that the proposition is unconstitutional, and that even if it were constitutional, it would not be equitable to tax all citizens for a monument which does not represent the sympathies of all the people, since there are "a vast number of taxpayers in Alabama, old Union men and their descendants, colored men, new-comers from the North, and others, who had no sympathy with the Confederate cause."

The report of the State Geologist of Alabama, just submitted to the Legislature, illustrates the rapid growth of mining in the South. Fifteen years ago coal was not produced in any quantity in Alabama, and in 1880 the amount mined reached only 322,934 tons, while last year the total had risen to 2,225,000 tons, or nearly one eighth of the record of Pennsylvania for bituminous coal six years ago. Six-sevenths of this came from what is called the Warrior coal field, covering several of the northwestern counties drained by the Black Warrior River, and comprising a region about two-thirds as large as the coal area of Great Britain. The State Geologist estimates that there are in this coal field more than 100,000,000,000 tons of available coal, which would be worth enough to buy the whole State out 200 times over. The coal is of excellent quality, and is especially valuable from its proximity to vast deposits of iron ore, in the manufacture of which it can be utilized almost where it is mined. The growing concern of Pennsylvania mine-owners and manufacturers over Southern competition appears to be entirely justifiable.

The people of the "Pan-Handle," as the northern end of Idaho is called, expressed their minds on the question of annexation to Washington Territory, and the vote was practically unanimous in favor of the proposition. This district is naturally allied in interest with Washington Territory, and the latter Territory, with this addition, will become a symmetrical region, which is qualified by population and development to become a State—although it should be under some other name than that of the capital of the country. The Idaho precedent should be followed in Dakota, by the holding of an election at which the people shall be allowed to express their opinion on the question whether the Territory shall be divided or come into the Union as one State. Until provision is made for such a popular vote on this question, nothing ought to be done by Congress in the matter, for there is no evidence that the people favor the pending scheme of the politicians to divide the Territory and admit the lower part as a State.

We wish to give notice to persons who are occupying themselves with the "labor problem," that what we have asked them for is not more general discussion, but a definite description of those wrongs of the laborer which are capable of being remedied by legislation, and a sketch of the remedy in the shape of the draft of a statute bill. We say this because we are being deluged with letters of the old sort about the designs of the Creator in making the earth, and the "natural rights" of the inhabitants thereof. Among other answers to our demand for a bill of particulars, we have received a letter from Mr. Charles F. Wingate, the sanitary engineer, who figured prominently in the George movement, calling attention to the condition of the New York tene-

ment houses, and enclosing the draft of a bill which certainly ought to be enacted, providing for their improvement as regards healthfulness. But a moment's reflection ought to show Mr. Wingate that the New York tenement houses might all be converted to abodes as wholesome and cheerful as the Navarro flats, without contributing anything to the solution of the labor problem. The wages of the laborer would still be what they are now, the rent of his dwelling as high or higher, his share in the amusements and luxuries of life just as small, and his dependence on his employer, the capitalist, just as great. Moreover, the condition of the New York tenement houses only affects a very small body of laborers in this city. What we are waiting for is some grand piece or pieces of legislation which will ameliorate the lot of laborers in general. Mr. Wingate offers nothing of this sort. Neither do those friends of labor who send us on the tariff as one of the remediable grievances of labor, because we believe the laborers in general do not object to the tariff. Mr. Powderly says he is a "protectionist from the crown of his head to the soles of his feet." What we wish to see is remedies of which the laborers themselves will approve, and which they will accept when ready.

While we are on this subject, we may as well also ask for a list of "the laws," of which we have lately heard a good deal, which "discriminate unfairly against labor and in favor of capital," together with some suggestions for their modification, if they are not to be repealed altogether. Of course, for the reasons above stated, we do not intend this request to cover the tariff. What we seek is a reference to these laws by date, page, and volume, so that we can examine them, and say what we think about them. None of the orators or writers who mention them, have, as far as we have observed, given any references by which these statutes can be identified. We take it for granted that they are either Federal or State laws, and not laws of nature. These latter are, we know, exceedingly troublesome, and some of them very harsh; but there is not much chance of their being amended as long as the Democratic party is in power.

The Socialists succeeded on Sunday night in getting a resolution passed by the Central Labor Union forbidding the members to read "capitalistic newspapers," and forbidding the Secretary to give information about their proceedings to "the reporters of the capitalistic press." The orator on this occasion was a certain Jablonowski, who was defeated in his first attempt, but cunningly waited till his opponents had gone home, and then moved to reconsider. But we think Jablonowski, who is an oral and not a manual laborer, is undoubtedly right in this matter. People who are expected to swallow the social and moral philosophy produced at the meetings of the Central Labor Union, ought not to be allowed to read any publications not furnished by the committee of the organization. Anybody, for instance, with whom it is desirable that Jablonowski should have influence, should never be allowed to listen to anybody but Jablonowski. His doings and sayings are, it is true, melancholy reading to those who remember that it is to bodies like the Central Labor Union that some of our social reformers are desirous of committing the government of the world and the care of modern civilization.

We suppose that no winter passes without causing a shudder in the breasts of all right-minded people when they read in the newspapers that thousands of cattle have perished from starvation on the Western plains. This particular form of cruelty to animals has seemed to be, and probably is, beyond the reach of law and of local public opinion. Nevertheless, the recent national convention of humane societies at Pittsburgh took the matter up, and delivered their opinions upon it in very proper terms. They say truly that nobody has a moral right to bring into existence a greater number of cattle than he can reasonably expect to find food and some kind of shelter for in winter. Yet the practice is to estimate for a certain percentage of loss by lingering torture, and then trust to the chances of getting through the winter with a better showing than the estimate. This is cruelty to animals reduced to system. Acts which would be severely punished if committed in the older States, and visited with loss of social consideration, are the principal trade and calling of large territories. The suggestion of the Association was that since the ranges are mostly on public lands, unsettled by the emigrant, and still under the direct and immediate control of Congress, it should be made unlawful for any one to range cattle on public lands without making provision for them in winter by food and shelter.

The charges upon sleeping-cars have always been so large that they should have covered the service of attendants, as well as the use of a berth. Yet every generous-minded person has felt under a moral obligation to fee the porter, because he knew that the porter's employers gave him so small wages that, unless the passengers came to his rescue, he would be shamefully underpaid. The Wisconsin Central Railroad Company has just announced a new departure in this matter. It has decided to increase the pay of the porters and waiters employed on its sleeping and dining-cars to an amount which will give them ample compensation for their work, and to prohibit them from receiving "tips" from passengers. Orders have been issued to them to receive no money from any passenger, except for blacking shoes, "when requested" to do so, for which service they are permitted to accept ten cents. This is a practical way of dealing with the fee problem, and it is the only practical way.

The overthrow of the French Ministry on the question of abolishing the sous-préfets is one of those surprises in which French politics abounds. M. de Freycinet was supposed to be in danger from the budget, which is in a terrible condition, and especially from a proposal now pending to stop the appropriation for ecclesiastical purposes; but nobody thought of his being in danger from the sous-préfets. These officers are 362 in number, and reign over the districts (arrondissements) into which each department is divided, just as the préfet reigns over the department as the agent or representative of the central authority. As the préfet is assisted by a Council-General of the Department, so also the sous-préfet is assisted by a district council (*conseil d'arrondissement*), elected by universal suffrage, one member from each canton. The préfet has always been a very great man in the department. He is the head of the police, he superintends the collection of taxes, and his residence in the chief town of the department is a sort of little court, the balls and receptions of which are great affairs for the provincial society—that is, for people who cannot get to Paris. He and the commanding general of the military district are tremendous personages, and their visits to each other, when either of them is a new arrival, are among the great ceremonies of a provincial town.

The sous-préfet is a much smaller man, of course, than the préfet, but this does not prevent his thinking himself just as great, and giving himself in his district the departmental airs of his chief. But the times are unpropitious both for him and for his chief. Until the fall of the Empire, a department without a préfet and sous-préfets was one of those things of which a French mind could hardly conceive. Their disappearance would have seemed the advent of anarchy itself, or a dissolution of the social fabric; for no matter what revolutions occurred in Paris, the préfet and his sous-préfets always remained undisturbed, the representative and guarantee of social order. Under the Republic, however, there has been an immense development of local independence and self-government, and of the habits of association for all sorts of purposes. The country now swarms with clubs and societies of every description, social, benevolent, economical, industrial, which not only did not exist under former governments, but would not have been permitted, and they have begotten a feeling of restlessness over the supervision of the central Government and over the omnipresence of its agents, which is something very new in French life. The consequence is, that there is a widespread feeling that the sous-préfet is an expensive and useless meddler, whom the departments can very well dispense with. The Radicals want him to go because he is useless, and the Monarchists want him to go because they think him a "cad," whose table manners are bad. Poor M. de Freycinet, however, naturally wanted to hold on to him until he got into smoother water, because, there being 362 sous-préfets, it gave him that number of places to fill at his discretion, for the purpose of restoring "harmony in the party," or placating a disgruntled deputy or senator, or turning the tide in a doubtful district. That the Chambers insist on getting rid of the sous-préfets is, however, a good sign.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 1, to TUESDAY, December 7, 1886, inclusive.

DOMESTIC.

THE Senate and House of Representatives of the United States met at noon on Monday with the usual formalities. The attendance in both houses was large. At two o'clock the President's message was received and read. It is a long document, filling about seven newspaper columns. Its principal features are summarized elsewhere.

The annual report of the Secretary of War, Mr. Endicott, shows that the army at the date of latest returns consisted of 2,103 officers and 23,946 enlisted men. On the subject of coast defence he says: "The principal cities named in the report of the Board on Fortifications should be fortified, and work on those most important should be begun at once, viz., New York, San Francisco, Boston, and Washington. The defences required must be erected and prepared to resist attack from the water. We have a single problem to solve in defending our cities—how best to resist and silence the armored ships and the steel guns and mortars of modern construction. It can only be accomplished by guns of equal force to those which any enemy can bring against us, and by torpedoes and submarine mines laid in the navigable channels, both so guarded and protected that they can do efficient service when required. We have no gun now which can stop the progress of or do any material injury to a well-armored ship. The manufacture of a gun is a work of time, and of a long time, and cannot be extemporized when wanted."

Secretary Lamar of the Interior, in his annual report, says that during the last year less than 100 of the 260,000 Indians in this country have been in open opposition to the Government, and he gives statistics showing that the Indians are making progress in civilization. The Secretary renews his recommendation of last year, that a law be enacted for the appointment of a commission to visit each reservation and investigate the condition of the Indians thereon. The desire for individual holding of land is growing. As a means of teaching the Indians the habits of self-government and of obedience to law, local tribunals, styled Courts of Indian Offences, presided over by Indian judges, have been established upon many of the reservations. These are reported to be doing good work. The Secretary acknowledges the evils of introducing railroads in the Indian Territory, but says: "The railroads, however, while serving the necessary purposes of commerce, bring the Indians into closer contact and communication with the intelligence, the general trade and intercourse of the country, and they contribute largely to enhance the value of the Indian lands through which they pass."

Secretary Manning of the Treasury, after showing that we shall soon have an annual surplus of $125,000,000, makes the following recommendations: (1.) Repeal of the clause in the act of February 28, 1878, making compulsory Treasury purchases of silver, for the reasons heretofore given, and in order to reduce surplus and unnecessary taxation, $24,000,000 a year. (2.) Further reduction of surplus taxation, close down to the necessities of the Government economically administered. (3.) Repeal of the act of May 31, 1878, making compulsory post-redemption issues and reissues of United States legal-tender notes, thus facilitating—(4.) Gradual purchase and payment of $346,681,016 outstanding promissory notes of the United States with the present and accruing Treasury surplus, issuing silver certificates in their room, and gold certificates if need be, without contraction of the present circulating volume of the currency, these notes (called greenbacks) being now the only debt due and payable before 1891, except the three per cent. bonds, which are probably all to be called and paid early in the ensuing fiscal year. The Secretary recommends that the first step in the way of tax reduction should be to repeal the tariff duties on raw materials. The Secretary does not favor the repeal of the sugar duties, nor of the excise taxes on liquors and tobacco. He thinks that wool should be made free, and that a corresponding reduction should be made in the duties on woollen goods.

United States Treasurer Jordan, in his annual report, shows that the net receipts of the Government during the year ended June 30, 1886, were $336,439,727, the net expenditures $242,483,138, and the excess of revenue over expenditures $93,956,589. The receipts were $12,749,020.68 greater, and the expenditures were $17,743,796.61 less, than last year. From tables given it appears that there are now in circulation 61,761,448 silver dollars, the largest sum attained in the circulation of this kind of currency. The Treasurer is of the opinion that $65,000,000 is the extreme limit which may be obtained.

Secretary Whitney, in his annual report, says he has done what he could to consolidate in one bureau the general purchases and the care and disposition of stores and property. An Inventory Board, appointed in June last to visit the navy yards, reports that, under the loose system of the past, property might be lost, misused, or stolen without responsibility upon any one. There were found to be over 12,000 tons of cast and wrought iron lying in scraps about the yards, 759,000 pounds of composition and brass, 159,000 pounds of old copper, and 193,000 of old lead. Of most of these articles some bureaus have recently made considerable purchases, and are even doing so at the present time.

Secretary Whitney on Wednesday signed an order directing the discharge of nearly all the watch force of the various navy-yards. The Chief of the Bureau of Yards and Docks, in which the watchmen serve, has concluded that civilian watchmen are only necessary where it is not feasible to station marines. There are upward of 200 navy-yard watchmen employed at $2 for each turn of eight hours' duty. The marines, it is said, make excellent watchmen, and, of course, will not be paid for the extra service.

The reports of the trial trips of the *Atlanta*, just made public by Secretary Whitney, show that her power does not meet the requirements. The Secretary says that the contract for the construction of the *Atlanta* provides that upon trial her machinery shall maintain for six hours a collective indicated horse power of 3,500, and there is nothing in the contract relating to speed.

The decrease of the public debt during November amounted to $3,005,249.57.

The President on Thursday issued a proclamation promulgating the new extradition treaty with Japan, which is now in force.

The tone of the President's message on the tariff question has encouraged revenue reformers in Congress, and Mr. Carlisle and Mr. Morrison will endeavor to proceed as speedily as possible to a consideration of the Morrison bill, which now stands on the House Calendar. An effort will be made to incorporate the Hewitt bill with it. In the Senate on Tuesday Senator Dawes (Rep., Mass.) introduced the following resolution: "That the Committee on Finance be instructed to inquire and report as soon as practicable what specific reduction can be made in customs duties and internal taxes which will, in their judgment, reduce the receipts to the necessary and economical expenditures of the Government without impairing the prosperity and development of home industries, or the compensation of home labor." Mr. Morrill (Rep., Vt.) offered a resolution, "That the promise of making any revision of the tariff in a spirit of fairness to all interests, not to injure any domestic industries, . . . appears so obviously hopeless and impracticable, that any further attempts at revision by the present Congress in contravention to the foregoing cardinal declarations are to be regarded as inexpedient and detrimental to the revival of the trade and industry of the country." The Senate, on motion of Mr. Hoar, postponed the Union Pacific Funding Bill until December 21, when it is to be made a special order.

Congressman B. T. Frederick (Dem.) of the Fifth Iowa District was made so angry by the fact that he was not successful in having the man of his choice appointed Postmaster at Iowa City, that he has resigned.

The United States Supreme Court, in an opinion rendered on Monday, decides that a person who has been brought within the jurisdiction of the court by virtue of proceedings under an extradition treaty, can only be tried for one of the offences described in the treaty, and for the offence with which he is charged in the proceedings for his extradition, until a reasonable time and opportunity have been given him, after his release or trial under such charge, to return to the country from whose asylum he had been forcibly taken under these proceedings. Chief-Justice Waite dissents from the opinion of the court, on the ground that he can find in the treaty nothing which forbids a trial for any other offence than that for which the extradition was made. The decision of the court is opposed to the position taken by the United States Government in its negotiations with the Government of Great Britain with relation to the Winslow and Lawrence cases.

In the United States Circuit Court at Boston on Friday, in the case of the National Home for Disabled Volunteers against Gen. B. F. Butler, charging the defendant with not accounting for $15,000 of the institution's funds, Judge Carpenter charged the jury that it is a bookkeeping controversy, and that Gen. Butler is distinctly wrong. The jury rendered a verdict against Gen. Butler for $16,537.50 after being out an hour.

The Anti-Saloon Republican Convention at Cortland, N. Y., on Wednesday changed the name of the organization to the New York State Temperance Republican League. Judge Noah Davis was elected President.

The amount paid into the New York State Treasury up to December 1, under the new Vedder law passed last winter, imposing a tax of one-eighth of one per cent. on the capital of new corporations, is $90,029.45. It is estimated that the annual revenue from this source will be over $150,000.

The American Copyright League, at its annual meeting in this city on Thursday afternoon, elected the following Council for the ensuing year: John Bigelow, Prof. H. H. Boyesen, the Rev. Drs. Robert Collyer, Howard Crosby, H. C. Potter, and Morgan Dix, R. W. Gilder, Laurence Hutton, Brander Matthews, Arthur G. Sedgwick, Edmund C. Stedman, Charles Dudley Warner, S. L. Clemens, Poultney Bigelow, R. U. Johnson, E. P. Roe, Charles Barnard, Dr. Titus M. Coan, Col. Thomas W. Knox, Hamilton Mabie, Prof. E. Munroe Smith, Thomas Maitland, Bayard Tuckerman, Prof. E. L. Youmans, Henry M. Alden, W. H. Bishop, George W. Folsom, George Walton Green, H. C. Bunner, and Bronson Howard.

The Trustees of Columbia College decided on Monday to celebrate on April 13, 1887, the 100th anniversary of the revival and confirmation by the Legislature of the royal charter granted in 1754, for establishing a college in the province of New York, and the creation by the same act of a corporate body entitled the Trustees of Columbia College.

FOREIGN.

In the German Reichstag on Friday, in the debate on the first reading of the Septennate Military Bill, the Progressists signified their willingness to vote for the bill provided the period of service were reduced from three to two years. The Government refused to consent to this. The Prussian Minister of War, in advocating the passage of the bill, said:

"Shall we allow ourselves to be outstripped by a neighboring State, in which we cannot perceive that degree of abstinence from preparations for war and that peaceful disposition necessary to enable us to live in peace? The bill is of the most urgent character. The Reichstag must pass this measure before Christmas if the purpose of the Government is to be attained." The debate was adjourned.

Count von Moltke made a speech in the German Reichstag on Saturday, which has created a profound impression in Europe. It was in the debate on the Septennate Bill. Gen. von Moltke said that all the neighbors of Germany, on the left and on the right, were fully armed, a state of things which even a rich country was unable to bear for any length of time, and which might lead to decisive events at an early date. The preamble to the bill showed how far Germany was behind other States in the strength of her army and the taxation of her people. The French, for instance, paid about double the sum paid by the German people, and an alliance with France would assure the peace of Europe. "But," he continued, "such an alliance is impossible while public opinion in France impetuously demands the surrender of two provinces which we are strongly determined never to give up." The alliance with Austria was valuable, but a great State must rely upon its own strength. The measure under consideration had reference not alone to a peace, but to a war establishment. "We have found it difficult enough to attain the unity of Germany," he said, "Let us uphold it, proving that we are united. The whole world knows that we do not contemplate conquest. May it also learn that we intend to keep what we have, and are resolute and armed to this end." The Vienna *Allgemeine* says that peace between France and Germany is now almost impossible, and that a terrible gulf yawns in Central Europe.

The gravest importance is attached by all Continental writers to Von Moltke's speech. All the foreign correspondents say there is no other topic of conversation among diplomatists and politicians. "It is well understood here," says the London *Times's* Berlin correspondent, "that the German Government must have special reasons for the anxiety with which it is watching the working of French feeling." The Berlin *Post*, Bismarck's organ, declares that Boulanger's plans are the extreme limit of what France can bear in war time, destroying all peaceful occupations, and they can, therefore, have but one meaning. "All parties," the writer adds, "calculate on war as putting an end to this state of things."

In the French Chamber of Deputies on Friday, M. Sarrien, Minister of the Interior, speaking in opposition to a motion for the total abolition of the offices of sub-prefects, promised that he would introduce a bill providing for a partial abolition of the offices. Prime Minister de Freycinet supported M. Sarrien, and reproached the Opposition for seizing every chance that was offered to overthrow the Government. The Chamber, however, adopted the motion for total abolition by a majority of thirteen votes, thus defeating the Government. There was intense excitement in the lobbies of the Chambers. That evening the Ministry tendered their resignations to President Grévy. The members of the Radical Left on Saturday unanimously decided to vote confidence in the Government.

M. de Freycinet having insisted on retiring from the French Premiership, M. Floquet has undertaken to form a new Cabinet. The Russian press hoped for the formation of a Boulanger Cabinet, and that of Germany desired the retention of M. de Freycinet. The Clémenceau party advocated M. Floquet for the Premiership, regarding an extreme Radical Cabinet as not likely.

M. Rouquet, Secretary of the Paris Municipal Council, on Wednesday forwarded to United States Minister McLane the petition adopted by the Council on November 27, asking for his intercession with the Governor of Illinois in behalf of the condemned Chicago Anarchists. Mr. McLane consented to transmit the petition, and sent the following formal reply to the Council: "As the petition is destined for the Governor of Illinois, and is made with the object of sparing human life, I will not refuse my assistance if you persist in demanding it. But allow me to inform you that in the present case it is useless. You can, without disadvantage and with as much efficacy as I, address yourself direct to the Executive of Illinois, who alone has the power of granting the pardon."

Dr. Colin of Paris read a paper before the French Academy of Sciences on Thursday showing that the annual average number of deaths from rabies in France is twenty-six, and that since M. Pasteur began his course of treatment the same number of patients have died. According to official statistics, the number of persons bitten by mad animals last year in France was 351, while M. Pasteur has treated 1,700 patients. Dr. Colin concludes that the Pasteur system is of doubtful efficacy, and he is alarmed for the results of virulent inoculation.

The deputation of Bulgarian notables instructed by the Government to visit the different Powers, and personally place before them the facts of the Bulgarian situation, has started on its tour. It is reported that the deputation has been instructed to demand that the Powers shall either consent to have Prince Waldemar of Denmark elected to the Bulgarian throne, or else permit the return of Prince Alexander.

In their reply to Austria's overtures, England and Italy favor settling the question of the union of Bulgaria and Rumelia before electing a Prince of Bulgaria, while Russia, Turkey, and France favor electing a Prince first.

Gen. Kaulbars arrived at St. Petersburg on Wednesday, and was received with enthusiasm.

Spain, after a long and difficult diplomatic controversy, protracted largely through the hostile spirit of the German military authorities, has finally succeeded in inducing Prince Bismarck to abandon his proposal to establish a naval station at the Caroline Islands. Count de Benomar, Spanish Ambassador to Germany, in conversing with the German Chancellor about the merits of the case, attempted to minimize the importance of having a naval station at the Carolines, and argued that it would not be much for Germany to concede to Spain a withdrawal of the German project. Prince Bismarck corrected the Spanish Ambassador, and said: "It is because I recognize the value and importance of the station that I decide to abandon it, in order to show the value I attach to Spanish friendship."

Johann Georg Meyer, the German genre painter, is dead, aged seventy-three. This famous artist was better known as Meyer von Bremen, from his birthplace.

In high political circles in England the opinion is expressed that a dissolution of Parliament is expected by Easter.

In a recent interview, Archbishop Walsh of Ireland explained his approval of the Irish "Plan of campaign" against rent as follows: "It is admitted on all hands, practically all over Ireland, that reductions, and large reductions, are to be made in rents, and even in judicial rent. The question is as to the amount of those reductions. Whatever inconvenience there may be in having this grave question decided by the tenants, I must maintain that there is just the same inconvenience in having it decided by the landlords. The landlord, like the tenant, now is merely one of two contracting parties, neither more nor less. Within the last six or seven months two proposals have been made by the friends of our Irish tenants, the adoption of either of which by Parliament would have saved us, or rather, I should say, have saved the Government of the country, from the responsibility of the present deplorable state of affairs, viz., Mr. Gladstone's Land-Purchase Bill of the present year, and Mr. Parnell's subsequent proposal for the relief of tenants. If either of these had been accepted, the fixing of fair reductions and fair rents would not now be in the hands of the tenants; it would be in the hands of the constituted courts of the realm. If the present rough-and-ready way has had to be substituted for a formal judicial procedure, the blame surely does not lie at the doors of the Irish tenants or their Parliamentary representatives and political leaders, who did their best in every possible way to have the matter referred for settlement to the courts."

To frustrate Irish landlords' endeavors to seize rents by means of garnishee orders served on tenants' trustees, amended instructions have been issued on the plan of the rent campaign, advising trustees to convey moneys to persons of assured integrity, but possessed of no property, whom the garnishee order will not affect. This precaution has already been taken in regard to twenty-seven properties. Two hundred and thirty tenants on Lord De Frayne's Sligo estate on Thursday paid their rents, less 20 per cent., to Mr. Redmond, Canon Donohue, and Fathers Henry and Felan, as trustees, the agent of the estate having refused to grant a reduction. The payments were made in an orderly and business-like manner, the total amount exceeding £1,000. Mr. Redmond in a speech said that the moment Lord De Frayne decided to accept the money it would be turned over to him. If he tried eviction, the tenants would make it hot for him, and the rents would be used for defending them.

The Irish question was discussed for two hours at the British Cabinet Council on Friday. The Government are apparently so satisfied with their present vigorous policy, and with the Irish outlook generally, that they have decided not to meet again until after Christmas unless unforeseen events compel them to. The Government do not regard the rumors about French interference in Egypt as serious. The Dublin agent of the Central News telegraphs that the Irish Executive, in consequence of the proceedings at the Cabinet council, is preparing for a determined struggle against the Irish National League. The proposed warfare, the telegram asserts, will include proclamations of all League meetings and arrests of the prominent anti-rent agitators.

The British Government have obtained from the law officers of the crown at Dublin opinions to the effect that tenants, trustees, and others conspiring to defraud landlords of due rent are liable to indictment under the common law.

A great Liberal Unionist conference was held in London on Tuesday, at which 400 eminent and influential men were present. Lord Hartington presided, and made an address vigorously denouncing the policy of Mr. Gladstone. A resolution was passed affirming the determination of the conference to make every effort to uphold the Union. Letters were read from Lord Tennyson, the Duke of Argyll, John Bright, and Mr. Chamberlain. The last said: "There is no hope of reuniting the Liberal party unless Mr. Gladstone's scheme of Irish Government is abandoned."

Mr. John Bright, writing with reference to the removal of Nottingham lace machinery to districts where wages are lower, expresses the hope that workmen will soon discover that it is not their true interest to demand higher wages than a trade can pay.

In the Admiralty Court at Charlottetown, Prince Edward Island, on Thursday, the American schooner *Highland Light* was condemned and ordered sold on December 14. She will probably be bought in by the Govern ment and fitted up as a cruiser. This is the first vessel which was seized for violation of the Fisheries Treaty of 1818.

THE PRESIDENT'S MESSAGE.

THE President's message reprobates the cruel treatment of the Chinese, and promises a "comprehensive remedy" through a convention with the Chinese Government; describes the importance of the Canadian fishery question, and says negotiations are pending, promising an "acceptable conclusion" of the trouble; says a good word for the reciprocity treaty with the Sandwich Islands; pats Liberia on the back, and proposes the gift to her of a "small vessel"; gives the history of Cutting's case, and expresses the hope that the Mexican statute under which he was tried will be modified, but intimates that, whether modified or not, it must not be again enforced against American citizens; describes our good relations with several minor Powers; rejoices over the restoration of commercial reciprocity with Spain in the Antilles; recommends a revision of the naturalization laws in some minor particulars, and our adhesion to the Berne copyright convention; strongly urges the revision of the mode of paying consuls, in accordance with the schedule presented by the State Department, and the provision of a proper system of consular inspection—something sorely needed, and never attempted since Parson Newman made his celebrated journey round the world; gives a summary of the Treasury receipts and expenses; dwells at length on the importance of doing away with the surplus revenue by a reduction of taxation; shows that this surplus, if allowed to continue, will result either in the hoarding of the circulating medium in the Treasury or in "wasteful public extravagance"; protests, both in behalf of the laborer and the farmer, as un-American, against the levying of more taxation than is necessary to meet the just obligations of the Government, and calls for a revision of the revenue laws in the direction of reduction, by a lowering of duties on the necessaries of life and on raw materials.

It also gives the leading points in the condition of the public debt, and on the silver question; reaffirms the opinions on this question expressed last year, and points in corroboration of them to the increased exportation of gold; recommends the appointment of an additional Federal judge in this district to cope with the increasing revenue litigation; reproduces the leading points in the reports of the Departments of War and Justice and of the Post-office; urges strongly the vote of additional money and the appointment of a commission to hasten the process of transforming the Indians into farmers settled on their own land in severalty, which is now going on far too slowly; dwells on the way in which the various land laws have been perverted from their original design in the interest of speculators, and recommends the repeal of the preëmption, timber-culture, and desert land acts; exposes the extent to which the benefits of the pension laws are unequally divided, through evasions and perversions secured by political influence; and, after a few words about the Patent Bureau and the Pacific railroads, recommends the bestowal of powers of arbitration on the Labor Bureau, but does not say whether the decisions of the arbitrators should have the force of law, or if so, how they would be carried into execution, or what reason there is for supposing that the infrequency of arbitration now in labor disputes is due to the difficulty of finding an arbitrator. The truth is, that it is due either to the unwillingness of the parties to arbitrate, or to the non-existence of any proper subject of arbitration.

The message further commends in strong terms the operation of the Civil-Service Law. It adds:

> "The continued operation of the law relating to our civil service has added the most convincing proofs of its necessity and usefulness. It is a fact worthy of note that every public officer who has a just idea of his duty to the people, testifies to the value of this reform. Its staunchest friends are found among those who understand it best, and its warmest supporters are those who are restrained and protected by its requirements.
>
> "The meaning of such restraint and protection is not appreciated by those who want places under the Government, regardless of merit and efficiency, nor by those who insist that the selection for such places should rest upon a proper credential showing active partisan work. They mean to public officers, if not their lives, the only opportunity afforded them to attend to public business, and they mean to the good people of the country the better performance of the work of their Government.
>
> "It is exceedingly strange that the scope and nature of this reform are so little understood, and that so many things not included within its plan are called by its name. When cavil yields more fully to examination, the system will have large additions to the number of its friends.
>
> "Our civil-service reform may be imperfect in some of its details; it may be misunderstood and opposed; it may not always be faithfully applied; its designs may sometimes miscarry through mistake or wilful intent; it may sometimes tremble under the assaults of its enemies or languish under the misguided zeal of impracticable friends; but if the people of this country ever submit to the banishment of its underlying principle from the operation of their Government, they will abandon the surest guarantee of the safety and success of American institutions.
>
> "I invoke for this reform the cheerful and ungrudging support of the Congress. I renew my recommendation made last year that the salaries of the Commissioners be made equal to other officers of the Government having like duties and responsibilities, and I hope that such reasonable appropriations may be made as will enable them to increase the usefulness of the cause they have in charge."

This is all excellent. It calls for only one word of criticism, which is that the reform as now embodied in the law will never be fully and heartily accepted by the people and politicians until its principles are upheld in dealing with appointments which the law does not cover. As long as these are made to any considerable extent on the spoils theory, the law will continue to be treated by politicians, with more or less approval and acceptance on the part of the public, as something fanciful and transitory, and the system of appointment for fitness will never take root in American political manners.

But after all allowances and deductions have been made, it still remains true that President Cleveland's public utterances have thus far compared very favorably with those of his recent predecessors both in style and method. He touches on nothing which he does not understand, and proffers no opinions which have not the ring of sincerity. The vagueness which marks his utterances on that Serbonian bog the "labor problem," can hardly be condemned in view of the extent to which it marks those of nearly all our public teachers. Of this fogginess the workingman is the worst victim, because it helps his own demagogues in living on his illusions.

SECRETARY MANNING'S REPORT.

THE report of the Secretary of the Treasury is the most pronounced, radical, and thorough-going of all the communications yet sent to Congress by Mr. Manning. It is not likely to commend itself to his party in Congress. Probably he did not expect that it would. But it is well calculated to impress thinking men of all parties, and thus to exercise a permanent and increasing influence. It is the kind of document to command the future, because it sets down truths to which the eternal years belong, and enforces them in terms which cannot fail to arrest the attention even of those to whom they are now most unpalatable. The evidence which this document supplies that Mr. Manning's mental powers have not been impaired by his recent alarming illness, is not the least gratifying piece of information to be gathered from the reading of it.

It is something remarkable that the first Secretary of the Treasury of recent years to recommend a retirement of the greenback currency, and the return of the Government to ante-bellum principles of finance, should be a Democrat. Secretary McCulloch did make a similar recommendation immediately after the war, but it was negatived by Congress upon two grounds. It was urged by the emotional class of statesmen that the greenback had saved the country during the war. One orator of the time acquired much fame by calling it "the blood-stained greenback." This phrase hit the popular fancy by impersonating the currency and connecting it with the struggle for the national existence. If Senator Oglesby had said "the one-legged greenback," the spell would have been broken, because everybody would have seen that there was no likeness between a wounded soldier and a past-due promissory note; but the blood-stained greenback was a very different thing. It was a loyal, long-suffering, battle-scarred standard of value. It was the very antithesis and opposite of the traitor gold that deserted us in our hour of peril.

The other ground upon which Secretary McCulloch's recommendation was resisted was, that retiring the greenbacks would contract the currency. Whether it would have done so at that time or not, it is certain that the popular imagination was much affected by the spectacle of the destruction of four millions of the circulating medium every month, without any means in sight for restoring specie payments other than contraction itself. The condition of things now is as different as possible from that of Secretary McCulloch's first headship of the Treasury. If the greenback is to be accounted a veteran of the war, it is quite proper to send it to a soldier's home. Its fighting days are over. Moreover, contraction of the currency is impossible on the terms proposed by Secretary Manning, since he will pay a gold dollar or a silver one, whichever is preferred, to the holder of every greenback dollar taken in and cancelled. The volume of the currency will therefore remain exactly what it was before, but it will be much improved in quality, and the demoraliz-

ing and ever-threatening consequences of a Government debt converted into legal tender will be for ever removed. If there is any country, or ever was any in the world, that could afford to dispense with a fiduciary currency altogether, the United States is that country.

Mr. Manning's recommendations regarding the retirement of the greenbacks dispose of the surplus-revenue question at once. The outstanding greenbacks are $346,000,000. The surplus will not be more than $100,000,000 per year. The remaining 3 per cent. bonds will absorb it for nine months to come. There will then be an interval of three and a half years before the 4½ per cents become payable. If the protectionists are very much perplexed about the reduction of taxation, let them adopt Mr. Manning's solution of the problem. He does not agree with them as to the virtues of the tariff —quite the contrary—but he offers them an alternative.

That portion of Mr. Manning's report which relates to the "incompetent and brutal scheme of revenue" which the tariff represents, will be hailed with satisfaction by most economists and thinkers, whose private interests are not linked in some way with that pernicious system. The chapters which relate to the silver question, while perfectly sound in the conclusions arrived at, are the least felicitous portion of the report. They are written from the bimetallist standpoint. They hold out the idea that something has gone wrong in the world in consequence of the gradual discarding by mankind of a clumsy, superannuated, semi-barbarous instrument of exchange. The exact reverse is the truth. Civilized mankind have put silver aside, except for small transactions, for exactly the same reasons that they have put stage-coaches aside for travel, except for short distances, and they are better off for the change. Moreover, the pottering of the English Tories over bimetallism is the merest boy's play. Anybody who builds hopes upon it will be grievously disappointed.

DISINTEGRATION AMONG THE KNIGHTS OF LABOR.

As the Knights of Labor Convention at Richmond in October was closing, an intelligent delegate predicted the early downfall of the organization. "The Convention," he said, "will be remembered by all who have attended it for the acrimony, selfishness, and political scheming which have characterized its proceedings." He pointed out that not a single one of the officers elected "had worked a lick as a laborer within ten years," and that all of them were "professional organizers," who were only in the order for the money they could make out of it. In a few graphic words he drew this vivid picture of the situation:

> "This organization has during the past two years become the bane of the laborer in being transformed into an asylum for deadbeats and paupers, and a scheming school for politicians. Every man who belongs to it now, and does not make money out of it, is a worse slave to intriguers than he ever was to capital, and is his own worst enemy. He is a tool and a dupe."

The few weeks which have elapsed since the Richmond Convention have strikingly confirmed the diagnosis and prediction of this clear-headed workingman. The great strike in the Chicago packing-houses illustrated the way in which the order had been converted into a scheming school for politicians, and demonstrated that the men who obey these politicians are worse slaves to intriguers than they ever were to capital. This strike was entirely without defence or excuse. After the original troubles over the eight-hour question, the men had returned to work under an implied, if not an express, contract to remain in the service of their employers, upon the ten-hour system, throughout the winter, and the employers, supposing that this agreement would be adhered to in good faith, had arranged to resume and indefinitely continue operations to the full capacity of their establishments. Suddenly one of the "professional organizers" issued an order that the men should stop work, and the "tools and dupes" obeyed. The weakness of the strike was so apparent that General Master Workman Powderly telegraphed orders that the men should return to work. But District Master Workman Butler, who had ordered the strike, had meanwhile become a candidate for sheriff, and, on the plea that Mr. Powderly's order would lose him 2,000 votes at the election then approaching, he had its publication suppressed for days. Meanwhile the employers had been securing a large number of new hands, so that when the old men applied for their former places, many of them could not get work, while those who were taken back had to sign a "cast-iron" pledge that they would never strike again without giving two weeks' notice, and would allow a certain amount of wages to be kept on deposit by their employers as a guarantee that they would keep this pledge

The Chicago reverse is only one of several disasters to the order which have recently occurred. A notable instance is the utter failure of the Knights in their controversy with the knit-goods manufacturers of this State. For some months the Knights had been insisting that they should be allowed to run the business of these manufactories, and that the nominal proprietors should really be only their agents. They finally went so far as to declare that the owner of a mill should not even have the right to hire or discharge whom he pleased, and then the employers decided to fight the issue out. They closed their mills against the Knights of Labor, and announced that they would in future employ only persons who would expressly agree to respect the employer's right to hire and discharge employees, and who would pledge themselves, in case of any grievance, to confer with their employers alone for redress and not turn the matter over to outsiders—in other words, that they would occupy the same relations to their employers as existed before the rise of the Knights. The men who "work with their mouths" boasted that they would block this scheme, but the mills are already generally starting up with new hands, and the Knights admit to themselves that they are beaten.

No less noteworthy has been the recent collapse of the great strike for a reduction of hours of labor among the workers in the tanneries of Salem and Peabody, Mass., which began last July. The employers resolved to employ no men who belonged to unions, and the strikers resorted to violence to prevent them from getting "scabs." After five months the strike has been declared "off," the net result being that 1,300 new men have been employed, 500 old men have returned on their employers' terms, and there are only 300 vacancies for the many hundreds of other Knights who have been earning nothing since midsummer, and are now confronted with a winter of idleness.

Of all the great strikes which have been ordered by the Knights this year, every one has turned out a disastrous failure. There are multiplying signs that the workingmen are beginning to learn the lesson of these failures. The Executive Board of a District Assembly recently ordered a strike among the New Jersey glass-blowers, and six assemblies have surrendered their charters rather than obey a command which they declare is unjust. The "professional organizers" who ordered the strike threaten to "black list," ostracize, and starve out those men who insist upon the right of private judgment; but such threats from the men who "work with their mouths" only, no longer carry the weight which they formerly did. A secret circular, issued by the general officers of the Knights a fortnight ago, has just been published, in which Mr. Powderly confesses that things are in a desperate way with the order. He begins by the significant admission that the appeal for funds to assist victimized and locked-out members, which was issued before the Richmond Convention, has only brought in the beggarly sum of $14,000 in a period covering more than two months, and he now calls for a levy of twenty-five cents from every Knight in the country as a "special defence assessment." The imploring tone of this circular is in marked contrast with the jaunty air which characterized outgivings from this source a few months ago. "The Order of the Knights of Labor," he says, "has reached the most critical period in its history." He pleads, where he used to command; and admits the possibility of the Order's being overthrown, where he used to boast that nothing could stand against it. "Two alternatives present themselves," he says—"unconditional surrender, or manly defence"; and he begs for manly defence in a strain which shows that he contemplates unconditional surrender as not improbable. The slowness with which responses are made justifies his apprehensions. The appeal was issued two weeks ago, and the Treasurer admits that "the boodle hasn't commenced to come in very fast yet."

It is unnecessary to multiply evidences of the disintegration which is now at work among the Knights of Labor. They are heartily to be welcomed, because they show that reason is resuming her sway among American workingmen. The only wonder is that the madness lasted so long; that they should have contributed of their hard-earned savings to funds controlled by men who were never called to account, and who, with the cynicism of a New York Alderman, talk of their contributions as "boodle"; that men who called themselves

free should have voluntarily become the slaves of masters whom they did not even know, and who for the most part were professional deadbeats. It is to be hoped that the lesson may be as improving as it has been costly.

PROGRESSIVE TAXATION IN SWITZERLAND.

UNDER a law passed this autumn the principle of graduated taxation will, on the 1st of January next, come into force in Vaud, the Canton which in point of population and wealth ranks third in the Swiss Confederation. It is remarkable that a country like Switzerland, where greater equality of wealth and of other conditions prevails than in most European States, should be the first to adopt a principle which seems to be needed much more in countries like England or France, where inequalities of fortune are dangerously great. Progressive taxation already prevails in ten of the Swiss Cantons, containing nearly half the population of the entire Confederation. It cannot, therefore, be considered an experiment in Vaud, which is only following the example of her sister States, and has legislated by the light of their experience.

The English Foreign Office has just issued a Blue Book containing reports of its representatives in France, Germany, and the United States on the taxation of personal property in those countries. But it would have been more profitable to have had a similar report on taxation in Switzerland, and particularly on the working of the *impôt progressif* so far as it has been adopted. The new Vaudois law divides real property into three classes, which are to be taxed in the following proportions: 1 per 1,000 for estates under $5,000 capital value, 1½ per 1,000 between $5,000 and $20,000, and 2 per 1,000 for estates exceeding $20,000 in value. Personal property is divided into seven classes, the lowest class being under $5,000, the highest exceeding $160,000 capital value. The rates of taxation on these classes are to be in the proportion of 1, 1½, 2, 2½, 3, 3½, and 4 per 1,000. Incomes from earnings are also divided into seven classes, but in arriving at the net amount to be taxed a deduction of $80 is allowed for each person legally dependent on the head of the family for his support. The result of this is, that while a bachelor earning $1,000 a year would pay a tax of $15, a married man with the same income and ten children would pay but 50 cents, and if he had twelve children nothing. The Vaudois law was carried by overwhelming majorities when submitted, as was necessary, to a "referendum" vote of the whole people, and at every subsequent stage of its progress.

Taxation is comparatively an easy matter in a country like Switzerland, where the head of almost every family is a landowner. In England and Ireland, where it may be said of the mass of the people that "they haven't a sod of ground but the sky overhead, and live from hand to mouth, like the birds in the air," the people generally can be reached for revenue purposes only by indirect taxes. The result of this is a very decided graduation of the burden of taxation in the wrong direction. The taxes being levied on articles of general consumption, which are not used in greater quantities by the rich than by the poor, the latter contribute a much larger share of their incomes to the revenue than the former do.

It is estimated that a laborer's contribution to the revenue in England is from one-sixth to one-twelfth of his earnings; while a man with an income of £1,000 a year, and the income tax standing at eight pence, would not pay more than one-twentieth, and those with larger incomes a very much smaller proportion. Customs duties being levied in England by weight and not ad valorem, it also falls out that the consumers of cheap tea, tobacco, and spirits pay 200 to 300 per cent. more duty than is paid on the finer qualities of these matters. The establishment of equality of taxation would involve an entire recasting of the fiscal system of the United Kingdom, and if the principles of "equality of sacrifice," the exemption of necessaries, and the taxation of superfluities, be aimed at, a very steep gradient of taxation would be applied to the larger fortunes in England. The people in England are scarcely aware of the fiscal oppression to which they are subjected. The subject is, however, a coming one, and hints are likely to be taken from the recent legislation in Switzerland on this matter.

In protectionist countries like our own, where indirect taxes are esteemed beneficial, even apart from the revenue they yield, and where the burning question is how to reduce the surplus in the national Treasury so as not to hurt anybody, any income tax, either progressive or proportional, will be merely a dream of doctrinaires so long as such fiscal notions prevail. An income tax for State and local purposes would be impracticable here, on account of the ease with which the payer might avoid it by removing from the State or city where it was enforced to one where a different system prevailed. It will be interesting to see what effect the progressive tax has on the owners of movable property in the Canton Vaud.

DOES GERMANY ANTICIPATE WAR?

BY a law of 1880 the peace effective of the German army was fixed until March 31, 1888. Fully sixteen months before the expiration of that term, the Imperial Government demands of the Reichstag the voting of a new military septennate, and an increase of the force, to take effect from the beginning of the new financial year. This is required, the Emperor said in his speech from the throne, "in view of the development of the military establishments of neighboring States," referring of course to Russia and especially to France. And the War Minister declared: "Despite her pacific policy, Germany may within a measurable time be involved in war; for the moment, such a danger does not threaten, but the present epoch is most difficult. . . . The bill is of the most urgent character." "Our rejection of the bill," Moltke added on Saturday, "will make us responsible for all the miseries attendant upon a hostile invasion." But Emperor, War Minister, and General Chief of Staff uniformly affirm that they urge speedy and additional armaments only in order to secure peace, in the sense of the Roman adage, "Si vis pacem, para bellum." The position is clear: France threatens a war of revenge upon Germany, and Russia an attack upon Germany's ally, Austria-Hungary; let the menaced empires be fully armed, and the assailants may desist and the peace of Europe be preserved.

Are these declarations all sincere? Does the German Government really apprehend the approach of war? Is it bent only on preventing it? Or does it merely mean to profit by the present scare in order to secure as early and as fully as possible its new military septennate, and thus render itself in great part independent of the Reichstag? Or does it perhaps arm not for peace but for war, meditating an attack on France or on Russia, to crush out of the former the thought of *revanche*, or of the latter the dream of a Panslavic crusade? Every consideration makes us inclined to believe that Emperor William and his military spokesmen—all of them, in fact, speaking for Bismarck—candidly say what they think and intend. That in France a young generation, which does not distinctly remember the horrors of the war and invasion of 1870, will, at a not distant day, force the republican Government to plunge into a new conflict with the hated neighbor, for the reconquest of the lost provinces and the recovery of the lost "glory," nobody can doubt who reflects on the history of nations, and of France in particular. That Russia—burning with the desire of expansion, Panslavic rule, and revenge on Austria for her "grand ingratitude" in 1854, when she forced the Czar's armies to give up the offensive in the Crimean war; for her share in the transactions of 1878, which changed the stipulations of San Stefano, conquered by the Russian sword, into those of Berlin, dictated by Beaconsfield and Andrássy; and for the greater humiliation just inflicted on the Czar in the Bulgarian affair—is only waiting for a movement of France which would fully occupy Germany, to pounce upon the latter's ally, is equally patent. The present attitude of England and Italy renders the conclusion of an offensive Franco-Russian alliance almost chimerical, but the political constellations may change in the future, and, as Moltke justly remarked, "A great State must rely upon its own strength."

On the other hand, it cannot be presumed that Germany contemplates a war of aggression, were it only for permanently defensive purposes. No amount of defeat inflicted upon the Russian forces by those of Germany and Austria-Hungary could effect more than temporarily forcing back the great Slavic Power. To drive it beyond the Dnieper, and erect a lasting barrier against it, would require the restoration of Poland, and the consequent abandonment by Germany of her Polish provinces, which she is just now fiercely trying to curb in their national aspirations. Neither can a war for the disabling of France for future aggression be undertaken now with any chance of a speedy termination—especially while Russia may fairly be expected to be on the side of the assailed; and for the beginning of a long war, in which the now fully prepared and armed French nation would fight for its

existence, Emperor William, Count Moltke, and even Prince Bismarck (of whom the oldest is ninety years of age and the youngest above seventy) are all too old. Besides, in a war of coalitions—if such a war must come—the defensive is decidedly to be preferred by those who hold the inner lines, as Germany and Austria-Hungary now do. And Moltke has a good warrant in the late past to say, as he does, "The whole world knows that we do not contemplate conquest." Germany has rested on her laurels for fifteen years, since the peace that followed the surrender of Paris. Were it in her plans to seize another portion of Lorraine, or Holland, or Jutland, she could have done it more easily while France was prostrate or Russia at war with Turkey, than now. Germany has not yet sufficiently absorbed Alsace-Lorraine, nor sufficiently worked out her own internal amalgamation, to stretch out her hand for new conquests. Frederic the Great—a captain—survived the Seven Years' War twenty-three years, all in peace; Bismarck, the continuator in our time of his work for Prussia, is wise enough to desire a similar termination of his career, and is apparently bent on forcing France to keep the peace, while Austria-Hungary watches or repels Russia.

WHAT FRENCHMEN MAKE OF "HAMLET."

About ten years ago Mr. A. W. Ward, in his 'History of English Dramatic Literature,' thought he saw signs of a coming Shaksperian era on the French stage. After a brief review of the French translations of the poet, he added, "It may be hoped that the time is not distant when French art may yet render the greatest service which it is capable of rendering to Shakspere's genius, and open to its creations worthily interpreted the doors of the first theatre in Europe." Mr. Ward's wish has apparently been realized, as "Hamlet" was produced on the 28th of September with all the splendor of which the Comédie-Française is capable. The acting, the costumes, the scenery—all that depended upon the skill of the artists and the taste of the Director, M. Claretie, has been praised and appreciated. But, leaving these accessories, it may be of interest to note how the play itself was received.

In the first place, "Hamlet," Shakspere's "Hamlet," may truly be said never to have been presented on the French stage. The version which the French public is called upon to admire is the old adaptation, in Alexandrine verse, first produced at the Théâtre Historique in 1847, the joint production of Alexandre Dumas and M. Paul Meurice, a very "counterfeit presentment," indeed. This has been modified for the occasion by the surviving *collaborateur*, who has in a measure restored some of the scenes so strangely remodelled by the imaginative and reckless Dumas. Even thus improved, this translation, in the Romantic vein of Hugoic verse, is not a production likely to satisfy the keen or brilliant or even the common-sense dramatic critics who lead public opinion in theatrical matters. Nor has either the play or the performance in general been received with universal satisfaction by these aristarchs.

Several, while finding fault with the liberties taken by the translators, seem to agree (a pure assumption on their part) that Shakspere's plays cannot be represented on the French stage as written. M. Savigny writes: "Whatever in France may be the adaptation of 'Hamlet' for the stage, it can never be anything but an arrangement according to the taste of the adapter. *Notre théâtre à nous a des exigeances auxquelles Hamlet ne saurait échapper.*" The very *bourgeois*, not to say philistine, judgments of M. Francisque Sarcey in the *Temps* have already been given by the *Nation's* Paris correspondent. M. Sarcey is delightfully honest and plain-spoken, and as the last three acts of "Hamlet" had bored him, he said so. True, he was severely handled for it by M. Émile Bergerat ("Caliban" of the *Figaro*), who, in an article headed "Le Père le Goût," speaks of the *Temps* as the official journal *du Haut Béotisme national*. But others, with less frankness of expression than that of the eminent critic, have implied the same thing. M. Ganderax, in the *Revue des Deux Mondes*, without precisely saying that "Hamlet" was an *ennui* to him, really devotes a long article to explaining why it was so to others, and he concludes by saying that "'Hamlet' is less fitted to be played than any other play of Shakspere." M. Hugues Le Roux, in the *Revue Bleue*, speaks of "Hamlet" as "Un drame presque informe, enfantin par endroits"; he adds further, "Il n'y a pas pour nous autres Latins de chef-d'œuvre sans cette qualité primordiale la clarté." It is to this absence of clearness that he attributes the effort that a French public must make to admire Shakspere.

The above may be enough to indicate the tone of what may be called the superficial, though often very neat, criticism of those who make it their business to enlighten the world concerning recent theatrical performances in Paris. But by the side of, or rather above, these there is a class of critics who do not base their judgment upon the uncertain reception of a play by any public. Thus, when M. Sarcey spoke slightingly of the "Midsummer Night's Dream," calling it a *féerie*, M. Adrien Remacle, in the *Revue Contemporaine*, answered in an article showing the highest appreciation of the poetry of Shakspere, to which the critic of the *Temps* is entirely insensible. The representations of "Hamlet" at the Comédie-Française served as a pretext, as the Paris correspondent of the *Bibliothèque Universelle* very aptly says, for all those "who had an explanation of the character of the hero in their desk or in their head, to give us their theory; and it has turned out that the number of these was great." Not all were new, it may be added.

First in importance, a few days before the performance, appeared the long article by M. Émile de Laveleye in the *Revue Bleue* (Sept. 25). In the eyes of this distinguished political economist, *Hamlet* is pessimism itself. "To the question: Is life worth living? he answers, No, a thousand times no." But the pessimism of *Hamlet* is not that of Schopenhauer and of Hartmann, nor is it the personal and selfish feeling depicted in certain novels. "It is in the poem of Job that I find the explanation of the hopelessness and of the pessimism of *Hamlet*. The problem that disturbs Job is this: How comes it, if God is just, that the wicked triumphs and the righteous is unhappy? . . . *Si Hamlet n'accomplit pas la vengeance que le fantôme lui a commandé, c'est parce qu'il porte le deuil de la justice encore plus que celui de son père.*"

Another article, full of thought, is that of M. Colani, who gives his views in the *République Française* (Oct. 14), without having seen the play at the Théâtre-Français or even read the translation of Dumas and M. Meurice. M. Colani finds the explanation of *Hamlet's* weakness, of his incapacity for action, not "in his temperament, but in the critical spirit of dialectics: . . . he reflects too much to act." He is absorbed in the contemplation of that unexplainable thing called life. All this M. Colani supports by very apt quotations of passages admirably translated. This summary statement of his view does not do justice to his essay, which will deserve a place in Shaksperian literature.

M. Jules Lemaitre, who is now the theatrical critic of the *Journal des Débats*, seldom limits himself to a notice of a play as performed; but in the case of "Hamlet" he allowed himself to be carried away by the admirable acting of Mounet-Sully. The result is a charming account of the whole, as if he were telling a dream. He closes with a very pretty fancy of what Racine would have made of *Hamlet* if he had taken him as his hero; and he tells us Racine would have said "here and there some things that would be deep without seeming so, and we could find in his *Hamlet* romanticism, and pessimism, and whatever we pleased. . . . Only he would be easier to define."

This long, yet very incomplete, review of French opinions about "Hamlet" must close with the mention of the excellent notice by M. Léopold Lacour in the *Nouvelle Revue* (Oct. 15). His theory is not very different from that of Goethe in "Wilhelm Meister": "Tout le caractère est dans l'effort d'une très grande âme pour se tromper sans y réussir, parce que la destinée, tragiquement ironique, l'a mise aux prises avec un devoir trop lourd." He begins his remarks about the performance at the Français by regretting that a new translation was not called for, and he rightly asks for a translation in prose. In conclusion, it is not too much to say that the French public will not be able to have any adequate conception of Shakspere's dramatic power until some enterprising manager has the courage to break with the ridiculous tradition which imprisons tragedy on the French stage in the fetters of Alexandrine verse. And if it is asking too much to wish to have the plays in their entirety, let them at least be only reasonably shortened, and lightened as they often have been in England and America, not changed and distorted to suit the presumed exigencies of a public that has never had an opportunity to judge them.

THE BELFAST RIOTS COMMISSION.

Dublin, November 16, 1886.

The Belfast riots extended over more than two months—from early in June until late in August. An exhaustive three weeks' inquiry has lately concluded. We cannot expect the report for some months; but a perusal of the evidence, as published in the papers from day to day, enables us to form some opinion as to the origin and progress of these deplorable disturbances which have disgraced the second city in Ireland, so often before the scene of similar occurrences.

We have no means of fully estimating the pecuniary damage occasioned by the riots (one firm alone put down their loss at £1,000 through short and broken time and the unsettlement of their workers); but regarding loss of life and limb, we have ample evidence, apart from that laid before the Commission, in a late Parliamentary 'Return of Officers and Men of the Military and Constabulary Forces Killed and Wounded in the Disturbances in Belfast during the Months of June, July, and August of the Present Year'; and in 'Surgical Reports on the Belfast Riots,' by George Foy, F.R.C.S. One soldier and one hand constable were shot dead; one soldier and 300 constabulary were wounded, mostly by blows from stones—110 of these injuries being of a slight character, while the rest disabled the sufferers, some for a few days and some till the present date. To Mr. Foy's report is prefixed a plate of the "Missiles used in the Riots." The number of cases treated within the cognizance of the Belfast surgeons is put down as 582; this includes, we presume, the more serious cases of injury to consta-

bulary who were taken to hospital; 396 of the civilians suffered from gun-shot wounds, 34 of whom died. Mr. Foy "cannot form an opinion of the total number of deaths." Some of the deaths were peculiarly sad—a woman within a few days of her confinement; a widow looking out of a window. One man lost his hand while taking one of his children from the street. A girl of seven was hit in the temple with buckshot as she looked out of a window; one of nineteen was kicked almost to death.

The Commission was constituted as follows: Mr. Justice Day of the English bench (as representing the law), Maj.-Gen. Sir E. G. Bulwer (as representing the army and constabulary), Mr. F. Le Poer Trench, Q.C. (as representing the Conservative party in Ireland), Mr. Richard Adams, B.L. (representing the popular party, as far as it would be safe for a Conservative Government to have that party represented on such a commission), Mr. Wallace McHardy, Chief Constable of Lanarkshire (as representing the management of police according to British in contradistinction to Irish ideas). It was a strong and fairly constituted Commission, but many of us looked forward to its proceedings with feelings akin to dismay. The Town Council was represented by counsel and solicitors; so were the Catholic Committee and the Loyalist Defence Committee and the Earl of Enniskillen and the Orange Institution and the ratepayers and the constabulary. If the evidence of each witness were sifted by five Commissioners and six sets of lawyers, there was little prospect of a conclusion to the proceedings, and still less of their enlightening any one. It has always been the policy of the Government to buy up the talent of Ireland through an unnecessary multiplicity of legal offices; so that, whether intentionally or unintentionally, our judges, with ample time on their hands, with relatives in the inner and outer bar to be provided for, and with tender recollections of the times when they had to make their way by fees and refreshers, permit legal proceedings here to be unconscionably extended. The first practical intimation the public had that an English judge was in the chair was when Mr. Justice Day informed the astonished court that the gentlemen in wigs and gowns were there only upon the same footing as the general public, and that they, the Commissioners themselves, meant to keep the examination of witnesses in their own hands. The lawyers protested and left in a body, but were glad enough to return in a few days to watch the proceedings on behalf of their various clients. This was altogether a great relief, and probably no commission ever sat here which in its proceedings more entirely gained the confidence of the general public. Everything that could possibly elucidate the riots was dragged to light, every one was allowed his say, and no unnecessary prolixity was permitted.

It does not appear as if the Protestant mobs who formed the main body of the rioters, and who came into collision with police and military, had any excuse for disorder. Great riots have generally arisen from destitution or want of employment, or from some particular craze impelling the mob in some particular, definite direction. No such motives were apparent in Belfast. The Protestants there have the government of the city entirely in their own hands, the institutions of the country are in accordance with their desires. The only cause of uneasiness was *in futuro*—they wanted to give the British public a taste of what they would do if home rule were granted. If they were as confident as they profess to be in their own strength, they might at least not cry out until they were hurt. The riots were commenced by the "Island-men," a body of Protestants, marching down with sticks and stones upon some Catholic workmen, driving them into the river, throwing stones at them when there, and causing the death by drowning of one of their number. This tumult was in consequence of a quarrel which occurred the day before between a Protestant workman and Catholic foreman, which had been grossly exaggerated in the papers. The following is the account of the transaction as given by the Protestant workman himself before the Commission. Though apparently trifling, it is interesting as the assigned immediate origin of the riots:

Robert Blakely examined by Mr. Justice Day. What were you doing?—I was sent to make a drain. Were you engaged on the job with several other men?—I was. Was one of the men named Murphy?—I was not working ten minutes with him when he came to me and said (there was a bit of a height in the drain and we didn't get time to take it out): "This is a nice drain you have made." I said we didn't get time to make it. Said he, "If you got at it from this time to this time twelvemonths you couldn't make it any way." I said, "You need not care, for you have not got to pay me," and he swore a big oath he would cut my head off with the shovel. He lifted the shovel to strike me, and I put up a spade and I struck the shovel and knocked it out of his hand. He then struck me twice with the shovel, but he did me no injury. What took place then?—He said neither me nor any of my sort should get leave to work there or earn a livelihood there or any other place. What took place next?—I went over and told the gaffer that I could not get peace with Murphy, and he told me to go and get my time, and leave the place. I got my time and my wages. I called into the barrack going home and told what happened, but it was mere chaffing me and nothing else till I met with the sergeant and told him, and he told me to be down next day at eleven o'clock. I was there and went with him to the docks, and when I arrived there the Murphys had left. There were three sons and a father.

The rioting, once commenced, was proceeded with. Catholic houses were wrecked. The Catholics defended themselves or became aggressive. The Protestant mobs, as usual, knowing the authorities and "respectable" inhabitants of the town were generally on their side, showed a spirit and determination never manifested by Catholic mobs in Ireland, who have learned by long experience that in a contest with the authorities they cannot count on effective support from any one. Since the riots an Irish Protestant advocate of temperance, arbitration, and the brotherhood of man, spoke glowingly on the way in which "even the corner boys of Belfast" "stuck up to their work" in assaulting a police barrack. Things became worse and worse. The ordinary police force of the city (select members of the Royal Irish Constabulary detailed for duty in Belfast by the Inspector-General in Dublin) proved insufficient, and detachments of men from the country districts were drafted in, besides large bodies of military. The soldiers managed to maintain their popularity; but the fresh constabulary were from the first declared by the Protestants to be Catholics sent by "Morley" to murder them.

Occasions now arose upon which these constabulary felt bound freely to use their arms, which, from the evidence, it appears were not always handled with sufficient discretion—as they would have been under similar circumstances in England. The police acted as they would have done in other parts of Ireland; and in other parts of Ireland they have generally acted without much sense of responsibility, well knowing that they would under all circumstances be supported by the authorities. Hence it is reasonable to suppose that, among both officers and men, there was not shown that patience and reserve under extraordinary provocation which is generally expected of a police force. No doubt, also, many of the men, when once their passions were aroused, were not at all sorry to have a slap at "the Orangers." And so matters became still worse. The local magistrates and prominent citizens, unable to stop the riots, were yet influential enough with the authorities to secure the removal of the police from certain districts, so as to conciliate the mob. This encouraged to further and more daring violence. In the end the riots wore themselves out, rather than were suppressed. The Mayor, Sir Edward Harland, who was supposed by the National party to have rather favored the rioters, came out of the inquiry very well, as having acted fairly and to the best of his abilities.

The Commission not only examined into the origin of the riots, but invited suggestions regarding the means that should be adopted to prevent a recurrence of such troubles. These suggestions pointed towards the maintenance of a larger permanent force of police in Belfast. The evidence revealed an extraordinary state of feeling between Catholic and Protestant in that city—almost absurd touchiness regarding the processions and emblems of the opposite party; separate doors arranged for Catholic and Protestant workers in some of the factories; the genuine belief of educated and respectable citizens that Mr. Morley desired that they should be shot down by the constabulary; the manner in which "the whole respectable people" of certain Protestant quarters sided with the mob against the police. Mr. Reid, Inspector-General of Constabulary in Ireland, expressed in evidence his conviction that "there was a regular set made by the Protestant party to drive the police bag and baggage out of Belfast, and they wanted to do it in detail—the first time on the Shankhill Road, and, having succeeded there, they attempted it in other places." The influence of newspaper utterances upon the riots was remarkable. "Every morning," said Mr. Reid, "we looked through the local papers, and we made a forecast of the day's proceedings by the articles and letters published in the newspapers. If they were moderate in tone, we anticipated a quiet day; if they were violent, we assumed we were in for serious work, and took measures accordingly." Of 3,000 men employed in Harland's ship-building yard, there were only 225 Catholics. Of these, 190 left during the riots, from fear of their Protestant fellow-workmen. It was acknowledged that at one of the magistrate's committees a noted Protestant divine declared that, if the police were established in a certain "loyal" district, he "would arm 4,000 Orangemen and drive them out." Moreover, Mr. De Coban, a gentleman of position and a magistrate, admitted that he believed numbers of the constabulary were Invincibles in disguise.

This full and open inquiry will do good. There is much in the evidence to deplore, showing how long it must be before communities like Belfast can be brought into amicable working accord with the rest of Ireland. But there is no cause for despair. These bitter feelings and rancorous doings arise from the possibility of the minority maintaining its ascendancy by acting upon the prejudices of the English masses. When local national self-government comes in Ireland (and from local national self-government Ulster cannot be exempted), our whole atmosphere will be sweetened, and Protestantism, standing upon right and appealing directly to the common sense and reason of the Catholic majority in Ireland, will occupy a position such as it has never before held in this country—safe from possible injury, self-respecting, and respecting the opinions of others. D. B.

RUSSIA AND GREAT BRITAIN IN ASIA.

LONDON, November 13, 1886.

LORD MAYORS of London, as all the world is aware, are elected for an annual term of office. This official year begins on the 9th of November,

and it is the custom for the incoming Mayor to give upon the evening of that day a grand banquet in the Guildhall. This civic feast is attended by the ministers of the day; and Prime Ministers, when they have anything of importance to disclose to the nation, are wont to avail themselves of this occasion for so doing. Owing to the critical condition of affairs in Southeastern Europe, Lord Salisbury's speech was looked for in the present year with more than ordinary interest; and in one respect at least public expectation was not disappointed. The speech contained a clear and unambiguous statement of the policy which commended itself to Ministers in the event of war breaking out in Bulgaria. That policy is, briefly, that we shall not take the field against Russia unless Austria precedes us. But if Austria makes up her mind to resist by force of arms a Russian occupation of Bulgaria, she may count upon the sympathy and active support of Great Britain. There can be no doubt that in the carrying out of this policy Lord Salisbury would receive a large measure of support. The Russophobists are a numerous, an active, and an excessively hysterical body; and ever since it became clear that the Turks were no longer a possible ally, they have transferred their affections to the Austro-Hungarian Government An Anglo-Austrian alliance might not go so far as the sending of a British division to coöperate with an Austrian army in the field. It might be limited, as in the Napoleonic days, to the payment of subsidies; but the effect upon the British Empire, and especially upon India, would be very much the same in either case. It would compel Russia to attempt, as a measure of self-defence, that attack upon India which, as a scheme of conquest, she might never have undertaken. And what I wish to show in this letter is the manner in which, by our acts in India and Europe, we have rendered such an attack not simply practicable, but likely in a high degree to be crowned with success.

The stability of British power in India has so far depended mainly upon two conditions: (1) the undisputed possession of the sea-route thither by the Cape; and (2) the unapproachable character of the country itself. The net result of our Oriental Policy during the last fifty years has been to annihilate both these conditions. The sufficiency of the long sea-route as a means of communication with India was demonstrated by the fact that we made use of no other route when building up and consolidating our dominion there. In the eighty or ninety years through which this process was going on, we were also engaged in a series of wars with Spain, France, and the United States; but the passage of our troops to and from India was never impeded. If, in the days anterior to the use of steam, India was conquered by way of the Cape, very much easier was it, since the use of steam, to maintain our conquest. Steam, indeed, has all but bridged the ocean. In the fast-steaming ships now built, a voyage to India by the Cape occupies only a week longer than a voyage through the Suez Canal, while the climate experienced during the voyage is far less trying to the health of the troops. Notwithstanding these obvious considerations, our policy has uniformly been to neglect the long sea-route, and to multiply precautions in order, as we supposed, to hold the Mediterranean route safely under all contingencies. For this purpose our available military resources—not large at any time—are grievously diminished by the provisions of garrisons for Gibraltar, Malta, Cyprus, Alexandria, and Cairo, although there is not one of these places that is of any national utility to us except upon the mistaken hypothesis that there exists no alternative route to India. This, if it stood alone, would be a serious misfortune, but it is by no means the gravest consequence of our Eastern policy. This scattering of British garrisons all along the Mediterranean and in Egypt involves us, of necessity, in the troubled politics of Southeastern Europe, and places us in a position of direct antagonism to two first-rate military Powers, the French Republic and the Russian Empire.

It is sometimes said that, independently of political considerations, our commercial interest in the Suez Canal is sufficient alone to justify our occupation of Egypt. This is a mistake. It is the greatness of that interest which gives it an exceptional security. The solvency of the canal depends upon the vast bulk of British traffic passing through it undiminished and unimpeded; and thus the Mediterranean sea-ports, whose commercial existence may be said to depend upon the canal, are even more interested than Great Britain herself in the secure passage of British commerce. On the other hand, a British occupation of Egypt indefinitely prolonged is what the French Republic will not and, indeed, cannot endure. There are two motives which would force her to resist it—the one sentimental, the other of a very positive character. France is herself the great Mediterranean Power, and she regards with not unnatural jealousy any action on the part of Great Britain which would lead to an extension of our power there. It is an open secret that at the Berlin Congress Lords Salisbury and Beaconsfield obtained the consent of the French Government to their acquisition of Cyprus by undertaking to offer no opposition to French aggression upon Tunis. But besides the sentimental objection, it is impossible for France to acquiesce in the reduction of Egypt to a British province, because through Egypt is her *only* route to her possessions in the China seas. So long as Europe is tranquil, it is not likely that France will break the peace in order to force us out of Egypt; but should we be engaged in hostilities with any other Power, France will assuredly insist upon the evacuation of Egypt, or, in the event of a refusal, enter into active alliance with our enemies.

Now, throughout the long development of (as it may be termed) this Mediterranean policy of ours, French hostility to it has been treated by our politicians as "une quantité négligeable." These precautions have been dictated by an overwhelming and senseless fear of Russia, as regards whom the reasoning of the British Russophobist is something like this: The Russian Government is a military autocracy which is aggressive by nature and necessity. The exhausting character of its rule compels it continually to penetrate to new regions in order to recruit its resources, and it is the operation of this necessity which must, sooner or later, cause it to undertake the invasion of India. It looks to this rich land as an ultimate compensation for the capital it is investing in the conquest of the sterile uplands of Central Asia. But the possession of Constantinople and free egress to the Mediterranean were also held by our Russophobists to be objects of Russian ambition quite as fondly cherished as the conquest of India. Now, assuming this to have been a correct diagnosis of Russian policy, it was obvious that the more freely Russia was allowed to expand in the direction of the Mediterranean, the less rapid and determined would be her advance in the direction of India. On the other hand, it was equally obvious that if we set ourselves deliberately to oppose and thwart Russia in Europe, we should drive her in self-defence to neutralize our enmity by menacing us in India. Nevertheless, from the Russo-Turkish war of 1828 down to Lord Salisbury's speech a few days ago in the Guildhall, we have acted as if we, beyond any other European Power, were vitally interested in Russia *not* getting to Constantinople. It is not merely that we have systematically worked against Russia, quite regardless whether her wishes were just or unjust, but that we have kindled feelings of the bitterest resentment in the minds of her people, by insults, calumnies, and incessant scoldings. At present, if Lord Salisbury's speech is to be accepted as a correct account of the situation, the result of all these "meddlings and muddlings" is this: In order to secure our hold upon India we have occupied Egypt, thereby drawing down upon us the hostility of the French Republic, and, in the event of a war, transforming the Porte into an ally of Russia. Yet, not satisfied with this, so fearful are we still of Russia getting to Constantinople, that in case of Austria declaring war against her, we shall strike into the conflict as the ally of the latter.

The other half of the story has now to be told. While in Southeastern Europe and in Egypt we have been pouring out British blood and treasure in order to reap a tremendous harvest of danger and difficulty, we have in India pursued a policy which has literally thrown open to a Russian invasion that naturally impregnable country. I have not space to follow this fatal policy from its genesis to the present time. It originated, of course, with the ill-starred invasion of Afghanistan in 1838. The conquest of Sind and the annexation of the Punjab were critical periods in its development. The mischief was completed when the British authorities in Kabul placed the present Amir on the throne; and the operations of Sir P. Lumsden's Afghan Boundary Commission may be described as "the crowning of the edifice." The result of all this policy has been that the frontier of our Indian Empire has been transferred from the Indus, where, entrenched behind the mountain barrier formed by the plateau of Afghanistan, we were practically unassailable, to the farther frontier of Afghanistan, where Russia can assail us under conditions of advantage which place her success almost beyond the reach of doubt Both internally and externally our hold upon India has been alarmingly weakened by the policy I have just sketched. India, it must be remembered, is inhabited by a people intelligent and civilized, immersed in trade, agriculture, and commerce, and keenly alive to the benefits of a sober and economical administration. Had we given them this, we might have relied upon their loyalty under all contingencies. But our frontier policy has established a most exhausting drain upon the resources of the country. The cost of our two wars in Afghanistan, with their consequences, has amounted to not less than a hundred millions. The expenditure on the army has increased within the last twenty years from a little over twelve millions annually to the gigantic sum of nineteen millions, and is still expanding.

The most serious consequence, however, of this policy was the revolt of the old Sepoy army in 1857. This incident compelled us to raise a new native army, recruited in the main from the inhabitants of a single province, the Punjab, and it is no exaggeration to say that our authority in India depends at this day upon the fidelity of our Punjabee soldiers. But service in Afghanistan is as distasteful to them as it was to the Sepoys of the old native army; and during the last war in Afghanistan not even the temptation of a large bounty would induce them to fill up the gaps caused by sickness, wounds, and death. Thus it will be seen that the further we push into the interior of Afghanistan the weaker we become. Not only do we, in a military sense, separate ourselves from our resources, but, so far as our native soldiery are concerned, these resources tend to dry up altogether. Moreover, it is not as if, in pushing into Afghanistan, we were advancing into a land of friends. We shall be in a country the people of which regard us with the deepest distrust and dislike, who would rejoice to find an occasion for retaliating upon us the in-

juries we have inflicted upon them; who, with such an end in view, would certainly not hesitate to coöperate with a Russian army.

The position of Russia, meanwhile, is as strong as ours is weak. She is under no necessity to dissipate her vast military resources over such widely divided points as Egypt, Burmah, and Afghanistan. She operates, as it were, from a secure centre, and may throw the weight of her power upon any point that she considers most effective. In the event of an Anglo-Austrian alliance, the point she would select is not doubtful. When, in 1877, Lord Beaconsfield brought 5,000 Sepoys to Malta, under the impression—shared by not a few otherwise sane Englishmen—that this prodigious army would cause Skobeleff and his 200,000 Russians to abandon Adrianople and fly for safety to the heart of Russia, what was the response of the Russian Government? It sent a mission of three men to Kabul and produced thereby our second invasion of Afghanistan. This incident sufficed to show how profoundly the relations between the two countries had been modified since 1853, when even the invasion of the Crimea provoked no demonstration in the direction of Afghanistan. Since 1877 these relations have again been profoundly modified. We stand pledged to the defence of Afghanistan, and Russia is planted, in increasing military strength, just outside of the frontier of that country. A railway now links her stations in Merv and along the Oxus with the Caspian, and the response to an Anglo-Austrian alliance would not now be a deputation of three officers to Kabul, but an invasion of Afghanistan by an army of 30,000 men.

Looking back from our present standpoint to the Oriental policy pursued by us for half a century, it is hard to believe that in all the records of human folly there is to be found another such example of persistent infatuation. Our fixed belief that the Russian Government cherished an inflexible determination to invade India rested upon no basis but a (so-called) "Will of Peter the Great," which was a gross and palpable forgery. In our blind haste to avert this purely fantastic danger, we have succeeded in converting it into a most formidable reality. Russia, with whose interests, in the natural order of things, no legitimate interest of ours could have clashed, we have pursued with a bitterness so implacable that, as I have already said, we are driving her to undertake as a measure of self-defence that attack upon India which as a scheme of conquest she would never have done. We have, at the same time, recklessly advanced our Indian frontier until what was, by nature, unassailable by Russia has been brought within easy and effective striking distance. And this insane course of action we have persisted in despite of the manifest fact that it was draining the wealth of India, chilling the loyalty of her people, and converting the Afghans, whose friendship was absolutely indispensable to us, into our bitter enemies and the friends of Russia. But even this was not enough. We were in possession of a route to India which the jealousy or ill-will of no European Power could disturb, and the sufficiency of which had been demonstrated by the experiences of a century. This safe and secure route we discarded for another which it was plainly impossible that we could hold permanently except at the cost of a war with Turkey and with France. Finally, in seizing upon Upper Burmah we destroyed all vestiges that remained of the former unapproachableness of India, by causing its frontier in that direction to run for a space of four hundred miles contiguously with that of China. British India, therefore, as she now exists, is virtually surrounded by a belt of Powers, all of which conceive that they have legitimate cause of grievance against the British Government. This is a situation without parallel in the history of British India, and, unless it is made to disappear by a prompt and complete reversal of our Oriental policy, which is not probable—perhaps hardly possible—its consequences, within a very measurable space of time, are not difficult to predict.

R. D. Osborn, Lieutenant-Colonel.

Correspondence.

MR. LOWELL ON POLITENESS.

To the Editor of The Nation:

Sir: I am much obliged to your correspondent "T. B." for calling my attention to the extraordinary slip I made in my use of the word "politeness" as if it were a derivative of *polis*. I think he will believe me when I say that I *was* thinking of "urbanity," as he suggests. It is an oversight of which I should not have been capable a few years—I might say a few months—ago. Till very lately I never looked into an English dictionary to help me as to the meaning of a word, and to correct a certain tendency to *heterophasia* (to borrow the late Mr. Grant White's useful word) which I had detected in myself.

I remain your obedient servant,

J. R. Lowell.

Southborough, Mass., December 4, 1886.

FRENCH POLITICS.

To the Editor of The Nation:

Sir: A late number of *The Evening Post* contained a statement that the average annual deficit in the French finances for twelve years past was 400,000,000 of francs; the total excess of expenditure over receipts being 4,840,000,000 of francs, or nearly 1,000,000,000 of dollars, and that in time of peace. Starting from this as a fact, there is an explanation which may, as it certainly ought to, interest the people of the United States. I will ask leave to translate a passage from the fortnightly summary in the last *Revue des Deux Mondes* by Charles de Mazade:

"The conflict between the Budget Committee and the Minister of Finance is certainly a most curious specimen of the disorder of ideas, the confusion of powers and rights, in which we have been struggling for a long time past, in which nothing is possible and yet everything is possible because there is no guidance anywhere. Evidently we should not be where we are—that is, asking what is to be the budget of next year, how this budget is to be made up and balanced, how even it can be voted—if the Chambers or their committees understood a little better their duty towards the country. As long ago as March the budget was submitted by the Minister of Finance, who at least did his duty. For eight months it has been known that there were deficits to be covered, perhaps new taxes to be voted—at any rate, measures to be taken to reëstablish financial order, profoundly disturbed; yet it is only now, in an extraordinary session in the last months of the year, that a hasty and necessarily insufficient discussion is entered upon, at the risk of being unable to escape the melancholy expedient of 'provisory twelfths.' We should not be where we are, with this loss of precious time, if the budget committees were content with their proper functions; if, instead of confounding all rights and all responsibilities, they left to the Government the dignity of its prerogatives, the right of initiative and proposition, limiting themselves to the power of examination and control. Unfortunately, for some years past the budget committees have come to understand their function so strangely that they exercise a sort of omnipotence; they interfere in the administration, the public services, the laws, the system of taxes, and seem not to be aware that they only succeed in producing disorder and uncertainty everywhere, that they are only accumulating difficulties by a sort of parliamentary arrogance, an empty pleasure of domination.

"The last committee, doubtless with the object of making everything simple, undertook nothing less than the substitution for the budget which had been presented by the Finance Minister, a complete fabric of wholly new combinations, re-establishing the *budget extraordinaire* suppressed by the Government, modifying certain operations, reducing or augmenting certain taxes—proposing, in a word, that wonderful resource, an income tax. So that, after eight months passed in doing nothing, there has just been submitted to the Chambers at the last hour a system improvised, artificially concocted, and seasoned, of course, with the everlasting economics in public worship. But has the Committee, in proposing an income tax, shown even how it can be established and distributed, how it is to be reconciled with other taxes which already reach in every form the income of the French taxpayer? Has the Committee asked in what degree and at what moment an income tax would be applicable, what influence it would have upon credit, upon the public wealth? The ideas of the Committee do not appear to be at all clear. No matter. They have the phrase 'income tax,' in itself a whole programme, and well suited as the ornament of a budget democratic, radical—and chimerical! And that is the way of proceeding to establish financial order."

In short, the French finances have got completely out of hand, as any finances always do and always must as soon as a legislative body undertakes the whole management of them; and as there is no prospect of any reform in the relations of executive and legislature, the financial disorder will in all probability drift on to a new revolution. Certainly a large surplus is better than a large deficit, and in so far our finances are better than the French. But as far as management goes, there is little to choose, and, apart from local circumstances, the above extract might just as well have been written with regard to Congress.

Those who are anxious for tariff or coinage reform, or the placing of the national-bank system upon a permanent basis, would do well to consider that any satisfactory result is not to be obtained through the Republican or the Democratic or even any new party, nor even by securing the election in particular districts of members pledged to the principles of reform, but only by placing Congress under some kind of discipline and control. And that can only be done by putting the finances in the hands of the Secretary of the Treasury, and sending him to fight his own battles on the floor of Congress. As the Secretary would be backed by the President, and would have behind him a vigilant press and the voice of the nation, Congress might not find it quite as easy to bully him as the French Chambers apparently do to bully MM. Freycinet and Sadi-Carnot.

G. B.

Boston, November 27, 1886.

A FEW THOUGHTS ON THE LABOR TROUBLES.

To the Editor of The Nation:

Sir: The Knights of Labor movement was inaugurated for the professed purpose of bettering the condition of laboring men by demonstrating their power. It is well to consider some of the things which it has succeeded in demonstrating. Among others may be enumerated:

(1.) That the Knights themselves have no clearly defined ideas as to what the assumed defects of the present order of society are.

(2.) That they are utterly unable to bring the machinery of their own order into harmonious action, to say nothing of the infinitely more complex machinery of the State.

(3.) That they have not the knack of selecting competent leaders, and hence must fail in any system of coöperative production.

(4.) That the fundamental principles of their organization, as at present constituted, are subversive of law and order, and tend directly towards anarchism.

(5.) The vast amount of time and money squandered in ineffective strikes and boycotts proves conclusively that present rates of wages are

much higher above the mere living point than has been generally supposed.

It must not be supposed, however, that there are no real evils at the root of these disturbances. Such important effects must be due to important causes. The events of the past year have brought some of these to the surface. We may mention:

(1.) *The reckless intemperance of such a large proportion of laboring men.* Place wages as high as you will, there will still be poverty and distress in the family of the man who squanders the surplus earnings of the week in a Saturday-night debauch.

(2.) *The lack of knowledge of the fundamental laws of trade.* This alone makes it possible for laborers to regard capitalists as their natural enemies, and furnishes a fertile soil for the propagation of any economic heresy which professes to take the side of labor against capital.

(3.) *The decay of a vigorous, independent manhood among wage-workers.* This has gone a long way when the privileges of citizenship, loyalty to government, and the right to earn and spend money according to one's own judgment, are placed at the disposal of such men as Powderly and Irons. It is a sad day for a man when he abdicates the exalting privilege of thinking and acting for himself.

Such abuses as the dishonest escape of taxation, the extortions of railway companies, etc., are not grievances of the laboring men alone, but of the great majority of capitalists as well, and hence do not properly enter into the discussion of what is technically known as the labor question.

There are some directions in which the State, as such, can assist in bringing the industrial system into a more healthy condition.

It can exercise much more thoroughly its primary function of preserving order, so that an honest man can work when he wishes, and devote to himself and his family the money which he is now dragooned into expending in support of an order whose chief effect, so far, has been to cause him to pass a large part of his time in enforced idleness.

It may do something in the way of providing libraries and reading-rooms which shall be accessible to the laboring classes, and in providing night schools for boys and girls who would attend the day schools but for the necessity of earning their own living. A more thorough sanitary care of the crowded districts in which the mass of wage-workers live would also do much toward improving their condition.

The completion of the political reforms which have been begun will take away the irresistible pecuniary temptation to political corruption which has been so demoralizing to the laborers in all our large cities. When poor men are no longer regularly solicited to dispose of their votes for a money consideration, there will be a better opportunity to cultivate a patriotic American manhood.

These are lines in which the State can work without transgressing its legitimate bounds. If it shall go beyond these and undertake to do for the individual what the individual could do for himself, but for lack of inclination, there is no logical stopping-place short of communism. The American people are too deeply interested in the moral and material welfare of American labor to see it sacrificed on the altar of State slavery.

W. H. Johnson.

Granville, Ohio, November 26, 1886.

THE "NEW SOUTH."

To the Editor of The Nation:

Sir: The recent election of Mr. James Phelan to Congress from the Memphis, Tenn., district is perhaps of sufficient significance to warrant a brief statement of some of the principles on which he conducted his canvass. An old farmer said to him one day, "They say you are a progressive Democrat—a man of the 'New South.' Now tell me what this means." In a speech delivered at Covington, Tenn., to a representative West Tennessee audience, Mr. Phelan made a reply to this question, from which the following extracts are taken:

"It is the liberalized state of mind which recognizes that a new order of things has come in since the war, and which, full of a broad patriotism, seeks to adapt itself heartily and earnestly to these things."

"In the farmer it means improved agricultural implements, diversified crops, experiments such as Furman made, the reading of agricultural journals, a ready contentment with his lot, but an eager desire to make the most out of it, a liberal treatment of his hired labor, a generous sympathy with those more unfortunate than himself, the education of his children, and an honest pride of character."

"In the lawyer it means the spirit that rises above case learning, and that goes into the literature of his profession and the philosophy of its development—the spirit that holds high the standard of professional honor and professional excellence."

"In the physician it means something higher than a haphazard diagnosis and the index of the Materia Medica—it means keeping abreast with the rapid rush of experiment that from Vienna to Philadelphia is changing his profession from a black art to a science."

"In the merchant it means a spirit of enterprise, a strict observance of the laws of business, an eschewing of the sentimental phase in its conduct, the development of new avenues of trade, public spirit, and an absence of speculation."

"[In a statesman it means] a careful and cautious formation of opinion, but an unswerving adherence to the right. It means a hearty sympathy with all people of all classes. It means, as a part of that recognition of the new order of things to which I have just alluded, to accept in good faith the citizenship of the negro race. They are our fellow-citizens, our fellow-Americans, our fellow-Tennesseeans. Their rights are as sacred as ours."

"The 'New South' attempts to rise above the barriers of mere partisanship and sectionalism. It loves and reveres the emblem of our nationality, and it is proud of all the great achievements which have made illustrious the name of any American citizen. It rejoices in the Union and its wide domain, and, most of all, it is proud that the blot of slavery has been removed from its escutcheon. It says in all heartiness and sincerity, 'God be praised for this crowning glory of a wonderful century.'"

These sentiments came from "a Southerner born and bred, member of a family whose blood was shed upon nearly every battle-field of the Confederacy, son of a Confederate Senator who advocated secession ten years before it was attempted." He makes no apologies for the past, but accepts with heartiest good faith all that has been accomplished. Happy indeed is the prospect if his great majority may be taken as in any sense an endorsement of such sentiments. If he lives up to the principles avowed, he will be worthy to represent his State, as well as his district, and to stand for that energetic "New South" whose patriotism and liberality are as broad as the Union.

Mr. Phelan is just thirty years of age, a son of Confederate Senator Phelan, a graduate of the Kentucky Military Institute, and a Ph.D. from Leipzig, Germany. He is proprietor of the Memphis *Avalanche*, and is preparing the volume on Tennessee for the "Commonwealth Series."

C. F. S.

Nashville, Tenn., November 29, 1886.

THE PRESIDENT AND MISSOURI.

To the Editor of The Nation:

Sir: However true your statement in No. 1116 may be, as to the effect of the President's policy on the election in Missouri, many of us in the State are just now inquiring what effect is likely to show itself in another two years. The reinstatement of Benton, notwithstanding the President's elaborate defence of his action, has not had a good effect either on those who believe in civil-service reform or on those who sneer at it. And now this is followed almost immediately by the removal, without reasons given, of the Register of the Land Office at Springfield, Mr. George A. C. Woolley, a most efficient public officer, who has held his position for more than ten years, and whose term is still unexpired by nearly two years. From any standpoint except that of the spoils theory, the act is entirely indefensible. There has never been a breath of censure on Mr. Woolley's management of the office, and since the beginning of the present Administration he has wholly abstained from political activity. A few more cases like these, and the arguments of those who scoff at the President's sincerity will meet with readier credence than heretofore.

It seems impossible to make any excuse for the President's action in the Benton case, but in the other we may perhaps prefer to believe that he acted under a misapprehension of the case until we are compelled to believe otherwise. And this is rendered more likely by the present political situation in this State—a situation which must render it extremely difficult for one in the President's position to obtain a correct understanding of such a case, and which makes conclusions, like those of your editorial note above referred to, very doubtful.

The contest over the election of a successor to Senator Cockrell has split the Democratic party in the State into two bitterly hostile factions, and this contest formed in many if not in most places in the State the real chief question in the late election. It is the universal opinion that this contest has been waged on both sides with all the means, legitimate and otherwise, known to political warfare. The anti-Cockrell faction are loudly accused of having betrayed the Democratic party wherever the election of their own candidates was not possible, and of having used the whole power of a great railroad or two to accomplish their ends. The combined Republican and anti-Cockrell parties lack only a few votes of a majority in the next Legislature, and it is now reported that the managers of the opposition propose to purchase enough votes to accomplish Cockrell's defeat, and that they say it will not take much money. On the other hand, nearly as bad charges are made against the other side, and it must be admitted that there is altogether too much in the past history of Missouri politics which lends credibility to the charges on both sides.

Of course in such a squabble every effort is made to use the offices in the old style, and Senator Cockrell from his position is naturally suspected of doing the most in this way. There appears to be some foundation for the suspicion in the case of Mr. Woolley. The Senator is reported to have said on one occasion that Mr. Woolley must be removed if it took him on a special trip to Washington to do it. Lately there appeared an article in a local Cockrell organ accusing Mr. Woolley of taking an active part in politics, especially as a member of conventions; and, though any one might easily ascertain the accusation to be false, this article was copied in a St. Louis paper.

Now, it is, of course, impossible from such rumors and bitter party accusations, even with a definite fact or two, to draw conclusions of any certainty. But it seems as if there were ground for a shrewd suspicion that the course of things was something like this: Mr. Cockrell, fearing that his position is weak in the Springfield district, resolves to make a last great effort to get a change in the Land Office, in the hope that it will strengthen himself and his party there. Accordingly, on the principle that all is fair in war, an article appears charging Mr. Woolley with offen

sive partisanship. This is copied into a St. Louis paper, and becomes the evidence on which the removal is finally secured. Unfortunately the change is not made till after the election, and the result of that in the district is decidedly against Mr. Cockrell.

Now this theory is built on a somewhat slight foundation of evidence, but if it, or anything like it, be true—if the President acted in this case, as he very possibly has in some others, from a misunderstanding of the facts—then one may still await with some degree of faith the final verdict. But if he has acted with a full knowledge of the facts, if knowingly he has lent himself to one side in this contemptible scramble—contemptible not from its ends, but thoroughly so from its methods—then it cannot fail to become evident to every one that before another two years are over we must seek a leader elsewhere.

PRESTON.

DOMESTIC SERVICE.

TO THE EDITOR OF THE NATION:

SIR: A recent editorial in the *Nation* on "One Phase of the Social Problem" is most timely. Many questions of domestic economy are quite as vital to the welfare of society as those which lie in the more general field of political economy, but they less often attract the attention of writers and speakers.

In addition to the general reasons assigned for the unwillingness of women to enter domestic service, a few others play an important part. In discussions of this question, three things are generally assumed—first, that all women have alike an instinctive talent for housework; second, that domestic work belongs in the category of "unskilled labor"; and, third, that the little training required for the service can always be obtained at home. The first assumption is true if it means simply that the great majority of women have an inherent taste for household work; it is untrue if it is carried to the extent of meaning that this natural taste will of itself make proficient housekeepers. A young man who has a proclivity for the law does not by virtue of that alone become an eminent jurist. The second assumption is radically wrong, as only the smallest part of domestic work can be so classed. Even the despised dish-washing demands no small amount of skill for the proper care of china, glass, and silver; the sweeping and dusting of rooms is far from being a mechanical process, as all housekeepers will testify; while the divinity who rules the kitchen possesses a responsibility that is awe-inspiring to one suddenly deprived of her assistance.

The third assumption is the most fallacious. Without taking into consideration the number of women—by no means small—who have been early thrown on their own resources, and thus have never had the opportunity to learn at home, it is often true, especially in the middle classes, that the most competent mothers have the most incompetent daughters. It is always easier to do one's self than to teach another how to do, and it is taken for granted that the daughter can learn as the mother has, by the hard road of experience. The picture Dickens has given us of Bella and the struggle with 'The Complete British Housewife' might have been drawn from the experience of many. But it is from the ranks below the middle class that the great army of house-servants is recruited, and it is here that is especially noticed the absence of all the indispensable household virtues of thrift, industry, economy, cleanliness, and general "handiness." It is impossible for a girl taken from this class to go into a family whose social advantages have been greater than her own, and become at once an adept in the conventional forms of table service, an expert cook, a good general servant, or master of any of the intricacies of household service. She has had neither the means nor the opportunity to gain even a knowledge of what duties will be required of her, to say nothing of knowing how to perform them. An incompetent mistress is unable to give the necessary instruction; a competent one has often neither the time nor the patience to undertake such training, and indeed it ought not to be expected of her, any more than it is supposed that a banker who desires an expert accountant will teach the applicant the process of addition and subtraction.

The inevitable result is friction between mistress and maid, which too often drives the one into hotel existence and the other to the purely mechanical work of plain sewing or clerking. The question of prospective failure or success must then enter largely into every decision which the girl makes concerning her daily work. A good cook is able within bounds to command her own price; but where one such can be found, there are a thousand inefficient women who can earn starvation wages by a sewing-machine, a type-writer, or behind a counter. Society is not to blame where a woman who could do otherwise deliberately chooses want and starvation in a city, or perhaps a life of shame, in preference to comfortable domestic service. Society is responsible when it refuses to see that incompetence and ignorance too often dictate the choice, and when it refuses to provide adequate means to remove that ignorance.—Respectfully, M.

NOVEMBER 28, 1886.

TO THE EDITOR OF THE NATION:

SIR: In your last issue I was glad to see "one phase of the social problem" presented in its true light, and I wish to thank you, in the name of the poor, unfortunate women of wealth, for embracing *them* in your philanthropy as well as the poor sewing-woman and shop-girl.

There is great need of public effort in their behalf. Many a woman who has worked hard through the best years of her life, breaks down from overwork and worry just at the time when she could afford to rest, if a competent woman could be found to take her place in the very kitchen where she herself has not been ashamed to work for years.

It is certainly important for us to look into the causes of this condition of things and make vigorous efforts to remove them. That there are many arrogant, selfish women, with whom it would be impossible to live, it is useless to deny; but it is just as true that there are many other kind, sensible women, ready to open their homes and hearts to any self-respecting, intelligent girl who is really willing to be a "help," They know from experience that housework requires much more intelligence, judgment, and good sense than is needed to run a sewing-machine or stand behind a ribbon counter, and they respect and appreciate these qualities wherever they find them.

One reason why a certain distinction is made, by some sensible people, between shop-girls and kitchen girls, is because of the poor class of girls who have been allowed to monopolize the kitchen work. To wipe out this distinction most effectually, let some good girls, of sense and refinement, who are starving in shops and factories, break through the ice of foolish prejudice, and go into the homes where they are so badly needed. Wages are in proportion to the demand for workers, of course, and the very girls who are now getting two or three dollars a week and are dying for want of good food and warm clothing, will get the same wages and more, with the best of food and the real comforts of home; moreover, they will renew their youth and strength by engaging in what is universally acknowledged to be the most healthful of occupations. To be sure, many housekeepers break down in spite of this latter fact, but it is because of the additional duties of wife and mother which they have to perform, and the various demands upon their time and strength from the outside world.

I know of shop-girls who depend upon having their incomes increased by the men of their acquaintance, and who unblushingly wear the finery thus *earned*. And this brings me to another phase of this great problem, which I have lately been led to recognize as important, namely, the position taken by young men in regard to domestic service. Shop-girls and sewing-women say frankly that the young men with whom they now associate would not visit them if they had to be entertained in somebody's kitchen, and that their chances for getting married are not half as good in a kitchen as in a shop. I am inclined to think there is truth in this statement, and that the whole responsibility for the distressing condition of the working women does not rest upon their shoulders alone. The desire for marriage is natural and wholesome, and we, as a nation, cannot afford to discourage it. If young men prefer to choose their wives from among the girls who are half starved on shirt-making at nineteen cents a day, or from among the "genteel saleslaadies," who have stood on their feet from morning till night for two dollars a week, and are almost hopeless invalids—if young men really prefer such women for the mothers of their children, then women will continue to choose these occupations in preference to any domestic work.

But it would be well for the young women to bear in mind one fact in this connection, namely, the same young men who will not marry girls engaged in kitchen work are perfectly willing that the delicate girls whom they do marry should engage in this same "menial" occupation, under most unfavorable conditions.

Let us hope that the young men and women who do not happen to have the ills of prosperity thrust upon them may consider these things, and set the ball a-rolling in the right direction.

MARY C. GANNETT.

WASHINGTON, D. C., November 26, 1886.

TO THE EDITOR OF THE NATION:

SIR: Your article entitled "One Phase of the Social Problem" touches but lightly one of the chief reasons of the refusal of American women to take employment as domestic servants, viz., the fear of degradation. This is, no doubt, a prejudice. But defining a prejudice does not remove it. Prejudice requires more delicate handling than any other human infirmity.

Many families never change their domestics. The writer knows one in New York who, paying ordinary wages, have kept the same servant thirty-five years, all her interests having become identified with theirs. Also, during the past summer, the writer visited a family in an interior town of Pennsylvania, whose female help, the daughter of a moderately well-to-do farmer, could have remained at home if she had so chosen, but took service to increase her pin-money. This girl was filling the place of a sister, who had been in the family several years, and only left to be married, having accumulated something towards her own housekeeping. In the above cases the girls were duly subordinate, but were treated in some sense as members of the family.

The insolence complained of, which is quite unjustifiable, probably took its rise in a natural human revolt against overbearing treatment, and is ignorantly perpetuated as a supposed protection. Let the American girl be convinced that she can take domestic service without loss of self-respect, and she will probably do it. But which can contribute most towards the removal of an

unfounded prejudice, the inexperienced girl or the educated and refined mistress?—Yours truly,

W. H.

PHILADELPHIA, November 28, 1886.

TO THE EDITOR OF THE NATION:

SIR: When Femina read to me last evening your interesting article on "One Phase of the Social Problem," I was very much pleased with it. In common with yourself and all other sympathetic students of the labor question, I have been from time to time disturbed by appeals made in behalf of working women, and your solution of the problem was to me exceedingly gratifying. Particularly did I admire your antithesis concerning the choice between the kitchen and the brothel. It disposed once for all of half-way measures, and reduced the equation to the simplest possible terms.

Something of this sort I said to Femina in the glow of my enthusiasm. Her eyes flashed ominously: "I would like to have a talk with the writer of that article," she said. "Evidently he knows no more about the real condition of the majority of so-called working women than you do. To begin with, he admits that domestic service is the only branch of woman's work that is well paid, and then he goes on to say that matters would be greatly improved if the women who are overcrowding other occupations would enter domestic service, and thereby reduce the pay of house servants by one-half! But he ought to know that not one in a hundred of the women who are employed in stores and factories is physically able to undertake 'general housework'—the only form of domestic service that would be open to them in the country. Our Bridget"—a brawny North of Ireland product—"gets a good deal of assistance, and yet she is scarcely able to finish each day the day's round of duties. Fancy the average shop-girl or factory-girl at tempting to do the washing and ironing for six or eight people! Then, again, many of those employed in stores and factories have relatives dependent on them and needing their personal care or guardianship—a daughter or daughters with an invalid mother to support, a sister with younger sisters. What are the alternatives for them? The kitchen or the brothel. The daughter must go into domestic service, the mother to the poorhouse, the younger sisters—where? And all to what end? That manufacturers and merchants may continue to reap good dividends from the labor of starving working women, and that the price of domestic service may be reduced one-half."

When Femina was done with her protest, which was enforced by examples of cases that had come under her personal observation, I was at a loss for a reply. If the spirit of humanity could be eliminated wholly from "the social problem," how simple would not its solution be!

H. S.

DORCHESTER, MASS., November 29, 1886.

MORE EVIL EFFECTS OF THE *NATION*.

TO THE EDITOR OF THE NATION:

SIR: The recital by your Pennsylvania correspondent, "X. Y. Z.," of the injurious effect of the *Nation* upon his business ideals leads me to say that I have been somewhat similarly affected by it in my religious temper. And this is serious enough when one is a Baptist dominie in active service, as I am.

Having begun my acquaintance with the *Nation* in early collegiate days, for about fifteen years its virus has been working itself into my political, moral, and religious fibre. Consequently I am now so reprobate, and so given to all-round mugwumpery, that I have actually come to regard the *Nation* as the only upright and downright *religious* journal that comes into my family. Yet I take several denominational papers. That is, they teach denominationalism principally, and a sort of pale pietism incidentally, in the space they can spare after the demands of objectionable and lying advertisements, and fulsome and tricky "reading notices," have been satisfied.

I mean, Mr. Editor, that I am so down-on-all-fours as a religious teacher that I am constantly exalting the *Nation* in my family as a fearless, unvarying, and uncompromising champion of the Righteousness of God. That statement covers what I think now of its handling of every current question. I believe it applies the very highest principle of human action to everything it touches, and is therefore an ideal paper for every man who has a passion to be just. And that it is speaking with such authority as no other paper possesses, is, in my view, *according to the Scriptures*.

As for political kicking, the practice has become so aged with me that I have to restrain myself from the temptation to do it as a sort of civil exercise. And, unlike your "San Francisco Subscriber," I never "wince"—not even when you prod with your unerring pen those Methodist and Baptist ministers who swallow the political pabulum of such disreputable feeders as the *Tribune* and Boston *Journal*, and who have as a consequence become badly spavined with Blaineism.

Some of the religious editors will grind their tobacco between their teeth with the rage of the uncircumcised when they read this—for they all read the *Nation* as a sort of secret inspiration—but they will doubtless consider the utter hopelessness of my case, and, on second thought, afford me their usual modicum of pulmonary pity.

BAPTIST PARSON.

NOVEMBER 1, 1886.

ANOTHER COLUMBUS STATUE.

TO THE EDITOR OF THE NATION:

SIR: In addition to the list given in your No. 1113 of statues of Columbus in the United States, mention should be made of the group, in marble, which was presented to the State of California three years ago by D. O. Mills, a former resident of Sacramento.

It contains three figures—Columbus, Queen Isabella, and a page—of more than life-size, was executed by Meade, and stands in the centre of the rotunda of our State Capitol.

W. H. BEATTY.

SACRAMENTO, CAL., November 24, 1886.

Notes.

GEO. ROUTLEDGE & SONS will bring out immediately an English version of Alphonse Daudet's amusing 'Tartarin on the Alps,' in the same charming style of decoration that characterized the second French edition, one of the daintiest of recent books.

The Huguenot Society of America will put on sale with Thomas Whittaker one hundred copies of their 'Collections, Vol. I.'

In a few weeks Mr. J. B. Harrison, 1316 Filbert Street, Philadelphia, will be prepared to send gratis, on application, a report of his observations among the Western Indians during a six months' journey, with especial reference to their advance in civilization on the reservations, from Nebraska to the Pacific. Mr. Harrison went out as the special correspondent of the Boston *Herald*.

A collection of short stories by Andrew Lang, entitled 'In the Wrong Paradise, and Other Stories,' and J. A. Symonds's 'Sir Philip Sidney,' in the 'English Men of Letters' Series, will be published by Harper & Bros.

The 'Dante Handbook' promised by Ginn & Co. is translated from the Italian of Giovanni A. Scartazzini, with notes and additions, by Thomas Davidson, and will appear about January 1, 1887. Its bibliographies constitute a main feature.

Ticknor & Co. announce for immediate publication Mr. Howells's latest novel, 'The Minister's Charge'; 'Liber Amoris: Being the Book of Love of Brother Aurelius,' a romance in rhythm of the period of the Minnesingers, with scenes laid at Padua, and in the Rhineland and Auvergne, by Henry Bernard Carpenter; and 'Goethe's Faust: A Commentary,' by Denton J. Snider.

'How Shall My Child be Taught?' by Mrs. Louisa Parsons Hopkins, and a 'Young People's History of Ireland,' by George Makepeace Towle, are in the press of Lee & Shepard, Boston.

'How?'—instruction in games, tricks, toy-making, etc.—will be published by Worthington Co.

Prang & Co., Boston, have in preparation 'The Use of Models in Primary Schools,' fully illustrated.

We have received the Trow City Directory Co.'s 'Metropolitan Directory of Selected Names, arranged by streets and suburban towns within a radius of twenty-five miles of New York city, for the year ending November 1, 1887—the second volume of the series. One obvious use of such a work is to supersede private lists of addresses for social purposes; but, as the present preface states, tradesmen have been quick to find their account in it, and it may be guaranteed to maintain the supply of circulars which fall like snow-flakes into one's post-office box. As this opportunity is often abused, the owners of unselected names have some consolation.

The opening number of the "Collections of the Bostonian Society" is, very appropriately, a paper on the first settler, William Blaxton, by Mr. Thomas C. Amory. It is chiefly devoted to showing the position of his house and orchards on the western slope of Beacon Hill, and an attempt to establish his descent from the ancient family of Blakiston. The next number will probably be a reprint of Mr. W. H. Whitmore's illustrated pamphlet descriptive of Abel Bowen, the engraver, and his works.

Under the title, 'Two Pilgrims' Progress' (Roberts Bros., Boston, 1886), Joseph and Elizabeth Robins Pennell have collected the magazine papers in which they described their journey from Florence to Rome, via Sienna and Perugia, by tricycle. The trip was full of incident and pleasure, and has been prettily illustrated by cuts; the text itself is agreeable and very faithful to the actualities of travel in Italy. At the close is an interesting comparison of the experience of Hawthorne by vetturino with that of the Pennells by tricycle, much to the advantage of the latter mode of locomotion; and at the beginning is a graceful light poem by Charles G. Leland, by way of introduction. It makes a very pretty and entertaining holiday volume.

'A Trip around the World' is the title of a sumptuously illustrated square octavo volume, published by M. & R. Burgheim of Cincinnati, and written by Mr. George Moerlein. The hundred and half-score lithographs are reproduced from photographs, and are colored in the tints of the original costumes or scenery. The largest number relate to Japan and are pleasingly realistic. One, representing the Himalaya Mountains, gives a most vivid idea of the vastness, mass, and wonderful deeps of color for which the "abodes of snow" are world-renowned. Mr. Moerlein's narrative is an unpretentious record of an enjoyable trip of several months by three young men of sunny disposition and imperturbable

digestion. Though lacking the spice of D'Audiffret's 'Notes d'un Globe Trotter,' or the brilliancy of Isabella Bird, the book is an accurate picture of the beaten route around the world from Ohio to Ohio.

'Colonial Facts and Fictions,' by Mark Kershaw (Scribner & Welford), can claim no merit beyond the candor of its preface. Some of the facts, we are told, come from a bottle with a tall gilt neck, others from two bottles combined. The fictions are chiefly the yarns of colonial drummers. The book is vulgar and uninteresting.

That indefatigable librarian, Mr. Wm. E. A. Axon, has combined all the previous works of the same kind in his 'Annals of Manchester: A Chronological Record from the earliest times to the end of 1885' (Manchester, Eng.: John Heywood). The town, once a Roman *castrum*, has a respectable antiquity, dating back to A. D. 48, and the early annals possess much that is curious and instructive. Beginning with the thirteenth century they more truly deserve the name, since almost every year contributes something to the record. In September, 1782, "the inhabitants of Manchester raised a corps of 150 volunteers to serve during the war with America," the ladies of the town working the regimental colors for these tardy combatants, whose lieutenant-colonel was Thomas B. Bayley. But in 1866, the American civil war being over, "the Union and Emancipation Society was dissolved, and the final soirée held at the Town Hall, January 22," Mr. Thomas Bayley Potter, M. P., presiding, and Prof. Goldwin Smith making an address on the civil war. Mr. Axon's generous index shows other American connections, indicated by names like Beecher, Garrison, and Grant, among our countrymen visiting Manchester.

A variety of calendars are on our table, agreeing all in having a pad for the days of the year with selections—the Beecher Calendar (Cassell & Co.), from H. W. Beecher, the Dickens and Tennyson Calendars (Philadelphia: John Wanamaker), from those authors respectively, the Morning and Evening Calendars (Boston: Roberts Brothers), from a great variety of writers, and a fleur-de lys calendar issued by these last publishers, containing elegant extracts from the French. All, again, have a colored design to which the pad is affixed; but the choice will probably go with the text rather than with the ornament. Similar in other respects to the foregoing is the 'Calendar of Events' (Calendar Co., No. 13 Park Row), which eschews literature, and gives births, deaths, and happenings, with a degree of accuracy which we cannot certify until the year has elapsed.

The library of the University of Michigan is to be congratulated on the prospective possession of a good collection of books relating to Goethe. A few months ago a member of the University Faculty wrote an open letter to a prominent German citizen of Detroit, suggesting that the Germans of the State raise $1,000 by subscription and give it to the University for the foundation of a Goethe library, and also that a permanent fund be provided, the proceeds of which should go towards increasing the collection from year to year. The idea met with favor, and in a few weeks the $1,000 asked for had been given and a good beginning made towards the desired interest fund. It is proposed to call the collection the German American Goethe Library, and in building it up the intention is to begin with a strict, and proceed as time passes upon a broader and broader, interpretation of the term Goethe literature.

The November *Library Journal* contains the second instalment of Mr. R. R. Bowker's "Memories among English Librarians," which is reinforced by a reduced copy, in photogravure, of a photograph of the grouped conference of the Library Association of the United Kingdom, 1882. The portraits are remarkably distinct, and, without the aid of the key, one could readily pick out Mr. Bowker himself and the late Henry Stevens, beside whom are Cornelius Walford and Henry Bradshaw, now likewise deceased. A likeness of Henry Stevens on wood also accompanies this number of the *Journal*. The January issue will contain a portion of the new list of public libraries in the United States to be given in the forthcoming report of the Bureau of Education. All those possessing less than 1,000 volumes will be neglected by the *Journal*.

In the December number of the *Magazine of Art* (Cassell & Co.) one remarks the use of color in the illustrations of an article on "Old Blue-and-White Nankeen China" as well as in sundry decorative pieces. Of interest also are the examples (including an etching) of the work of a young Dutch artist, Cecil van Haanen, and of landscape art in New Zealand.

What had already been done for Wagner in *L'Art* (Macmillan) is now repeated in the case of Berlioz in Nos. 538, 539. On occasion of the recent setting up of this great composer's bronze statue in the Square Vintimille, M. Adolphe Julien pays him an affectionate tribute, and the director of *L'Art* comes to his aid with a drawing of the statue, with copies of very interesting early portraits (1840 and 1845), sundry caricatures hardly less valuable, an autograph score and letter, portraits of singers in Berlioz's operas, etc., etc. The sculptor Alfred Lenoir has conceived Berlioz as the conductor, leaning on his music-rack with the elbow of the right arm, which supports the contemplatively drooping head; his left hand rests in his trousers pocket.

The promises made on behalf of the *Nouvelle Revue*, on the recent change in its direction, are already beginning to be carried out. "Les Livres," in which M. Francisque Sarcey has for some time past written in his light and lively way about the books he has been reading, is now signed by M. Henri Chantavoine, the able literary critic of the *Journal des Débats*. Pleasant as M. Sarcey is when speaking of theatrical and general subjects, he is not at his best when he attempts literary criticism, and the readers of the *Revue* will welcome the change to a serious critic like M. Chantavoine, who has always something to say worth listening to, and who says it gracefully and well. Another of the regular departments which has passed into new hands is the "Revue du Théâtre," which has a very prominent position in all French periodicals. This is now written by M. Léopold Lacour, who is well able to make it equal if not superior to anything of the kind now appearing in French reviews.

Among the announcements of the *Nouvelle Revue* for the coming year is a series of stories by M. Guy de Maupassant, beginning in January, and a novel by M. Paul Bourget, of which the first part will appear in the number for February 15. There is also announced for early publication in its pages a novel by Mr. F. Marion Crawford, 'Paul Patoff,' "specially written for the *Nouvelle Revue*." This is the story also announced by the *Atlantic*, to begin in the January number. If the translation is as well done as one of 'Daisy Miller,' which appeared in the *Revue Contemporaine* in the beginning of the present year, it will be of interest even to those who can read the original.

From the latest bulletin of the Librairie des Bibliophiles we learn that M. Jouaust intends to add to his splendid "Bibliothèque Artistique Moderne" the comedies of Alfred de Musset, to be illustrated by M. Édouard de Beaumont; that the 'Cent Nouvelles Nouvelles' and the 'Moyen de Parvenir' will appear soon in the charming little collection of the "Conteurs Français"; and that he is about to begin a new series uniform with the excellent "Bibliothèque Classique" to be called the "Bibliothèque des Mémoires Historiques," of which the earliest numbers will be the memoirs of Madame de Staal and Agrippa d'Aubigné. His Christmas book is 'Aventures Merveilleuses de Fortunatus,' with a preface by M. Henry Fouquier, and a hundred and twenty illustrations by M. de Beaumont.

Although M. Jouaust has now many rivals in Paris in the making of beautiful books, no one of them runs him hard except M. Lemerre in typography and M. Conquet in illustration. Certain recent volumes from the last named are beyond all praise, being nobly printed and exquisitely illustrated. The 'Sylvie' of Gérard de Nerval (Paris: L. Conquet; New York: John Delay) has a preface by M. Ludovic Halévy, and although it is barely a hundred and fifty pages long, it has forty-two illustrations drawn and etched by M. Ed. Rudaux. Of these the frontispiece is the only one which has a page to itself; the rest are most dexterously printed in the text. There are head-pieces and tail-pieces to every chapter, with lovely little illustrative bits of design scattered here and there throughout the pages as occasion served. The engravings are soft in tone and rich in color, and are admirably printed. The edition is cruelly limited to 1,000 copies, of which one hundred and fifty are on Japanese paper.

The recently issued catalogue of Smith College, Northampton (Official Circular No. 13), exhibits some noteworthy advances of the institution. Three complete courses of study are provided, running through the four years; the classical course leading to the degree of Bachelor of Arts, the scientific to Bachelor of Science, and the literary to Bachelor of Literature. The educational facilities of the institution have during the year been augmented by the Hall of Science, the gift of Mr. Alfred Theodore Lilly of Florence, which provides generous accommodation for the collections of the College, and lecture-rooms and laboratories for chemistry, geology, physics, and biology, and by an observatory equipped with an eleven-inch telescope, and all the needed accessories for advanced astronomical work. There is also a marked increase in the number of students at the College, the Freshman class being nearly double the size of the other classes, and having as many as 110 members, of whom about one-third are admitted to special courses of study, and are not candidates for a degree.

Prof. Cleveland Abbe, in a recent number of *Nature*, directs attention to the fact that there certainly is a purely local and dynamic effect of the wind on the barometer due to the exposure, and for which there must be found some method of correction or elimination before we can proceed much further in barometry. Within late years this effect has been discussed by a number of meteorological workers, but its existence was first demonstrated by Sir Henry James as long ago as 1853. His memoir, however, in the twentieth volume of the Transactions of the Royal Society of Edinburgh, appears to have been quite lost sight of. During the past forty years, various investigations have been made of the suction of wind on tubes, cowls, and chimneys, and this effect has been used by Hagemann as the basis of his anemometer. Prof. Abbe points out a method of determining the amount of the correction which should be applied to barometer readings as affected by the wind, in such cases as those which usually obtain at the mountain meteorological stations, where the small, closed room, with only a chimney-flue opened, is virtually a Magius tube, that is, one across which the wind blows at right angles, and the barometer within the room must, under favorable conditions, show a depression depending upon the so-called suction or

draft up chimney. The location of any station with respect to mountains or other orographic features has also an influence upon the readings of the barometer during severe winds; thus, on the leeward side there is a diminution, and on the windward side an increase, of pressure, which may generally be inappreciable, but which still remains to be investigated. Meanwhile, mathematical and experimental physicists are invited to suggest the best method of determining the static pressure within a mass of moving air, by means of a stationary apparatus.

In view of the recent progress in celestial photography, the French Academy of Sciences has, according to *Nature*, decided to propose that an international conference be held in Paris next spring to make arrangements for the elaboration of a photographic map of the entire heavens, to be simultaneously executed by ten or twelve observatories scattered over the whole surface of the globe.

Americans invented the sleeping-car, but a German has invented a sleeping-harness, if we may so call it, that makes the car less needful. Broad straps support the arms; they pass through a noose over the head so that either arm can be lowered, which gives one a chance to change one's position. The head is supported by a pad, which is attached to the upper part of the arm-straps. The back, of course, rests against the back of the seat. Thus the world changes. In old times beds and pianos were horizontal. Now, both are often upright. The new harness is the natural sequel of this change; it will enable a man to sleep in his parlor bedstead without taking it down.

The opening of the orange season recalls the fact that fortunes are made or lost elsewhere than in the United States, according as the weather is propitious. Japan's Florida, or chief orange-producing province, is that of Kii. The southern great island of Kiushiu rarely, if ever, sends its perishable fruit by way of sea to Tokio, or Yedo, as they called the most populous city in the days of the Tycoons. The richest merchant old Japan ever knew was a famous character who, a century or so ago, started a junk-load of oranges from Kii (not Kiushiu, as a book recently reviewed in these columns states). While a long spell of tempestuous weather was keeping the various orange-laden vessels coast-bound, he boldly put to sea, escaped all dangers, and, unloading at Nippon Bashi in Yedo, sold his freight upon an empty market at unheard-of prices. By this success he laid the foundation of his unparalleled (in Japan) fortune of $5,000,000. The streets of Tokio still resound with a song commemorative of the event, and a portion of the ditty, which settles also the geographical question, runs as follows:

"On the ocean, a dazzling white sail I see:
'Tis the ship orange-laden from the province of Kii.'

Or, in the original:

Are' wa Kii no kuni mikan-buni.

—The December *Century* begins its promised discussion of the Food-Question by an economical statement from Mr. Edward Atkinson, which must attract wide notice. He groups together a number of statistics which illustrate the progress of our country in producing and distributing food, in the last score of years, and afford ground for an instructive comparison of the condition of the mass of the people in Europe and America in regard to subsistence. Many telling points are made by the way; one of them being that in consequence of railway development the cost of transport has been so decreased as to be equivalent to a saving of $138,500,000 in what Mr. Atkinson calls the bread bill—*i. e.*, the rate of a barrel of flour per 1,000 miles has fallen from $3.45 to 68 cents; and as 50,000,000 barrels, subject to this average distance of transportation, are needed for our population, the saving is enormous. And bread, he quietly remarks, is but one item in the food that has to be freighted. The average cost for daily maintenance is found to be 25 cents for each adult, and the total annual cost for the country is put at $5,000,000,000. The writer points out that there can be no scarcity of food here, and affirms that the individuals who suffer from insufficient nutriment cannot find a cause of their distress in lack of land, capital, or laborers, but must seek it in their own ignorance in buying and preparing food. The greater importance of this fundamental question of common life in Europe is dwelt on, and its conditions there slightly laid open. In the course of the comparisons consular reports are cited to show that a prosperous and skilful farmer on a first-class Prussian farm has for his own food supply a diet "less in quantity and variety, and less in cost by one-third, as compared with the rations that are served in the prisons of Massachusetts." The article, however, scarcely does more than open the series, with this showing of our own wealth, opportunities, and advancement in the means of providing a living for the working people. Other noticeable papers are the reminiscences of Henry Clay, with three admirable portraits, the pleasantly illustrated conclusion of "Old Chelsea," and a short article on modern French sculpture, which is remarkable for fine and condensed criticism and unusual literary finish.

—Mr. Grant Allen, the versatile writer who, a month or two ago, entertained the readers of the *Fortnightly Review* with his stalwart defence of that ancient and famous institution known as "Falling in Love," shortly afterwards ventured on a review, in the *Academy*, of Dr. Croll's 'Discussions in Climate and Cosmology,' in which he says that that author "has been fortunate among theorists in living to see his own explanation of the causes which lead to glacial epochs almost universally adopted, with or without minor modifications, by nearly everybody capable of forming an intelligent opinion at all upon the difficult subject to which he has devoted the best years of his working life." Prof. Karl Pearson of the University College, London, in the same journal, follows with quotations from the writings of two scientists, agnostic as to Croll's theory, but who will be generally acknowledged as first authorities in terrestrial physics—Prof. Albert Heim, who remarks: "Bis zur Stunde müssen wir eingestehen, das wir die tiefere Ursache der Eiszeit noch nicht kennen, so vielerlei verschiedene Gründe uns denkbar erscheinen mögen. Die Lösung auch dieser Frage ist der Zukunft überbunden!" and Prof. George H. Darwin, who says: "Any speculations as to the precise effect of changes in the annual distribution of the sun's heat must be very hazardous until we know more precisely the nature of the thing changed. When looking at the astronomical theory of geological climate as a whole, one cannot but admire the symmetry and beauty of the scheme, and nourish a hope that it may be true; but the mental satisfaction derived from our survey must not blind us to the doubts and difficulties with which it is surrounded. . . . So remarkable a doctrine as the instability of climate must certainly be regarded with great suspicion, and we should require abundant proof before accepting it." It is not to discuss the evidence for or against Dr. Croll's theory that Prof. Pearson writes, but to point out the fact that "this dogmatism on the part of popular-science writers is likely, in the near future, to be a great danger to genuine science." Before teaching any hypothesis as dogmatic truth, science should wait for an overwhelming probability based on coincidence between fact and theory. "To judge, however," Prof. Pearson fittingly remarks, "by the utterances of some of the 'science' lecturers, more especially those who frequent workingmen's clubs, by the writings, journalistic and otherwise, of the professional 'science' popularizer, we are likely, in the near future, to have a scientific dogmatism hardly paralleled by the theological dogmatism of the rural priest of the middle ages."

—Two recent numbers of *La Réforme Sociale* (August 1 and September 15) contain interesting articles upon the progress of society and of population in France of late years. Some of the statistics are very curious, such as those which show that, while crime in general has steadily diminished in France, both actually and in proportion to the population, during the last fifteen years, certain crimes—among them, singularly enough, that of parricide—have as markedly increased. M. Fougerousse, the writer of the article in the August number, sums up the result of his criminal statistics as follows: an increase of parricide, suicide, and of the number of tramps and habitual offenders—a decrease of assassination and of crimes against property. Under "assassination" he would seem to include poisoning, which, as he elsewhere remarks, has shown a very decided falling off, in spite of the progress of scientific knowledge in the last few years. From the result of his calculations he draws the melancholy conclusion that "family feeling is dying out, the moral sense is growing weaker, crimes that denote the enfeeblement of the will are increasing, those which demand a certain nervous and physical energy diminishing—the country is falling into a state of anæmia!"—though why parricide, for instance, does not require as much nervous energy as housebreaking, does not appear. Continuing his social notes, M. Fougerousse mentions an experiment in coöperation to be tried among miners, criticises severely a bill relating to the military service, and enlarges on a former report of a social congress at Plymouth, England, quoting copiously from a sermon on Christian Socialism by an Oxford canon, "le révérend Percival."

—The second article, by M. Berbiguier, on "The Progress of the Population of France in 1885," is of a very despondent character. We are told that the rate of annual increase in population has fallen from 59 to 10,000 inhabitants between 1821 and 1841, to 34 between 1841 and 1861, then to 26 between 1861 and 1881, and finally, in 1885, to 23. More figures show that this lamentable falling-off is not due to any excessive increase in the number of deaths, which are, in fact, fewer in proportion than the European average, though this is partly owing to the smaller proportion of children—among whom mortality is most frequent—in France. It is upon this small proportion of children, this decrease in the annual number of births in proportion to the population, that M. Berbiguier lays the blame of the sad result already mentioned. The facts are, indeed, alarming. The whole number of births in 1885 was no greater than that in 1805, when France had eight millions fewer of inhabitants. Affairs are worse in some parts of France than in others; Normandy sins especially in this respect, while in old-fashioned Brittany the old-fashioned large families still hold their own. M. Berbiguier calls upon all interested in these symptoms of national decay to make special and careful inquiries upon the subject in their different districts, in order that, the facts once authentically established, the local causes of them may be sought, in the hope that the proper measures for combating them will be discovered at the same time.

—*Volapyk* is a word frequently used in these days, and is the name of a world-language invented by the Rev. Mr. Schleier in Constance in 1879.

It aims at nothing less than to become the means of communication between all races and nations, so that an individual, for the purpose of travel, commerce, telegraphy, or for scientific pursuits, may accomplish as much with this one language as has hitherto required a knowledge of three or four tongues. The etymology of Volapyk is based on short word-stems, selected exclusively from the English, German, French, and Latin languages. There is but one declension and but one conjugation. There is no article, no gender, and all prepositions govern accusatives. The conjugation of verbs is more elaborate, but it is without exceptions. We are informed that Volapyk has been adopted in various parts not only of Germany, but of Australia, America, and Syria. In France it has been taken into service as a commercial language. It is taught in Paris in thirteen institutes and schools to more than 3,000 students. Five newspapers are already published in this tongue, including one journal of wit and humor, and all of the more than 300 instructors are in regular correspondence with each other, employing for this purpose postal cards. In Holland, Volapyk is taught in seventy schools, and is making rapid progress. In Denmark it was introduced a short time ago by Capt. Wolff, who delivered a few lectures on it and published a small gram mar. The result is that it is taught both in Copenhagen and in Jutland.

HOLIDAY BOOKS.—III.

Character Sketches from Thackeray. From original drawings by Frederick Barnard, reproduced in photogravure and printed by Goupil & Co , Paris. New York: Cassell & Co. 6 sheets in portfolio.

She Stoops to Conquer: A Comedy by Goldsmith, with illustrations by Edwin A. Abbey. Decorations by Alfred Parsons. Introduction by Austin Dobson. Harpers. Sm. folio, 177 pages.

The Blessed Damozel. By Dante Gabriel Rossetti, with drawings by Kenyon Cox. Dodd, Mead & Co. 61 pp.

Book of American Figure-Painters. Philadelphia: J. B. Lippincott Co. 35 plates, with 75 leaves of text and ornaments.

A Book of the Tile Club. Boston: Houghton, Mifflin & Co. Pp. xiv., 105.

Home Fairies and Heart Flowers: Twenty studies of children's heads, with embellishments, by Frank French, accompanied by poems by Margaret E. Sangster. Harpers. 4to, 93 pp.

We have some rather remarkable artistical books to examine this week, and as all but one are of American origin and make, let the *pas* be given to Mr. Barnard's 'Character Sketches.' Similar drawings of his, representing the *dramatis personæ* of Dickens, have already been noticed in these columns—the second series in December, 1884, the third series no longer ago than last year about this time. The beginning that is made now with Thackeray leads us to hope that other series will follow this one. There are six drawings, each 7¼ by 10¾ inches, the plate itself. There is little dramatic action in them; the study of character is almost wholly limited to expression of face, pose, and gesture. Major Pendennis looks out of the bay-window of his Bury Street lodgings at the passing throng of carriages and foot-passengers dimly seen without; Major Dobbin has a white-robed baby in his arms which grabs at the medal on his breast; but none of the other four characters have any company but their own thoughts. The drawings are as good as the best of the Dickens set, in their way, as simple compositions in black and white. A good deal of artifice used in bringing out some of the figures, especially the ladies, in light upon dark, and others in dark upon light, is so skilfully used that it is not intrusive; in fact, the capital figure of Becky Sharp, erect and fair, coming white in her evening dress against the gray wall and the darker shadow of the curtain, may defy examination into the ways and means by which so good a result has been obtained. Becky Sharp is here as her admirers like to see her, as she appears to them except at the dreadful time, unworthy of her long-headedness and general sense of the advisable, when she left her husband alone in the spunging-house, and lied awfully to conceal her perfect ability to let him out. There's not a bit of the petty *intrigante* in this drawing; she is calm and gracious, a little watchful of somebody or something, but not too obviously so—the fascinating creature that Thackeray meant her to be, *teste* the text, and not the caricatured charlatanness of the pictures (for we hold that the author of 'Vanity Fair' was a great artist with the pen, and said with it just what he meant to say, but a very inferior narrator with the pencil). But of all Mr. Barnard's transcripts from Thackeray, we like Major Dobbin the best. In this drawing we have a most admirable design and capital characterization. The others are Colonel Newcome, in his old age, evidently at the door of Grey Friars' Hospital; Captain Costigan, the least successful of the series, as we think; and the little Sister, from 'Philip.'

And now, as we come to the American books, it is noticeable that these are all in an especial sense glorified gift-books. With the five which are named above must be considered Mr. Hopkinson Smith's 'Well-Worn Roads,' reviewed a fortnight ago. In a very marked and visible way they are all holiday books; and it must be admitted that it would be hard to make up a collection of holiday books, so good on the whole, from one winter's publications of any country in Europe. For, if we analyze them, we find that they are one and all developed out of the "parlor table" books of a quarter-century ago—books which were hateful to gods and men; books which it is a mercy and a duty to forget. Now it is very probable—it is even inevitable—that the reviewer deals with them in a different way, and with a different standard, from those which are applicable to books of higher origin. A book on ancient art, like Rayet's 'Monuments,' or a portfolio of modern architectural designs like the photographs of the Burges house, or the monographs now publishing in Boston, or the costly books of travel and art study like the recent ones on Persia, Corea, and Japan—all these, because from their very natures and their very names they make greater pretensions, must be treated more gravely. But these artistic gift-books are so very much better than one expects them to be, that praise of them is inevitably rather warm and unreserved: though this is not true of individual works of art which they may contain. A picture is to be classed and compared with other pictures; the design for a cover, with other attempts at decorative bookbinding, ancient and modern.

Upon the whole, the best of the lot is "She Stoops to Conquer." Fault-finding here must be confined to non-essentials, as that there is an unlucky, black-looking, underscored running title at the top of the pages, which mars them; that the first sheets were printed on one side only, and with scattered outlying vignettes on the other—an extravagant plan, awkwardly abandoned at page 30; that there is no pretence of inserting the full-page illustrations where they belong (in our copy, at least, they are everywhere except there); that the printing these large illustrations upon separate, loose India paper, tacked only at the corners, is out of place in a book, and is an annoyance to the reader and a danger to the prints. It is time that this last bothering novelty, which came in fashion only two or three years ago, should disappear. But in essentials how good is the book! How admirably do Mr. Abbey's open, airy-looking, unshadowed drawings harmonize with the page! And how excellent are the designs in themselves, whether we consider them as illustrations of Goldsmith's famous play, or as studies of eighteenth-century character and costume, or as a lively drama set forth in pictures. The peculiar excellence of Mr. Abbey's work seems to lie in the vigor and naturalness of gesture which all his actors display—a naturalness which may be found to reach even to discrimination of character, so that if the heads were concealed the personage would be known by the action. The designs would serve as a study for amateur actors, which would give them many suggestions and save them from much bad taste. But, on the other hand, perhaps the least successful part of the work is in the character of face. *Young Marlow* is the most marked instance of this; it is impossible to find the same face in his different representations; it seems doubtful whether the artist ever made up his mind what this young man was like, at least in the face. Of the fifteen full-page illustrations, perhaps half are photogravures from brush-drawings, and these are marked by a certain opacity and uniform blackness of the dark parts which may best be seen in the illustration to that scene where *Tony* meets *Marlow* and *Hastings* in the inn kitchen. On this account we like the pen-and-ink drawings the best. They have the merit of being full of daylight. And it is noticeable, as showing the artist's own feeling in the matter, that when his subject requires a dark picture (and there are night-scenes among them) he frames it in with a firm, square outline, whereas the greater number are vignettes. The "decorations" are head-pieces and initial letters, well imagined in the taste of Goldsmith's day, but modified by our contemporary love for "natural flowers." The lining paper and cover are by a different hand, not named, but rumored to be Mr. Stanford White. The cover is the best of the year—yes, the most sensible design in bookbinding we have seen for a long time; and as it is in leather, the buyer may look on his book as permanently bound (unless he have it taken to pieces to place the plates right and have the India paper mounted), and so will not have to regret the short life of a pretty cloth cover. And this pretty cover is *two-sided*, for a wonder; a complete thing, in fact, and not one-half of a piece of binding.

The 'Blessed Damozel' of Mr. Cox is the other important piece of individuality of the year, but there are few points of comparison between it and Mr. Abbey's work beyond this, that each of them is a pictorial comment on an old and well-known work of literature. The poem by Dante Rossetti came out in the *Germ* in 1850, and was reprinted in the *Crayon*, our New York art journal, in 1858. It has been so altered since, that whole stanzas of it might be quoted in the hearing of one who knows it by heart in its early form without recognition. Only one stanza has been inserted and one other shifted in place, but nearly all have undergone a prodigious revision, perhaps not always for the better, though no doubt the poem has gained in elegance and finish. It is a dream of heaven nearly as imagined by mediæval Christians of poetical minds. Fra Angelico's painting, and unquestioned acceptance of Church legends, acting upon a larger mind and profounder thought, might produce such a vision. The Lady Mary and her five hand-maidens,

"— whose names
Are five sweet symphonies,
Cecily, Gertrude, Magdalen,
Margaret and Rosalys,"

who sit with their mistress in the sacred grove—

"Into the fine cloth, white like flame,
Weaving the golden thread
To fashion the birth-robes for them
Who are just born, being dead";

and the shrine

"Whose lamps are stirred continually
By prayers sent up to God,"

all make up a heaven for which the mediæval Church, Gothic architecture, and a modern mind that cares for both and finds mysticism in one and quaintness in the other, have all been necessary. The blessed lady herself, who is so perfectly an embodied spirit that

"— her bosom must have made
The bar she leaned on warm,"

who bears lilies in her hand as well as stars in her hair, and wears "a white rose of Mary's gift," who, confined to "the fixed place of heaven," has longed for ten years for her lover's coming, and who smiles for anticipation, and weeps for hope deferred, is in so far a result of mediæval art and the mediæval Church that she could never have existed without them.

Certainly it is not easy to imagine an appropriate set of illustrations to this poem. It is not easy to think of the artist who could make them. Rossetti himself might have been thought the right man to do it, but as he did not choose to, it is all the harder for others. There should be something of Blake in them, and something of Hippolyte Flandrin, if such a mixture can be imagined; they must be mystical, they must be pietistic, they must be gentle even if feeble, and pure even if a little dull. The draperies should be formal and severe, in line, however, enriched with patterns; the winged creatures should have the unseen but perfectly imaginable wings of Blake's Morning-stars singing together, or of Milton's Raphael, or, still better, of the types of that conception in mediæval art. Freedom of gesture, naturalistic grouping, earthly forms of plant and cloud, are elements that should be sparingly introduced. Such, at least, are the ideas which thirty years' familiarity with the poem have called up. Now the illustrations before us are original enough, and we imply no undue following of guides when we say that they are eminently Renaissance and neo-pagan. In fact, it is hard to conceive of anything further from the tone and sentiment of the poem. And, this having been said, let us go on to describe these pictures as they are, premising that they seem to us the strongest work of the year in book-form, and that which is most likely to gain a reputation.

There are twelve large pictures, 6½x8½ inches, which immediately illustrate the poem. Another large one forms the title-page, having the figure of an angel playing the violin; and still another is the "Frontispiece to List of Drawings." A smaller plate forms the half-title, and two others the Dedication and Signature; and there are three head and tail-pieces. Each stanza of the poem has an initial letter with a background panel, recalling the subject of the verse. All the originals of these were painted in oil monochrome by Mr. Cox, and are now on exhibition in this city, being perhaps two and a half times as long and as wide as the reproductions by the Forbes Company which illustrate the book. The illustrations proper are in a pleasant tone of brown. They are unusually free from detail, the subjects being treated almost as in a bas-relief, with very delicate modelling in pale gradation, and the figures made as large as the size of the drawing permits. Space does not allow of a minute examination of the different designs. The personages are not generally attractive. One fails to feel an interest in the lady in Heaven or her lover on earth, and even the Lady Mary fails to charm or to awe, but has a mild and rather unimpressive countenance. Sincerely do we regret the feathered wings of the angels, and of the Heavenly Love in the last large plate; why should that old delusion of bird wings be kept up? The group—

"We two will lie in the shadow of
That living, mystic tree"—

is as conventional as can be. But the charm of the pictures is in their nobleness of design. See, for instance, the picture of

"— her new friends
Amid their loving games,"

where three draped female figures are wreathed in a kind of dance; and the next one, that one of the stars singing in their spheres, where three nude figures are similarly grouped. These are designs of a very high order indeed. One does not find in cis-Atlantic art figures so well used for artistic purposes, delicate light and shade so skilfully managed, panels so well filled with decorative forms. The finer of the two, and perhaps the finest of all, is the former one, with the draped figures, and we do not know where to find in any similar case a better design than that. It was said above that no comparison was possible between this book and Mr. Abbey's. The statement might have been made general. With no other book can we compare this one, for the works of art which it contains will rather find their like in wall-painting or in sculpture in relief than in book-illustration.

Mr. Cox is also represented in the largest book of the year, the folio called 'American Figure Painters.' This publication, with a page 14½x20 inches, presents us with thirty-five designs by as many different artists: some, as the preface says, made for the book, others found in paintings which had already been seen and known. Mr. Winslow Homer's excellent picture called 'Lost on the Grand Banks,' being now on exhibition at the Academy, is described in another column. The photogravure gives boat and men well; but the centre of the drama, the approaching wall of fog, is but faintly suggested. There is nothing better, however, in all the collection, unless it be Mr. Dewing's "Days"—the gift-bearing Hemeræ of Emerson's poem, following one another in never-ending single file, and offering to man "diadems and faggots"—what each one chooses to take. The majority of men take only that which is least worth having; such is the inference. This picture seems to be a very noble composition. It is pale and faint in the reproduction, but evenly intelligible—there is no place where the work has failed exceptionally, so far as can be seen. Mr. Wm. Low's "Autumn," a girl—clothed in only a chiton and broad girdle—asleep on her sheaves, with her sickle at her feet; Mr. Carl Marr's "Gossips," Swiss girls with their spinning in a pleasant flower-adorned room; Mr. F. D. Millet's fire-place, with raised hearth and window under the chimney, in the good old style, apples roasting, herbs drying in the smoke, and a young woman curled up in the window seat—all of which is called "A Cozy Corner"—and "A Reverie," by Mr. J. Alden Weir, are pictures which we love to turn to. Each poem is accompanied by a selection of poetry or prose; each has an ornamental title-leaf, in the recto of which is a mask designed by Mr. Francis Lathrop, and on the verso the name of the artist and title of the picture. The masks constantly vary, and so do the little ornaments which accompany the literary extracts; these, as well as the half-title with *amorini* or genii bearing an open book, and a sort of frontispiece consisting of a large figure of the Genius of Art, are all by Mr. Lathrop. The two last named—that is, the two most important figures and the only ones in full light and shade—are luckily much the best. The title-page, by Mr. George Fletcher Babb, embodies a figure modelled in relief by Mr. Augustus St. Gaudens. The whole seems to have been drawn in monochrome as if in semblance of a bas-relief and photographed: it is a most effective design. Also, the cover is very much to be praised. Only one side of the book has received the stamp, but that one is capital; the design is by Mr. Grant LaFarge. The lining, with its suggestions of the frescoes in the Palazzo del T. at Mantua, we are so unfortunate as not to like.

The 'Book of the Tile Club' is a large quarto or small folio, it is hard to say which, in these days of paper especially made and of fancy sizes; the page is about twelve by fifteen inches. There are twenty-seven full-page illustrations, phototype plates by fifteen different artists, and these same artists and a few others have contributed about eighty illustrations incorporated in the text—these also reproduced photographically by one process or another. Among them are pieces of sculpture by Mr. St. Gaudens, seven of them, reproduced in phototype, and in the same medium two architectural interiors (from the object), and a sketch made in Athens from the Acropolis by Mr. Stanford White. There are two large plates by Mr. Hopkinson Smith, one of them a capital reproduction of a charcoal drawing, and a number of smaller illustrations. Our old acquaintance, Mr. Vedder's "Sibyl," is reproduced in one of the large plates, and another, the picture of the Pleiades in a sort of mystic dance from the 'Omar Khayyam,' but enlarged, makes another. Excellent is Mr. Frank Maynard's "Portrait of a War-Correspondent," which is said to be of Mr. Frank Millet; and "At the Inn," by Mr. Millet himself, is an excellent composition, a most delightful interior. Mr. Alfred Parsons's landscape, "The Infant Thames" and another, are among the large plates, and among the text-illustrations are four or five by him, all of them having the air of the most portrait-like fidelity to the object. Other artists whose work is contained in this book are Messrs. Chase, J. Alden Weir, the late Arthur Quartley, Napoleon Sarony, Dielman, and Bunce. Nothing is said of the designer of the cover and cover-lining, on which details so much care and skill is lavished this year, but the cover at least is apparently by the same designer as that of Mr. Hopkinson Smith's 'Well-Worn Roads,' namely, Mr. Stanford White. There are then three of these tasteful schemes of binding due to him. As the works of art in and about this book are clearly its reason for being, and as the text has no allusion to them nor they the least reference to the text, it is not necessary to dwell upon this latter. It is an instance of that kind of bad taste which mistakes one's own fireside jokes and significant nicknames for things of general interest.

'Home Fairies and Heart Flowers' is the awkward name of a collection of woodcuts engraved as well as drawn by Mr. French. The little poems serve as that obligatory text without which the pictures would not make up the entity called "a book"; they are in smooth verse, which nevertheless has the better of its authoress so far as to compel her to write gondola with accent on the penult, and the subject is in places so far beyond her powers that she puts white doves in Venice and goes to "Homer's measure" for the golden fleece. All this is unimportant, and the verses are readable. The fact that Mr. French is engraver as well as designer is noticeable, and the wood-engraving itself is unusually good. There is choice among the engravings, but the best of them—as, for instance, the little girl in a white sun-bonnet—are both delicate and strong. The little girl's formless right hand troubles one; also, in the second picture, the kite has flown straight up overhead, on a wind such as never blew on land or sea; but this number two is also a pretty drawing and an admirable piece of en-

graving on wood. In its entirety this work, if not wholly a satisfaction to the artist or his critics, is yet a work of enthusiasm and real ability, and the promise of even better things to come.

We pass more rapidly over some of the minor holiday productions. 'Three Kings, a Christmas Legend of Long Ago,' by Mary Leland McLanathan (A. D. F. Randolph & Co.), is a wholesome little book. In good blank verse (not so striking as to greatly charm the ear or cling to the memory, but easy and flawless), and in the most direct and simple fashion, is told a tale of King Arthur's time: of how three brothers held in common one of the minor kingdoms which made up the brief empire of Arthur, and of a vision they had and their subsequent devotion to nobler aims than even their blameless and gentle earlier lives. It is a charming little book, not marred nor much helped by three or four illustrations which Rosina Emmett contributes, printed on the not very glossy paper which it is pleasant to see more common this year than before, and bound in boards ornamented with a musical setting of a song that will be found within. It may be well to add that the tale, though religious and Christian, is not in any sense sectarian or goody-goody. If it would not offend the authoress, we should call it a manly little book.

Another book, of somewhat religious character, is the 'Legendary History of the Cross' (A. C. Armstrong & Son)—though, indeed, it has more to do with Christian archæology than with piety and good works. The long and descriptive title goes on to say that within there are sixty-four woodcuts from a Dutch book of 1483, an introduction by John Ashton, and a preface by S. Baring-Gould. The last is very brief, but Mr. Ashton's essay occupies more than half the volume, and relates the legendary history of the cross —how it was made of a seedling from the Tree of Life, and what had been the history of the wood before it was put to the use for which it had been reserved; how the three crosses were discovered by the Empress Helena, and how that of Christ was identified, and afterward divided among the Christian sovereigns and cities who boast themselves of possessing fragments of the true cross. The account, taken from the Golden Legend, as printed in English by Caxton in 1483, is incorporated in the essay, and several large cuts are given of the same story as told by certain frescoes which once existed in Stratford-on-Avon, and are now either destroyed or wholly hidden with whitewash. Finally, the Dutch woodcuts are given, and they have all the appearance of having been accurately reproduced. The cuts, three and three-fourth inches square, printed in black, and the quatrains beneath, in very monkish-looking letters, and printed in red, seem to be careful facsimiles. The binding is in paper which closely imitates vellum, and upon it is a large woodcut of the crucifixion, with roundels containing the emblems of the Evangelists. Little brass clasps, purposely dulled, complete the antique make-up of the book, which is printed throughout on rough *vergé* paper, with red-lined borders, rough front edges, and red top.

The two books we have described are small and light in the hand, but 'The Earl's Return' (Estes & Lauriat) is a quarto, twelve inches high. It is Owen Meredith's (Lord Lytton's) poem, with illustrations by W. L. Taylor. The poem itself many of our readers know as an unqualifiable sort of production, a strange inverted "Mariana" story of the young wife who pined and wasted during her husband's absence for fear of his return, and who fell dead when he returned and greeted her; a tale which is only half told, interrupted as it is, in and out of season, by the author's comments on the situation, and distorted as it is by a constant effort to be abrupt and harsh. To this tale are fitted the illustrations named above, which are of divers sorts. Some are photographic "process" reproductions, and of these there are some in brown, some in dark green, and one in which the principal figure has almost disappeared in white cloudiness, which may be intentional, but looks rather like a failure in the negative. There are woodcuts occupying the centre of the large page with a tinted margin, and there are vignettes and head and tail-pieces. It is necessary to rank them with those in the 'Lay of the Last Minstrel,' as better in costume and in architecture than would have been the case twenty years ago, and also as failing when the subject is difficult. But they are not as good, on the whole, as those in the 'Lay' in the matters of verisimilitude. It is of prime importance in book-illustration, when there is a story to be illustrated, that there should be some feeling for reality in the scenes, in the action, pose, gesture, and grouping—in the presentation of the scene, in short; and the worst of these pictures is, that there is nothing real going on in any of them. The best thing in the book is, probably, the emblematic title-page, although the little head-pieces of flowers and sprays of grass are pretty.

Another, though a smaller, bit of Walter Scott, is given us in 'Christmas in the Olden Time' (Cassell). This is the rhymed introduction to the sixth Canto of "Marmion," with full-page woodcut illustrations, the poem itself being given in small instalments, and with marginal decorations on the pages opposite to the pictures. The difficulty has been greater here than in the books we have named, and the failure more visible, to produce anything like an adequate set of illustrations. Sir Walter allowed himself some very unarchæological statements, which the artist would have been wiser to shun in his version.

We have still another book whose pictures must be judged from the point of view of truth of costume and surroundings, because here also they challenge such criticism, and because here, again, there is no especial artistic merit to give them value otherwise than as elucidations of the text—'Fair Ines,' by Thomas Hood, illustrated by W. St. John Harper and W. F. Freer, under the supervision of George T. Andrew (Estes & Lauriat). These cuts are perhaps better than those above considered, in the matter of consistency of costume. They cannot be praised otherwise.

'Nature's Hallelujah,' illustrated and arranged by Irene E. Jerome (Lee & Shepard), is a book of a very different character. The numerous illustrations are announced as engraved and printed under the direction of George T. Andrew; those which we have examined are signed by the authoress—probably all are hers. The book is an oblong quarto, and the illustrations fill more than half the page in most cases. The poems, which are selected from many different authors, are drawn in irregular lettering, here and there in the margins, or in the corners, or above with the cut below, or below with the cut above. With them are mingled briefer extracts in quotation marks and not signed, and scraps from the Bible, short ejaculations, or suggestions of religious thought. As an introduction there is a prose account of the little children, the authoress's relatives, in their home in New Hampshire, and their longing for spring, and their joining in the hymn of praise raised by all nature when the spring comes at last. Ice and winter are assumed to be sin and tyranny, against which nature strives, and for whose defeat she sings her hallelujah. The whole book is to be taken as of pious meaning, a religious rather than a literary or artistical effort, in spite of the poetical extracts which have sometimes a certain value as literature; and, being what it is, it may not be requisite that the studies of nature should be very good ones. They are not very good: worse caricatures of spring flowers, of birds, of budding trees, and all that one loves in the country in April, we hope never to see. And uglier pages than result from these elaborate designs of long-tailed and straggling letters, mingled with the ill-drawn plants, houses, hill-sides, rocks, and birds, it would be hard to conceive.

'The Message of the Bluebird, Told to Me to Tell to Others,' by the same author and from the same publishers, is of almost exactly the same character as 'Nature's Hallelujah,' but briefer, containing only eight pages in all.

The Problems of a Great City. By Arnold White. London: Remington & Co.; New York: Scribner & Welford. 1886. Pp. 275.

THIS is a book of much grasp and force. We know nothing of Mr. White beyond what is revealed in these pages, but it is evident that he is no novice or sentimentalist. A man who walks the streets of London enough nights in one winter to be able to give as the result of personal investigation the statistics of six thousand hungry and homeless men (p. 229), has a right to be heard on the question of unemployed labor. A man who visits Cape Colony "in connection with a private scheme of colonization" (p. 80), has earned some authority on the question of relieving the overcrowded city by emigration. Mr. White takes "The Bitter Cry" for granted. All that he has to say of the misery of the poor is in the way of diagnosis, not mere description. With a vigor and directness wholly to be commended, does he expose the evils of the system of early, hasty, and improvident marriages permitted by the law and encouraged by the Church. Take this description of the customary scenes attending the rite of holy matrimony in an East End church:

"Inside the church there was a noisy mob; obscene jests were freely shouted out, and every minute they became coarser and more objectionable as the brides and bridegrooms became more intoxicated. One old lady, reeling about, was singing a Salvation Army tune set to a filthy jargon about the joys of married life, while some of the bridegrooms were shouting one to another to come and have another —— swig of beer; in fact, two couples had to be married half an hour after the rest because the happy bridegrooms had 'gone for a booze' and could not be found. It is a striking fact that, out of all the fifteen couples, only one had any holiday clothes to wear for such an occasion. All the rest were in old working clothes, and some in rags. None had any witnesses with them, each couple signing one another's marriage certificate. After waiting till a quarter to twelve, the ceremony began. The curate read all the names of the men first, and gabbled with them through their part, afterwards doing the same with the women, interlarded with a few remarks like this: 'Now, then—you are not saying it after me; you will have to say it by yourself if you ain't careful.' Or to another it would be: 'Say *I will*, and not *yes*, you idiot!' While this was proceeding, the few who had strolled in to see the weddings were indulging in filthy jokes and suggestive actions quite openly."

It is no wonder that the author heads the chapter which deals with such enormities, "The Sterilization of the Unfit."

Mr. White is as dubious as many another before him whether the vast charities of modern cities, with their multiplied forms of private and municipal benevolence, do more good than harm. In fact, it is the excellence of his prescriptions that they strike at causes not at symptoms, and promise permanent relief not through any system of "charity by check," but by more firmly grasping and following the teachings of natural law. The style of the book calls for a word. It is, on the whole, sufficiently straightforward and forcible; but it is weakened by several attempts to be epigrammatic where the result is only

punning, and suffers from too frequent use of scientific metaphors. These are sometimes effective, more often overdone, and occasionally even ludicrous, as, for example, on page 130: "It [overcrowding] is a plague-spot of furious vitality: so prolific of disease to body and mind, that the stream of philanthropy has exhausted effort in wetting a sore when it should cleanse a cancer, and in dealing with effects when fully developed, instead of drowning them in the centre at their birth."

The English Church in Other Lands; or, the Spiritual Expansion of England. By Rev. H. W. Tucker, M.A., Prebendary of St. Paul's. [Epochs of Church History, edited by Rev. Mandell Creighton, M.A.] Anson D. F. Randolph & Co.

THIS is a day of small things in nothing more surely than in its multiplication of serial publications which aim to give in a compendious form the results of wide investigation. "Epochs of Church History" is a series which borrows its title more than its manner of treatment from the "Epochs of History," which has had a considerable and, in the main, a well-deserved success. Some of the subjects which it included were in no true sense of the word epochs, but it is evident from its prospectus that the "Epochs of Church History" series will wear its title in a much looser manner. How, for example, can "The University of Oxford" or "Monks and Friars" be regarded from the epoch point of view? How can the English Church in other lands be so regarded? This is the subject of the first volume of the series. The author is not a novice in the line of missionary literature. He is the author of several missionary biographies, and his acquaintance with his subject, which is of equal range with the political expansion of Great Britain, is evidently deep and full. He writes with an easy confidence throughout that bespeaks the saturated man, and not merely one well smattered. It is also true that he writes throughout as an ecclesiastic, and that his ecclesiastical pride is everywhere noticeable. The moral of his story will, he hopes, unfold itself, and it certainly does unfold itself with sufficient clearness. It is that "events which are rapidly changing the face of the world, threaten to change the centre of gravity of Christendom, so that at no distant day it may be found neither at Constantinople nor at Rome, but at Canterbury." Even if this hope is regarded as extravagant, an increase from ten bishoprics in "Greater Britain" in 1841 to seventy-five in 1886 is certainly remarkable. Even more so is such a special instance as the growth of the Australian Church: in fifty years from one missionary station into a bishopric, and in another fifty into thirteen bishoprics.

Dr. Tucker's sixteen chapters cover so many different fields that it is very seldom that he can allow a moment to elaboration. But it is the moments so yielded that give his book all of its life and color; and almost any individual missionary's account of his labors would be more heart-stirring and inspiring than this statistical compendium. The book leaves two distinct impressions: first, that the English Church has been much more successful in extending itself in the colonial dependencies of Great Britain than among savage tribes and men of alien faith; second, that the principal obstacle to the spread of Christianity by missionary effort has been the inhumanity and greed of Christian commerce bent upon stealing slaves and selling rum.

The Evolution of the Snob. By Thomas Sergeant Perry. Boston: Ticknor & Co. 1887.

MR. PERRY is one of the writers who belong to that new school of criticism which looks upon literature through the glasses of the evolutionist. To them the chief value of literature appears to be as a term of social development. The present slight essay is conceived as a kind of episode of English social or literary history, as one prefers to call it, and is an attempt to show that snobbishness was a sign of the encroachment of plutocracy on the demesnes of the aristocracy in the end of the last century, and grew out of that social movement; and the proof of this is that the snob does not appear in literature before the time of Beau Tibbs. Snobbishness is finally regarded as the "homage that a plutocracy pays to an aristocracy," and is said to have "found recognition, to have become part of the modern social system" at "about the period of the Bourbon restoration." It is thus contemporaneous with the romantic revival, the Catholic Reaction, homœopathy; and Mr. Perry argues for a closer tie between snobbishness and these other movements, and asserts that it belongs to the same family. He then fears that his discussion is vague, and illustrates snobbishness with some pages of Jane Austen's. He concludes that the "vice" is losing the reflected glamour it possessed when the aspirant aped a true aristocracy, and is now nothing more than a "practical worship of the material side of worldly success"—in other words, of the externals of wealth. This, if it be true, implies that the plutocracy has ousted the aristocracy from its place of respect.

These views of the literary sociologist are interesting, and they are intermingled, not to say confused, with views on a great variety of other matters pertaining to the forms of taste in which the romantic spirit expressed itself throughout Europe. In his main thesis the writer is well sustained by the facts. Snobbishness, as the characteristic of a defined social class, could not exist until the commercial spirit had developed a body of wealth with commanding power in society, such that it could press successfully, by its mere weight, upon an upper class; but snobbishness as an individual trait is an incident of human nature, and springs up in history wherever rank has not passed into caste and the *novus homo* attempts of necessity to palm off the externals of breeding for the thing itself, and strives thus to impose upon the vulgar. Mr. Perry has confined his observation to the modern, and especially the English, breed of the genus; and despite an awkwardness of phrase that is extraordinary in so practised a littérateur, and a very ill-regulated mode of disquisition, he has written an entertaining and suggestive chapter of social history.

Studies in Ancient History, comprising a Reprint of 'Primitive Marriage: an Inquiry into the Origin of the Form of Capture in Marriage Ceremonies.' By the late John Ferguson McLennan. Macmillan & Co. 1886. 387 pp.

THE preface to the present edition gives the substance and nature of the book: "This volume is a reprint of 'Studies in Ancient History,' as published in 1876, with notes added only when they appeared to be indispensable." The editor is Mr. D. McLennan. The original work having been discussed and reviewed long ago, it seems superfluous to bestow upon this new edition any attention beyond commending it as handsomely printed. Still, it contains some notes by the editor on the controversial points between the author and the late Mr. Lewis H. Morgan, one of which at least deserves a passing notice.

In 'Primitive Marriage,' the late Mr. J. F. McLennan attacked the "classificatory system of relationships" established by Morgan, and the latter replied to him in 'Ancient Society.' Mr. D. McLennan now repeats the assertion that the terms used by the American Indians in addressing each other, even when they imply relationships, are mere forms of salutation, and do not establish and define a fixed nomenclature for degrees of parentage. He quotes Lafitau and other Jesuits in support of his views. Nobody denies, or can and will deny, that the older writers looked upon the Indian terms of relationship as largely "terms of address" only; but the fact that an Indian calls out even to a child "grandfather" (as may be heard among the tribes in the West), or addresses a white man as "my son," has nothing at all to do with the existence or non-existence of the classificatory system. The writers of past centuries were unacquainted with the scientific methods of to-day, ethnology as a branch of study being yet unborn; they did not and could not go any deeper than they had the means to follow. Yet it is strange that their minds, unbiassed by any ethnologic system, theory, or hypothesis, should have been struck forcibly by the Indian modes and terms of greeting each other. Mr. Morgan himself passed through the same stage of experience. But he had the merit of going beyond it, and of examining how degrees of relationship were *defined* in the languages of each tribe. No Indian is compelled to call his sister's child "my child," in common intercourse, but when he wants to describe him as a relative, he will (when descent in the female line prevails) use the term "my child." Had the late Mr. McLennan taken pains to examine vocabularies, he would have found the classificatory system established therein. But Mr. Morgan went still further. He traced the entire social organization of the Indians to its base in the classification of relationships, upon which depended their customs of inheritance and their governmental system. He showed that the nomenclature had its roots in conceptions of vital importance to Indian society. This side of the question both the author and the editor of the book under consideration are very careful to avoid, yet it is the strongest evidence in favor of the existence of the "classificatory system of relationships" and of its origin as explained by the late Dr. Morgan.

Die Hygiene und Æsthetik des menschlichen Fusses. Von Dr. Ludwig Schaffer. Vienna: W. Braumüller. 1886.

THE author of this little monograph of 132 pages on the human foot was formerly a "k.-k." or imperial-royal surgeon in the Austrian marine. There is no evidence that he ever followed the profession of a pirate; but as a writer he shows an uncommon talent for annexation, inasmuch as, after a few preliminary remarks, he treats his readers to an extract of no fewer than thirty-two pages. But the quotation was worth making, being Prof. Burmeister's masterly and famous comparison of the human feet with those of the lower animals. Prof. Burmeister occasionally errs by taking it for granted that any human characteristic which suggests an analogous peculiarity in one of the lower animals is thereby æsthetically condemned; but otherwise his remarks are just and valuable. Summing up his views, he says that the characteristics of beauty in the human foot consist "first, in a narrow, neatly turned, moderately projecting heel; secondly, in a decidedly vaulted middle part of the foot, arched below; and thirdly, in toes of moderate length, the inmost of which projects most, but must not have too large a first joint. But even with these characteristics it is essential that the foot be, in the fourth place, neither too large *nor too small*, for in both cases its beauty would suffer through a want of proportion to the body."

If shoemakers and their patrons had taste, they would make and wear shoes which follow the natural outlines of the foot and allow the characteristics of pedal beauty to be freely deve-

loped. Instead of this it has been customary, throughout mediæval and modern times, to sacrifice to a fashionable boot of monstrous shape beauty of outline, grace of gait, comfort, and health. It is alleged that women's shoes are still commonly made alike, without reference to right and left; and that even men have paid attention to this subject only within half a century, incredible as it may seem. Dr. Schaffer gives an instance which vividly illustrates the enormous folly of such neglect. Of 600,000 men in the German army it has been shown that 30,000 become disabled on the very first day of service, from trouble with their feet. The Germans are often unfortunate in regard to the fate of their ideas. It was a German, Petrus Camper, who a hundred years ago first inveighed against the habit of wearing like shoes for both feet, and against high heels, pointing out various female maladies to which they give rise. But his advice was uttered to the winds, for the vulgar and hideous French fashions continued to prevail. In 1857 a Swiss professor of anatomy, H. von Meyer, returned to the subject in a treatise which the Germans again ignored, whereas in England it had sixteen editions in rapid succession and made many converts to common sense, beauty, and comfort. And thus it happens that, as Dr. Schaffer complains, the proper hygienic style of shoes and boots has been lately introduced in Germany as "the English form," though first suggested by Germans. In England not only the men, but thousands of the women, now wear hygienic shoes, while in Germany the narrow toes and high heels continue to prevail, except in those circles which ape English sporting life.

Dr. Schaffer's treatise is so full of sensible and practical suggestions for further improvements, that it would be well worth while to have it translated into English. He emphasizes the fact that our two feet are rarely identical in size, and that therefore a shoemaker who measures only one foot is a bungler; so is he if he measures the foot while you sit, for it is considerably larger when you stand. In consequence of this neglect it is easier for most persons to get a good fit from a large stock of ready-made shoes than to order, not to speak of the difference in price. Regarding the soles of boots, Dr. Schaffer finds very thick soles objectionable, because deficient in that elasticity which is essential to comfort and a graceful gait. The feeling of ease which comes from wearing "rubbers" is due to the elasticity of the material. A novel suggestion of the author's is that the heels, too, should be made elastic by the insertion of some sort of spring. Nature herself indicates these reforms by the elasticity of the fat-cushion of the sole. He further suggests that, whereas we now only take care of the upper leather, the sole should be likewise daily looked after. Neglected, it becomes dry, brittle, and inelastic; it should, therefore, be occasionally rubbed over with wax or some oily or resinous substance. Whenever practicable, thin woollen, felt, cellulose, or cork soles should be placed inside the shoes, impregnated with some disinfecting substance in cases where it is impossible to change the shoes day by day. It is easier to walk in a meadow than on a stone pavement, and the advantage of such inside soles is that one can thus "have the meadow in the shoes."

Those who do not consider comfort, health, and a graceful gait a sufficient inducement to turn their back on fashion, may reflect to advantage on one of the points made by Prof. Burmeister. The foot, he remarks, depends for its beauty almost entirely on the outlines of its solid parts, whereas it is muscular fulness and the presence of a certain amount of adipose tissue that condition the beauty of other parts of the human frame. But whereas muscle and fat waste away with age, a foot retains its outlines to old age, even its fat-cushion being the last portion of adipose tissue affected by disease or age. Hence a well-shaped foot will outlast all other forms of personal attractiveness, and be a thing of beauty and a joy for ever.

History of the Irish People. By W. A. O'Conor, B.A. 2d ed. Manchester and London: John Heywood. 1886.

THERE are two classes of history—the exhaustive and the hand-book or suggestive. Few countries find themselves satisfactorily limned in a standard exhaustive history; Ireland does not. The ordinary reader of Irish history must rest content with works of the second order; the closer student falls back upon the materials for history contained in original documents, in memoirs and biographies. And this may be an advantage: the more a reader trusts to one book, the more he is influenced by a single mind; the wider the field over which his search extends, the more his conclusions are likely to be independent. Mr. O'Conor makes an honest attempt to write a history of the Irish people, but we cannot see that the result justifies the addition of another to the already numerous Irish histories of that class. A history forfeits all claim to real merit as a history when it seeks to inculcate political opinions. The work before us is too diffuse; there is too much theory, too much glorification of the spirit and capacities of the Irish race. The central facts and tendencies of Irish history are obscured in a mass of details and disquisitions; there is too much controversy—as with Macaulay and Froude. The book contains about as much matter as, and more facts than, Walpole's 'Kingdom of Ireland,' but is wanting in the clearness and balance, and, let us add, is deficient in the maps and appendices, which make that work upon the whole the best hand-history of Ireland which has yet appeared.

Our Home by the Adriatic. By the Hon. Margaret Collier (Mme. Galletti). London: R. Bentley. 1886. Pp. 250, 8vo.

THIS in reality is a story of pioneer life, only the scene is not the West or Australia, but Italy. The author, the daughter of the late Lord Monkswell, better known as Sir Robert Collier, went with her husband, Count Galletti, some twelve years ago, to live on the eastern coast of Italy, a few miles south of Ancona, where he had bought some church lands. Their house was originally a "priest's house, with the church and a peasant's house attached," all forming one building, situated on a lofty table-land overlooking the sea. The country is very fertile and rich in corn, wine, oil, and flax, and dotted over with "quaint little towns, all fortified" and perched on the hill-tops. The people were mostly an ignorant and superstitious peasantry, bitterly opposed to any new methods in agriculture or, indeed, to any reforms. Mme. Galletti tells in a very entertaining way of trials with servants and tenants, and a successful struggle with the corrupt *sindaco* or magistrate. The daily life of the people, their homes, occupations, and amusements are very well described, an especially amusing chapter being that on "Courtship." A melancholy picture is drawn of the condition of the decayed nobility, "whom generations of idleness and unthriftiness have reduced to extreme poverty." In regard to politics the author says, "The population around us hovers between the two extremes of ultra-clericalism and red-republicanism or socialism." The concluding chapter briefly summarizes the progress made in the twelve years of residence—a charming home, with lands yielding in some cases fourfold the returns of previous years, attached servants, a friendly peasantry, a reformed municipality, with good schools and well-attended, and a village, "where so lately reigned confusion, squalor, and misery in a supreme degree," noted for its order, cleanliness, and comfort.

The Story of Carthage. By Alfred J. Church, M.A., with the collaboration of Arthur Gilman, M.A. [The Story of the Nations.] G. P. Putnam's Sons. 1886. 12mo, pp. 309.

MR. CHURCH is too good a scholar not to have made an accurate book, and too practised a writer for the young not to have made an interesting one. He has had, also, a subject full of picturesque interest, and one not sufficiently familiar to be hackneyed. To be sure, nothing could be more familiar than the story of Dido and the wars with Rome; but between these there lies a long period comparatively little known, and of this Mr. Church has made the most. The long succession of wars for the possession of Sicily—with Gelon, Dionysius, Timoleon, and Agathocles—are narrated at considerable length, and make very attractive reading. A chapter of especial interest is devoted to the journey of Hanno, whose account is translated and given in full. The book contains a large number of excellent illustrations, most of them copied from genuine antiques. In the way of maps it is defective. The general map of the Carthaginian possessions on the inside of the cover serves very well, although it ought to indicate that Corsica as well as Sardinia was, at least to a certain extent, under the authority of Carthage; but there ought to be a good map of Sicily to illustrate as well the first Punic war as the wars with Syracuse. Again, for the second Punic war, the maps of Italy are wholly inadequate. That of northern Italy contains neither the Trebia nor the Metaurus, neither Lucca, Arretium, nor Cortona. It may be said that children do not need such detailed maps, but this we think a mistake; and, at any rate, this is not a book for the youngest children, but one which calls for some maturity and knowledge.

BOOKS OF THE WEEK.

Blake, J. V. Essays. Chicago: Charles H. Kerr & Co.
Collins, W. The Guilty River: A Novel. Harper's Handy Series. 25 cents.
Conway, Prof. W. M. Early Flemish Artists and their Predecessors on the Lower Rhine. Illustrated. London: Seeley & Co. $1.40.
Corson, Juliet. Practical American Cookery and Household Management. Dodd, Mead & Co. $1 50.
Craik, Georgiana M. A Daughter of the People: A Novel. Harper's Franklin Square Library.
Crowninshield, Mary Bradford. All Among the Lighthouses. Boston: D. Lothrop & Co.
"Daly, James." "For Love and Bears." Illustrated. Chicago: Frank S. Gray.
Dickens, C. Christmas Carol. Illustrated. Boston: S. E. Cassino & Co.
Erbe, Prof. K. Cornelii Nepotis Vitæ. Für den Schulgebranch mit sachlichen Anmerkungen, einem Sachregister und einem Wörterbuch. Illustrated. Stuttgart: Paul Neff.
Farjeon, B. L. The Golden Land; or, Links from Shore to Shore. Illustrated. London: Ward, Lock & Co.
Farjeon, B. L. The Nine of Hearts. London: Ward, Lock & Co.
Fothergill, J. M. The Will Power; Its Range and Action. James Pott & Co.

Fine Arts.

PICTURES AT THE ACADEMY.

THE first thing that strikes the visitor to the annual autumn exhibition, now open at the Academy, is the confused appearance of the pictures as they are hung upon the walls. Large pictures and small ones, noisy pictures and quiet ones, light pictures and low-toned ones, are placed at random in jarring contrast. The doors seem to have been very wide open, also, this year, for there is a larger number than usual of what may by courtesy be called inferior pictures. It is true that there is not generally enough good work sent to the Academy in the autumn to fill the galleries, and the custom of holding exhibitions at this season was once abandoned on this account. This year the really good things are fewer than ever, and they are almost swamped in the mass of mediocre and feeble work. Why such childish efforts as "After the Accident" (No. 176) or "Lung' Arno" (No. 23), for instance, should be given places in what is supposed to be a serious exhibition of works of art, is inexplicable.

One of the most important canvases in the exhibition is a large picture by Emil Carlsen, entitled "Plucking Fowl." It is placed at one end of the south gallery. The picture represents a young woman standing beside a table, plucking the feathers from a large fowl. In the foreground, on the floor, is a large metal vessel. The still life, the painting of which has evidently been the object of the artist in composing this picture, is very well done. The figure is broadly handled, and keeps its place well in the background of the picture, while it is at the same time made sufficiently prominent to give interest to the homely interior. It is a good picture, frankly and honestly painted.

Two pictures by Edgar M. Ward are worthy of more than a passing notice. One is a small portrait of a lady in a black dress, which is thoroughly well drawn and modelled. The other is an interior with two figures, called "Motherly Care." The effect of the dark notes made in this light room, with its whitewashed walls, by the soberly clad figures of the mother and daughter, is well conceived, and rendered with great truthfulness.

From Burr H. Nicholls there is a good landscape, "By the Roadside," with a flock of geese in the foreground, painted in a gray-day effect which is remarkable for its light and air. H. R. Poore shows a well-painted study of "Hounds"; Geo. De F. Brush, two original pictures of Indian life, "The Silence Broken" and "Crossing the Prairie"; and Winslow Homer, an impressive marine, "Lost on the Grand Banks," representing two fishermen in a boat on the crest of a large wave, surrounded by the foggy atmosphere of the Grand Banks. This work is of Mr. Homer's best. The gray masses of water rising and falling in huge waves, the lowering sky, and the lost fishermen in their lonely boat, make a picture of singular charm, which has already found a place in one of the gift-books of the year.

In the West gallery is hung a cleverly painted half-length of a lady in the costume of the early part of the century, by W. H. Lippincott, called "Souvenir of Sir Thomas Lawrence"; an interesting little genre, "Old Music," with excellent qualities, by George W. Maynard; and a charming picture of Oriental life, "The Last Favorite," by H. Siddons Mowbray, a small canvas showing the interior of an Eastern apartment, with a figure of a young female slave seated in the foreground: she holds an orange in one of her pretty hands, and several of her companions, clad in variously colored draperies, recline on a divan in the semi-obscurity of the back of the room. It is especially pleasing in color. In the West gallery also are a good little bit of painting by W. Verplanck Birney, called "Shining Up," and a landscape, "Bartlett's Pond, South Plymouth," by R. W. Van Boskerck. Bruce Crane is represented by an excellent sunlight effect, a scene in a broad village street, with overhanging trees and white houses, called "A New England Study." Hung in the same room and near by is a characteristic piece of work by F. D. Millet, "Tambourine Player." A striking and deftly painted portrait of a gentleman in a plum-colored suit is signed by W. M. J. Rice, and another of a stout gentleman seated in a chair with his hands on his knees is by J. Carroll Beckwith. A portrait by Lowell Dyer, an elderly gentleman with white hair and beard, seated in a large leather arm-chair, is noticeable for good qualities of color and serious painting. J. Alden Weir is creditably exemplified by a picture of dogs lying on the hearth before an old-fashioned fireplace, called "After a Day's Rain," Hamilton Hamilton by a "Head" and "On the Way to the Beach"; and there are noticeable landscapes or marines by Charles H. Davis, H. R. Butler, Edward Gay, J. Francis Murphy, Kenyon Cox, F. K. M. Rehn, D. M. Bunker, and Edward Moran.

A Connecticut subscriber writes: "It is one of the most encouraging signs of the times." *Harper' Weekly* says: "It is always thoroughly honest and independent." Only one dollar a year. Address BUSINESS MANAGER, Baltimore.

Champagne
ANALYZED.

Champagne, with a minimum of alcohol, is by far the wholesomest and possesses remarkable exhilarating power.

THOMAS KING CHAMBERS, M.D., F.R.C.P.
Honorary Physician to H. R. H. the Prince of Wales.

Having occasion to investigate the question of wholesome beverages, I have made chemical analyses of the most prominent brands of Champagne.

I find G. H. Mumm & Co.'s Extra Dry to contain in a marked degree less alcohol than the others. I therefore most cordially commend it not only for its purity, but as the most wholesome of the Champagnes.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. Chemistry, Bellevue Hospital Med. College, N. Y.

Champagne, whilst only possessing the alcoholic strength of natural wines, is useful for exciting the flagging powers in case of exhaustion.

F. W. PAVY, M.D., F.R.S.,
Lecturer on Physiology at Guy's Hospital, London.

Champagne containing the smallest percentage of spirits is the most wholesome.

JOHN SWINBURNE, M.D.,
Former Health Officer of Port of New York.

NOW READY.

A SUPERB VOLUME: A MAGNIFICENTLY ILLUSTRATED GIFT-BOOK.

England, Scotland, and Ireland.

A picturesque survey of the United Kingdom and its institutions. By P. VILLARS. Translated from the French by HENRY FRITH. Imperial 4to gilt edges, with 600 illustrations drawn expressly for this work by the best artists, from photographs or sketches taken on the spot. 650 pages. Cloth, $10.

PART I.—LONDON AND ITS ENVIRONS. PART II.—THE PROVINCES. PART III—SECTION I.—SCOTLAND. SECTION II.—IRELAND.

One of the leading books of the present season. Artist and printer and binder, in an endeavor to outdo each other, have produced a most noteworthy volume. The text renders the publication one of permanent value; and, unlike much book "decoration," the illustrations, drawn especially for this work, vividly illustrate the subject matter.

Randolph Caldecott.

A Personal Memoir of his Early Art Career. By HENRY BLACKBURN, author of 'Breton Folk,' 'Artists and Arabs,' &c. With 172 full-page and other illustrations by RANDOLPH CALDECOTT. 4to, handsomely bound in cloth, $6 00.

Also a Large Paper Edition, of which only a few copies have been printed. Cloth extra, gilt top, rough edges, $10.00.

"The 172 pictures, with few exceptions, are as good as new. They show the wonderful precocity of the artist, and his excellence in all the classes of work which he attempted."—*Journal of Commerce.*

"Few are the eyes familiar with its subject that will not first kindle with merriment as they glance over its enlivened pages, and then moisten as they gaze on the fresh, kindly young face photographed in the frontispiece, that we shall see no more. He is embalmed in this fittingly beautiful book about him; all of him—his personal history, his professional history, his magnetic nature, his humor, his good feeling, his love of the country, his way of poking about in corners and getting hold of characters and serving oddity up with a relish."—*Literary World.*

A Fitting Companion Volume to the 'Memoirs' is 'MORE "GRAPHIC" PICTURES,' a new series of Mr. Caldecott's contributions to the *Graphic* Newspaper. Printed in colors. Oblong boards, $3.00.

For sale by booksellers, or mailed, postage prepaid, on receipt of price by the publishers.

The Nation.

NEW YORK, THURSDAY, DECEMBER 16, 1886.

The Week.

THE charge so frequently preferred against Secretary Bayard of slothfulness and indifference in his treatment of the fishery question is shown, by the published correspondence, to be false and calumnious. Both Mr. Bayard and Minister Phelps have been industrious and intelligent, and both have been wholly concerned with American interests, and not, as has been gratuitously alleged by the fishermen and their lawyers, biassed in favor of British or Canadian interests. They have gone about their task with careful deliberation. No other method of dealing with the subject would be of any service to the fishermen. If they have had the notion, so jauntily set out by Senator Frye, that "Great Britain is under bonds to us to keep the peace"—a sentiment fit only for the stump or the prize-ring—and if they have built upon it the expectation that the greatest naval power on the globe would permit herself to be bullied by the smallest, on account of these unrecorded bonds, it was not to be expected that a responsible cabinet minister would proceed upon that hypothesis. The fishery question has given us more diplomatic trouble from the beginning of the Government to the present time than any other question that can be named. It has never ceased to give us trouble except when settled by treaty, and not always even then. To assume that a controversy of such lineage and history, when it breaks out in a new spot, is to be settled in a summary manner, and in just the way we should like to have it, is a most unreasonable and childish suggestion.

President Cleveland's proposal for a new treaty to take the place of the fishery clauses in the Washington Treaty having been rejected by the Senate, there was nothing to do on our side but to protest against the seizures of American fishing vessels in Canadian ports, taking each case upon its merits, and to insist upon their speedy trial or settlement and to make claim for damages. All this has been done and something more. Secretary Bayard protested against the employment of a naval force on the scene of the controversy while the dispute was pending. It was a part of his duty as an American to make such protest, but he could hardly expect that the execution of British law would be suspended in British waters merely because there was a dispute over the construction of the law. We would not suspend the execution of our own law in our own waters under like circumstances. It is the duty of the representatives of each Government to "claim everything," as the Blaine men did after the last election, and then to take what the facts and the law give them. This is what Mr. Bayard and Minister Phelps have done, so far as the business has proceeded. The want of any common tribunal to determine what the facts and the law are, in an authoritative manner, causes the negotiation to drag, but there is some compensation for this. The longer the case remains open, the plainer it becomes that this controversy is a tariff controversy altogether, and that it could be terminated by adding to any bill relating to that subject a single line making fish products duty free, as they have been during the past thirty years, with only the brief intervals from 1865 to 1873, and from 1884 to 1886. There is an evident purpose on the part of the high-tariff junta to repeal or greatly reduce the duties on sugar, on the ground that they are a tax on the food of the poorer classes. The duty on fish is equally exposed to this criticism. Why not tack upon the repeal or reduction of the sugar duties, when it comes about, a repeal of the fish duties, and thus put an end to this everlasting bore, the fishery question?

The truth in regard to the Inter-State Commerce Bill at Washington appears to be that the essential feature of the Cullom bill has been preserved in the compromise measure. This feature is the creation of a Railroad Commission having authority to relax or change the ordinary requirements of the law in special cases and according to circumstances, but not to modify that part of it which prohibits discrimination between individuals. This is the only kind of bill that ought to pass, or that could be executed if passed. As there seems to be a determination to pass something, the compromise bill is probably the least harmful measure that can be looked for. A Railroad Commission having authority over commerce between the States may do much good, but it would be idle to expect that any commission could reduce freight rates as rapidly and systematically as the law of competition has done during all these years that the Inter-State Commerce Bill has been on the carpet. Under the law of competition railroad men have been put to it to find ways to lower their charges and yet make both ends meet. They are under no such stress when acting under arbitrary regulations prescribed by public authority. In the one case self-reliance is their only guide and monitor. In the other it is always possible to find fault with the public authority and cast the blame of failure to make ends meet upon somebody else, which is by far easier. The Railroad Commission, if we are to have one, ought not to weaken the principle of self-reliance, but to cultivate it in every possible way, restricting their interference to very plain cases of injustice, and to such cases as are the result of intended discrimination, and not merely discrimination which results from geography, topography, or other natural causes. The law itself ought to be drawn upon these lines.

There are two cases pending before the Treasury Department that serve to illustrate the shameless greed which the tariff creates and nurses among the protected classes. One is the petition of the owners of iron mines that the duty on imported iron ore shall be assessed on the moisture absorbed by the ore from the ocean vapors while in transit, as well as upon the ore itself. To listen to the groaning of the mine owners one would think that they were at the last gasp, and would be obliged to close up all the mines if the duty of 75 cents per ton were assessed upon dry ore instead of wet ore. The fact is that these inveterate bounty beggars get more *profit* out of their ore, after paying all expenses, than the duty comes to, that is, more than 75 cents per ton, and in some localities a great deal more. The duty is not needed to compensate them for higher wages or higher anything. It is sheer bounty and plunder. The other case is an apparent reopening of the Donskoi or carpet-wool question, which was supposed to have been settled once and for all by Acting-Secretary Fairchild last winter, after an investigation by a special commission of experts and a protracted hearing of lawyers pro and con on the report itself. This decision of the Secretary, if we are correctly informed, has been overruled by the General Appraiser of the New York Custom-house, and a million dollars' worth of Donskoi wool tied up in consequence, necessitating a fresh appeal to the Department in Washington. If these are the facts—we state them under reserve—only one appeal should be necessary to settle all such cases hereafter, so far as this General Appraiser is concerned. He should be allowed to exercise his fine discrimination elsewhere. All these things are going on at a time when everybody says that the Treasury surplus ought to be reduced.

The removal from office of Mr. Coombs of Maryland, one of the four General Appraisers of Merchandise on the Atlantic Coast, and the appointment of a political henchman in his place, strikes us as very nearly the worst offence chargeable against President Cleveland's Administration. It acquires this character by reason of the peculiar duties of the Board of General Appraisers, who are an appellate court of the customs service, their decision upon the questions brought before them being final. Experience is the first requisite for such duties, after probity of character. Both these qualifications Mr. Coombs possessed in a high degree. He had gained the confidence of the mercantile community in this city, where more than two-thirds of the importing business of the country is done, and where accordingly the larger share of his time and talent and acquired knowledge was brought in requisition. The Board, as we understand, were in session on important cases when Mr. Coombs received an intimation that his resignation was desired, and learned at the same time that his successor had been designated. He telegraphed to Washington to inquire whether he should finish the business immediately before him, and, receiving no reply, resigned at once. The reason why he got no reply is probably that if he remained to finish up the business in hand, the Senate would convene in the meantime, so that under the Tenure of Office Law his successor could not draw pay

until he was confirmed, but if a vacancy actually existed before the meeting of the Senate, the new appointee would receive the emoluments until the Senate should take definite action on the nomination. This looks like a trick, and it serves to give character to the whole transaction, which, as we have said, has a very bad look otherwise, when we consider the kind of duties Mr. Coombs had to perform. The Board of General Appraisers ought not to be subject to political huckstering any more than the army, the navy, or the judiciary.

A description of "the wrongs of the laborer which are capable of being remedied by legislation," has been furnished us by Mrs. J. S. Lowell, in the shape of extracts from constitutions and platforms of various labor organizations. But Mrs. Lowell has apparently overlooked that it does not follow, because laborers "demand" a thing, that it is capable of being supplied by legislation. This was our reason for asking for a rough draft of the bill by which the laborers' demands were to be met, in order that we might see how the law would work. For instance, we should like to know how the decisions of arbitrators between employers and employed are to be enforced, and what subjects this arbitration is to cover. Supposing the arbitrators were to decide, in a dispute about wages, that the rate offered by the employer was sufficient, would the men be coerced into remaining in his employment? If a man left it or failed to appear at the factory, would he have to go to jail? Or if the employer thought he could not make any profits at the rate fixed by the arbitrators, would he be compelled to continue his business under it? If he closed his factory, would he have to pay a heavy fine or go to the penitentiary? We might multiply these illustrations indefinitely. There is hardly one of the demands of the laborer, except those for the protection of minors and the inspection of factories and the establishment of bureaus of statistics, which does not involve an interference with individual freedom utterly foreign to our manners, and difficult to enforce without a complete recasting of our institutions. And, finally, supposing every one of these demands complied with—supposing every law asked for were on the statute book—would the "labor problem" be solved? Should we have heard the last of it in sermons, and books, and lectures? Would the professorial Socialists, and the oral laborers, and the sociological quacks be one whit nearer to a cessation of their toil than they are now? Every human being who is not born to a fortune has a labor problem of his own to solve, and the time will probably never come when a very large number of men will not keep trying to make somebody else solve it for them. The greatest need of our age seems to be the buckling down of each man to his own labor problem. Every man should try to help his neighbor to bear his burdens, but no neighbor should try to unload on him.

A few weeks ago, when the Knights of Labor held their convention in Richmond, Va., and a great excitement was caused by a colored delegate's attending a theatre and occupying a reserved seat in the best part of the house, Republican papers at the North were profoundly shocked at the discovery that a prejudice against sitting beside a negro in a theatre existed at the South. This week two performances are to be given in one of the principal theatres of Brooklyn for the benefit of the Employment Bureau of the Grand Army of the Republic, and a meeting of the committee in charge was held on Saturday evening. A member of William Lloyd Garrison Post, which is entirely composed of colored veterans, raised the question whether people of his race were to be admitted to the proposed performances. Reply was made that, while the proprietor of the theatre said that personally he had no prejudice in the matter, and would make no objection to allowing negroes equal privileges in all parts of the house, such objections had been made in the past to their occupying seats in the better parts of the house that, in deference to a public sentiment which he regretted, he had been forced to make a rule that they should be admitted only to the gallery. Prominent citizens of Brooklyn, like District-Attorney Wilber and Gen. Horatio C. King, who belonged to the Committee, admitted that the theatre proprietor was correct as to public sentiment. The latter said it was greatly to be regretted that public sentiment had forced such a rule on a theatre manager, but "should he ignore that sentiment he might as well shut up his theatre, since it was the people who created it, and not those who owned the theatre." This, it must be remembered, is the situation not only in a Northern city, but in the Northern city which has been called the City of Churches.

The sale of a large slice of the German Government's stock of silver to Egypt has dashed the hopes of the bimetallists who have been "banking" on this silver ever since the Paris Conference of 1881. At that conference the German delegates read a paper stating that, although their Government could not change its own monetary system, it would be disposed to lend its aid to international bimetallism by agreeing to abstain for a certain number of years from all sales of silver, and during another period to sell only a limited quantity, so that the experiment need not be embarrassed by the action of Germany. The stock on hand, which was equivalent to about $77,000,000, has never been disturbed from that day until the recent sale to the Egyptian Government, which came to light in Berlin on the first of the present month, through an official statement from the Financial Secretary. The significance of the announcement is that the German Government is no longer open to the entreaties of the bimetallists. If there were any purpose to join in the experiment of bimetallism, of course all the silver on hand would be kept, instead of being sold at a loss of 25 per cent. as compared with first cost. The sale to Egypt is therefore the forerunner of a closing-out sale which puts Germany finally and beyond all peradventure on the single gold standard. It is worth remarking, also, that the unused silver of Germany goes to a semi-civilized country. It goes from a rich country to a poor one, and from a place where it is not wanted to a place where it is wanted—a movement which to the bimetallist mind is incomprehensible, but which the man in the moon could grasp without much explanation.

The *Pall Mall Gazette* supplies some information, from the pen of Mr. John D. Jamieson, relative to the Russian petroleum trade and the proposed pipe line from Baku to Batum, of considerable interest to the trade in this country. Mr. Jamieson says that the projectors of the pipe line, which is to be 600 miles long, and is to cross the Caucasus range at an elevation of 3,200 feet, are in the London money market for £2,000,000 sterling, having already failed to get it in France, Belgium, and Germany. They offer as security a "concession" from the Russian Government, and say that the line, when completed, will be capable of conveying 160,000,000 gallons of oil per year. The chance of their getting that amount to carry is extremely problematical, but, if they get 90 per cent. of it, the Russian Government may, by the terms of the concession, require them to lay down a second line within two years. The concession is to run for twenty years, but there is no stipulation as to the disposition of the property at the end of that time. Mr. Jamieson thinks that when the charter expires, "the matter will be treated in that fair and liberal spirit which characterizes Russian dealings." The picture which Mr. Jamieson draws of the trade is extremely gloomy. He says that "the Baku petroleum industry has for the last few years been laboring under extraordinary pecuniary difficulties; that prices for Russian crude and its products have fallen to so low a figure that sales, except at a loss, are difficult to make; that over forty of the Baku refineries were recently closed, and many others partially—so that, in fact, the Baku petroleum industry is in the throes of a crisis, verging on insolvency." The singular fact is added, that the few miles of local pipe lines at Baku had to be protected night and day, by armed escorts, from the depredations of the lawless people, Tartars, etc., who inhabit the Baku district. If the pipe-line prospects are as bad as Mr. Jamieson represents them, the subscription of £2,000,000 will probably be taken up with rapidity in London, where Emma mines, and Wabash railways, and Honduras loans are so popular.

M. Leroy-Beaulieu, the French economist, has lately been discussing the incidence of taxation in his journal, the *Économiste Français*, and has thus been led to discuss also the ability of the different classes of the community to bear taxation. This brings him, of course, at once into collision with that pet saying of the Georgeite school of social philosophy, and, in fact, of the whole army of social quacks, that "the rich are growing richer and the poor poorer every day." The falsehood of this has been exposed by figures over and over again, but "the parrots," of which M. Leroy-Beaulieu says "the human race is in large part composed," keep on repeating it just the same, and tens of thousands believe it, for no better reason than that they have

heard it a great many times. A familiar social phenomenon which ought to make even the most unreflecting and most ignorant doubt the truth of the saying, is that great fact of modern trade that, to make money by the sale of any article of comfort or convenience, you must seek your market among the multitude. All the trades which rely on popular support are far more money-making than those which appeal to the rich. Whether it be dress, or food, or furniture, or pictures, or books, or tools, or transportation you deal in, the rule of modern business is, that if you want to make a fortune rapidly you must address yourself to the people—you must go to the millions, and not to the millionaires, as M. Leroy-Beaulieu very neatly puts it. Now, this means that the purchasing power which used to be lodged in the hands of a few well-to-do people in each community has, in our day, been distributed among the masses, or, in other words, the wealth of the community is more widely distributed than it ever was before. This great change has often been proved or illustrated before, but never, we think, exactly in this way.

Herr Soetbeer, the German statistician, has still further illustrated it by the aid of the Prussian system of taxation. The Prussians, as everybody knows, have an income tax which they levy on incomes divided into classes. They have, however, since 1885, exempted all incomes below $225. Soetbeer has taken the Government returns, and, after making large allowance for fraud and concealment, has divided Prussian incomes into six classes, and worked out the proportion which each class contributes to the sum total. His lowest class has less than $85 a year, his highest more than $17,000, in round numbers. The total of their incomes is $2,190,000,000; of this over 51 per cent. actually belongs to the small people whose income lies between $225 and $412. The incomes below $225, and those between $225 and $412, contain 70 per cent. of the whole, and the three lowest classes, whose revenue stops short of what is ordinarily called wealth, possess over 85 per cent. of the whole. This analysis is more readily made in Prussia than elsewhere, owing to her system of taxation and the thorough manner in which her civil service does its work. But there can hardly be a doubt that it would show much the same results either in England or in France, and would in this country probably make a still better showing for "the little people," as French financiers call them. In truth, the wealth of every tolerably civilized nation in our day is, paradoxical as it sounds, in the hands of the poor. The rich play in the distribution the part assigned to the grains of sand on the surface of the orange, by which teachers of geography illustrate the insignificance of the inequalities which mountains create on the surface of the earth.

The *Tribune* has a despatch from London giving the substance of a letter of vindication written by Sir James Stephen to Mr. Froude on the Carlyle matter. Sir James is Mr. Froude's co-executor, and was a great friend and admirer of Carlyle. He confirms Mr. Froude's story that he had given Mrs. Alexander Carlyle £1,600 derived from the sale of the books, which he was not obliged to give her, and maintains that Carlyle, the testator, never did decide, owing to age and infirmity, what "he wished to be done about his papers," but threw the whole responsibility on Mr. Froude. Then comes this curious defence of the use Mr. Froude has made of his discretion :

> "It is to me wholly incredible that anything but severe regard for truth, learned to a great extent from his teaching, could ever have led you to embody in your portrait of him the delineation of faults and weaknesses which were mixed with his great qualities. He did not use you well. He threw upon you that responsibility of decision which he ought to have taken upon himself. He considered himself bound to expiate wrongs which he had done his wife. Had he done this himself it would have been a courageous thing. But he did not do it himself; he did not even decide for himself that it should be done after his death. If any courage was shown by you in order to present the world with a true picture of him as he really was, you, well knowing what you were about, stepped into a pillory in which you were charged with treachery, violation of confidence, and every imaginable base motive, when you were, in fact, guilty of no other fault than that of practising Carlyle's great doctrine that men ought to tell the truth."

We believe this is the first time that it has been held by a judicial moralist of high standing that all truth must be told, or that nobody has a right to keep back any truth. To the ordinary mind it would seem as if Carlyle's "feebleness and indecision, natural enough in extreme old age," of which Sir James speaks, and which must have been very evident to Mr. Froude, would have imposed on him the duty of doing for Carlyle what Carlyle, in the full vigor of his powers, would have been expected by rational persons to do for himself—that is, refrain from making public any odious or ridiculous weaknesses of character or conduct. Mr. Froude was no more bound to tell the whole truth about Carlyle's private life than Carlyle was to tell it himself. If Carlyle had, when in possession of all his faculties, published an account of his relations with his wife, in which he played a contemptible rôle, people would have exclaimed, not, "What a truthful person this is!" but, "What a disgusting fool this is!" There is something, too, very ludicrous in the account Sir James Stephen gives of Mr. Froude's docility. Judging from the effect which Carlyle's teachings about truthfulness have had on the pupil—who, it must be remembered, was over forty when he became intimate with his master—the conceptions of the former about this great virtue must have been in an awfully rudimentary condition when the tuition began.

After a week of labor a new French Cabinet has been born. Its name is Goblet—an insignificant name. The versatile chief of the overthrown Ministry, M. de Freycinet, who, besides the Presidency, held the portfolio of Foreign Affairs, could not be persuaded to accept the same portfolio under the new Administration. Other politicians—or say, statesmen—of repute equally refused it, and M. Goblet, though entirely without experience in the field of foreign politics, had to take it provisionally himself until M. Flourens was persuaded to relieve him. It is clear that here lay the difficulty in the formation of a new Cabinet, and it was probably the perplexity of the outgoing one in its foreign relations that caused it to accept its stumbling over the trifling sub-prefect question with the same cheerful readiness to fall with which the Gladstone Cabinet, in 1885, accepted its defeat in a vote on spirit duties—Mr. Gladstone himself declaring that he did not envy the victors. In England, however, the victors were the leaders of the party in opposition ; in France, there is no change of party rule, and, as to the foreign policy, which is just now of all-absorbing interest, M. Goblet expresses his determination to continue the line of his predecessor. And Gen. Boulanger, who was, under the cautious Freycinet, a somewhat turbulent Minister of War politically, and now retains his position under M. Goblet, "has announced that he will hold himself entirely aloof from politics, and will devote his attention to military affairs exclusively." This, too, is significant.

The explanation of the situation is obvious. A week or two ago Russia seemed to have been driven by her own strange performances in Bulgaria and their exasperating issue to the dangerous point of war with Austria-Hungary, of which Germany could not long remain an idle spectator. The heart of France throbbed with wild excitement at this chance of seeing her German foe distracted in the east while she could assail him from the west. But Russia could not plunge into the contest without France. Even a positive assurance of coöperation on her part, in case Germany should enter the lists in defence of her Austro-Hungarian ally, would not suffice. For what to the Czar is the positive assurance of a French Cabinet, or even of the President of the French Republic? The Cabinet may be forced to make room for men of different sentiment and policy by an accidental majority of a couple of votes against some petty measure proposed by it in the Chamber; and the President of the Republic is not likely long to remain in his office, for he is seventy-three years of age. Besides, few French statesmen—and least of all that peace-loving septuagenarian, Grévy—are sufficiently blinded by the desire of revenge for Sedan to forget how perilous a new enterprise against Germany would be while Bismarck virtually rules all central Europe, and has, besides Austria-Hungary, Italy and England on his side. For France has, by her foolish aggression in Tunis and not much wiser attitude on the Egyptian question, herself driven those two kingdoms—other reasons coöperating—into combinations hostile to her. Her own animosity has, in fact, become divided. She begins to hate "perfidious Albion" almost as much as the land whither her armies were carried captives sixteen years ago. In this state of affairs and public sentiment, the French statesmen have not the warlike courage to court an offensive alliance with Russia, nor have they the moral courage to repudiate before the nation and Europe the intention of accepting overtures offered by that empire, Hence hesitancy, wavering, the disinclination to carry the burden of foreign affairs, the continuance of an indefinite peace policy, and Gen. Boulanger's resolution, on reassuming the duties of the War Office, to keep aloof from politics.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 8, to TUESDAY, December 14, 1886, inclusive.]

DOMESTIC.

THE President on Wednesday transmitted to Congress the correspondence which has taken place in regard to the Canadian fisheries disputes, and a letter from the Secretary of State on the same subject. It states that the United States will demand damages for the action of the Canadian authorities in seizing American fishing vessels, and recommends the appointment of a commission to take proofs.

The fact was announced on Wednesday that Mr. W. L. Trenholm, Comptroller of the Currency, had asked for the resignation of Mr. A. M. Scriba, the National Bank Examiner for New York city, who was appointed to his present place in 1883, upon the death of Mr. Meigs, and who for nearly twelve years previously had filled the position of Assistant Bank Examiner. His appointment as Bank Examiner was recommended by all the leading banks of New York, and was in the nature of a promotion on the principles of civil-service reform. In the letter requesting his resignation, which was written on November 29, Comptroller Trenholm found no fault with Mr. Scriba, but said that he wished so responsible a position to be filled by a man with whom he was personally acquainted. The office is in no sense a political one, and Mr. Scriba has always been so disconnected from politics that persons well acquainted with him are ignorant of his political affiliations. He has not resigned, but has sent a letter to the Comptroller of the Currency, giving a brief sketch of his services in the Department of Bank Examination, and holding that, under reformed civil-service principles, his resignation should not be called for. It is understood that the person selected as Mr. Scriba's successor is V. P. Snyder, now the Deputy Comptroller of the Currency. The matter was taken up by the principal banks and business houses of the city, whose representatives largely signed a petition to Comptroller Trenholm asking that Mr. Scriba be retained in his present position.

In answer to the petitions in behalf of Mr. Scriba, Mr. Trenholm, Comptroller of the Currency, has written a letter in which he says: "I should fail in justice to myself if I should omit to point out that, while I am in a position to judge somewhat of the manner in which a Bank Examiner discharges so much of his duties as come under the immediate observation of the officers and directors of the bank, such officers and directors are not in a position to judge correctly how the Bank Examiner discharges that part of his duty which comes under the observation of the Comptroller of the Currency alone; for I cannot suppose that any of the signers of the communication now before me have ever seen a single report made by Mr. Scriba to this office. If he has made a practice of exhibiting such reports, which I do not for a moment suspect, he has been guilty of a breach of duty which would alone require his immediate dismissal; but as I feel bound to assume he has not exhibited his reports to any one, then I submit with great respect that the gentlemen who have signed this paper have not had an opportunity to judge as to whether or not I ought to be satisfied with the manner in which those reports are made, while I could not retain my self-respect, nor would I be worthy the confidence due to whoever occupies this office, if I should be deterred from making a change in any examinership by reason of the number or the eminence of adverse petitioners who, as in this case, have not had an opportunity of forming opinions based upon knowledge. If there is any case in which the relation between a responsible officer and his subordinate should be exempt from the interference, not to say the dictation, of other persons, whosoever they may be, it is undoubtedly the case of the Comptroller of the Currency and a person employed by him to examine the national banks. If the precedent should be established that an Examiner holds his office by tenure of popularity or the favor of bank officers, or a public sentiment averse to official changes, there would be, in my judgment, a fatal blow struck at the efficiency of the whole system of examination, and there would be introduced a principle that would cripple and eventually destroy its value both to the public and to the banks."

The Secretary of the Treasury on Tuesday transmitted to the Senate a report prepared by Mr. Miller, Commissioner of Internal Revenue, in regard to the operations of the Oleomargarine Law. Since November 1 the taxes provided for have been assessed on 34 manufacturers of oleomargarine, on 204 wholesale dealers, and 2,415 retail dealers. The number of pounds of oleomargarine assessed at two cents per pound was 4,430,174. The principal collections were in the First Illinois District, where 2,613,700 pounds were taxed.

At a private conference of the Democratic members of the Committee on Ways and Means, relative to the action which the party ought to take upon the tariff, it has been decided that the Morrison bill shall be pushed at the earliest opportunity with all the energy which the leaders of the majority can command.

The Republican Congressmen are divided in their counsels as to the policy to be pursued with respect to the tariff. The latest to declare himself is Judge Kelley, who has just returned from a trip through the South. He is opposed to the abolition of the duty on sugar, which has been favored by Senator Sherman, and it is understood will be favored by Senator Dawes and Representatives Reed and Hiscock of the Ways and Means Committee. The ground of Mr. Kelley's objection is substantially this, that the agricultural interests of the country were never in graver danger of "prostration" than now, and never so needed the "stimulating influence" of the protective system. The production of Indian wheat, and the opening to commerce of the wheat and cotton-growing district of southern Russia, have done much "to endanger our agricultural interests," and have cheapened wheat to a point where we are annually supplying greater quantities and receiving in payment much less money. Moreover, the production of sugar is not a tropical industry. To repeal the duty on it would not only strike down the Louisiana cane-sugar industry, but would injure the grower of sorghum and beet sugar.

The tariff debate was opened in the Senate on Thursday by Senator Morrill, who made aggressive war on those who seek to modify the existing tariff. Senator Dawes followed in a similar strain on Monday.

Mr. Morrison (Dem., Ill.) gave notice in the House on Tuesday afternoon that on Saturday next he should move that the House go into Committee of the Whole to consider revenue bills

In the doubt which prevails as to the successful passage of any measure looking to tariff reduction, Mr. Hewitt has busied himself with providing a safety-valve for the overflowing Treasury. The bill which he has introduced provides that the Secretary of the Treasury may anticipate so much of the interest of the funded debt of the United States as may be in excess of 3 per cent. per annum. If all the holders of the 4 and 4½ per cents should avail themselves of this opportunity, about $75,000,000 to $80,000,000 of the surplus would be used in thus anticipating the interest of the public debt. The Government would, of course, lose nothing by the transaction. In fact, it would get the benefit of compound interest upon the quarterly payments of interest at 3 per cent. per annum. This is all that the money can possibly be worth to the Treasury. Bondholders will be left with a bond bearing 3 per cent., but the cash payments will be a full equivalent for any premium which the bond would bear in the market. The new 3 per cent. bond would undoubtedly rule somewhat above par, but the bill provides that it shall be received by the Comptroller of the Currency as security for national-bank notes at par, instead of being limited to 90 per cent., as the law now provides.

The Senate Finance Committee has come to a compromise on the Trade Dollar Bill which will not be satisfactory to the silver men. The Committee reports back the bill with an amendment that the amount of trade dollars to be redeemed shall not exceed $500,000 monthly, and that this sum shall be deducted from the regular monthly purchase of bullion. It is not probable that the House will accept such an amendment.

The conferees on the Inter-State Commerce Bill finished their labors on Thursday. As to the enforcement of the act, the commission feature of the Senate bill is accepted by the House conferees, while the Senate conferees accept the system proposed in the Reagan bill, under which a shipper is entitled to sue for damages in United States Courts in his own behalf. This gives shippers the option of making complaint to the Commission or instituting suits in Federal courts. Railroads are prohibited from charging more for a short than for a longer distance upon their own lines in the same direction, the shorter being included within the longer distance, and the circumstances and conditions being the same; but the Commission is authorized upon application of a railroad, and after investigation of the facts, to relieve the roads from the operation of the general rule in special cases. The Senate conferees agree to the absolute prohibition of pooling contained in the House bill. These were the main features of the difference. On the question of publicity of rates, the provisions of the two bills have been merged so as to require each railroad to make public the rates between points upon its own road as proposed in the House bill, and in addition the Commission is required to secure publicity of through-rates in so far as it may be found necessary.

Senator McPherson (Dem., N. J.) introduced on Monday a bill to authorize the reduction of United States bonds and the circulation of national banks. The bill provides that all national banks having a capital of $150,000 or less shall not be required to keep on deposit United States bonds in excess of one-eighth of their capital stock as security for their circulating notes; and that all such banks having a capital of $150,000 or more shall not be required to keep on deposit as security for their circulating notes United States bonds in excess of $25,000; and banks having on deposit bonds in excess of these amounts are authorized to reduce their circulation, provided that the amount of such circulating notes shall not exceed in any case 100 per centum of the par value of the bonds deposited, as provided in the bill.

Representative Grout of Vermont has introduced his bill to provide that the 50,000 fourth-class postmasters of the country shall be elected by the people, and he intends to press it so long as he remains in Congress.

The House Committee on Indian Affairs on Thursday completed the Indian Appropriation Bill. In its present shape the bill provides for a total appropriation of $5,178,000, which is a reduction of $350,000 as compared with the appropriation for the current year, and $430,000 below the estimates submitted by the Interior Department. The principal reductions were $50,000 in the estimates for Indian schools (the effect of which is to curtail only the fund available for new school buildings), $150,000 in the appropriation for the support and civilization of the Sioux, and $25,000 in the appropriation for the maintenance and civilization of the Navajoes.

The House on Thursday passed the bill extending the free post-office delivery system.

Congressman Dowdney, representing the Twelfth New York District, died suddenly in

this city on Friday. He was forty-six years of age and was elected to the Forty-ninth Congress as a Democrat.

The Federation of Trades Unions at Columbus, O., on Thursday refused to adopt a resolution of sympathy with the Chicago Anarchists.

The directors of the Theological Seminary in Columbia, S. C., passed a resolution on Thursday dismissing Dr. Woodrow, the evolutionist.

The council room of the University of the City of New York was filled on Monday night with ladies and gentlemen, who had met "in commemoration of the fulfilment of fifty years of continuous service in the University, in its Council, by President Charles Butler." The Rev. Dr. John Hall, Chancellor of the University, presided, and among those present were the Rev. Dr. H. M. McCracken, Vice-Chancellor; William Allen Butler, the Rev. Dr. Howard Crosby, John E. Parsons, J. W. C. Leveridge, William A. Wheelock, and President Hitchcock of the Union Theological Seminary. An address on behalf of the Council was presented to Mr. Butler by Mr. Parsons.

The Rev. Dr. Edward McGlynn, pastor of St. Stephen's Roman Catholic Church in this city, has been summoned to Rome to explain certain utterances of his made during the Mayoralty campaign in this city. Dr. McGlynn upheld the doctrine of Henry George that property in land is robbery.

Henry M. Stanley, the African explorer, who was lecturing in this country, received a summons from the King of Belgium on Saturday to return to Europe—it is supposed, to go again to the Congo Free State, where it is reported the Stanley Falls settlement has been abandoned because attacked by Arab bandits. He will sail immediately.

The will of E. Price Greenleaf of Boston bequeaths nearly all his estate to Harvard College. It is to be known as the Greenleaf Fund. Three thousand dollars each year are to be divided into shares of $300 each, to be paid to undergraduates who may be unable to pay the expenses of their education. The remainder of his estate is to be equally divided, all the income from one-half of it to be used for the maintenance and support of the library of the College, the preservation and repair of books therein, and the purchase of books therefor. The remainder of the fund shall be appropriated in such manner as the President and fellows shall deem expedient to reduce the general expenses necessarily incurred by undergraduates of the College in pursuing the studies required to obtain the degree of Bachelor of Arts, who are not of themselves or with the aid of their parents of sufficient pecuniary ability to pay for the same. In the event that the President and fellows of the College fail to comply with the conditions of the bequest, the money will be given to the Home for Aged Men and the Children's Hospital in equal parts. The estate is expected to amount to $500,000.

Mr. Joseph W. Harper, United States Consul at Munich, died there on Wednesday at the age of sixty. Mr. Harper was the eldest son of the late Fletcher Harper of this city. He was a resident of the city of Munich when he was appointed to the position of United States Consul by President Arthur. He was a straightforward business man, and socially was very popular.

Isaac Lea, LL.D., the American naturalist, who earned wide fame for his extensive scientific researches, died on Wednesday at his residence in Philadelphia, in the ninety-fifth year of his age. Dr. Lea was a member of the Zoological Society of London, the Linnæan Society of Bordeaux, the Imperial Society of Natural History of Moscow, and at the time of his death he was an honorary member of nearly all the scientific, philosophic, and historical societies of the world. He was President of the Academy of Natural Sciences of Philadelphia from 1853 to 1858.

FOREIGN.

M. Floquet, President of the French Chamber of Deputies, who undertook to form a Ministry, advised President Grévy on Wednesday to summon M. Goblet to the task. M. Goblet, under pressure from the President, finally consented to make the attempt. On Saturday his completed Cabinet was announced as follows: M. Goblet, President of the Council, Minister of the Interior; M. Flourens, Minister of Foreign Affairs; M. Dauphin, Minister of Finance; M. Berthelot, Minister of Public Instruction; M. Sarrien, Minister of Justice; Gen. Boulanger, Minister of War; Admiral Aube, Minister of Marine and the Colonies; M. Granet, Minister of Posts and Telegraphs; M. Lockroy, Minister of Commerce; M. Millaud, Minister of Public Works; M. Deville, Minister of Agriculture. In announcing the composition of the new Government to the Chamber of Deputies, the Premier read a declaration that he relied upon concord among the Republicans in the Chamber to enable him to continue in the work of Government. He said he would follow M. de Freycinet's foreign policy, which the Chamber had approved, and promised early next session bills for such internal reforms as the Chamber desired. He asked the Deputies to vote his Government a provisional budget, and to adjourn discussion till Tuesday. Rêné Goblet, the new Premier, is fifty-eight years of age. He has held the offices of Under Secretary of Justice (1879), Minister of the Interior (1882), and Minister of Public Instruction, Fine Arts, and Public Worship (1885-'86) He was a protégé of Gambetta, and is at present on friendly terms with Clémenceau.

The German press adversely criticises the new French Cabinet. The papers consider that the rapid fall of M. de Freycinet, and the refusal of Baron de Courcel to join the new Ministry, afford evidence that no French Government which advocates peace has a chance of permanence.

The French Chamber of Deputies on Tuesday, by a vote of 508 to 12, passed the Provisional Budget for two months.

A document written by the Count of Paris has been made public in Paris. He denounces alliances between the Right and the Extreme Left for the simple purpose of hampering the Government. He says: "The monarchy is the Government in reserve. The Conservatives ought not to put themselves out of court by refusing to accept the republic as the working machine until the way is prepared, not by violent means, for the monarchy." He urges them to adopt a programme in favor of the reduction of new public posts and treasury burdens; the maintenance of the five years' military service; the appointment of a non-political general to command the army; the stopping of religious persecution, and the reinstatement of magistrates who will loyally support the Republicans.

The Conservative and National Liberal members of the German Reichstag Committee on the Septennate Bill, at a meeting on Thursday, advocated unconditional acceptance of the bill. The Clericals and German Liberals, objecting to a permanent increase, asked that the Foreign Office explain the foreign relations of the Empire. Herr Windthorst demanded an exact statement regarding the Austro-German alliance. Gen. von Schellendorf replied that diplomatic revelations would be inopportune It is believed that the bill is certain to pass the Reichstag.

The St. Petersburg *Official Messenger* says: "The recall of the Russian agents was not intended to sever the ties uniting Bulgaria and Russia; it only signified that Russia refused to recognize the legality of the condition of affairs under which an insignificant minority seized supreme power, and imagined it was entitled to guide Bulgarian destinies and make the people its tool. The Russian Government will not accept any arrangement which, under cover of legality, will merely perpetuate the present abnormal conditions in Bulgaria. Russia is satisfied with the attitude of the Porte. She regards Turkey as working seriously for a pacific solution of the Bulgarian problem in conformity with existing treaties, and as being, therefore, entitled to the support of the Powers."

England has decided to reduce the Egyptian standing army to 10,000 men, and the army of occupation to 5,000, thus largely reducing the cost of armament to the Egyptian Government.

Lord Salisbury delivered an address at the City Conservative Club in London on Wednesday evening. He said it was a remarkable phenomenon that men of the greatest power and influence had separated themselves from the Liberal party, and that their leader had thrown aside party claims for a principle. No party commanded an absolute majority in Parliament, but the Conservatives and Unionists were working together, and, although still retaining their individuality and independence on all subjects except one, both sides were avoiding points of difference. Nothing could exceed the straightforwardness displayed by Lord Hartington and his followers in rendering their coöperation easy.

The Glasgow *Mail* says it is authorized to state that Mr. Gladstone does not approve the anti rent campaign inaugurated by the National League in Ireland. The announcement was based on a private letter.

The hearing of Mr. John Dillon, charged with agitating in favor of the Irish plan of campaign, was concluded on Tuesday. The Judge declared that the "plan of campaign" was absolutely illegal. He ordered Mr. Dillon to give a personal bond in the sum of £1,000, with two sureties for £1,000 each, for good behavior in the future, within twelve days, or go to prison for six months.

The British Cabinet met on Friday and will not come together again until after Christmas. The order of business in the coming session of Parliament was revised, and the programme will probably be as follows: The session will open with the introduction of a coercion bill, including special provisions for the suppression of boycotting. It was decided that local-government measures affecting England and Scotland shall have precedence over legislation on the same subject for Ireland. The result of this will be that no Irish business, except such as relates to coercion and to the bill extending the scope of the Ashbourne Land Act, will be transacted. The Hartington section will give thorough support to the coercion measure. It is also said that the Cabinet resolved to modify Mr. Ritchie's draft of a bill making local bodies entirely elective, so as to allow them to have also a number of ex-officio members, with powers to dispose of land allotments. Scotland is to be treated in a similar manner. Ireland will not be dealt with at present. The new rules of Parliamentary procedure empower the Government to give notice of closure and call a division thereon, instead of awaiting the Speaker's initiative. It is stated that Lord Hartington approves the proposals.

The Duke of Manchester announces a permanent reduction of 25 per cent. in rents on all his estates in Ireland.

Signor Marco Minghetti, the Italian statesman, is dead at the age of sixty-eight. He was an intimate friend of Cavour, and Minister of the Interior under him. He aided with all his power in founding the kingdom of Italy, and was Prime Minister from 1873 to 1876.

Jens Nikolai Madvig, the Danish philologist and statesman, is dead, at the age of eighty-two. From 1848 to 1852 he was Minister of Public Worship and Education, and after 1854 he took an active part in Danish politics. He published many critical editions of Latin authors, but his celebrity rests chiefly upon his 'Latin Grammar' (1841), a standard work.

THE ELECTORAL COUNT BILL.

It is difficult to realize that it has required a discussion of eighty-six years' duration to secure the passage, by both houses of Congress, of a simple law regulating the official counting by those houses of the Presidential vote. Yet such is the fact The need of such a law was felt early in the history of the Government, and the first electoral-count bill was introduced by Senator Ross of Pennsylvania in the year 1800. It provided for a committee of six Senators, six Representatives, and the Chief Justice, who should decide all disputed returns. It will be seen that this was the germ of the Electoral Commission of 1876. The bill passed the Senate, but was so amended by the House that the Senate refused to concur, and it failed between the two. A second attempt was made by Mr. Van Buren in the Senate in 1824. His bill provided that if a return were objected to, it should be counted unless the two houses, voting separately, concurred in rejecting it. The bill passed the Senate, but it was not acted upon by the House.

In 1875 Senator Morton introduced a bill which provided that, if objection were made to any return, it should be counted unless it was rejected by the concurrent vote of both houses, and that, in case of double returns, that one should be counted which the two houses acting separately should declare to be the true one. In case of failure of the two houses to agree, the vote of the State would be lost. This bill passed the Senate by a party vote, the Democrats voting in the negative. A motion to reconsider was entered, but never finally disposed of. When the controversy of 1876 began over the Hayes and Tilden votes, the Democrats discovered all too late that, if they had passed the Morton bill, nothing could have prevented their seating Tilden under its provisions. It will be remembered that, in the election of 1876, 184 electoral votes had without question been cast for Tilden, or just one less than a majority of the Electoral College. Of the remaining 185 votes at least 20 were disputed. In three Southern States, Florida, South Carolina, and Louisiana, the Legislatures had directed the popular vote to be counted by returning boards, with plenary powers to cast out the entire vote of any county or parish in which fraud or force had vitiated the election. By exercising this power, the returning boards of Florida and Louisiana had converted an apparent Democratic popular majority into an apparent Republican majority, and given certificates to Republican electors. Double returns were sent to Congress by Democratic and Republican electors from these two States and from South Carolina and Oregon. Under the Morton bill, the votes of nearly all these States would have been lost, for the two houses would have inevitably failed to agree about their acceptance and Tilden would have been seated. Under the twenty-second joint rule, which had prevailed in other counts, he would have been seated also, for under that the Democrats could have thrown out all the doubtful States and thus given their candidates a majority, but the Republican Senate had repealed that rule on January 20 of that year. Under these circumstances the Electoral Commission was created, whose decisions could only be reversed by the concurrent vote of both houses. Its Republican majority decided invariably in favor of Republican electors, and as the House voted to reject its decisions and the Senate voted to accept them, they all stood, and Mr. Hayes was seated.

The Electoral Commission was a makeshift which nobody desired to see become a permanent method for deciding upon disputed returns. In 1878 Senator Edmunds introduced a bill which provided that each State might establish tribunals for the trial of electoral contests, and that their decision should be final; that, if there should be any dispute as to the lawfulness of the State tribunal, or if there should be double returns from a State which had not provided such a tribunal, only those returns should be counted which the two houses, acting separately, should concur in receiving, and that any single return should be counted unless rejected by both. This bill passed the Senate, but was not acted upon by the House. Several attempts have since been made with similar results. The bill which the House has now passed was introduced by Mr. Edmunds in the Senate at the last session, and was passed then by that body.

While the House has made some amendments, the general scope of the bill is the same as it was originally, and there is, therefore, every reason to think that the changes will receive the approval of the Senate. In brief, it provides that in those States where a tribunal has been established for the determination of electoral contests, and such tribunal has decided what electors were duly appointed, the determination of the tribunal shall be conclusive; that when there is but one return from a State, the vote so returned shall be counted; that when there are two or more returns, and the question arises which of two or more State tribunals or authorities is the lawful one, that return shall be counted which the two houses, acting concurrently, shall accept; that when there is one State government and two sets of returns purporting to be the vote of the State, that return shall be counted which is supported by the certificate of the Executive of the State, unless both houses, acting separately, shall concur in deciding that it is not the lawful vote of the State. The purport of the measure is thus summed up by the committee which reported it:

> "The two houses are, by the Constitution, authorized to make the count of the electoral votes. They can only count legal votes, and in doing so must determine from the best evidence to be had what are legal votes; and if they cannot agree upon which are legal votes, then the State which has failed to bring itself under the plain provisions of the bill, and failed to provide for the determination of all questions by her own authorities, will lose her vote. Congress having provided by this bill that the State tribunals may determine what votes are legal coming from that State, and that the two houses shall be bound by this determination, it will be that State's own fault if the matter is left in doubt. The power to determine rests with the two houses, and there is no other constitutional tribunal. Congress prescribes the details of the trial, and what kind of evidence shall be received, and how the final judgment shall be rendered."

This is so clear and simple, and so obviously not only constitutional but in the interest of peaceable and orderly government, that the wonder is we have been so long in reaching it as a solution. It puts an end for ever to electoral disputes and to the great peril to which they subjected our institutions.

THE BANCROFT TREATIES AGAIN.

The President tells us that there has been "much correspondence" with Germany "in relation to the privilege of sojourn of our naturalized citizens of German origin revisiting the land of their birth." This statement is immediately followed by the assurance that our relations with that country have lost nothing of "their accustomed cordiality."

As things stand, this utterance is unexpectedly calm and good-tempered. The correspondence of which the President speaks has turned on the significance of the "two-years clause" in the naturalization treaties of 1868. The clause in question provides that if a naturalized citizen returns to the country of his original allegiance and remains there two years, he shall be deemed to have renounced his naturalization. The dispute as to its interpretation began in 1878, when the Prussian Government expelled a naturalized American of German birth, named Bäumer, a few months after his return to Germany. From that time the controversy seems to have slumbered until 1885, when new expulsions aroused fresh debate. During the past two years the dispute has been incessant. Our State Department has uniformly insisted that the clause in question impliedly guarantees an unmolested residence of two years; the German Foreign Office has uniformly denied our interpretation, and the German Governments have continued to expel naturalized Americans whenever they saw fit. But until recently these expulsions have been the exceptions, and undisturbed residence during the two years the rule. Now all this is changed. The Prussian Ministry has recently instructed the local authorities that naturalized Americans who return within the military age —*i. e.*, before the completion of the thirty-first year—are to be permitted to remain in Germany for "weeks or months" only, or are not to be permitted to remain at all, according to the circumstances of each case. The Saxon Minister of the Interior has issued a similar ordinance, and it is probable that the other German States will follow Prussia's lead.

This is Germany's answer to the American agitation of the last two years. We have protested against exceptional expulsions, basing our protests not on grounds of comity, but on claim of right, and the German Governments decree that expulsion shall be the rule. A more emphatic rebuff could hardly be given to our diplomacy; and it seems at first glance surprising that our diplomacy, speaking through its constitutional chief, the President, should take the rebuff so calmly.

The tone of the President's utterances probably indicates that his advisers have at last convinced themselves that the ground of controversy was ill-chosen. It was ill-chosen. The two-years clause will not bear the construction which our State Department has tried to make it bear. The treaties make certain results dependent upon a two-years' residence, but they

do not guarantee a two-years' residence. They do not give our naturalized citizens any right to live in Germany without the consent of the German Governments. That is a right which native Americans do not possess, and it was the intention of the treaties that our naturalized citizens should be regarded and treated in all respects like native Americans. It was intended that Germans naturalized in America should be regarded by Germany as aliens. But the right to expel aliens is a right of every sovereign government. Comity demands that the expulsion shall not be made without cause, and that the cause shall be made known to the State whose citizen is expelled. The causes are known to us. Germany puts its case substantially as follows:

"The German Empire is situated in the midst of an armed Europe. Three of the greatest military Powers of the Continent edge on its territory. One of these Powers is smarting under the fresh memory of a great defeat, and is preparing with tireless energy and inflexible purpose for a war of revenge. A second Power is ruled by a friendly dynasty, but its people is far from friendly. To maintain its existence, the German Empire must arm itself to the teeth. It must demand from every German that he sacrifice several of the best years of his life in training himself for war, and that he sacrifice life itself, if need be, when war comes. Germany does not demand that aliens shall enter its army, but it does demand that no one who is really a German—who was born on German soil of German parents, and who wishes to live in Germany—shall be exempted from this universal duty. The German people itself resents such an exemption of any German as a wrong to itself, as a violation of the democratic principle of equality. And when, as often happens, the Germans who return with American naturalization papers make a boast of their exemption, call it 'liberty,' and commiserate or revile those who are doing their duty to the State, as 'serfs' or 'tools of tyranny,' they become intolerable.

"The Bancroft treaties were intended to protect bona-fide Americans of German birth, but not to protect sham Americans. Those Germans who go to America simply to avoid military service at home, and who come home as soon as they have obtained American naturalization papers; who take their five years in America instead of their three years in the German army, but who have no intention of living and dying in that country; who, on the contrary, mean to die in Germany if they can do so without the risk of having to die *for* Germany — those Germans, though they be legally American citizens, are no Americans."

Twenty-two or twenty-three years ago these arguments would have appealed to the American mind more strongly than they do now. During our civil war the United States Government was obliged to resort to conscription. The draft acts made liable to conscription those resident aliens who had declared their intention of becoming American citizens. They were not technically citizens, of course, but (our legislators argued) they were really members of our body social; they had abjured all allegiance to every foreign prince and potentate, and had become "inchoate citizens" of the United States. They could not in honor refuse to aid their adopted country in its peril. To the great disgust of the authors of the act and of the American people, very many of these aliens refused to honor this over-draft upon their loyalty, and appealed for protection to the very potentates whose allegiance they had forsworn. The protection they demanded was legally due them, and it was granted; but it struck all Americans as an eminently just and proper retaliation when the Government gave these "inchoate citizens," who had resisted conscription, sixty-five days in which to leave the country.

Whether the present Administration does or does not recognize the force of Germany's arguments, it probably realizes that it will be useless to press the conflict—unless it is prepared to sacrifice the Bancroft treaties. There is, in fact, no possible answer to the last act of the Prussian Government except a notice that we desire to withdraw from the compact of 1868. Do we desire this? That depends upon the probability of our getting a better treaty from the German Empire in 1887 than we got from the North German Confederation in 1868. The treaty we have is a good one. It gives full recognition to bona-fide American naturalizations. It carries the effect of naturalization back to the moment of emigration, so that no naturalized American citizen of German birth can be punished for illegal emigration. If sentence has been rendered against him in his absence for illegal emigration, or for failure to perform military service, the sentence is quashed as soon as he produces his American naturalization papers. If a fine has been levied by seizure and sale of his property, the money collected is returned to him.

The clamor of certain German-Americans who appear to want the earth, and refuse to be satisfied with any section of it, has been taken for much more than it is worth. These are the same persons whose "ignorant and overweening assumption of rights," as Bayard Taylor wrote to the State Department, has caused most of the friction in the working of the treaties. Over against their opinions may be set those of two distinguished German publicists—Kapp and Von Martitz—who ten years ago demanded that the German Governments should terminate the naturalization treaties at the earliest possible moment, because in them Germany had yielded every point and the United States nothing.

Are we likely to get anything better if we let the present treaties go? No one who knows what a favorable conjunction of circumstances was required to secure the North-German treaty, will advise risking it. In 1868 Bismarck had just won his first great fight, and Prussia was flushed with triumph and full of confidence and generosity. The United States was represented at Berlin by a famous historian who had always believed in Prussia and predicted her greatness; whose faith had not waned even during the dark days of her humiliation at Olmütz twenty years before; whose words of encouragement, written at that time to his friend Bunsen, had become known all over Germany, and had earned him the grateful affection of all Prussians. Prussia was in a "giving humor," and Bancroft was of all Americans the man to urge and carry our claims.

THE PRACTICAL SILVER MAN.

Our esteemed contemporary the *Financial Chronicle* is afflicted with a kind of color-blindness in its view of the silver question, which is more to be regretted since its vision is in general very clear. In some remarks that it makes on Secretary Manning's report, it begins by saying that the bimetallist view must be the view of "every practical man," and that "only a rigid doctrinaire can advocate gold monometallism—one who, in pursuing his theories, loses sight of the conditions to which they are to be applied." It would appear from this that there are a lot of doctrinaires, agitators, theorists, and impracticable people who are stirring up the world to adopt an exclusively gold currency, and that this is the reason why bimetallism has been discarded in Europe, and why the bimetallists have such hard work in getting their eminently practical views carried into effect. We were under the impression that the agitators were all on the other side. There is no such thing as a monometallist society or organization in the world. There are, however, plenty of bimetallic leagues. There is one in this country, another in England, another in Germany, and if there is not one in France, still, the chief agitator of all, Mr. Henri Cernuschi, is more diligent than any organization, for he, in the main, keeps the rest of them going. These societies or leagues make all the racket on the subject that any one hears. If there were any corresponding collection of theorists on the other side, they could be pointed out, but there is none such. Those who are called monometallists are a few persons in each country, for the most part unknown to each other, who now and then take some notice of the stream of talk which Mr. Cernuschi and his affiliated societies are for ever pouring out. It is quite clear, then, that, whether the one or the other is best entitled to be called doctrinaires, the bimetallists are the only agitators. They are the only ones who are in a constant stew and splutter. To be called a doctrinaire is of no moment anyway. If the phrase signifies a man who has a doctrine or an opinion, it is equally applicable to both. If it signifies one who is seeking diligently and methodically to get his doctrine embodied in legislation, then the bimetallists are the fittest to wear the title.

But there is a class of monometallists, not doctrinaires in any sense, whose joint and concurrent action for ever thwarts and confounds the other side and brings all their plans and their Paris conferences to naught. They are the business world. It will hardly answer to say that they are not practical men, because practice is the only thing that they fully understand. If the business world were called upon to give a reason why they prefer gold instead of silver, or why they prefer one metal instead of two, they would not in general be able to give any reason, they would perhaps not fully understand the question, yet they would go on acting at all times as though gold was the right thing for them. Even those who are bimetallists in theory are monometallists in

practice. They all like gold in the market-place. In their capacity as traders they want the yellow metal just as much as anybody else does. Now, this is a question peculiarly, and indeed solely, of the market-place, and not of the lecture-room. It is the province of the lecture-room to observe what goes on in the market-place, and to interpret the observed movements, but the lecturer is as powerless to restrain the preferences of traders for one metal over another as he would be to regulate their preferences for one cereal over another.

When the doctrinaires of bimetallism are asked to explain why the world has got away from them, they say that it is because the German Government demonetized silver in 1871; that this forced the hand of France, and dragged the Scandinavian countries captives, and toppled all Europe over like a row of bricks. Every reason, except the true one, is ascribed to Germany for doing what she did. The true one was, that the silent but irresistible preference of the business world for the gold standard, which had been growing with the growth of commerce not in Germany merely, but in all the market-places of Europe, and nowhere more mightily than in France, got itself translated into law. To suppose that the German monetary change came about without a commercial cause, is as unphilosophical as to suppose that great revolutions, social or economical, are due to the whim and caprice of a few individuals. German unity did necessitate uniformity of coinage, but that was a mechanical affair altogether, like the cutting of a garment to the shape of the wearer. German unity did not necessitate a change of standard. If silver had been as good for business as gold, it would have been quite as good for Bismarck. The imperial policy had nothing to gain by one metal more than by the other. In fact, Bismarck's personal preferences have always been for bimetallism. But although he may control Germany in a political sense as he chooses, and may exercise a preponderant influence in Europe, he could not restore bimetallism anywhere, even if he were foolish enough to make the attempt. He would fail because he could not change the instinct of the commercial community, which chooses gold for the standard of value, and would continue to do so even if the law were changed.

The *Chronicle* says in conclusion that "prices, values, and wages have all become adjusted to the double standard—conditions none of which can be ignored by any wise statesman changing the world's currency." It is, perhaps, thinking of the conditions prevailing *before* the German demonetization of silver. That event took place fifteen years ago. Prices, values, and wages have since that time become adjusted to the single gold standard. If anybody has been injured by the change, which we do not admit, the injury has been done. Why make a fresh disturbance? But really, since no statesman, wise or unwise, is able to change the world's currency, it does not matter what conditions are ignored by them.

RELIGIOUS STATISTICS.

The Boston correspondent of the *Christian Union* recently expressed what he declared to be the feeling of the Boston pastors, that there is growing difficulty, owing to the shortening of the church year to eight or nine months, in bringing the statistical showing of their churches up to the figures expected of them. What appears to be meant is the fact that the statisticians of the Church have, as it were, set the pace for the ministry. The percentage of gain in the churches must be kept up, is the understanding. In some way or other the authorities and organs of the Church must be given the means, at the end of the year, of once more showing that the churches are growing faster than the population. Other examples might be given of this feverish anxiety on the part of directors of various forms of religious enterprises, to secure results which will make a fair show in the year's exhibit. Undoubtedly they assure themselves that all they are looking for is the accomplishment of the greatest amount of good possible, yet it is a fact that this commendable desire often takes the form of an undeniable pressure brought to bear upon those actually doing work under them.

Thus, we have known of the officers of a Woman's Foreign Missionary Society sending word to the teacher of a mission school that she must take measures to report a larger number of pupils under her care, that the supporters of the society were demanding larger results, etc. Indeed, so far has the Church caught the spirit of the age, so far has it become a business enterprise, that the chief test of ministerial success is now the ability to "build up" a church. Executive, managerial qualities are now more in demand than those which used to be considered the highest in a clergyman. Recent ministerial changes were based, confessedly, almost solely on business grounds. The denominational newspapers have a sure instinct in these matters of clerical reputation; and the way they confer greatness for success which is capable of a mathematical demonstration, is enough to substantiate what we have said.

Now, this tendency in the churches is a peculiarly modern one. One reason why the religious statistics of seventy-five years ago are so uncertain is, that no definite attempts were then made to collect them. It may be said that substantially the same thing is true of many other classes of statistics, and that the Church has simply moved with the times in aiming everywhere at exactness instead of estimates. This may be so, and yet the change referred to signifies a great deal more for the Church than for any other institution, inasmuch as its ancient attitude towards statistics was not alone one of indifference, but of hostility. Was not one of David's worst sins that of numbering Israel? Was he not provoked thereto by Satan, or (following the account in Kings instead of Chronicles, as the stiff Calvinists prefer to do) by Jehovah in order to his just punishment? In short, the prevalent idea used to be that the Church appeared in greatest dignity when represented as comprising only a select and favored few. The more that were outside it, the greater the privileges of those within. There was formerly little of the anxiety to be a competing and predominant element in society which is now so common.

The modern attempts to produce a religious balance-sheet which will show more saved than lost, have little in common with the spirit of a century ago; then the glory of the Church was thought to appear chiefly in the assumption that the opposite was true. We do not know a more striking proof of theological change, in truth, than the fact that the professor who is probably the most thorough-going Calvinist in any seminary in this country, now tells his students that no theodicy is possible, except on the supposition that a majority of the race is to be saved. A bare majority will do; even a very large minority would not be enough to save the divine benevolence. What would Calvin have said to this intrusion of the democratic idea of determining things by a count of heads into the government of a sovereign? Very important internal changes are implied, we repeat, in the changed attitude of the Church towards the religious census.

It is easy to see that the element of personal and corporate eagerness referred to as present in the statistical showings of churches must operate to make them much less trustworthy than almost any other class. It is as if the personal desires of protectionists and free-traders could affect the Government's official returns of exports and imports. In economical disputes the figures can be made to lie by an unfair use of them, it is true, even though they are themselves truthful. Church statistics, however, need to be sifted before they can be used. The lists of membership given in denominational year-books are notoriously inflated, as are also the returns of church benevolences. The resulting untrustworthiness is due in large part to the quiet pressure put upon churches and ministers alike, for the reasons and in the directions indicated.

DEMOCRACY IN SWITZERLAND.—II.

London, November 25, 1886.

The political problem of the age is how to form conservative democracies, or, in other words, how to give to constitutions resting on the will of the people the stability and permanence which has hitherto been found only in monarchical or aristocratic states. The problem takes different shapes in different lands. In one country the difficulty is how to form an executive which shall be at once powerful and permanent and yet amenable to the wishes of the citizens; in another, the question presents itself how best to secure the possibility of readily amending the law, and, at the same time, of making sure that laws while unrepealed shall be respected and shall represent the deliberate will of the nation; in a third, statesmen are puzzled by the perception that government by party is degenerating into government by factions, and that assemblies which may form admirable instruments for eliciting or guiding the opinion of electors, may, at the same time, be quite incompetent for the purpose either of scientific legislation or of effective administration. The instability of the executive, the weakness of the law, the inherent defects or aggravated vices of party government are, it will be admitted, the diseases, so to speak, to which modern democracies are liable. In every country where the people is becoming, or has become, supreme—that is, in every civilized State throughout Europe or America—statesmen and theorists are driven to devise more or less efficient remedies for ailments of which no one denies the existence.

The Swiss people and their leaders have been, for more than a generation, occupied with this task; they have worked at it (as has been already pointed out) under very peculiar conditions; they have, however, under these conditions achieved a marked, though not by any means a complete, success. They have formed a stable democracy; they have created an executive which, while not out of harmony with the wishes of the nation, has as much permanence as any Government in Europe; they have secured for the foundations of the Constitution the possibility of change without the risk of incessant alteration; they have, for a time at any rate, minimized the evils of party government. My aim in this letter is to point out the means by which these results have been attained. Whether the methods adopted do not involve counterbalancing evils—whether they are methods which could be adopted say in England, America, or France—are questions to which I hope at some future period to recur, but shall to-day give no answer whatever.

As to the Executive.—The Swiss Executive is neither a President nor a Cabinet; it is an Executive Council (by which name I shall, for the sake of convenience, describe it). It consists of seven persons chosen at the first meeting of the Federal Assembly, or, as Americans would say, of Congress, for a period of three years. The Assembly, it should be noted, consists of two houses, the National Council and the Council of States, or, as we may for clearness' sake term them, the House of Representatives and the Senate. The members of the House of Representatives are themselves elected only for three years. The result, therefore, of the Assembly electing an Executive Council which holds office for three years, is that the Council's tenure of office extends slightly beyond the period for which each Assembly remains in existence, so that the Executive Council holds power from the time when it is elected to the moment when the next Assembly, or Congress, meets. At that moment the Executive Council ceases to exist, and another is elected. Now, there are two or three matters about this Executive Council which require special notice. It is a body elected by the two houses sitting *ad hoc* together; it is a body which may consist either of members of the Assembly or of persons who have no seats in it. No one can sit at once in the Executive Council and in the Assembly, but the members of the Executive Council have the right of speaking as well in the Senate as in the House of Representatives. No one among the members of the Executive Council is in any sense a Prime Minister. Each year one of them is chosen as President, or Chairman, but no man can hold this position for more than one year consecutively; and though this presidency or chairmanship confers some honorary distinction and some slight increase of salary, it does not, either by law or by custom, increase the authority of the person who holds it. The Council is, in short, a body of equals; they are each and all responsible for the conduct of the administration, but, as a matter of convenience, each practically undertakes a different branch of the Government. One, for example, manages the Post-office; another devotes himself to the War Office, and the like. The Executive Council, again, is, from its very nature, what occasionally, under the stress of peculiar circumstances, an English or French Cabinet professes to be—a "Ministry of business." Its object is to carry on the nation's Government, but not to dictate a policy to the nation. It is to be supposed, though perhaps the supposition may be one forced upon me by the habits of English public life, that the members of the Council agree in a very general way as to the measures they lay before the Assembly; but even this is by no means certain. What is certain is that the Council, or a particular member of it, may propose a law, or, as we should say, a bill, to the Federal Assembly, and yet, if the proposal is rejected, not be required by custom or by opinion to resign his place. A man of eminence recently, when a member of the Council, brought forward a wide scheme for the improvement of national education; it was rejected. The Minister did not retire, and indeed would have violated the conventions of the Constitution if he had retired. The very persons who had most vigorously opposed his educational reforms, publicly expressed satisfaction at the knowledge that the rejection of an ill-judged measure did not deprive the country of a very meritorious and able public servant. Here it is that we see the marked difference between the Swiss system and Parliamentary government as practised in England, and in countries where the Constitution copies the English model.

Two or three results follow which may startle, but also may instruct, parliamentary statesmen. The Swiss Executive Council are elected with a view to administrative ability. Its members need not necessarily belong to one party; there is nothing whatever to prevent a Minister from being again and again reëlected. Practically, as I am told, reëlection is rather a rule than the exception, and men of eminence have remained on the Council for sixteen years or more. It is, in short, a Board chosen on the same business principles on which sensible shareholders would select a board for the management of a railway company. If the directors are men of sense, if they are men of honor, if, above all, they are successful men of business, no shareholder who cares for his dividends thinks that the composition of the Board ought to be changed every three years. The way in which Englishmen think about the management of a trading concern is pretty much, it may be suspected, the way in which the Swiss think about the management of national affairs. The results are what one might expect. Men chosen for business capacity turn out on the whole good men of business. The Executive Council have to perform two difficult feats: they are called upon to minimize the friction inherent in the working of a cumbersome and not very well arranged federal system; they are bound to support the dignity and defend the interests of a small, a free, and, as far as regular troops go, an unarmed country in the face of the great Powers of Europe. These tasks are difficult. That they are well performed is certain, for failure would lead either to internal disturbance or to external embarrassments. Switzerland is at peace at home and is neither defied nor insulted abroad. A Swiss gentleman, unconnected with the Executive Council, and not, I conceive, in sympathy with the prevailing tone of Swiss politics, told me that Bismarck had expressed an opinion that the Council was the best popular executive in Europe. The German statesman may, no doubt, have meant to flatter statesmen whom he had no reason to offend, but his known principles or prejudices make it probable that he genuinely respects a body of ministers who have neither the merits nor faults of parliamentary leaders.

In judging of the Swiss Council an Englishman, and even an American, must be careful to keep one point in mind: there is no necessary loss of self-respect involved in a Swiss Minister's keeping office, though his legislative proposals are rejected by the Federal Assembly. In England, this course of action would be degrading, because an English minister holds, or is supposed to hold, office for the sake of passing measures of which he approves. In Switzerland a minister sits on the Council as the servant of the nation, for the sake of carrying out efficiently the policy of the nation. As a good and competent servant he suggests to his employer measures which he thinks expedient, but he is no more personally disgraced by the refusal of his employer to adopt them than an honest solicitor is humiliated by his client's not following his advice about paying off a mortgage. A sovereign or a master may give orders so immoral that no man of virtue or spirit would carry them out. There are occasions, like the contest for the abolition of slavery, which overrule all constitutional regulations. But such crises are rare, they need not occur once in a century; no constitution can provide for them, and I do not know that they have ever tested the theory of Swiss statesmanship. Meanwhile, if any parliamentary pedant sneer at the Swiss refusal to adopt the theory that the nation must necessarily lose the service of an able minister because some one of his measures is rejected by Parliament, the critic will do well to remember that the Swiss practice about members of the Executive Council is exactly the English practice with regard to members of the permanent civil service; they retain office even when carrying out policies which they may individually condemn. Nor ought American critics to overlook one side of Swiss constitutionalism: Switzerland escapes the turmoil of Presidential elections, and Switzerland keeps her best statesmen permanently in office without incurring the evils attaching to the continuous reëlection of the same President.

As to Changes in the Constitution.—The object of democratic statesmanship must be to form a constitution which may combine the two opposed characteristics of mutability and stability. It must be capable of change. If it be not, one of two evils will ensue: (1.) It may remain unchanged and become more or less out of harmony with the necessarily changing wants of the nation. This strikes a foreign critic, at least, as to some extent the defect of your Constitution. It may, again, just because it cannot be easily changed by law, be all too easily subverted by violence. This has been admittedly the defect of almost every constitution framed by Frenchmen. The constitution, again, must be stable. If it be not, it is liable to sudden alterations dictated by popular passion or tolerated without thought by popular indolence. This, as every modern observer knows, constitutes the true though unacknowledged weakness of English constitutionalism. The warmest advocate of home rule will hardly, I conceive, maintain that it can be expedient that the dissolution of the Union should be carried through in less time than and with a good deal less consideration than would be demanded by the Judge of the Probate Division before he dissolved a marriage. Yet every one knows that repeal might conceivably, at least, be carried by the force of popular excitement within a single session. It were easy to conceive circumstances under which Ireland might be deprived of representatives in less than a month. The combination of changeableness and fixity is in Switzerland secured by the application to the Constitution of that Swiss invention which is known as the Referendum. If one omits details, the effect of the Referendum as applied to the Constitution is as follows: Every one of its articles can be changed, and can be changed by a law passed in the ordinary way by the Federal Assembly or Congress. But no change, however slight, comes into force until it has been submitted to the people and has been approved of both by a majority of the voters and also by a majority of the Cantons. The result of this arrangement has fairly answered all reasonable expectations. The Constitution has been more than once altered during the now nearly forty years of its existence; but the Referendum has again and again vetoed changes either inexpedient in themselves or for which popular feeling was not ripe. It has, in short, been the means of giving effect to demo-

cratic conservatism. Such conservatism is, of course, like every other obstacle to possible improvements, hateful to ardent reformers. But it will be regarded with favor by thinkers who recognize the inevitable advent of democracy, and who also acknowledge the difficulty of giving stability to popular government. Of the Referendum I may at some future time write more; all I need here add is, that it is an institution which has grown up naturally in Switzerland. It prevails in almost every Canton, and in every Canton where it prevails is, I believe, applied not only to constitutional legislation, but to ordinary laws. Wherever it flourishes it has a conservative influence.

As to Party Government.—The essence of party government, as it exists in England, is that the Cabinet should consist of persons holding a particular political creed, and retaining office (in theory at least) only so long as they can give effect to their political convictions. The Cabinet exists, not so much to carry on the Queen's Government, as to carry out the real or supposed principles of the party which has a Parliamentary majority. Hence it follows, among other results, that the Ministry are chosen mainly with reference to their representing the opinions of the majority, and that the whole Cabinet must change office whenever the majority of the House of Commons signifies—either by rejecting the Cabinet's measures or by a direct vote of want of confidence—that the members of the House of Commons no longer support the Government. This system, almost of necessity, involves the existence of an Opposition held together (in theory at least) by their unanimous condemnation of the principles upheld by the Government. It further involves willingness on the part of the Opposition to undertake the duties of administration when at any moment the Cabinet resign office. Of the conditions on which such party government depends, and of its merits and demerits, it is not my purpose to write anything to-day. All that we need note is, that the system of party government is one of the most artificial schemes for carrying on national business which the stress of circumstances has ever called into being, and that in Switzerland this highly complicated plan does not exist. The Swiss people are divided by marked differences of opinion; the Executive Council consists in the main, though not exclusively, of persons who belong to the Liberal party, which has predominant influence in the country. But the Executive Council, as I have already pointed out, though nominated by the Federal Assembly, cannot be dismissed from office by the Assembly. The members of the Council are rather administrators than political leaders: they propose laws to the Assembly, but if the proposals are rejected, the members of the Council do not resign. The Executive Council, moreover, can be held in no sense responsible for the laws which it proposes being carried. Constitutional legislation must be submitted to the people, and may be rejected by the people, and the validity even of ordinary laws does not depend entirely on the will of the Assembly. On a demand of 30,000 Swiss citizens, any law must, before it comes into force, be referred to the people, and depends for its validity on ratification by the popular vote. It is easy to see how all these arrangements, taken together, are opposed to the system of party government which depends for its existence on the supremacy of a representative Assembly. These arrangements may be good or bad. That in Switzerland they exist and are found to work fairly well, leads to an important conclusion. Popular government of the most democratic form has no necessary connection with the kind of party government which appears to be inherent in the system of Cabinet government as it exists in England, and—though this is far less certain—in the system of Presidential government as it exists in America. In Switzerland the people are the true sovereign, and the Executive are the servants of the people in much the same sense in which the Ministry were at one time in England, and still are in Prussia, the servants of the Crown. This state of things is probably inconsistent with parliamentary government; it is not inconsistent with popular government. D.

Correspondence.

ARCHÆOLOGY AT ATHENS.

To the Editor of The Nation:

Sir: The fifth year of the American School of Classical Studies at Athens has opened auspiciously under the direction of Prof. Martin L. D'Ooge of the University of Michigan. Seven students are actively at work, representing six colleges, Amherst, Beloit, Columbia, Michigan, Trinity, and Yale. Informal reports presented by different members at the weekly sessions in the library of the School have covered generally the results of reading and observation in Athens and Attica. Among the subjects discussed have been the allusions of classical writers to the Academia, some irrational theories concerning the curves of the Parthenon, the identity of the Pnyx, representative statues of cities and communities, and some more distinctively literary topics, such as the different critical treatments of Books ii-vii. of the 'Iliad.' Besides the private reading of Pausanias with the students, and topographical excursions, the director conducts a weekly evening meeting, to which friends not connected with the School are invited, the works for translation and comment being selected for their local coloring. At present the 'Acharnians' and 'Œdipus at Colonus' are read in this way.

The work upon our new building on Lycabettus was begun November 4 on the land presented to the school by the Greek Government, adjoining that of the British School. The relations of these two institutions, thus brought into close neighborly contact, promise to be mutually helpful. The English director, Mr. Penrose, while making his preparations in London for the opening year, sent for the catalogue of our books, in accordance with the proposal made in 1885 by the American Committee, that the two schools should save expense, and at the same time enlarge the scope of the libraries, by avoiding the duplication of rare and costly works and by exchanging privileges of reference.

Excavations begun by the American School at Thoricus in April, and continued this autumn, show that the theatre of Thoricus had no stage structure of any kind. A simple retaining wall defines the limit of the orchestra, which consisted of a primitive earth floor. The foundations of a small temple *in antis* facing the orchestra, with fragments of an Ionic entablature and painted terracotta tiles and antefixæ, were discovered near the west parodos wall. The finely built but irregular rear wall, with its two outside staircases, apparently belongs to a late enlargement of the old theatre, the boundary of which is marked by an inside parallel wall, hitherto unknown.

It is a remarkable fact that while but one inscription has been exhumed, and that consisting of a single word, it proves to be the word of all others most needed to determine the purposes of the theatre, ΔΙΟΝΥΣΩΙ, in characters of the Macedonian epoch. Questions connected with various irregularities about the parodos walls are still under investigation. Permission to excavate the theatre of Sicyon has been promised by the Director-General of Antiquities. It is expected that here also something will be found to throw light on the form and purposes of the early Greek stage, all previous conceptions of which have been unsettled by the brilliant discoveries of Dörpfeld at Epidaurus and Athens.

The German Institute opens with five members, four of whom hold *stipendia*. Among the most valued opportunities enjoyed by the American student in Athens is the courteous assistance offered by the two German Secretaries, Drs. Petersen and Dörpfeld, in their special departments of archæology. The French and English schools have not yet begun their year's work.

The Greek Archæological Society is still excavating on the Acropolis, near the Pinacotheca. Besides numerous bronze drinking vessels and some fragments of bronze statuettes, an inscription of the fourth century B. C. has recently been discovered, which indicates that the Chalcotheca was in that vicinity, and not at the east end of the citadel. The same society, within the past few weeks, has excavated the entire north wall of the peribolos of the Olympieum, finding a series of graves containing a few fragments of vases, probably of the Byzantine era; and towards the eastern end, remains of a structure which is conjectured to be a propylæum of Roman date.

The National Government has not ceased its efforts to perfect the classification and arrangement of its collections of antiquities. Visitors now find in Athens many of the conveniences afforded by Northern museums. The place of honor is given to the archaic statues found last winter near the Erechtheum. These are exhibited in the Acropolis Museum in a separate room, the decorations and furniture of which show especial care and taste. W. L. C.

American School, Athens, November 16, 1886.

LAND REFORM—STATISTICS OF INSANITY.

To the Editor of The Nation:

Sir: The land ideas of Henry George are old. Dr. J. R. Buchanan, formerly of Cincinnati, now of Boston, advocated them in two articles which I published in the *Herald of Truth* in the fall of 1847. I regarded them as entirely impracticable, but firmly believed in the wisdom and availability of the land-reform ideas then considerably advocated, including:

(1.) Homestead exemption—since very generally applied by legislation.

(2.) Land freedom to actual settlers on the public domain and no land for speculators—since applied with the mockery of giving all the available land in empires to corporations.

(3.) Land limitation—since applied only to the poor who are crowded beyond the reach of monopolists and far from market, schools, and society.

(4.) Actual personal possession and use the sole ground of title—thus far applied to nobody except the aforesaid poor homesteaders for five years.

Previous to 1850 several papers and lecturers advocated this land reform; but, failing to live by it, all, except one lecturer, were silenced. During the ten years preceding the war I continued to advocate this policy in over 1,000 addresses in five of the Western States, and distributed five or six hundred pages of my own writings on the subject.

The idea of the State becoming a great landlord and obtaining all its revenue by renting the land is supremely absurd, for many reasons, one of which is that *agriculture cannot pay the rent without subjecting the agriculturists, both renters and laborers, to poverty and starvation wages.*

While I am writing to you let me say that the statistics of insanity, to which you have judi-

ciously alluded, throw no light whatsoever on the increase of insanity among the whites, and much less among the blacks, of this country. Those of 1870 were taken more thoroughly than those of 1860 and 1850; and in 1880 the subject was given in special charge of an expert, who made such an increase as cannot be received even if we suppose the nervous condition of the people to have been more shattered during the decade than it is possible to imagine. These statistics are good for nothing for comparison; and the same may be said of those of idiocy, deaf-mutes, crime, pauperism, etc. It is to be hoped that philosophers fifty years hence will be enabled to make comparisons and deduce some profitable conclusions. If insanity is "a disease of civilization," it is time that civilization were handed over to the reformer.—Respectfully,

L. A. HINE.

LOVELAND, O.

WHY MEN ARE FARMERS.

TO THE EDITOR OF THE NATION:

SIR: Your statement that "one of the most striking phenomena of modern times is the dislike of both the poor and the discontented to get their living by farming," seems to require the explanation that this repugnance is owing rather to the meagreness of the living afforded in proportion to the capital and outlay of labor required, than to the lack of society on the farm or the character of the work. I have all my life been engaged in practical farming, and am not ignorant of the condition of the interest in other localities than my own, and to me one of the most striking phenomena of the times is the fondness for getting a living from the soil in a very large class—much larger than the balance of supply and demand of farm products justifies. The proof of this lies in the smallness of the income in proportion either to the capital required for ownership of farm and equipments, or, in the case of renting, to the wages the same amount of labor will command in other pursuits. The farmer is not always a devotee of beauty and picturesqueness in the Wordsworthian sense, but to every observing man in the country it must be a conspicuous fact that there lies some deep, peculiar fascination in agriculture to induce so many to engage in it that the supply of its products is all the while in such excess as to reduce the net income far below that of any other calling. The price of land keeps steadily up to a figure that places profits out of the question. It is proverbial that the acquirement of a farm without capital to begin with is one of those extraordinary feats only to be accomplished by a man of exceptional acuteness and industry. There are, of course, large numbers constantly going into the towns; but they go, in a great measure, because their labor, even with high rents and prices, will bring them much more there.

The condition of things a hundred years ago, when a farm would support a family directly with little regard to any market, is as much gone by, even for the poorest class of toilers, as the age in which it could be clothed and fed by means of the bow and arrow—a fact which many, especially those bred in the city, seem unable to comprehend. A merchant, of course, with his warehouse full, may experience sudden bankruptcy; but our city visitor, beholding huge pumpkins, stacks of corn, etc., in the field, expresses open-eyed wonder when told that the farmer is not necessarily preserved from a like calamity when the balance of supply and demand in the world's market is against him.

The greatest attraction in farming, with all its hard work and small pay, undoubtedly lies in the opportunity it affords the farmer of being his own master. For such independence he and his family are willing and glad to toil for low compensation. It is this fascination which leads so many to willingly make a life-long, tooth-and-nail struggle to pay for a farm—to pay a price which, on account of this very charm of ownership and opportunity of being one's own master, is fixed all the while out of proportion, otherwise, to the income possible to be derived from the investment.

This view of the farming interest is only confirmed by the facts often referred to of worn-out New England farms. If thousands of them can be rented by merely paying the taxes, to say nothing of those "within twenty miles of New York . . . which can be bought for a mere trifle," it is safe to say that the man who jumps at such a bargain will, for the price of his rural felicity, have the privilege of supporting his family by odd jobs of work in the factories, or wherever he can pick them up, and may consider himself fortunate if he is not compelled to liquidate the taxes also by outside earnings.

AMENIA, DUTCHESS COUNTY, N. Y.

"READING NOTICES."

TO THE EDITOR OF THE NATION:

SIR: I sympathize very sincerely with your correspondent, a "Baptist Parson," who feels himself professionally bound to take "several denominational papers," after having "actually come to regard the *Nation* as the only upright and downright *religious* journal that comes into his family." Any regular reader of the *Nation* who believes in truth and righteousness as cardinal virtues, must, indeed, find a heavy strain laid on his "religious temper" by the reading of several sheets which "teach denominationalism principally, and a sort of pale pietism incidentally, in the space they can spare after the demands of objectionable and lying advertisements, and fulsome and tricky 'reading notices,' have been satisfied."

Impenitent readers of the *Nation*, who do not understand how the righteous soul of a "Baptist Parson" must be vexed within him by the taking of "several denominational papers" (if besides taking them he dooms himself to read them), will, perhaps, be able to appreciate his sufferings in the light of the following citation, which I extract from the most widely-circulated newspaper of the Baptist denomination at the South, the *Religious Herald*, of Richmond, Va. In its number for November 25, 1886, that nominally "religious" sheet confesses to one of its "fulsome and tricky" "reading notices" in the following terms:

"We noticed a book some time since and commended its *mechanical execution*. A few days after that a professor of Richmond College walked into our office and said: 'I have read that book and it is full of typographical errors, which would be a disgrace even to a Western publishing house.' The reason the professor caught us was that he read the book and we did not. That books and newspapers come filled with such mistakes is a reproach to the nineteenth century. Such a publisher ought to do better, or try something else."

Yet the publisher of this tricky and lying reading notice would perhaps take offence if your "Baptist Parson" should suggest to him that *he* "ought to do better, or try something else."

AMEN CORNER.

DECEMBER 10, 1886.

PHILADELPHIA WATER.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "I. A. W." in the *Nation*, December 2, falls into an error when he says: "In fact, the real reason why no change has been made in our source of water supply is *entirely* [italics mine] political," etc. One of the most important reasons for adhering to the present water supply is the fact that it is unanimously supported by a committee of citizens which has been patiently and thoroughly investigating the subject for about nine months, and the fact that this committee is composed of men who have no suspicion of political bias, all of them being men who are sure to be identified with every movement instituted for the true welfare of Philadelphia. When Philadelphians see associated the names of Messrs. Philip C. Garrett, Joel J. Baily, John Hunter, John Wanamaker, Frank Reeves, Robert R. Corson, and Doctors D. Hayes Agnew and J. Churton Morris, they may be sure that what they approve is supported by something better than a "political reason." The fact is that few large cities in the world have as good a water supply as Philadelphia has; only one large city has a lower death-rate; and it is believed that, with the completion of certain improvements already contemplated by the municipal authorities, every reasonable and some unreasonable objections to the Schuylkill water will be removed.

Yours respectfully, C. W. D.

PHILADELPHIA, December 4, 1886.

COST OF THE GERMAN MILITARY ESTABLISHMENT.

TO THE EDITOR OF THE NATION:

SIR: The weekly Summary of your issue of December 2 quotes the cable despatch: "The permanent expenditure [of the German Army] is placed at 23,000,000 marks, and the special at 24,000,000 marks." This statement appeared also in all of the daily papers, but in none of them have I noticed a correction of this palpable error. Referring to Dr. Karl Baumbach's 'Staats-Lexikon,' we find (page 123): "The annual expenditures of the [German] Government include not less than 342,190,985 marks for the Army," besides "a special outlay of 51,130,733 marks for the administration of the army."

Yours respectfully, S. T.

NEW YORK, December 7, 1886.

[Our correspondent is quite right. The latest figures given in the *Almanach de Gotha* are 340,672,513 and 32,143,358 marks respectively.—ED. NATION.]

FLAUBERT'S "REALISM."

TO THE EDITOR OF THE NATION:

SIR: The position Gustave Flaubert holds in many persons' minds of being the first, the leader, of the school of so-called "realists" among the French novelists of the day, is one which was so repugnant to him when alive that, dead, those in whom he has inspired a personal regard cannot but desire to show, whenever chance offers, the falsity of this conception. It is, therefore, with peculiar satisfaction that I have just read a page of M. Jules Lemaître (an accepted critic) which, though not directed to that end, is not without weight in combating this misconception. He speaks in phrase so modern as to be extremely difficult to render (some of his words are not to be found even in Littré), of "the labored impressionism of the Goncourts, the somewhat agitated picturesqueness of M. Daudet, the epic violence of M. Zola, the crudeness (of color) and sharpness (of outline) of M. de Maupassant, the analytic involvement of M. Bourget," declaring that it is always easy to know what their next work will be like, and impossible to read twice their former ones. He continues:

"I find contentment only in absolute perfec-

tion of form, strict, stern perfection, such as that of the phrases of Flaubert, which one repeats to one's self when the way is dusty (*quand on s'ennuie*), which satisfy you completely, beyond which there is nothing to desire. And this path carries me back to the classics who had the wit to express only essential, eternal things, and to express them in a definitive manner."

This appreciation would have been welcome to Flaubert. He would gladly have led in the classical path towards "the expression of only essential, eternal things in a definitive manner."

* *

Notes.

KARL KRON'S 'Ten Thousand Miles on a Bicycle' will be ready for mailing in January. If its utility or its readability is to be measured by the time and care expended on its preparation, the purchaser will not fail of his recompense. The author-publisher's address is University Building, New York, or Station D.

Cupples, Upham & Co., Boston, have in preparation 'Selections from Buddha,' translated by Samuel Beal; 'Veronica and Other Friends,' another translation from the German of Mme. Spyri, by Louise Brooks; 'Letters from Surprise Land,' a girl's impressions of the West; 'The Sunday Law,' by Judge Putnam of Uxbridge, Mass.; and 'Rambles in Old Boston,' by the Rev. E. G. Porter, illustrated by Geo. R. Tolman.

'Suggestive Lessons in Language and Reading,' by Anna B. Badlam, is to be published in April by D. C. Heath & Co.

'Cebes' Tablet,' edited by Prof. Richard Parsons, of Ohio Wesleyan University, is announced by Ginn & Co.

Researches in connection with a Life of Charles Brockden Brown have led Mr. Edward Irenæus Stevenson to the discovery of the complete MS. journals of Dr. Elihu H. Smith of New York, which possess much interest and value for their references to literary characters and events at the close of the last century. Mr. Stevenson hopes to publish them in time, after his main work is completed.

Elliot Stock, London, is about to issue a monthly *Book Prices Current*, recording the prices realized at auction, in town and country, for rare books. The entries will give the titles, the names of the purchasers, the date of the sale, and the amount paid. The undertaking can hardly fail of support.

A gift-book of the most tasteful and elegant character is Lord Ronald Gower's 'Last Days of Marie Antoinette' (Roberts Bros.), a small quarto of 154 pages. As a frontispiece there is a portrait of the Queen near the close of her life, from that by Kocharsko: "The face is still 'majestic though in ruin,' and shows the almost haughty mien which never quite left the daughter of the Cæsars. . . . There is no more pathetic portrait than this." The story related in this volume is that of the last seventy-six days of her life, from the time of her removal to the Conciergerie, August 2, 1793, to her death on the 16th of October. The book is written in a simple, earnest style, the more impressive from the absence of exaggeration. In the preface the author, who had once intended writing a complete life of Marie Antoinette, says: "The Queen's life becomes chiefly interesting as it approaches its end, and is chiefly remarkable by showing how a woman, whose early years were trifled thoughtlessly away, and who in later life—most unfortunately for her family, herself, and her adopted country—mixed herself in politics, where women are ever mischievous, was raised through suffering to an heroic level." Undoubtedly a sound historical judgment; whether sound as a piece of political philosophy, may be questioned, unless by "mixing" is meant "interfering" with what is not a recognized sphere of action. Marie Antoinette mixed in politics and ruined herself: her contemporary Catherine made government her business with brilliant success. "This edition, printed on hand-made linen paper, is limited to 485 numbered copies."

Lamb's face is on the title-page of 'Some Essays of Elia,' illustrated by C. O. Murray, and bearing the imprint, in this country, of D. Appleton & Co. Mr. Murray's designs are pen drawings, and not much can be said for them except that they are numerous. The book really recommends itself to those who desire an edition in large print of "The Two Races of Men," "Mrs. Battle's Opinions on Whist," "Dream-Children," "The Praise of Chimney-Sweepers," "A Dissertation on Roast Pig," "A Complaint of the Decay of Beggars in the Metropolis," and the rest of the fifteen essays selected by the illustrator for his own purpose.

The Jubilee Edition of the 'Pickwick Papers,' just issued in two handsome green cloth volumes by Macmillan & Co., will gratify many admirers of the author and the work, and insure the latter a new lease of life. It is fifty years since this unique production of Dickens's genius, and the most popular, first appeared, and hence the name adopted by his son Charles for the present issue. An introduction relates the vicissitudes in the illustration of the original serial, owing to Seymour's suicide, and in the production of the text itself, owing to the death of Mary Hogarth, and contains many other interesting particulars. This is followed by the absurd Calverley examination papers in Pickwick, and by Dickens's original dedication to Talfourd, and preface; and then we have a clear reprint of the extravaganza, with notes, explanatory and archæological, at the end of every chapter, with a great variety of illustrations of places, buildings, etc., associated with the story, and occasional (apparently newly drawn) character sketches on a small scale. The pictorial scheme is in excellent keeping with the typography on the one hand, and the half-century-old atmosphere of the book on the other. Altogether the result is extremely satisfactory, and the new edition will doubtless give point to the English wanderings of many an American tourist hereafter.

'Colonial France' (London: Allen & Co.), by C. B. Norman, consists mainly of brief historical descriptions of the various French colonies, exclusive of Algeria, with details as to their government, and statistics of population, commerce, and finance. The older colonies are fully treated, but the accounts of Tunis, Tonkin, and even of Madagascar leave much to be desired, while, but for an incidental mention of the French possessions on the Congo in his final chapter, we should have supposed that the author did not know of their existence. He continually sounds a note of warning to his countrymen as to the progress of French influence, and the fact that their distant colonies "are purely military settlements, destined, in the event of war, to be strategic points whence England's trade can be crippled and England's colonies ruined." In the map which accompanies this volume, and which is colored so as to show the various British and French possessions, we notice that to France is given the whole of Madagascar and the New Hebrides, which is strictly contrary to fact.

The Pope Manufacturing Co., Boston, advertise their specialty in a Columbia Calendar for 1887, whose gay background shows the adventurous youth 'cycling round the world, and a fair damsel on a tricycle. The reading-matter on the pad, we are informed—and we will not withhold the good tidings from our brethren of the country press—"might come in handily for 'copy' now and then." From Koch, Sons & Co., 156 William Street, we have a large crazy-quilt design stamped all over with gold, called "The Calendar of Choice Selections," compiled by Eleanor R. Deane from a great number of poets and prose writers; and a "Children's Calendar," by the same editress, equipped with seven pads (for the days of the week), and a mine of instruction in "unselfishness, politeness, habits of order, and other cardinal virtues." Any child's eye will be captivated by the bright decoration of the calendar.

In proper juxtaposition with the foregoing we may mention the "Eternal Time Indicator" sent us by the company bearing the same name (New York: 45 Lispenard Street). The number of these backward and forward-looking contrivances is legion, but we find this among the simplest and most convenient, displayed on a card without circles, sectors, or other apparatus.

B. Westermann & Co. send us the fifth, and the first four parts of the third, volume of 'Meyer's Konversations-Lexikon,' carrying the work along to Louis Figuier. The articles on the Danube and on Fortifications are most in line with current topics, and the latter especially occupies a large space and is well illustrated. Iron (with the kindred subject of Railroads), Petroleum, Electricity, and Telephone are also treated at considerable length, together with "Drainage"—a word taken squarely over from the English, and presumably, therefore, abhorrent to Bismarck, especially whenever it happens to be printed in Roman characters. Other leading articles are on the Earth and Geography, Europe, England, Marriage, and Divorce, etc. American biography does not figure largely in these volumes, and in its actual selection and proportion suggests the advisability of a sifting (from edition to edition, or from decade to decade) by some competent person, with a view to taking advantage of the judgments of time. For example, one might think a German conversation more likely to introduce the name either of Senator Edmunds or of Admiral Dupont than of the late E. A. Duyckinck, who alone of the three is found in place. There are colored plans of Düsseldorf, Dresden, Elberfeld and Barmen, Erfurt, and Strasbourg besieged; maps of Europe in various aspects, and of Germany with the State and private railways indicated, of Elsass-Lothringen, of the northern heavens. Fine indeed are the colored anatomical plates, and two sheets of birds' eggs and another of precious stones.

From the same firm come Parts 51-60 of the 'Allgemeinde Naturkunde,' still dealing with ethnography till in Part 60 we arrive at Man—him of to-day and his prehistoric ancestor, beginning (inevitably) with a consideration of the differences and likeness between man and the apes. This is all finely illustrated, and in fact the entire work is most intelligently furnished with excellent woodcuts from the best sources, showing races, customs, implements, etc., etc. The colored plates are not of as evenly high a quality, and are best when dealing with inanimate objects. The chapter on Madagascar and its inhabitants has a living interest. There are several maps—most curious being one of the peninsula of Italy, shaded for the average heights of the youths of twenty, and one of Middle Europe, indicating the distribution of the dark type of man. Both maps placed together would show a convergence upon the Alps; the dark-complexioned massing southward, and the tall massing northward.

For the highest style of instructive illustration, accompanying a text of the weightiest authority, commend us to the popular 'Allgemeine Geschichte' of Flathe, Hertzberg, Philippson, and their co-editors (Berlin: G. Grote). Parts 42-59, the last to come to hand, are not likely to be surpassed in interest, either historical or pictorial, dealing as they do with the Reformation and with

the French Revolution. It would require much more space than we can spare at this season to give any adequate idea of the wealth of engravings impressed in the service of the readers of this history. All the great lights of the Reformation, from Luther to Calvin, all the great monarchs of all Europe, are portrayed after Holbein, Cranach, Dürer, as the civil and military usages of the sixteenth century are exhibited by Amman, Beham, and other contemporary designers. Many of these portraits are classical, like the several Luthers, Erasmus, Raphael, Titian, Michael Angelo, or the Droeshout Shakspere; but the sweep includes still more which are less known, like the Abbé Sieyès, or Magellan. Then we have scenes like the massacre of St. Bartholomew, the torture chamber of the Inquisition, the execution of Egmont and Horn, the *lanterne* in Paris. Add the facsimiles of broadsides and titles of books, and MSS., and the *Bulla contra errores Martini Lutheri et sequacium*. Even such a symbolical design as the "Triumph of Reuchlin," the theologian, with its concomitant representations of cruelty to opponents, speaks volumes as to the civilization of the time. But we must pause.

M. Gustave Larroumet has collected the articles published by him in the *Revue des Deux Mondes* on Molière and his troupe, under the title, 'La Comédie de Molière, l'auteur et le milieu' (Paris: Hachette). This is by far the most valuable and most comprehensive French contribution to Molière literature since the publication of Taschereau's life of the poet. It sums up in a short space the results of the latest researches of the *Moliéristes*, who often write at very great length to give very little new information.

The delight of dethroning a "first edition" by discovering one *prior* and probably *prima* is evinced in the leading article in *Le Livre* for November. A Frenchman of this city, M. Jolly Bavoillot, performs the feat in the case of Victor Hugo, without leaving his arm-chair, and gleefully relates his 'Voyage dans un fauteuil à la recherche de l'édition originale de "Ruy Blas."' The narrative might have been shorter, but something is pardonable to a collector's enthusiasm, and there is really a curious interest in the appearance on this first edition of the name of a German publisher, Brockhaus. The other feature of this number of *L'Art* is an etched portrait of Champfleury, seated at his writing-table, with numerous fine-China accessories. One feels instinctively that this likeness is to the life.

Polybiblion for November tells of 'Pushkiniana,' edited by Mezhoff, with a life of the great Russian poet, an account of the publications pertaining to his recent statue, of his works and their critics and translators, etc., etc. A bibliography is added concerning the Alexander Lyceum, at which Pushkin was educated.

In the newly issued report of Dr. Struve, Director of the Pulkova Observatory, the new thirty-inch refractor, at present the largest telescope in existence, is spoken of in terms of the highest approval, both as regards its optical power and the mounting, the movement of the dome, etc. It will be remembered that the great object-glass of this instrument was the work of the Clarks, who completed it in 1883. The telescope has been intrusted to the charge of a son of Dr. Struve, who has employed it in the critical examination of a large number of test objects, such as the satellites of Mars, Saturn, and Neptune, the fainter double stars, the Maia nebula (discovered photographically at Paris), and the Nova Andromedæ, which latter object is said to have been easily visible as late as the latter part of January.

In a recent communication to the Academy of Sciences, Paris, M. Cruls states that the Observatory at Rio de Janeiro is about to be removed to a much more favorable site on the same parallel as the present Observatory, but somewhat to the west. After the removal has been accomplished he hopes to conduct observations of terrestrial magnetism and atmospheric electricity, and to record any possible movements of the soil by means of the seismograph. The Observatory has already taken steps toward coöperation in the photographic survey of the heavens as proposed by Admiral Mouchez.

The Fourth Annual Convention of the Modern Language Association of America will be held at the Johns Hopkins University on December 28, 29, and 30. On Tuesday evening, December 28, an address of welcome will be delivered by President Gilman, followed by the address of the President of the Association, Franklin Carter, President of Williams College, Massachusetts. On Wednesday and Thursday, there will be three regular sessions for the reading of papers and for other business. On the Monday evening before the opening of the Convention, President Gilman, with the resident members of the Association, will receive the non-resident members, informally, at his house, and, on Tuesday, arrangements will be made for visiting the libraries and other institutions of Baltimore. On Wednesday evening, a social reception will be given by Mr. D. L. Bartlett of Baltimore. Reduced rates for railways and hotels have been obtained, and orders for excursion tickets are in the hands of the Secretary, Prof. A. Marshall Elliott of the Johns Hopkins University, to whom application should be made by those desiring to be present. The sessions of the Convention will be open to the public; and all professors and teachers of modern languages, whether members of the Association or not, will be made cordially welcome.

—'The Western Boundary of Massachusetts,' by Franklin Leonard Pope, is a pamphlet privately printed, and further entitled "A Study of Indian and Colonial History." The author, a member of the Berkshire Historical and Scientific Society, here presents in a lasting form, supplied with copious notes, and illustrated by a large and clear map, a paper read by him before that society in April, 1885. He tells, with great care and continual reference to his authorities, the whole story of the settlement of the territory between the Hudson and Connecticut Rivers, and of the long and sometimes bloody struggle over the establishment of the boundary line between New York and Massachusetts. In the conflicts of authority between the two colonies—for a settlement was reached soon after they became States—Massachusetts generally appears as the aggressor, or, at least, as the upholder and protector of very bold and determined individual aggressors upon lands held under New York grants. Mr. Pope, however, lays full stress upon the grasping and even fraudulent manner in which these grants, in their full extent, had been obtained by Livingston and Van Rensselaer, and upon the underlying fact that the struggle was not merely between two sets of squatters, but between two radically different systems of land tenure, and led at last to the destruction of the antiquated feudal tenure of New York. Incidentally, Mr. Pope gives us quite a dissertation upon the Mohicans or Mohegans, who were the original owners of the territory in question, and whom he vigorously defends from the charge of having ever been subjugated or expelled by their hereditary enemies, the Mohawks. The tone of respect and admiration in which he at all times speaks of these Mohicans, or Stockbridge Indians, is noticeable. Their generosity and good faith do indeed stand out in vivid contrast with the greed and dishonesty of New York patroons and New England land-grabbers.

—Subscribers to the 'Encyclopædia Britannica,' ninth edition, who look to it by preference for contributions on scientific, mechanical, or art subjects, will probably be less satisfied with volume xxi (New York: Charles Scribner's Sons; Boston: Little, Brown & Co., 1886) than with most of its predecessors. The most important of the rare and comparatively less bulky articles of that class are "Salt," "Seamanship," "Series," "Schools of Painting" and "Sculpture" (by Prof. Middleton, and rather scantily illustrated), "Shipbuilding," and that headed by the redoubtable name "Schizomycetes"—"a term proposed by Nägeli in 1857 to include all those minute organisms known as Bacteria, Microphytes, Microbes, etc." History, geography, and biography, on the other hand, as well as philology and Biblical criticism, are well represented, and in part better than ever. Of historical and geographical articles we may mention those on Rumania—with a considerable omission to be covered under "Vlachs"—Russia (geography and statistics by Kropotkin, history and literature by Morfill), the St. Lawrence, St. Petersburg (Kropotkin), Samarcand, Sardinia, Saxony, Scotland (upwards of seventy pages, by five writers), Scythia (Prof. Gutschmid), Seljuks, Servia, and Siam. Literary biography is richly represented by elaborate lives of Rousseau, Saint Simon, and Sainte-Beuve (the former two by Saintsbury, the third by Matthew Arnold); of Schelling, Schiller, Schleiermacher, and Schopenhauer; of Scott (Prof. Minto), Shakspere (Prof. Baynes), Shelley (Rossetti), and Sheridan (Minto). The articles on Sanskrit (Prof. Eggeling) and the Scandinavian and the Semitic languages (Dr. Noreen, Prof. Nöldeke) are among the heaviest in the volume. Prof. W. Robertson Smith discourses learnedly on Ruth, Sabbath, Sacrifice, and Samaritans; Wellhausen, on the Septuagint; and Prof. Seth, on Scepticism and Scholasticism. The weakest side of the volume—as well as of many a preceding one—is the portion of the history of countries which refers to late events; it is almost uniformly meagre and defective beyond anything in similar works.

—As this general defect of the 'Britannica' can still be remedied in a supplement, it deserves to be fully pointed out. Under "Russia" the Eastern war of 1853-56 is thus described (we leave out certain phrases without facts): "In 1853 broke out the Crimean war. The Emperor . . . found enemies instead of allies in England and France. The chief events of this memorable struggle were the battles of the Alma, Balaklava, Inkermann, and [the] Tchernaya, and the siege of Sebastopol; this had been skilfully fortified by Todleben. . . . In 1855 the Russians destroyed the southern side of the city, and retreated to the northern. In the same year, on March 14 [*sic* for March 2, N. S., Feb. 19, O. S.], died the Emperor Nicholas, after a short illness." This is all. In which years, under what commanders, and with what results the battles were fought, we are not told; nor who defended or stormed Sebastopol, or that it fell six months after Nicholas's death. There is no allusion to the campaigns on the Danube and in Asia, with their sieges of Silistria and Kars, to the sea-fight at Sinope, or to the participation of Sardinia in the war. We turn to the article "Crimea" for fuller information and find eight lines, including again a bare mention of "the battles of the Alma, [the] Tchornaya, Balaclava, and Inkerman"—with different spellings, and in bad order, for the battle of the Tchernaya was fought nine months after those of Balaklava and Inkerman. We look under "Sebastopol," and even here we find, in nine lines, no such name as Gortchakoff, Raglan, Pélissier, or Malakhoff, nor an allusion to Sardinians or Turks in the contest. Will the article "England," which is a large book, give us the needed

information? It contains just these four solitary war names: Crimea, Alma, Sebastopol, Inkerman, and these two war dates: 1854, 1855. "France," another large book, contains somewhat more, but we still look in vain for a mention of Paskevitch, Omer Pasha, Oltenitza, Napier, Bomarsund, Saint-Arnaud, Raglan, Canrobert, Pélissier, Kars, Williams, etc. The war of 1877-78 is treated still worse. Under "Russia" we find these words: "In 1877 Russia came to the assistance of the Slavonic Christians against the Turks. After the terrible siege of Plevna nothing stood between them and the gates of Constantinople. In 1878 the treaty of San Stefano was signed. . . ." We also find a few lines under "Plevna," and one line each under "Kars," "Rustchuk," and "Shumla," Shipka being forgotten. Such is the history of Russia's greatest Turkish war in a huge cyclopædia in which the chief actors in the conflict, such as Czar Alexander II., Milan of Servia, Charles of Rumania, Nikita of Montenegro, Gurko, Loris-Melikoff, Osman Pasha, etc., have, as persons living at the time of publication, found no biographical mention under their names. Nor did the writers of "Roumelia" and "Servia," in the volume before us, remember that "Bulgaria" was written before the war of deliverance, and that therefore allusions to that war, to the "Bulgarian atrocities" that preceded it, to the treaty of San Stefano, to Servia's reason for a war with Bulgaria in 1885, and to Alexander of Battenberg, were unavoidably required.

— The idea commonly entertained among us as to the state of cartography in the middle ages is so largely derived from sixteenth-century Ptolemies and the works of Apianus, Münster, etc., supplemented, perhaps, by reproduced extracts from earlier maps, that we are apt to overlook the fact that the navigators of the fourteenth and fifteenth centuries had a more accurate knowledge of the sea-coast than had the professional geographers for some centuries later. Humboldt long since insisted upon this, and others have followed him, but the fact is difficult to comprehend without a study of the maps made by or for these navigators; and as such maps, though very numerous, are almost exclusively manuscript, and satisfactory reproductions have been found hitherto only in the costly atlases of Jomard, Kunstmann, etc., few persons are familiar enough with them to recognize their excellence through the bewildering network of compass lines that bedecks them, and in the absence of parallels of latitude and longitude. The coast-pilots or ruttiers of the middle ages, though neglected by geographers as the itineraries and periplì of classic times were neglected by Ptolemy and Marinus, and with like disastrous results, were exceedingly full and accurate in their descriptions of the coast. When the magnetic needle became, in combination with the compass card, an indispensable companion for voyagers, the added element of direction made it easy to throw the coast-pilot-books into graphic form, and there resulted a rapid production of a number of these large detailed charts, often beautifully ornamented in colors, in which the coast line, as to distances and directions, was very accurately depicted. These resultants of the accumulated experience of centuries show the avoidance of two of the most marked errors which disfigured the work of professional geographers from the days of Greece down to the last century: the undue elongation of the Mediterranean, and the false direction given to the axis of the Caspian Sea.

— The accurate reproduction of some of these log-and-compass charts in a convenient form at a reasonable price was long a desideratum which is now well met in the series of photographs entitled 'Raccolta di Mappamondi e carte nautiche dal xiii. al xv. secolo,' issued by Ongania at Venice (New York: F. W. Christern), fifteen of which have now appeared. Dr. Theobold Fischer, Professor of Geography at Marburg, has recently written a general introduction to the series under the title 'Beiträge zur Geschichte der Erdkunde und der Kartographie in Italien im Mittelalter: Sammlung mittelalterlicher Welt- und Seekarten italienisches Ursprungs' (Venice: Ongania, 1886). More than half of the octavo volume of 254 pages is devoted to commentaries upon particular maps, as the Visconti map of 1311, the Medicean Atlas of 1351, maps of Bianco, Agnese, etc., the Mappamondi of 1447 receiving a very full exposition. Of more general interest is the first part of the book, wherein the latest results of German and Italian investigation into the nature and origin of these loxodromic maps, as the Germans have called them, are brought together. And if the main object of the work is to claim for Italy preëminence in advancing geographical knowledge and maritime investigation, it cannot be denied that such a claim is in large part just, though we may not always follow the author in his depreciation of other nations, or agree with him that England owes her maritime supremacy to the influence of Italy, exerted through the personality of Sebastian Cabot, Venetian. The volume is badly printed, and the index is scant and clumsy.

RECENT POETRY.

THE last few months have called forth nothing new from the greater poets, but have brought the usual harvest from those of lesser fame. For some of these it may be said, in Holmes's phrase, that poetry is walking on the toes; few can do it gracefully, and the solid contact of the heel also is commonly needed to secure a well-poised gait. This is strikingly seen in the thick volume by Mr. Benjamin F. Taylor, for instance, containing his 'Complete Poetical Works' (Chicago: S. C. Griggs & Co.), with portrait and autograph. It is a kindly, good-natured face that looks out, upon which one can detect a lurking look of wonder as to how the author became—as we are assured—famous, or why the London *Times* called him the Goldsmith of America. The reader of the poems at first shares the surprise, but presently the solution is plain. The author observes and loves common and homely things; and although his poetry is almost wholly trite and commonplace in execution, yet there are scattered through the book at least half-a-dozen prose preludes, on "The Old Barn," "The Psalm-Book in the Garret," "The Miller and the Mill," "The North Woods," "The Deserted Homestead," and the like, which are worth all the verses put together. Here the author steps with free and firm stride; throughout all the rest he is walking unnaturally and on his toes.

Even in his most commonplace verse, however, Mr. Taylor gives us that which is yet rare in American poetry—local coloring. He writes of that which he has seen and known. This merit is also to be found in a book of much smaller pretensions, somewhat crudely executed, dingily printed, and adorned with no portrait of the author, but showing enough of outdoor feeling and homely human interest to set up half-a-dozen daintier bards. Its title is 'Shore-Life in Song,' by William Hale (Biddeford, Me.: *Journal* Office). The region he celebrates is Ogunquit, wherever that may be: and his seaweeds and shipwrecks and old fishermen are as genuine as those of Miss Jewett's 'Deephaven.' In 'A Village Sketch, and Other Poems,' by Charles G. Fall (Boston: Cupples, Upham & Co.), we have the Concord, Mass., scenery; and in two thin volumes by Graham Clayton there are some very simple and wholesome pictures of the Virginia life and landscape. These books are entitled 'Among the Hills; or, Scenes in Piedmont, Virginia, and Other Poems' (Richmond: Randolph & English), and 'Otterdale; or, Pen Pictures of Farm Life' (same publishers). From this last we take an extract, to show the manner of execution

THE OLD HOMESTEAD.

Upon a hill, a gentle hill that slopes
Towards the setting sun, the olden mansion stands
Deep bosomed in the tall ancestral trees,
Beneath whose pendent boughs and genial shades
Our fathers played a hundred years ago.
Hard by the garden gate, the sycamore
Uprears its dark form towards the deep blue sky
And fondly stretches out its arms above
The shingle roof. Two friendly locust trees
Stand guard beside the old front gate, that opes
A welcome to the touch of every hand.
Green cedars cluster here and there, and keep
Their silent watch, while broad mulberry trees
Whose boughs so intertwine that scarce a ray
Of sunshine penetrates their foliage,
Encircle all the yard; no bush or shrub
Grows 'neath to mar the beauty of the rich
Blue grass that carpets o'er the spacious lawn.
Along the garden wall the beehives range
Beneath the ancient pear tree's prickly branch,
And all the livelong day a busy stream
Of insect life is flowing in and out.
From spicy groves and blooming fields they come
On tipsy wing, and bring their precious stores
And fill the hives with golden honeycomb. (P. 7)

Miss Minnie Gibson, too, in her 'Pipes from Prairie-Land and Other Places' (Cassell), attempts the same sort of thing, but does it less simply and with too much of that "dialect" which has now grown tiresome. But in her poem on the flower called "The Shooting Star" she embalms a wholly new blossom in poetry, though Helen Jackson had already mentioned it in prose; and she is certainly the first to take for her theme "A Sorghum Candy Pull," which she really makes almost intelligible by her description:

Five miles out from house or village stands the old farm on the prairie;
From its roof red lanterns dangle, lest we miss the lonely way.
Lamps are shining at each window, in the barn, and in the dairy,
And red pine-flames on the snowdrifts o'er the kitchen threshold play.
Rows of sleighs stand in the barnyard; rows of steeds paw in the stable;
There is sound of many voices, then a sudden listing lull,
As we sweep through the great gateway to the porch beneath the gable,
Where the farmer bids us welcome to the sorghum candy pull. (P. 52)

The author of 'Heart's Own Verses' (Chicago: C. H. Kerr & Co.), Mr. E. R. Champlin, says, somewhat rashly, in his preface, "Most of the pieces in this book have not been published; those which have been will doubtless be readily recognized by most readers." We think not; very few of those which we have read make a sufficiently marked impression to be recalled if read again a month hence. Nor is the impression made by Mr. G. L. Raymond's 'A Life in Song' (Putnams) a very profound one; the volume is meditative and didactic, but has more of life than of song in it. 'Lyrics of Life,' by John Grosvenor Wilson (New York: Caxton), is apparently by a young man connected in some way with the dramatic profession, and has something of fire and passion here and there. In 'Poems,' by James Vila Blake (Chicago: Chas H. Kerr & Co.), these qualities are rather painfully wanting, while there is a profusion of meditation and mental exercise. A sort of fantasy on "Wild Rice" may be noted as attractive, and as reminding one a little of Lanier. In 'An Epigrammatic Voyage,' by Denton J. Snider (Ticknor & Co.), we have a strain which the author has already employed more freshly, with the advantage of a landscape background, in his 'Delphic Days'; but the dingy appearance of this book is hardly worthy of the house whose name it bears. 'In the King's Garden, and Other Poems' is a second edition of the works of the late James Berry Bensel (Boston: Lothrop), with a most touching biographical preface by his friend Oscar Fay Adams, himself a poet of high aims and conscientious execution, and editor of that admirable series 'Round the Year with the Poets' (Lothrop). There is certainly an exquisite quality about these poems of Mr. Bensel's, and they fully justify the regrets of

those who knew their author. 'Reymond, a Drama of the American Revolution,' by Henry M. Cronkhite (Putnams), is a dramatic poem in which the weak point is, as usual, in the low life and the comedy. Mr. I. R. Baxley can hardly be said to have chosen low life for a theme in 'The Temple of Alanthus, with Other Poems' (Putnams), for his subjects are often Egyptian and Persian, with scenery as remote as that of Georg Ebers's novels; but there is a certain tone of earnestness in what he writes. The 'New Essay on Man, and Miscellaneous Poems,' by J. B. Swasey (Dillingham), seems to us not so much earnest as inflated, though sincere.

Some of the most valuable volumes of the last few months have been those contributed by women. At the head of these stands, of course, the little collection of the hitherto unprinted poems of "H. H.," now known as Helen Jackson, under the name of 'Sonnets and Lyrics' (Boston: Roberts). It is printed uniformly with her 'Verses,' and has a tender prefatory poem by the editor, Miss Woolsey. The months since Mrs. Jackson's death have only deepened the proof of what American literature loses in her; and her very last poems are certainly among the strongest she ever wrote. This volume, as a whole, is more unequal than 'Verses,' and some of the strains belong to the intermediate period after her intensities of passion had ceased to express themselves and before the final uplifting. The editor has wisely selected for a closing poem the verses called "The Song He Never Wrote," with its exquisitely delicate and evanescent transitions and intershadings, subtle and elusive as the tints upon a dove's wings:

THE SONG HE NEVER WROTE.

His thoughts were song, his life was singing;
Men's hearts like harps he held and smote,
But in his heart went ever ringing,
Ringing, the song he never wrote.

Hovering, pausing, luring, fleeting,
A farther blue, a brighter mote,
The vanished sound of swift winds meeting,
The opal swept beneath the boat;

A gleam of wings forever flaming,
Never folded in nest or cote;
Secrets of joy, past name or naming;
Measures of bliss, past dole or rote;

Echoes of music, always flying,
Always echo, never the note;
Pulses of life, past life, past dying—
All these in the song he never wrote.

Dead at last, and the people, weeping,
Turned from his grave with wringing hands—
"What shall we do, now he lies sleeping,
His sweet song silent in our lands?

"Just as his voice grew clearer, stronger"—
This was the thought that keenest smote—
"O Death! couldst thou not spare him longer?
Alas, for the songs he never wrote!" (P. 133.)

Next to this volume we should rank—but quite at a distance—'The Cruise of the *Mystery*, and Other Poems,' by Celia Thaxter (Boston: Houghton, Mifflin & Co.). True to herself, Mrs. Thaxter has a whiff of the sea in her title and on many pages; yet there are the unmistakable marks of wider experience and of a more trained ear. Mrs. Elizabeth Akers shows something of the same development in her 'Silver Bridge, and Other Poems' (Houghton, Mifflin & Co.); she has ripened beyond the too easy sing-song of her "Rock Me to Sleep, Mother," but we miss something of the proud movement of strong contest with fate which was visible in her "Ich bin Dein" and others of the early poems. Miss Nora Perry seems to us to gain less with time than either of these other poets; her 'New Songs and Ballads' (Ticknor & Co.) has the sort of hard finish that characterizes all her verse, with little of sympathy or attraction. Of far finer quality, to our thinking, is the work of Mrs. Margaret Deland, who gives us the most promising volume of any new woman-poet in America since Miss Edith Thomas and Miss Hutchinson. Her interpretations of nature are as intimate and delicate as theirs; but her touch is not yet so practised: her "Dance of the Fairies" is far below Miss Thomas's "A Light Round," or the "Moth-Song" of Miss Hutchinson. But her "Old Garden," the title-poem of the book (Houghton, Mifflin & Co.), is a delicious mingling of all old-fashioned sights and sounds and scents. Another woman's book, in every sense, is Mrs. Margaret J. Preston's 'For Love's Sake; Poems of Faith and Comfort' (A. D. F. Randolph & Co.). This has in it much of thoughtful and earnest work, while the uniformly religious motive imparts a little flavor of the conventional. Much the same may be said of Mrs. A. D. T. Whitney's 'Holy Tides' (Houghton, Mifflin & Co.). To these poems by women may be added the new volume by Emily Charles, 'Lyrical Poems' (Philadelphia: J. B. Lippincott Co.), a beautifully printed and fairly illustrated volume of smooth and not very characteristic verse, such as is sure to find its way into the corners of newspapers.

'The Imitators: A Poem of Boston Life' (Cupples, Upham & Co.), is one of those tame satires which make even the thing satirized seem interesting by comparison. Very different is the talent of Mr. James Jeffrey Roche, who in his 'Songs and Satires' (Ticknor & Co.) has many capital touches. His "Concord Love Song," and his sketch of the maidens from four cities, trying to pronounce the word *vase*, have already established themselves in facetious literature. Mr. Roche is understood to be associated with Mr. O'Reilly in the Boston *Pilot;* and it is very interesting to watch the distinct and valuable element that is making its way into our poetry from such Irish-American writers as these two, with their townswomen, Mrs. Mary E. Blake and Miss Imogen Guiney. In this connection should be mentioned, as something quite unique, the beautifully printed collection of 'The Latin Poems of Leo XIII., done into English verse by the Jesuits of Woodstock College' (Baltimore: John Murphy). Even the seeming formality which attaches to all modern Latin verse cannot hide the genial kindness and thoughtful sweetness of these poems; and the translation, though unequal, is often in a high degree fresh and spirited. The most attractive of these verses are a series addressed to the parish priests of Perugia, where the author was once bishop; and this, to one Peter Penna, will serve as an example:

IN PETRUM PENNA.

Fortunate senex, dulcis dum vita maneret
Te candore animi, te pietate, fide
Æquabat nemo; lætis in rebus, in arctis
Delicium populi tu, bone pastor, eras.

TRANSLATION.

O rare old man! through all thy life's sweet way,
A whiter soul than thine, more true, more kind,
No man of us hath known: thy flock's dear stay
In weal or woe, shepherd of equal mind.

Another of the promising group of younger Boston authors is Mr. Arlo Bates, well known as a novelist. His 'Berries of the Brier' (Boston: Roberts Bros.), if sometimes a little dry or hard, as is the wont of berries, have often a very choice and aromatic flavor, as in the following:

A SHADOW BOAT.

Under my keel another boat
Sails as I sail, floats as I float;
Silent and dim and mystic still,
It steals through that weird nether-world,
Mocking my power, though at my will
The foam before its prow is curled,
Or calm it lies, with canvas furled.

Vainly I peer, and fain would see
What phantom in that boat may be;
Yet half I dread, lest I with ruth
Some ghost of my dead past divine—
Some gracious shape of my lost youth,
Whose deathless eyes, once fixed on mine,
Would draw me downward through the brine!
(P. 23.)

An older Boston poet, who preserves in years the ardor of youth and much of its power of expression, is Mr. Christopher Pearse Cranch. Only a small part of his new volume, 'Ariel and Caliban, with Other Poems' (Houghton, Mifflin & Co.), has been published before. The title-poem is in a manner a plea for Caliban, as is Browning's poem on a similar subject; but Mr. Cranch's treatment is lighter and airier. The poem next in length is his former cantata "Satan," now improved in form and more seductively rebaptized "Ormuzd and Ahriman." With these are many shorter poems, grave and gay, and some of the most delicate and perfect sonnets yet written in America. We gladly accept as true of the author himself these generous verses:

OLD AND YOUNG.

1.

They soon grow old who grope for gold
In marts where all is bought and sold;
Who live for self, and on some shelf
In darkened vaults hoard up their pelf,
Cankered and crusted o'er with mould.
For them their youth itself is old.

2.

They ne'er grow old who gather gold
Where spring awakes and flowers unfold;
Where suns arise in joyous skies,
And fill the soul within their eyes.
For them the immortal bards have sung.
For them old age itself is young. (P. 106.)

If it was the object of the author of 'Words to Song of Hugh Allone, Sailor' (Richmond, Va.: Whittet & Shepperson), to produce one of the craziest and most bewildering books in all literature, he has succeeded. From beginning to end, through advertisement, poems, and notes, it is a chaos without a key, a labyrinth without a clue. It is said to be compiled by John Marshall Doggett, and there are occasional hints of its having something to do with some kind of life-saving service; but all else is a mystery. Perhaps the insanest thing in the volume is a long play or masque called "Max, the Blind Seer of Poland," in which sprites, wizards, and newspaper reporters take part; but it is hard to choose. The following is a fair sample of the verses, and is addressed to John Smith:

Hail! John Smith, of many One,
Greater then than Washington;
Common man: of whose great Form
We're but shadows; general Norm,
Thou immortal one; Smiths die,
But John Smith's the same stand-by
Deathless as the Wandering Jew—
O, John Smith, don't I love you!
Men may into smithers go;
But John Smith is always *so*.
Ay, we're Smithers of John Smith;
We're the leaves and he's the pith.
Since the Greek for "Smith" is "type,"
Call him *Mr. Typos*. Ripe
With old age, or else, "bad" we
Drop like windfalls from this Tree.
He's the Tid: of which we're waves;
He's the Fate of which we're slaves.
Captain of the Craft of life;
Aye, with savage waves at strife.
Smith, thou workman! Striker, strong
On toil's Anvil: thou'rt the song
Of the ages: Auld Lang Syne
Is his history—yours and mine.
Man! thou art incarnate well
In him of whom histories tell.
Smith saved by Love! And ah!
There thy font, Matoaca,
Hard by Appomattox lies;
Holds a mirror to our skies! (Pp. 111-12.)

Of English poetic volumes the best that has lately come to us is the blank-verse poem 'Tiresias,' by Thomas Woolner (London: George Bell). His clean-cut, sculpturesque muse is always agreeable, and 'Tiresias' has some touches as fine as those in 'Pygmalion,' though the poem as a whole has less of unity and sustained imagination. One thing in which the author shows the effect of his profession as sculptor is the sustained dignity with which he treats the nude. How remote is the following, for instance, from the way in which the "fleshly school" would deal with the same subject. He is speaking of the blindness of Tiresias, which came as a punishment for having seen Pallas Athena bathing:

Awe-smitten, kneeling in bewildered fear,
I felt the presence of a God.
Lo, high,
Leaning against an oak, Athena's spear
Pulsed fiercely, edge and point! The golden scales
That guard Her breast, a shimmering net of flame,
Lay with Her garment by the Gorgon shield,
Its visage turned in mercy toward the tree.
But how to tell of great Athena's Self,
When She, in overwhelming stately power,
With light inscrutable, before me shone!

Resplendent from the water, on the grass,
Within a shower of trembling sparkles She
Stood wringing out the river from Her hair.
Stretching Her hand to shake the drops away,
She showed the length, the strength, the rounded glow
Of beauty gleaming in Her mighty arm;
And hallowed, twin in glory, proudly rose
Her sacred bosom, lifted loftily.

While living radiance round Her presence clung
And moved in faithful concord as She turned
And bent Her gaze on mine. O not in scorn,
Approval, nor surprise; but as a star,
Serene, remote, and unapproachable,
Beams upon water troubled in the wind.
And I in worship strove to penetrate
Deep in the brightness of those azure heavens,
But felt their lustre pierce into my brain,
And I myself in darkness; evermore
Closed from adventure in the world of men.
Since that dark hour, I say it not in pride,
I have not tasted life nor known regret. (Pp. 6-7.)

Another attractive English book, though bearing an American imprint, is 'The Lazy Minstrel,' by J. Ashby-Sterry (New York: Scribner & Welford). The author is one of that mob of gentlemen who write with ease their little *vers de société* in London; and one is tempted to grow tired of his endless procession of pretty maids in boats or on horseback, all with pouting lips and with those dainty feet so much more abundant in current English poetry than on the actual thoroughfares of the mother-land. But then his figures are no more monotonously pretty and no more thoroughly conventionalized than those of Du Maurier in *Punch;* and if we never grow tired of them in the pictures, why should we in the verses? So long as we do not go to London, there is nothing to convince us that the originals are not actually abundant. Another English book, on a theme now almost as familiar as pretty girls, is 'The Lyrics of Ind' (London: Trübner), by Dejen L. Roy, M.A., M.R.A.S., author of 'The Aryan Melodies.' The author's nominal object is "to harmonize English and Oriental poetry as they ought to be"; but he must have done this harmonizing in some way not very obvious, for his poems are on the surface either clearly English or distinctly Indian. The latter department is, moreover, represented by only two lyrics, not quite justifying the title of the book, and not nearly so good as the Indian poetry of Edwin Arnold, to whom this little book is inscribed.

Mr. A. Douglas Ainslie's new version of the old fable, 'Reynard the Fox' (London: Macmillan), is taken avowedly from the German of Goethe; and its excuse for being is the fact that no other English version is now in print. Meantime, Arnold's version, published in 1855, with Wolf's illustrations, has been revived for the present holiday season, and, being in the heroic or ten-syllable metre, is far more graphic and vigorous than that of Ainslie, which is in the ballad metre, like Newman's Homer. It is impossible to carry this measure through three hundred pages without its becoming utterly unreadable; and though the present translator has faithfully labored, he is unable to escape this doom. More graphic than either of these is a version in Hudibrastic metre, published anonymously—or reprinted—at Boston in 1865 by the now extinct house of De Vries, Ibarra & Co. This has the further merit, if it be one, of having preserved more of the coarseness of the original than Arnold or Ainslie has done; but it wholly reconstructs the books and chapters of the original, and transfers the scene to England. Mr. Ainslie, in his excellent preface, makes no reference to this translation, and it is now wholly out of print. It is a curious fact that an American translator—if American indeed he was—should be the first to transfer Reynard's tricks and whimsicalities to an English stage. Each nation, it would seem, finds the scene appropriate for these performances to be in some other nation.

HOLIDAY BOOKS.—IV.

American Art. Illustrated by twenty-five plates, executed by the best American etchers and wood engravers, from paintings selected from public and private collections. With text by S. R. Koehler. Cassell & Co. Large 4to, pp. x, 58, besides the plates.

The Ebers Gallery: A Collection of Paintings illustrating the Romances of Georg Ebers, by the following artists: L. Alma-Tadema, W. A. Beer, W. Gentz, P. Grot-Johann, H. Kaulbach, Ferd. Keller, O. Knille, F. Simm, Laura Tadema, E. Teschendorff, P. Thumann. With descriptive letter-press. Photographic reproduction by Friedrich Bruckmann of Munich. New York: William S. Gottsberger. Folio, twenty full-page photographic prints, and as many leaves of text.

The Song of Songs (Revised Version). With twenty-six etchings by Edmond Hédouin and Émile Boilvin, from designs by Bida. Philadelphia: J. B. Lippincott Co. 4to, pp. 48.

Happy Hunting-Grounds: A Tribute to the Woods and Fields. By William Hamilton Gibson. Illustrated by the author. Harpers.

Grandmother's Garden. By Eben E. Rexford. Illustrated by Mary Cecilia Spaulding. Chicago: A. C. McClurg & Co. 4to. 1887.

A Christmas Carol in Prose: Being a Ghost Story of Christmas. By Charles Dickens. Illustrated by J. M. Gaugengigl and T. V. Chominski. Boston: Cassino. Pp. 121, 4to.

Youth in Twelve Centuries. Poems by M. E. B. Drawings by F. Childe Hassam. Boston: D. Lothrop & Co. Small 4to, pp. 82. 1886.

If heliographic reproductions leave something to be desired, they have this advantage over reproductions by engraving, that they represent the original work of art with such drawbacks and omissions as can be allowed for. The 'Book of American Figure Painters,' noticed last week, has that advantage, at least, over the collection now before us—'American Art,' as these twenty-five engravings entitle themselves. There is no doubt a certain preference among the gift-buying public for etchings, and perhaps there is one for wood engravings also, over photographic reproductions of any sort. The public imagines that it gets two works of art in one, but it is too often true that it gets none—that is to say, not the original design of the painter or draughtsman, for that has lost its identity in passing through another mind; and not the independent thought of the engraver, for that has not been free—has perhaps been hampered by compulsory conformity to an original not to his own taste. That is when things are at their worst; but the best is that we have the engraver's design substituted for the painter's, and that we are studying an engraving. That is what engraving has always been—an art so strong and individual that it substitutes itself for the original which it pretends to render. Why not face the truth that, before photography, reproduction of sculpture and painting was unknown? As for architecture, it seems to be admitted and understood that it is only now that we can study architecture at home. Mr. Fergusson's unfortunate experience, building up a so-called *history* of the art upon a substructure of the study of plates in books, is not likely to have passed unnoticed. Etchings such as we see to-day in the shop windows—strong and in a sense faithful etchings of an apse, a spire, a portal—are of but little value to the lover of old buildings. For purposes of study, a twenty-cent photograph is worth a $5 print from an engraved plate. And for sculpture, too, perhaps, the public is waking up to a similar truth, only that, as the public does not care for sculpture, it has not its eyes open very wide as yet. In painting, it is true that the photograph changes systems of light and shade, though to a less extent than of old, and with a prospect of ultimately preserving "values"; while the engraver can translate color into black and white. Nevertheless it is a translation still, and who that loves poetical or other fine art will accept it in a translation? Even in a language which we only half understand we do better to struggle with the original; we shall get more satisfaction, and lose less of what is essential in the work of art, than by a translation's aid. Now photographic processes do this for us, that we are still reading in the original language, though the language of some paintings is hard to understand when read in this way. What we get is real, is the thing itself; we lose something, but much remains.

It is on this account that we regard 'American Art' as an important gallery of the works of Messrs. Swain Gifford, Thomas Moran, Smillie, Schoff, and other etchers, and of Messrs. Juengling, Teel, Miller, and other wood-engravers, rather than of any painters whatever. It is, indeed, interesting to have these memoranda of what arrangement and grouping there is in Mr. Homer's "Voices from the Cliff"; but with all respect for Mr. Smillie's very unusual gift for translation, it is not much of Mr. Homer that remains in the picture as here presented. And so on through the book. The etchings are very good, really a capital lot—every one of them of a certain independent character, and some really valuable; the woodcuts, too, are generally of a high class, and it is as a collection of etchings and woodcuts that we commend the book to purchasers. Mr. Koehler's preface shows that he was nervous about his title, but only because he feared it ought to read 'American Painting.' Really it should be 'American Engraving,' if it is to have so sweeping a name. Nor is the welcome fact that some of the etchings are by the painters themselves at all a discouragement to our theory of the book; for if there are any good etchers in the world—artists whose work will live after them—it is just the painter-etchers or *peintres-graveurs*, especially so called, who are so. Mr. Koehler's account of American painting in recent times, which runs through the whole volume, has no further reference to the engravings than that they are all probably named in the course of it. No explanation or analysis of the pictures is given—perhaps none has been needed.

The 'Ebers Gallery' is a large folio twenty inches high, the plates and leaves of letter-press mounted on guards, and the whole bound in half morocco—a solid book of most respectable aspect. The photographs themselves are rather over eight by eleven inches, and are generally clear and good. To each one there is a page of letter-press in very large type, consisting of an extract from the English translation of the novel from which the scene is taken. It is curious to see how complete a contrast there is between these two books—the 'American Art' and the 'Ebers Gallery,' with their simple, broad-margined pages, and not a line or spot by way of ornamental accessory—and the elaborately decorated books which have come from the American press this year. In fact, the German publication is very like the Goethe Galleries and Schiller Galleries of the past, not worse than the best of those, but not so very much better. A certain picturesque reality in the interior scene by Mr. Kaulbach, with its furniture and costume, as of the later sixteenth century; vigorous action in Mr. Alma-Tadema's picture of the discus-throwing; good faces and a prettily composed scene in Mr. Grot-Johann's picture of Tachot on the balcony; but generally, in preference to all others, the pictures of single figures in repose are what seem the most noteworthy. That want of reality which has always been so prominent a fault in modern German art, not atoned for by any especial dignity of design or by any great technical excellence; that unfortunate lack of interest which makes a great collection of German pictures so

wearying—these are here in all their force, and few are the redeeming traits.

In the demand for attractive gift-books of a somewhat Biblical or quasi-religious character it is inevitable that the 'Song of Solomon' should be taken as a subject for illustration. But it must have been a puzzle to the artist how any religious character was to be given to the pictures. In these designs the veteran Bida offers simply a succession of single figures and groups of two in what may be called an idealized Bedouin costume. He has avoided perplexing questions as to the connection of King Solomon or Pharaoh's daughter with the poem, or as to the speaker of this or that passage, and has put his tranquil lovers into graceful attitudes like those of *tableaux-vivants*, which, indeed, the pictures strongly resemble.

There is only one fault to be found with 'Happy Hunting-Grounds,' that the pictures do not come where the text calls for them; but this is a real fault. It would seem to be a well-established law that illustrations to texts lose half their value when they are not pat to the occasion: one wants them to be there as he reads, and not around several corners and out of sight. But these are very delightful illustrations when you find them. Under their decorative appearance there is a vast deal of close observation and some of the best drawing of natural forms that is to be found. The difference between this and landscape-art of the usual sort is very marked. The landscape painter has it in hand to produce a work of art of which natural forms are the suggestions; to produce a composition the component units of which are studied from nature. But Mr. Gibson is primarily an observer and recorder of separate facts; his work is almost a botanist's for precision. Only a strong natural artistic gift could make such faithful bits of copying from nature so decorative. The text, as well as the illustrations, many of our readers have known in *Harper's Magazine*. "A Winter Walk," "A Witch Hazel Copse," and the like, are the names of the papers which make up the volume. "Backyard Studies" are the most novel, and, as offering boundless possibilities of enjoyment during "intramural æstivation," as Dr. Holmes would say, is our favorite.

'Grandmother's Garden' is an attempt at restoring the *culte* of the pinks and roses and daffodils of the old straight-walked gardens of the past. It is a thing to be done. The public would welcome a good book of the sort, we believe. As for the present attempt at it, the heliogravures (or whatever they are) are not very successful, nor does it seem as if the drawings, except perhaps that of pinks, had been very good to begin with. It is unfortunate that a poem about Grandmother, of which one stanza is given in each plate, should be so much a dirge, and so little a pleasant recalling of the flowers and the garden of long ago.

The 'Christmas Carol' is illustrated in an odd sort of way, by full-page drawings, of which hardly two are of the same character, size, or disposition on the page. They would be none the worse for that had they been strong and original; as they are, one is left wondering why the effects might not have been sought more naturally within a regular five-by-seven parallelogram. There is one vigorous nightmarish design, the Marley's Face which grew out of Scrooge's knocker. Otherwise there is little to care for. A clever bit is where Scrooge's figure comes black in silhouette against the pale gray robe of the ghost of Christmas Present, but that spirit, instead of jolly, is a cadaverous and woe-begone giant, and there are no accessories at all, while the idea of the figure in silhouette is repeated in other prints with less effect.

Finally—for this week at least—'Youth in Twelve Centuries' is a slight affair indeed as to its graphic side. There are twenty-four heads of youth of both sexes—two of Egyptians of 1500 B. C., two of Greeks, Romans, what not, down to New Englanders of 1813—but all feeble in expression and in drawing, and costumed just as it happens. The verses are by several degrees better, though it would be easy to find weaknesses in them, too. It is a trifling little book, and not even attractive in general appearance, except in being neatly printed and bound in simple gray cloth.

Among the minor holiday offerings, the booklets and calendars and Christmas cards, one little publication is almost a book, the one oddly entitled 'Seekers after the Light, from "Ben Hur,"' etched by F. M.' (Geo. R. Lockwood & Son). There are four little etchings, each printed in ink of a different color from the rest, showing desert scenes, and the three wise men with their three camels, but no appearance of train or attendants, thus half adopting, half ignoring the mediæval legend. Extracts from 'Ben Hur' are given on pages opposite the etchings. The whole is secured between pasteboard covers by means of a broad ribbon. The etchings are not unpleasing, and make a pretty little gift.

From the same publishers come a series of "Lockwood's Parchment Dainties"—little books of sixteen pages tied by ribbon into a decorated cover. One is entitled 'Christmas Festivities,' and contains Bob Crachit's Christmas Dinner from the 'Christmas Carol,' and an extract from Irving's 'Old Christmas.' Another, 'Glad Tidings,' contains a dozen hymns and sacred songs, some old, some not familiar to us and perhaps new. These two are advertised as "new this season." Others are: 'The Night before Christmas,' with Clement C. Moore's always popular poem and four other seasonable pieces of verse—'The Star of Bethlehem,' and 'Poems for Christmas and New Year.' Of the above we have only polite things to say. They are pretty to hang on trees and appropriate as little presents; but an ugly species of the same genus is exemplified by 'Holly Leaves' and 'Mistletoe Sprays.' These are also collections of verse, and pretty verse enough, but the booklet is cut out into the irregular shape given by the boundary-line of an ill-drawn and worse colored branch of leaves of one or the other plant named, which is to be seen on the cover.

The International News Company send us the Christmas numbers of three English illustrated weeklies, the *Illustrated London News*, the *Graphic*, and the *Illustrated Sporting and Dramatic News*, whose annual is called "Holly Leaves"; and there is also "Yule Tide: Cassell's Christmas Annual." The *Graphic* has the most brilliant number; it has every page, usually illustrated, printed in colors—sixteen pages of chromatic splendor—and the largest extra sheet ever seen, perhaps, for the picture itself is within a half-inch of two by three feet. More than this; some of the pictures are capital as *genre* bits, funny or semi-pathetic. Miss Mary L. Gow's two pictures of child-life in night-gowns are very pretty indeed; if there were nothing else of the kind in the number, they would be very noticeable. Mr. Arthur Batt's picture, "The Culprit," a terrier who has killed a pigeon and is terribly ashamed, is as good a picture of the sort as the Royal Academy gives us. "A Picture without Words," by Mr. E. K. Johnson, is humorous enough. The most pleasing as a picture in color is perhaps "The Twenty-fourth of December," by Miss Jessie Macgregor. Three short stories, one of them by Mr. David Christie Murray, fill the letter-press pages, but afford a theme for none of the illustrations. Of the *London News*, the great feature is its extra print, only half as large as the *Graphic's*, but taken from John Everett Millais's picture of "Little Miss Muffet." The body of the journal contains a long story by Bret Harte, and one of the large illustrations is taken from it. This and the other pictures are all in simple black and white. One two-page plate contains many small pictures of cats and kittens, illustrating "A Kitten's Christmas Party," by that English Lambert whose cat-pictures in a pretty book of this season will enchant many children by and by—we mean Mr. Louis Wain. "Yule Tide" contains a good little story by Mr. D. C. Murray, and four loose, full-page pictures, only one of which, "Family Secrets," by Mr. F. Dodd, seems to be of consequence. It is nearly filled with advertisements. "Holly Leaves" contains nothing worthy of note except "My Great-Grandfather's Ghost Story," which is an attempt at a *jeu d'esprit* of the Caldecott type, in little colored pictures accompanied by a continuous legend. It is vastly inferior to its prototypes in drawing and general comeliness, but funny enough, and that in a pleasant way.

Le Figaro Illustré is also before us, and is as elegant and dainty as it ought to be; its character being well expressed in what is for us the best thing it offers—"Cadeaux de Noël," a colored print after a painting by Éduard de Beaumont. This represents a crowd of girls in a sort of Watteau costume; their high-heeled *mules* have been left on the hearth-rug to catch their Christmas gifts; and one has found a necklace, and one another *joyau* or a *carton* of *colifichets;* but the luckiest has found in hers *un petit amour bien en vie*, a jovial Cupid, who seems to have slipped down the chimney and dashed, right foot first, into the slipper of the fortunate one. The article called "La Parisienne: Autrefois (1786), Hier (1846), Aujourd'hui (1886)," with three clever costume prints in color, is readable and instructive in a way.

There are Christmas cards to notice. Some from L. Prang & Co. are pretty. The silk-fringed ones are no doubt as charming as ever to those who seek for dainties. The satin-printed, cushion-like ornaments to stand up like an easel and encumber a boudoir table, and the rest of the graceful varieties, are in the publishers' previous and familiar state of high development and captivating glitter. We notice nothing new as to idea or scheme of decoration, and it is to be remarked that the Christmas motives were long ago used up, so that now we get pictures of young ladies in summer landscapes, and harvest scenes with "Black-eyed Susan" or other September flowers in the foreground, and we think that it is time to begin to give away the cards in May or August, or perhaps at Thanksgiving time. Of the colored pictures the simplest are the best, as is natural. A splendid golden-yellow Japanese Chysanthemum, scattering its ribbon-like petals over a card four inches wide, is a more charming object than a caricatured landscape. The prettiest of all is somewhat more elaborate—a tall stalk of thistle, upon which three gold-finches have alighted "to peck the tall plant's fleecy seeds." This is signed F. B. Another, perhaps the best of the more pretentious ones, the Twelve Months of the Year personified in twelve child-heads in a long and low panorama-like field, is signed with a cipher of H-L-B. or L-H-B. or L-B-H.; why are not these ciphers forbidden by law?

From Raphael Tuck & Sons come a host of comparatively low-priced cards, together with certain "Portfolios" or selections of views, as of Highland Lochs, and as of military groups; but all arranged with a fitting place for the giver's autograph, which will make them into Christmas cards. We like pretty well a large card with two groups of dogs and children on two sleds, coasting; and there are several with well-drawn orna-

mental plants, spoiled by ugly table-cloths or other accessories. Of the various series of "Artistic Private Cards" for sending as New Year greetings, now that New Year calls are passing away into the forgotten, the set No. 17 pleases us the best, with pretty little landscapes in brown on corner panels.

CHILDREN'S BOOKS.—IV.

USEFUL information is not always interesting, and the expedient of stringing large beads of history or science upon a very slender thread of narrative is certainly hackneyed and often unsuccessful. But in 'All Among the Light-houses, or the Cruise of the *Goldenrod*' (D. Lothrop & Co.), by Mary Bradford Crowninshield, we find instruction of a novel sort, balanced by an almost equal amount of pleasant story-telling. Indeed, the information and the story go necessarily hand in hand. In all this history of a trip along the Maine Coast—the first light-house district—upon which cruise the Government Inspector takes a trio of fortunate children, there is not a page of dull reading, and much that is very bright and pleasing, aside from the good descriptions of many light-houses visited. Lights of the different orders and kinds—fixed white, flashing white, white with red flashes, and their variations—and fog-signals, the air trumpet at Manauas, whistle at Whitehead, and the fog-bell at Owl's Head, are well described. The young voyagers see the "setting" of a buoy so intelligently that the reader may understand the process almost as well as they do. The bell-buoy and whistling-buoy are also clearly explained. A buoy having been opportunely lost, a diver is called upon to go down in search of it, which he does, much to the interest and anxiety of the children, who watch every detail of his dress and equipment with eagerness. A little history and a touch of science here and there are brought in by the delightful Inspector, Uncle Tom; and a few entertaining stories are told by the mate, Mr. Guptil, who is much more a real character than the mere mouthpiece of facts who is apt to figure in children's books. There is an amusing encounter with a small boy at Blanby's Island—the name of which is thus changed to save any possible sensitiveness on the part of the curious characters described. The absurd child upon the wharf with his freckled face, red hair standing up through an old hat like flame, and boots which came up under his arms, is well drawn, and reminds us of "Gem's" method of counting his birthdays, in 'One Summer,' when he says, early in July, that he shall have been on the island seven weeks "come the 10th of August." Adventures are not wanting to give zest to the pleasant trip, for the little heroine, Violet, loses herself in a fog upon Treachery Cliff, her cousin John gets caught at flood-tide upon a rock, from which he cannot reach the shore safely, and the *Goldenrod* picks up a sailor and a child floating on some boards from a wreck. There are thirty-two illustrations of light-houses, scenery in Mt. Desert, etc., which are rough, but spirited. The book will be very interesting both to boys and girls, especially those who have a romantic love for the sea and nautical matters; and those who have not, should certainly read it to increase their knowledge of these fascinating subjects.

'Chivalric Days,' by E. S. Brooks (Putnams), is a delightful book of stories drawn from different periods of history. The subjects range from the age of the Pyramids to the American Revolution. 'The Little Lord of the Manor,' introducing as boys Edward Livingston and DeWitt Clinton, is one of the most attractive of all. In the case of some of the other historical characters undue liberty has been taken. For example, 'The Gage of a Princess' introduces Constantine, as a youth, as being almost a Christian, and the reader would certainly infer that he early became an avowed Christian; but, as a matter of fact, his conversion was late, and perhaps never very genuine. In 'The Cloister of the Seven Gates' the fatal battle of Kosovo is represented as lost through the treachery of Stephen, son of King Lazarus of Servia; but the traitor was Vuk Brankovitch. As historical pictures the stories are in general very correct. Three of them have already appeared in *St. Nicholas*.

In 'The Last of the Peterkins, with Others of Their Kin' (Roberts Bros.) are collected some of Miss Hale's later chapters concerning these humorous creations of her fancy, but there is no repetition of any matter contained in 'The Peterkin Papers' recently issued by Ticknor & Co. The second part of the title is a misnomer, and the added stories are not very attractive. In this volume we have the Peterkins travelling in Europe, and now the absurd develops into such vast inanities that the final disappearance of the members of the family in various directions is a welcome relief to the exhausted reader, and perhaps a not inartistic conclusion.

An especially silly book is 'Madame Tabby's Establishment,' by "Kari" (Macmillan), and, not content with silliness, the author has superadded vulgarity.

Mary Cowden-Clarke has written for the special pleasure of American children an English story called 'Uncle, Peep, and I; a Child's Novel' (Roberts Bros.). In Bab and Peep are delineated two sturdy and excellent little people, who seem, however, some years older than they are represented to be. If "Uncle" and one or two of the other characters used less slang and less poor English, the book would be choicer, and more acceptable to parents or friends who think the present rage for realism might remit where children's reading is concerned. However, the tone is good, morally, and the author has successfully aimed to make clear the difference between gracious and rude manners, and between refined and coarse feeling.

Young girls will rejoice that Susan Coolidge now tells 'What Katy did Next' (Roberts Bros.). Katy goes to Europe, and is so fortunate as to enjoy the novelties and beauties which she sees, with ideal enthusiasm. Somehow, despite the familiarity of the ground, the story does not lack interest and freshness. No doubt the introduction of a young lieutenant helps it much. The episode of little Amy's illness paints very well the misery of nursing a dear one far from home and friends, and among strange surroundings. In a word, the book is bright, sensible, and entertaining, and will give much pleasure to the readers for whom it is intended.

'Four Winds Farm' (Macmillan) is one of Mrs. Molesworth's charming stories. Gratian is a little boy born and bred on the breezy moorland, in a spot where all the four winds meet. These call themselves his godmothers, and make him their protégé. He hears their voices in the chimney, sees visions of them on the moors, and they mingle strongly in the life of the poetic, dreamy boy. Refined thought and feeling and a very sweet tender-heartedness characterize the book throughout.

'The Christmas Country, and Other Tales' (T. Y. Crowell & Co.) is a pleasing collection of stories, mostly translated by Mary J. Safford. Three, however, are original with her. The greater part appear to have been taken from the German; Hauff's name appears twice. Several are tales of enchantment, and in these can be recognized the basic idea of many such stories. The two said to be Icelandic are familiar throughout or nearly so, one being essentially the same as 'Prince Ahmed and the Fairy Pari Banou,' to say nothing of other forms. Miss Safford's own stories are quite different from any of the others, and good in their way.

The combination of Bret Harte and Kate Greenaway in a juvenile venture succeeds, but it is a mechanical rather than a chemical mixture. Miss Greenaway's illustrations to 'The Queen of the Pirate Isle' (Houghton, Mifflin & Co.) are as conventional as ever, and keep at a safe distance from realism in all that pertains to Mr. Bret Harte's Californian and mining scenes and properties. She does not even soil the clothes of the four youngsters who have whizzed and tumbled down the perilous slide. In short, her function is almost purely decorative. The story itself is told with much art and delicate humor, in language (especially at the beginning) a good deal above the comprehension of small children. The small, level-headed heathen Chinee, who is not so overcome by the miners' mummery as not to recognize one Bob Johnson—"Me shabbee you! . . . My fader washee washee for you. You no payee him. You owee him folty dolla!"—this young gentleman is a very agreeable addition to the stock characters of our nursery books. But who can say if he will not spoil the sale of the 'Queen of the Pirate Isle' on the Pacific Coast?

We must frankly confess that we have not read 'The Moon Maiden, and Other Stories,' by Jessy E. Greenwood (Macmillan). We did begin the title story, but wearied of its allegory, its apparent fertility and real barrenness of invention, and its cruel treatment of the heroine, related with inquisitorial particularity—an English trait, as we have observed. Thus, the Princess Filozelle "suddenly darted upon Carita, seized her by the shoulders, and shook her until Carita thought her head must fall off. The wicked Princess snatched a long gold pin from her hair, and stuck it into Carita's arm again and again, and finally she dragged Carita across the long room, knocking her against all the corners of the tables in their way," ending by throwing her into a den of wild monkeys, "who pounced upon poor Carita as if they meant to tear her to bits just to see what sort of bits she would make." This is not wholesome reading, and it is not redeemed by any unusual fancy.

From 'How? or Spare Hours Made Profitable for Boys and Girls,' by Kennedy Holbrook (Worthington Co.), much may be learned in the manufacture of toys, boats, cars, baskets, whirligigs, blowpipes, corn stalk fiddles, compasses, birds, snakes, leather work, portraits, windmills, stencils, telescopes, circles, panoramas, etc., etc.; with information about divers art processes, including photography, about the keeping of aquaria, the arrangement of sea-mosses, the performance of conjurers' tricks and of certain physical experiments, and much else that we cannot enumerate. The instructions (even when aided by pictures and diagrams) are not always clear or sufficient, but enough remains to insure a long period of activity for curious children. In the section on repoussé work we must not omit to remark the glaring fallacy contained in these sentences:

"If you have friends who have made the voyage of the Nile, you have probably seen the beautiful silver bracelets bought by them of the Nubian workmen as souvenirs of their Eastern travels. These bracelets are made, I was told, by the natives of the interior, with simply a nail and a stone, but the effect is very artistic and pretty. *So, if ignorant Nubians can make these beautiful things with such primitive tools, certainly an intelligent American lad can do equally good work, with a little instruction and better materials.*"

It was an excellent idea of Edmund Alton, formerly a page in the United States Senate, to tell the story of his life as a page for the readers of the *St. Nicholas*, and publish it in book form for the benefit of "The Boys of America." The title

of the book is 'Among the Law-makers' (Scribner), and it is handsomely printed, bound, and illustrated. It is written for boys, but most adults can read it with profit, for the rules and procedure of Congress are a deep mystery to the rest of the world. It contains a graphic picture of the actual administration of our Government, and the picture is made more complete by digressions, such as not merely illustrate in detail the work of Congress, but "also exhibit by practical examples the constitutional relations between the three departments of the General Govment." Some of the titles of chapters will give a good notion of the scope of the book: The Federal Executive, Secret Sessions, Counting the Electoral Vote, Close of a Congress, An Inauguration, The Federal Judiciary, A Vacant Chair, Into the Hurly-burly [the House of Representatives], Foreign Relations, An Impeachment Trial. It will be seen that there are very few phases of public life in Washington which are not described here with more or less fulness.

'Ronald Hallifax' (F. Warne & Co), by Arthur Lee Knight, is one of that large class of stories which depend entirely upon their incidents to interest the reader. The hero, a midshipman in the English Navy, drifts to sea in an open boat, is rescued and shipwrecked, robs a church in Teneriffe, fights with pirates in Trinidad, and finally, with the aid of two negroes, captures a pirate vessel and brings her safely into Rio. These are some of his adventures, which, crowding upon each other in quick succession, keep the blood at fever heat with excitement and leave the mind at the end wearied with the strain and unfitted to enjoy quieter and more wholesome reading. There is also a rather tame description of the fight between the *Merrimac* and the *Monitor*, and an extraordinary account of an attack on an English frigate by the United States frigate *Chickahominy*, and the death of the American captain (a maniac though in command) on learning his mistake. The author's attempts at humor are frequently not in good taste and are nearly always depressing.

Of the same general character as the preceding is Commander Cameron's 'Harry Raymond' (F. Warne & Co.). A lad of twelve, accompanied by two negro servants, during a voyage from the West Indies to the Cape, is captured by pirates and taken into a Brazilian port as a page to the captain's wife. The three escape in a slaver bound for the Gaboon River, but here they are obliged by more pirates to take refuge among the Fans, a cannibal tribe living in the interior. Of this people, their manner of living, their fetish, and especially their poison test, a very graphic and strictly accurate description (so the author assures his readers), is given, thus keeping the book from being a purely sensational story. It is well told and full of life, but if the incidents connected with the pirate's wife had been omitted, we should have liked it better.

In marked contrast to the foregoing is 'The Golden Land' (Ward, Lock & Co.), by B. L. Farjeon. Here the incidents are few in number, but we gain, what is far better, a personal interest in the characters. For the heroes of those startling adventures we care nothing, being simply curious to know how they get out of their scrapes. But these children, whose love for their widowed father is so pure, we follow with the deepest concern from England across the ocean and through the bush, leaving them on the threshold of their Australian home with regret, but grateful to the author for his promise to tell more of them in their new life. Their conversation is natural and entertaining. The stories which their imaginative uncle tells are thoroughly delightful, while through the whole book runs a vein of delicate humor, mingled with pathetic touches, especially in the story of the little stowaway Mite's devotion to Eleanor, which gives it a peculiar charm. The book is exceedingly well illustrated.

Capt. Marryat's 'Settlers in Canada' (F. Warne & Co.), after delighting successive generations of boys for more than forty years, bids fair to do the same for as many years to come. We cannot remember in fiction any better description than this of the life of the early emigrants to the West. The scene of the story is laid on the northeastern shore of Lake Ontario, and we watch with great interest the progress of the settlers in building their log huts, in clearing and planting the land, as well as in their more exciting adventures with wild animals and Indians. The characters of the old hunter, Malachi Bone, and his pupil, the silent John, are especially well drawn. The illustrations, particularly those of the animals, are excellent.

There are two stories in 'Down the Mississippi' (Cassell & Co.), by E. S. Ellis. The one describes the adventures of a boy and girl, who, straying from an emigrant train, are lost on the Plains and captured by Indians, and narrowly escape perishing in a prairie fire, and being trampled to death by a herd of buffaloes. In the other, the children of this boy are carried away on the roof of their house by the great flood of 1882. The scenes and incidents of their life upon the river during their enforced voyage are very well described and are apparently true to life, while the children themselves display real heroism and unselfishness in their efforts to aid their companions in misfortune.

In Hezekiah Butterworth's 'A Zigzag Journey in the Sunny South' (Boston: Estes & Lauriat) a very slight and lifeless thread of narrative binds together the different historical and character sketches, and the book has the appearance of being produced mainly for the pictures, which are good enough. Some of the stories, for which the editor acknowledges his indebtedness to other writers, are very entertaining, but the historical portions are heavy. The general appearance of the volume is attractive.

'The Tale of Troy, done into English by Aubrey Stewart' (Macmillan), is one of those fascinating renderings of classic legends of which English scholars have given us so many. For the most part the story is derived from the 'Iliad,' and the language of the poet is followed very closely wherever possible. The beginning and the end, for which Homer gave no materials, are told by the author in language not unworthy to go with the rest, although the style is his, not Homer's. We think it a mistake to give so many proper names, after the fashion of the catalogue of the ships. It is Homeric, but not that feature of Homer's style which will please the modern boy. This small volume is beautifully printed.

SIR FRANCIS DOYLE.

Reminiscences and Opinions of Sir Francis Hastings Doyle. 1813–1885. London: Longmans & Co.; New York: D. Appleton & Co. 1886.

In the course of these 'Reminiscences' Sir Francis Doyle records an anecdote of himself which is eminently self-revealing. The British in India were engaged in their first war against the drilled armies that Ranjít Sinh had left masters of the Punjab when he died. A despatch had been received from Lord Hardinge, the Governor-General, descriptive of the terrible battle of Ferozshah, and breaking off abruptly with the announcement that a new Sikh army had just appeared on the field, that the British army had no ammunition and were exhausted by fatigue. This new army consisted of 30,000 men, under the command of Sirdar Tej Sinh, and had their leader not yielded to the seductive influence of British rupees, it might have changed the destinies of India. But there was then no telegraph line between England and India, and weeks had to elapse before the issue of the perilous situation could be known. This period of suspense so wrought upon the imagination of Sir Francis Doyle as to rob him of peace during the day and sleep at night, and his friends began to fear lest the strain should be too great for his sanity.

This little story shows precisely the manner of man which Sir Francis Doyle is. He is a patriot of the antique type, identifying himself with his native country as a Roman of old did with the Eternal City, and, being such, it is almost needless to say that in politics he is a Conservative. But his Conservatism does not stop here. Sir Francis Doyle, a man of culture, of thought, and experience of men and affairs, calmly assures us that from 1828 down to the present time the Liberal legislation of Great Britain has been an unbroken series of mistakes. Great Britain, according to him, ought never to have relieved the Catholics from their political disabilities, ought never to have reformed Parliament or repealed the Corn Laws; and all that has happened since the carrying of these (so-called) reforms has justified the wisdom of those who opposed them. The argument on which he relies to support this extraordinary contention is not less extraordinary than the contention itself. It is that the bright hopes which animated those by whose efforts these reforms were effected, have not been realized. The world has not adopted free trade; religious bigotry has not disappeared; Lord John Russell was mistaken when he invested his Reform Bill with the attribute of finality. Therefore, in effect, argues Sir Francis, we ought to have stuck to protection, continued to persecute our Catholic countrymen, and permanently excluded the commerce and manufacture of Great Britain from representation in the House of Commons.

The "reminiscences" of Sir Francis are much pleasanter reading than his political "opinions." As might have been surmised from the martial enthusiasm which inspires the best of his poems, he is born of a race of soldiers. His father and his grandfather were officers who won distinction in many a hard-fought field. Very striking, indeed, are his reminiscences of the latter gentleman:

"To him it is owing that the revolutionary tune, 'Ça ira,' has remained to the 14th regiment since 1793 as their chosen quick march. At the battle of Famars, in that year, the French attacked so fiercely that his regiment wavered for a moment. The revolutionary fever, in truth, blazed forth as a new element in war, and everywhere the discipline learnt under average drill-sergeants was at a loss how to meet it. He, however, was not at a loss; for, dashing to the front, he called out in a loud voice, 'Come along, my lads; let's break these scoundrels to their own damned tune. Drummers, strike up "Ça ira!"' The effect was irresistible, and the enemy found themselves running away (it was an Irish exploit, and a bull is excusable) before they could look round. Again, at the siege of Valenciennes, a redoubt had to be stormed, and he was selected to storm it. He called his men together, and addressed them thus: 'My lads, the general in command has done us a great honor. We have been selected to perform an important, and, I will not disguise from you, a dangerous duty. We have to carry yonder redoubt, said to be mined underneath; we must carry it, therefore, in such a fashion that the enemy may not have time, as he retires, to blow us and it up altogether. I want a hundred of you to follow me there. Volunteers, ground your arms!' The whole regiment grounded them at once, as if by the action of a single will. 'Very good,' continued the Colonel; 'then I'll take the hundred next for duty.' And with that hundred next for duty the redoubt was so rapidly stormed that the enemy had no time to explode their mine."

It will be very long before the great wars of that revolutionary period lose their power over the imagination. As they recede into the past,

it becomes increasingly difficult to realize the vast, the incalculable sum of suffering which they inflicted upon Europe; but all such periods of peril, excitement, and adventure call into activity characters of a stamp which possess an unceasing interest for their fellow-men. We all of us admire and like to hear of the man who has looked death in the face with a gay and dauntless eye; who has been, so to speak, at hand-grips with the common enemy of all, and emerged from the contact unscathed. Sir Francis Doyle has some capital stories about those exciting times, more especially about the war in Spain. Here is one which we do not remember to have seen before:

"I recollect hearing from my father an anecdote told him by the Duke himself in his own characteristic language, one day when he was dining at Apsley House. . . . 'After the Battle of Talavera,' he [the Duke] said, 'I wanted the Spanish force to make a movement, and called upon Cuesta to take the necessary steps, but he demurred. He said by way of answer: "For the honor of the Spanish crown I cannot attend to the direction of the British general, unless that British general go upon his knees and entreat me to follow his advice." 'Now,' proceeded the Duke, 'I wanted the thing done, while as to going down upon my knees I did not care a twopenny damn, so down I plumped.'"

Twopence was a kind of conventional value which the Duke in conversation was in the habit of prefixing to his "damns," with a view, it is presumed, of lending them additional emphasis.

Here is another story of the same illustrious commander. Carlo Doyle, a relative of Sir Francis, and known as one of the handsomest men in the army, was on the staff of Lord Wellington, while another relative, Sir John Milley Doyle, had a half-independent Portuguese command:

"Sir John Milley Doyle . . . seemed to be pushing on his troops rather faster than Lord Wellington liked. 'Ride over, Doyle, to that damned Irish cousin of yours,' was the order given, 'and tell him to keep his men in hand for the present.' Doyle obeyed, and found the 'damned Irish cousin' cracking a huge hunting-whip to the tune of 'Hola, Señores! Forward, Señores! En avant, Señores!' and so on. On receiving the General's command he answered thus: 'Oh, very well! that must be as he chooses; but do you tell Lord Wellington from me, Carlo, that it is a very bad plan backing young horses just when you have got them to face a hill!' Carlo, I apprehend, was much too wide-awake to do anything of the kind!"

This anecdote suggests another subject which is very pleasantly touched upon in these 'Reminiscences.' No reader of Sir Francis Doyle's poems will need to be told that he is an enthusiastic lover of horses. His poem on the "Doncaster St. Leger" is not only a most spirited and exciting presentation of the incidents of a great race, but, so far as we know, it is unique of its kind in English literature. It shows how much of stirring poetry can be elicited from the most prosaic occurrences when there is a poet's eye present to discern it. As regards English racers, Sir Francis is not less stanch a praiser of past times than as regards English politics. The Doncaster St. Leger which he has described was run in 1827, and he is of opinion that "our present horses have been for many years gradually decreasing in point of stamina and endurance." It is characteristic of Sir Francis that he should attribute the opposite opinion to a decay of patriotism in those who hold it. "To them," he says, "the superiority of our English thoroughbreds as one of the elements of England's greatness is perfectly indifferent; to most of them the best horse is the horse that wins the most money—they have no other test."

The parts, however, of the 'Reminiscences' that will be most interesting to the present generation of readers are those which have Mr. Gladstone as their subject. At Eton and afterwards at Oxford Mr. Gladstone and Sir Francis were close friends. When Mr. Gladstone married, Sir Francis was his best man, and the latter recalls with pain and regret those happier times when Mr. Gladstone, still clothed and in his right mind, could express himself upon Scotch politicians as follows: "A Scotch Tory is worse than an English Whig; a Scotch Whig is worse than an English Radical; but a Scotch Radical is worse than the devil himself." Now that to the eyes of Mr. Gladstone the Scotch principle of evil has been transformed into an angel of light, the two friends have naturally drifted asunder, but Sir Francis tells us many pleasant anecdotes of their young days. Curious it is to note how, from his school days, Mr. Gladstone's chief pleasure lay in speech-making, in endless debates and discussions. Not content with the opportunities afforded to him by the regular debating society in existence at Eton, he and two or three friends formed a sort of interior debating club to get rid of their unexpended eloquence. Although these debates do not seem to have been attended by more than four or five boys, the forms of a regular debate were rigorously observed. They had their various ways of cheering the speakers—ironical, crushing, applausive, and so forth. It does not greatly surprise the reader, therefore, that upon one occasion a master, overhearing these strange and uncouth sounds, supposed the whole party to be drunk. He called upon Mr. Gladstone to render an explanation, listened to it with marked incredulity, and, says Sir Francis, the future Prime Minister narrowly escaped a flogging on the ground of having been intoxicated.

Sir Francis still recalls, as one of the finest speeches he ever heard, the oration against the Reform Bill of 1832 delivered by Mr. Gladstone when an undergraduate at Oxford. The fame of it went abroad, and the Duke of Newcastle, in consequence, returned the speaker to Parliament for his close borough of Newark. This early entrance to Parliament Sir Francis holds to have been a misfortune for Mr. Gladstone:

"But for this bigoted old duke, Mr. Gladstone, instead of becoming in his youth a Parliamentary orator and a statesman, would undoubtedly have been called to the bar. Had this event taken place, the untiring energy given by him to everything he takes in hand, coupled with his splendid talents, must have insured him a signal success. The probability is that he would not have entered the House till he entered it as Solicitor-General, in which case I venture to think that the lessons of life learnt, and the knowledge of human life acquired, by a barrister in large practice would not have been without value to him when he became, as no doubt in the end he would have become, a Cabinet Minister and leader of men."

That there is truth in this, few of Mr. Gladstone's admirers will care to deny. In one respect, in particular, he would have been a great gainer. The phases of political opinion through which Mr. Gladstone has passed are not, as a matter of fact, more varied than happens to most thinking men in their passage from boyhood to old age. His misfortune has been that, by his early admission to public life, his transformations have been, so to speak, stage performances. The world has assisted at what, in most cases, would have been a strictly private and personal affair.

Mexico of To-day. By Solomon Bulkley Griffin. Illustrated. Harper & Bros. 1886. Pp. 267.

THE frank disclaimer of Mr. Griffin's preface warns the reader not to take offence if the somewhat pretentious title of the book is not borne out by its contents. Recognizing, with the author, the limitations of his work, we yet find much in it to commend. If it has some of the vices, it has also many of the virtues, of newspaper correspondence. If the writer is betrayed into occasional hasty generalizations, if he sometimes forgets that he is not still in the editorial rooms of the Springfield *Republican*, and if he too frequently exhibits the worst faults of newspaper style, he is yet always alert and keenly observant; he is cosmopolitan enough not to be too much bewildered by foreign ways; he is gossipy without being garrulous, and his enthusiasm is not of the exclamatory sort. In the main, he reaches a high degree of accuracy, yet in several particulars he needs to be set right.

For a man who confesses his substantial ignorance of Spanish, Mr. Griffin uses a good deal of it—with the result to be expected. Besides the general disregard of the accent, we have noted the following misspelled words: Tobasco (p. 28), haciendado (p. 31), pronunciam(i)ento (p. 31), Gonzales (p. 32), Patriata (p. 118), picadore (p. 132), Signor (p. 138), Viñez (p. 144), Puresima (p. 169), Guanajuata (p. 190). The author seems disposed to take up a cudgel for the reputation of Prescott (p. 17), and says that he "is accepted as an authority by the Mexicans" (p. 19). Undoubtedly, except in the many particulars in which Mexican writers themselves have proved the American to be grossly inaccurate—for the most part, it is true, through lack of material adequate to his undertaking. Mr. Griffin appears to think that the laws against the freedom of the press, recently revived and enforced in Mexico, are not unduly oppressive (p. 32), and says, concerning the imprisonment of Señor Chavarri, that "his savage criticisms were of such a character that I doubt whether they would have been tolerated in the United States" (p. 116). But it is safe to say that the Springfield *Republican* was far more personal and "savage" in '72 and '76, in its attacks upon Gen. Grant and his Cabinet, than the *Monitor* has ever dared to be in its opposition to President Diaz. Indeed, from a newspaper man we might have expected a more adequate and intelligent account of Mexican journalism than is given us.

Not understanding the system of press subsidies and blackmailing, Mr. Griffin is at a loss to explain "the phenomenal way in which newspapers seem to flourish." We must leave him to settle with the *Diario Oficial* for the unaccountable mistake of calling *La República* "the organ of the Government" (p. 117). The political situation of Mexico is by no means clearly described. "The parties in Congress are the Liberal Opposition and the Government Liberals. The Church party does not appear as such" (p. 37). "The Opposition, which is variously called the Church, Clerical, or Conservative party" (p. 251). As things were when this book was written, the two statements quoted are simply contradictory; as things are now, both of them are inaccurate, as the last Congressional elections left no Opposition at all. We should perhaps so far qualify this as to admit that, even in the present Congress, there is an incipient Opposition, inasmuch as, a few weeks ago, quite a respectable minority voted against the Government's bill granting subsidies to the Spanish Transatlantic Transportation Company. The budget for '86-7 given on page 59 needs now to be corrected by the addition of nearly a million dollars included in deficiency bills already passed by the new Congress. It is a great mistake to suppose that the debts of Maximilian "burden the people of Mexico to day" (p. 241). They were long since expressly and justly repudiated. The assertion that "The Liberal Government did not molest the partisans of the Empire" (p. 244) will sound queerly to those Mexicans against whom decrees of confiscation and exile were directed for having accepted office under Maximilian. Mr. Griffin thinks that Mexico is "a city where one can be as well cared for as in Washington or Paris" (p. 76), but himself furnishes a part of the material for his refutation in alluding to the discomfort caused by the absence

of any provision for fires (p. 89). Other particulars might be adduced to show the greatness of the exaggeration. A good example of generalizing from one instance is seen in the statement that "The soldiers do not keep step in marching, and present a most disorderly line to an eye trained to the exact movements of armed men" (p. 99). One might almost think that the writer had only seen the troops when breaking ranks after their morning inspection. Certainly he could not have seen the fine military displays of the national holidays, or the brilliant drilling on the parade-ground outside the city walls. We think it would puzzle Mr. Griffin to find the hundred miles of horse-car tracks with which, he says, "the city is netted" (p. 112). The fact is that there are no more than a hundred miles of rails to be found in the entire Federal District—some of the lines running out as far as twenty miles. It is probable that thirty miles would be a large figure to give for the extent of the tramways of the city proper. The publishers have made a thrifty use of their old plates, no less than eighteen out of the twenty-four illustrations of the book being reproductions from Mr. Bishop's 'Old Mexico and her Lost Provinces.' Most of these are so excellent and characteristic that they will bear repetition; some of the veterans, however, might well have been excused from further service.

Our Arctic Province Alaska and the Seal Islands. By Henry W. Elliott. xvi. 465 pp. 8vo. Charles Scribner's Sons. 1886. Illustrated.

SINCE the placid navigation and magnificent scenery of southeastern Alaska have become more generally known; since a trip to Sitka and Glacier Bay has formed a regular item in the "tours" suggested by enterprising railway agents; and since some hundreds of tourists annually, for several years, have reported the wonders they have seen, books on Alaska have multiplied. Among those which have recently appeared none are larger, more fully illustrated, or more handsomely printed than the one before us. The author is well known among those interested in Alaskan affairs, as once assistant agent of the Government on the Seal Islands, subsequently a Commissioner to investigate the sealing operations of the Alaska Commercial Company, and latterly as a representative in Washington before Congressional committees of the aforesaid company. He possesses a facile pencil, and his book contains many characteristic and well-executed sketches of seal-life and landscape, which give, on the whole, a very good idea of those features in the Aleutian region.

Mr. Elliott's previous and rather copious contributions to Alaskan literature have excited much controversy, and been the subject of much criticism, good-natured or indignant, for alleged inaccuracies. These criticisms were perhaps in his mind when he announced in his preface "his determination to divest himself of all individuality," and to portray "clearly" and "truthfully" "the life and country of Alaska as it is." We hasten to say that we believe the attempt to have been honestly made, and to be as successful as could reasonably be expected of a person who for some fourteen years has propagated energetically a particular set of opinions in active controversy; we will even go further, and say that, for the Aleutian region and the Seal Islands, barring unintentional inaccuracies, the account given by the author is, for general reading, a very good one. The features of the country, the characteristics of the Aleuts, the fur-seals, sea-lions, and their associates, are well described and illustrated. In regard to the rest of the country, a great deal of information is given, but as most of this is untrodden ground to Mr. Elliott, his narrative is defective in those minutiæ which can only be accurately rendered through personal familiarity, and in that sympathy of treatment which grows out of thorough knowledge.

Having said so much in favor of the author's intentions and their outcome, we regret that it seems necessary to criticise certain very obvious defects. The writer's style is bad. The most turgid epithets follow one another in verbose confusion. The mouth of the Yukon is "its deltoid entrance" (p. 413) and "a most mournful and depressing prospect," and myriads of water fowl "resort to this desolation of the deltoid mouth," etc.; rotten wood suffers from "the slow hungering eremacausis of the Arctic" (p. 443); a paucity of seals results in "an inconsequential number" (p. 255). There is an excess of what may be called scientific slang, relating to departments not well understood by the author, who finds Melania and Cyclas in the fresh-water ponds of the Pribiloff Islands; describes carnivorous whelks and fresh-water snails (we take Limnaca to be a misprint for Limnæa, p. 215) as eating the salt kelp on the beaches; and groups Mya and Mytilus, the common clam and mussel, away from the Mollusca, after and among "Crustacea, Annelidæ (*sic*), and Echinodermata" (p. 213). His descriptions of the natives of Alaska, other than the Aleuts, are marked by the inaccuracies consequent upon imperfect knowledge and careless compilation, as in the statement that the natives "for the first ten or twelve years of their lives" "are semi-naked or wholly so, both male and female; this is their condition, then, at all seasons of the year" (p. 110). In fact, except at their daily bath-time (in southeastern Alaska), and during certain religious ceremonies, or extremely severe exercise, the young natives of Alaska, able to walk, are as generally clothed as the children of the poorer classes in New York city, and the nakedness of a boy or girl of twelve in public would excite as much comment there as here. They are often poorly clothed from poverty, but not from choice or custom. Proper and geographical names are very generally inaccurately spelled. The maps of the Seal Islands are given as they resulted from the imperfect tape-line-and-pocket-compass survey made by Mr. Elliott, but it is ten years since the general outlines were corrected and mapped by the Coast Survey. The general map of Alaska is dated 1886, but we find no trace on it of Ray's discoveries near Point Barrow, in 1882-3; of Cantwell on the Kuak and Selawik in 1884; of Schwatka on the Upper Yukon in 1883; or even of the Western Union Telegraph survey of the Tahko or Hotalinga, between Tahko Lake and the Stikine River, made in 1867-9, and published in 1869. To complete our fault-finding, this large and handsome volume, crammed with unsystematized information, has a very imperfect index.

Confessions and Criticisms. By Julian Hawthorne. Boston: Ticknor & Co. 1887.

MR. JULIAN HAWTHORNE is perhaps least objectionable when he is interviewing himself. 'Confessions' is a title of eminent literary respectability, and yet with a shade of humility in it which makes one instinctively look about for some garment of charity to cover the host of sins which are presumably near exposure; but in the present case there is no occasion for the reader to lay aside his customary hardness of heart at once. Nothing more terrible is in prospect for him at first than those confidences respecting one's professional career, be it poetry or sports, which have recently been "developed" by magazine enterprise and syndicate journalism. In the 'Criticisms,' however, there are disclosures of more consequence than this gossip about one's private business affairs, because what a novelist thinks about his art may have some intellectual interest. Mr. Hawthorne, in writing on the subject of fiction in general, with illustrations from leading adepts, unbosoms himself of many things besides his æsthetic principles; or, it may better be said that, being an idealist, he is obliged to concern himself with larger matters in unfolding his views upon novel-making. In fact, he starts with a confession of faith. Man, he says, is born into evil which he did not contract, but which is inevitable; this appertains not to men individually, but to human nature, "the impersonal substratum of us all"; and "the divinely beneficent purpose in creation" is "a gradual and progressive Purification, not of this or that particular individual in contradistinction to his fellows, but of human nature as an entirety." This redemption is not carried on "piecemeal," nor has it any aid from mankind; but it is being brought about by "the gradual descent into human nature (figured in Scripture under the symbol of the Incarnation)" of the Infinite One. This is clearly a late rendering of Original Sin, the Christ, and Salvation by Grace. "We find, therefore," he concludes, with a delicious suppression of all intervening logic, "that Art is essentially the imaginative expression of a divine life in man."

How the agnostic or the realistic schools will fare at the hands of a critic who bases his ideas of novel-writing on these profundities, may be more easily imagined than set forth. His attitude is not of severe condemnation; rather it is one of amused tolerance of wrong-headed and sterile pottering with life. In another portion of the volume he confides to the public his metaphysics. The same conceptions generate them. Nature has its order, he says, because it is conditioned in our impersonal human nature, "in which is transacted the miracle of God's incarnation, and through which He for ever shines"; and he goes on to state that matter, inasmuch as creative energy passes from the world of causes to that of effects, is "the negative of God." We will not follow him further in this exposition. We have gone so far only to indicate that he has, indeed, laid his mind bare. The sum of the matter seems to be that a system of thought, curiously compounded of mental abstractions and moral energies, has laid hold of him; and he endeavors to bring all things into relation with it, including fiction. In other words, his theory of art does not appear to be the result of his study of it, but derived from other sources; he is mystic first and novelist afterwards. It is futile to discuss his view as a matter of literary art, because the only common ground on which æsthetic disputes can be profitably conducted is the works of imagination, not of theology even plus Nathaniel Hawthorne. As matters of speculative thought one would not dismiss these opinions so abruptly, but as they are not original with Mr. Hawthorne, who can claim as his only the attempted application of them to the composition of novels, there is no call to examine them now.

An interest more near to the public lies in the glowing patriotism into which he is kindled by the word America. He has great hopes of his country. He affirms that "in settled method, in guiding tradition, in training and associations both personal and inherited, the average English novelist is better circumstanced than the American"; but for all that the best novels, he concedes, are written here. He glories in the fact, and is prepared to glory more and more as the years go on. It is true, he thinks our fiction must be episodical, because our life is a life of experiments, of pioneering, of prevailing change in status, fortune, and circumstances all along the line. It is less in our fiction specifically, however, than

in our general future that he plants faith. It is America that he celebrates, not Bret Harte; in setting down his views of Emerson, he qualifies his estimate of him by adding "as an American," and in demolishing Mr. Mallock he fairly revels in the latter's ignorance of what democracy and its shibboleths mean. This, in a man who has lived a considerable time abroad, is worth notice by those who think that to breathe foreign climes unfits a man for this air. Mr. Julian Hawthorne confesses, with a blare of trumpets (for one cannot otherwise express his abandon), that he is an American; let the world take note. He confesses, also, the vital principles of his intellectual life, his æsthetic, religious, and philosophical creed. His criticisms, in themselves, are a slight matter, though there are brilliant and incisive remarks sown through them; and it must be said that when the atmosphere is as heavy with materialism as it is to-day, one need not inquire too subtly into the dogmas of one who at least preaches the practice of idealism in literature. But in the confessions, if any one has been wondering what manner of man Mr. Julian Hawthorne is, his intellect may be observed at leisure.

The Story of Hungary. By Arminius Vámbéry, Professor at the University of Buda-Pesth. "The Story of the Nations" series.] G. P. Putnam's Sons. 1886.

A FEW years hence Hungary is to celebrate the thousandth anniversary of its existence as the "Land of the Magyars" (*Magyarország*). What lies beyond the close of the ninth century in the recollections of the nation, or is written about its early migrations in Byzantine and other histories, is very shadowy, and mostly legendary. On the other hand, the thousand years which have elapsed since the Magyars, under their seven tribal chiefs and the lead of Álmos and Árpád, approached and crossed the Carpathians, present one connected and authentic national record, remarkable for almost epic unity. The Magyars, a small but bold nation, separated from their kindred on the Volga and elsewhere, wedged themselves in between Slavs, Germans, and Wallachs, occupying the fertile basin of the Danube and Theiss, and pressing back the more or less subdued natives towards and beyond the mountain ridges which encircle that basin, without, however, possessing strength enough to absorb the hostile elements and amalgamate them into one powerful, homogeneous body. In this position the Magyars have remained to this day—rulers of a vast territory, the periphery of which is held by tribes and fragments of tribes reluctant to give up their own national characteristics, and some aspiring to independence. The Magyars have always held their own, but have almost constantly been forced to fight, or be ready to fight, for their existence as a nation.

The invasion of the Mongol Tartars in the middle of the thirteenth century nearly crushed the people, but the tide of invasion soon rolled across the border, and the country revived. Under various national and foreign dynasties, the Hungarians had their wars with the Byzantines, Germans, Bohemians, Turks, and others, and generally came out victorious, until, shortly after their grandest period (under Matthias Corvinus), they succumbed in 1526 to the Ottoman Power, when this was at its greatest height. The nation then sought protection under the Hapsburg sceptre, and the fight for life against the Turks went on for one hundred and sixty years within the borders of the land. All this while, the Hungarian Constitution, which is almost as old as the nation itself, was defended as vigorously as the national soil. When, with German help, the Turks had been driven from Hungary, the Hapsburg dynasty's encroachments upon law and liberty, and especially upon the rights of the Protestants, provoked the powerful insurrection under Rákóczy, at the beginning of the eighteenth century. The insurrection failed of achieving independence, but constitutional freedom was saved. And similar was the issue of the grand struggle under the lead of Kossuth in our day, though for ten years after the surrender at Világos Hungary's freedom seemed to be extinct. The nation's fidelity to its own cause saved its life, autonomy, and freedom, and made it the leading half of what is now Austria-Hungary. But new dangers are looming up on the horizon, and a new fight for life—this time with Russia and its Slavic followers—is again imminent.

The story of these struggles is plainly and vividly told by Prof. Vámbéry, though not with sufficient regard for historical symmetry—that is, for the relative importance of events and developments. Like all the books of the series, as far as known to us, this work is a "story"—not a history in the stricter sense—and as such it will hardly have its equal in interest for youthful readers (nor for them alone) in the entire collection. The history of Hungary, and especially of the Turkish periods, is known to very few English readers, and it is full of varied and thrilling events, which together, as we have hinted above, form a most interesting historical whole. Told with patriotic fervor, with a greater desire to awaken sympathy than to satisfy critical inquirers into the past, and in a language both animated and nationally flavored, it cannot fail to please and instruct.

The Shâh Nâmeh of the Persian Poet Firdausi Translated and abridged in prose and in verse by James Atkinson, Esq. Edited by Rev. J. A. Atkinson, M.A. Frederick Warne & Co. 1886.

IN adding Atkinson's abridged version of the 'Shâh Nâmeh' to their collection, the publishers probably remembered that the first edition of 1832 was printed by the Oriental Translation Fund, and judged worthy of the royal gold medal. These honors went by right to the first attempt to lay before the English public the treasures of heroic lore locked in the manuscripts of Firdusi's poem. That a mere abridgment should have the further honor of a reprint is somewhat surprising, but not more so than the fact that, after fifty years of inroads into all the fields of Eastern literature, it stands, in its scantiness, unsurpassed as a representative, in English, of Persia's great epic. The poet's exuberant vein itself was at fault, however; the Oriental number of sixty thousand distichs behind which he intrenched his fame, no doubt added to his glory in a country and time of regal munificence and dreamy leisure, but finds no favor with modern publishers. The only verse-for-verse translation ever carried out was made by order and with the help of the French Government; and Mohl, the editor, after forty years of untiring labor, died before the completion of the seventh and last volume. Mohl's 'Livre des Rois' included, however, the original text as well as the French version in prose.

Atkinson's work was of a more expeditious character: he adopted a system of reduction throughout, which has the advantage of compactness, while it permits an unbroken narrative and brings out the general outline. Fewer sections of the poem, treated with completeness and something akin to the graceful swing of the original, would certainly give a more adequate idea of Firdusi's exquisite art, yet the abridgment is by no means wanting in interest: the poet adorned his figures with so lavish a hand, and made them so much greater than nature, that even half-stripped and foreshortened they loom up in epic size and beauty. Moreover, the most striking passages are rendered in verse, and the famous episode of Rustem and Sohrab, translated with more breadth and coloring, is appended. A better interpretation of Firdusi's "time-destroying" verses remains to be hoped for; until it comes, this work may fill the void. Its only competitor in our tongue is Miss Zimmern's 'Epic of Kings' (Henry Holt & Co., 1883), in which essentially the same matter is sifted from the French of Mohl for a younger, or at least more general, public.

Barring a marked improvement in the typographical features, the new edition is simply a reprint. The notes might have been increased to keep pace with Oriental studies; they consist, now as before, chiefly of the classical quotations dear to a past generation, and have but little relevancy. If filial respect precluded critical severity on the part of the editor, it ought not to have stood in the way of improvement. On one point, especially, editorial reserve should have been broken. Mohl, an authority in Persian bibliography, asserted years ago that Atkinson's work is not translated from Firdusi's text, but from a Persian abridgment due to a native scholar of the seventeenth century. This charge does not necessarily imply that Atkinson was unacquainted with, and made no use of, the original text, nor, if it did, would it impair the value of his book for readers; at the same time it suggests an indebtedness to the native abridger which the editor owed it to his father's memory, no less than to the public, either to disprove or to acknowledge.

A Plain Man's Talk on the Labor Question. By Simon Newcomb, LL.D. Harper & Brothers. 1886.

To condescend gracefully, and at the same time to be honest, is one of the most difficult of all feats, and this is one of the most difficult of all countries in which to accomplish it. Whatever democratic virtues we may have developed, we have very nearly lost the aristocratic virtue of deference. If any man proposes to impart of his political wisdom to his fellow-citizens, he must needs begin by making them feel that they know more than he does about the matter, or they will have none of him, no matter how obvious his superiority. Moreover, at the present time the relations between masters and workmen are such that the latter are not disposed to listen to any instruction that seems to originate from the former. When people are determined to have their own way, the only teaching that is effective is that of experience, and we very much doubt if any one who maintains that the present order of things is the best for the laboring classes, can now get a hearing from them.

Prof. Newcomb feels the difficulty of the situation, and seeks to overcome it by assuming the disguise of "a plain, blunt man," who does not claim to be an authority or to maintain a theory, but only to speak right on and tell the people that which they themselves do know. But the mask is a transparent one, and the wearer is of too frank and positive a nature to charm very wisely. He is so thoroughly convinced of the futility of the schemes for reconstituting the world, that he almost conveys the impression that he sees nothing very bad in the present order. This optimistic bias prevents him from appreciating the attitude of the labor reformers. He goes too far in laying it down as a mathematical absurdity that a man should produce as much with eight hours' labor as with ten. He does not allow for the military advantage, so to speak, that strikes have gained for laborers. Nor does he consider that an increase of wages, even though it involve

a diminution of profits, may result in an increase of capital, provided workmen save their wages, and employers cut down their expenditure for luxuries. His account of the benefits conferred upon mankind by the late Commodore Vanderbilt is quite one-sided, and his picture of a bricklayer's home is more grotesque than impressive.

The real force of Prof. Newcomb's essay—for it has great force—lies in its emphasis of the truth established so conclusively by Mr. Giffen, that in the vast increase of wealth during this century the gain of labor has been proportionally greater than that of capital. Impressive, too, is his description of the wonderful efficiency of the present industrial organization. His suggestions as to the enormous mischief that might be wrought by meddling with this complicated mechanism, are such as to commend themselves to the wayfaring man as well as the philosopher, and deserve the consideration of all who have pet schemes for reconstituting society.

Recollections of Eminent Men. With Other Papers. By Edwin Percy Whipple. With Introduction by Rev. C. A. Bartol, D.D. Boston: Ticknor & Co. 1887.

THIS posthumous volume is a collection of Mr. Whipple's later writings, at a time of life when his mind naturally turned back to his association with men whose renown made their earlier days memorable, and whose death had removed the seal from the lips of their friends. Choate, Agassiz, Emerson, Motley, and Sumner are the five who are selected for commemoration; and to these personal sketches five reviews are added, on Ticknor, Arnold, Barry Cornwall, 'Daniel Deronda,' and George Eliot's Life, which complete a somewhat bulky volume. It cannot be said that the biographical papers add very much to our knowledge of the men, even in the way of anecdote; they succeed, nevertheless, in placing the personality of each before us with remarkable life-likeness. Choate, in particular, who is a picturesque character, and besides was a hero to Whipple, is painted with great vigor; and as the recollection of him is already a fading memory, the subject has greater freshness than is the case with the others. The scene of all is, of course, laid in Boston; and, taken together, the five essays give an impression of the Boston of this group which is historically valuable. The sketches of Sumner's office, with the newly returned occupant dilating upon the personages he had met abroad, and shining with their reflected importance, or on the morning after his Fourth-of-July address, when the clans hostile and friendly descended on the inopportune advocate of peace, are excellent interior views. So, too, is the incident of Agassiz's emotion at Longfellow's poem read at the dinner given by the Saturday Club on his fiftieth birthday, and the episode from the sitting of the same Club when, as the three were arguing at once "with a velocity of tongue which fully matched their velocity of thought," Mr. Whipple calculated that "in swiftness of utterance Motley was two-sixteenths of a second ahead of Holmes, and nine-sixteenths of a second ahead of Lowell." Emerson is, of course, the source of some happy remarks and one or two characteristic incidents; a moonlight ride, and a speech at Cambridge, when he had his first, and perhaps only, experience of being hissed, being the best. Of Motley little is said that Dr. Holmes had not already made public. Mr. Whipple was not very close to these men, and consequently he does not have it in his power to write of them with either the novelty or the charm that springs from intimacy. Choate is delineated with literary art, and the portrait is rich in details. Sumner certainly gains in our toleration of his less amiable qualities by the way in which his vainglory and lack of humor are spoken of. But these reminiscences are more valuable for their general local color than for specific fact; they are the scenes from the life of a Bostonian of their days.

In the critical portion of the volume Mr. Whipple exhibits his usual tenacity of mental grasp and hardness of head. He is, in these papers, more the reviewer than the critic, and much of his space is occupied in spreading on his own page the contents of the work he has been reading. He does not eliminate himself, however, but makes his personality strongly felt. It is not that he has unconquerable prejudices or insuppressible views, for he certainly is not intellectually aggressive; he was more positive in character than in mind, so that one discerns in him the New Englander rather than the thinker. And thus it happens that in the essay on George Ticknor the figure of that pattern of respectability, which loses nothing in dryness, chill, and social Brahminism in the clear medium of Whipple's style, is no more sharply cut to an observant reader than is the figure of his shrewd and not too friendly critic, bringing his Yankee horse-sense to bear on the man and his "goings on," and coming to a tolerably just reckoning of the matter at the time. The presence of the same ingrained democracy is felt in the only purely critical essay of the collection, the one in which Mr. Whipple gives judgment on Matthew Arnold. This is full of keen sentences, solid as well as sharp, and delivered with that slowness and impartiality which mark the New Englander when he is summing up the character of a neighbor. Mr. Arnold, he says, reverses the ordinary ways of men—"when he is out of spirits he sings; when he feels himself a being superior to his contemporaries, he criticises"; and he continues with merciless persistence in a vein which brings out all that quality of the brilliant essayist which is offensive to the American. Whipple does not really add anything to our knowledge of Arnold, nor in general is his criticism of the sort that enlightens. He was gifted primarily with a sense of style rather than a talent for thinking. It is noticeable how very frequently his attention is directed to formal style—not the moulding of the thought but the construction of sentences—throughout this volume, and also how sensible he was of the value of tone and inflection to the public speaker as a kind of vocal style superadded to the rhetorical, and enlarging the means of expression. He is more interested, it seems, in how the thought is conveyed by voice and words than in the thought itself.

This is the mark of a stylist, and such Whipple was. He had a hard, clear head, good observing powers, and wit; he said many a sharp thing. In this last collection he appears in his old vigor, and writes with the same inelastic, unimaginative, but close-gripped style. He belongs to the same literary *stirps* as Dr. Holmes and others of the highly individualized New England group, who all had at bottom the old Yankee character; and as his reminiscences revive the Boston of a quarter century ago, he himself in his criticisms stands out as a typical provincial Bostonian when Macaulay's star was in the zenith and the word "reviewer" was still dignified by a capital letter.

BOOKS OF THE WEEK.

A Wilful Young Woman: A Novel. Harper's Franklin Square Library. 20 cents.
Biart, L. The Aztecs; their History, Manners, and Customs. Authorized translation by J. Garner. Chicago: A. C. McClurg & Co. $2.00.
Bouchot, Henri. Le Livre. Christern.
Boynton, Julian P. Lines and Interlines. G. P. Putnam's Sons. $1.25.
Burt, Mary E. Browning's Women. Chicago: Charles H. Kerr & Co. $1.00.
Cameron, Commander V. L. Harry Raymond: his Adventures among Pirates, Slavers, and Cannibals. Illustrated. Frederick Warne & Co. $2.00.
Carpenter, H. B. Liber Amoris; being the Book of Love of Brother Aurelius. Boston: Ticknor & Co.
Dickens, C. The Posthumous Papers of the Pickwick Club. Jubilee Edition. Edited by Charles Dickens the Younger. In 2 vols. Illustrated. Macmillan & Co. $5.00.
Dupuy, Ernest. Victor Hugo l'homme et le poète. Boston: Schoenhof.
Ebers, Prof. G. Die Nilbraut. 3 vols. B. Westermann & Co.
Francillon, R. E. Golden Bells: A Peal in Seven Changes. Harper's Handy Series. 25 cents.
Frommell, Dr. E. Heinerle von Lindelbronn. Philadelphia: Lutheran Publication Society. $1.00.
Gibson, W. H. Happy Hunting-Grounds: A Tribute to the Woods and Fields. Illustrated. Harper & Brothers.
Gill, W. I. Philosophical Realism. Boston: *Index* Association.
Gottheil, Dr. G. Hymns and Anthems Adapted for Jewish Worship. G. P. Putnam's Sons. $1.00.
Griswold, Hattie Tyng. Home Life of Great Authors. Chicago: A. C. McClurg & Co. $1.50.
Hall, H. Society in the Elizabethan Age. Illustrated. London: Swann Sonnenschein; Philadelphia: J. B. Lippincott Co. $3.50.
Hamilton, H. The Poet's Praise. G. P. Putnam's Sons. $1.25.
Hieritz, G. Betty's Decision. Philadelphia: Lutheran Publication Society. 60 cents.
Hoffman, F. Alli; or, Blessed are the Merciful. Philadelphia: Lutheran Publication Society. 75 cents.
Holbrook, K. How? or Spare Hours Made Profitable for Boys and Girls. Illustrated. Worthington Co.
Howells, W. D. The Minister's Charge; or, the Apprenticeship of Lemuel Barker. Boston: Ticknor & Co.
Hyde, T. A. and W. A Natural System of Elocution and Oratory, founded on Analysis of the Human Constitution. Illustrated. Fowler & Wells Co. $2.00.
Kirby, Mrs. Georgiana B. Years of Experience: An Autobiographical Narrative. G. P. Putnam's Sons. $1.25.
Knox-Heath, Mrs. N. L. Elementary Lessons in English. Part II. The Parts of Speech and How to Use Them. Boston: Ginn & Co. 70 cents.
Lane-Poole, S. The Story of the Moors in Spain. With the collaboration of Arthur Gilman. G. P. Putnam's Sons. $1.50.
Lang, A. In the Wrong Paradise, and Other Stories. Harper & Brothers.
Le Dain, A. La Linguistique vulgarisée: Étude sur l'origine et l'unification du langage. Paris; E. Leroux.
Mauthner, F. Credo: Gesammelte Aufsätze. B. Westermann & Co.
Mermeix. La France socialiste. Boston: Schoenhof.
Metropolitan Directory of Selected Names arranged by Streets and Suburban Towns within a Radius of 25 miles of New York City. For 1887. Trow City Directory Co.
Monteiro, Marianna. Legends and Popular Tales of the Basque People. Illustrated. A. C. Armstrong & Son. $3.75.
Patmore, C. Poems. Second collective edition. 2 vols. London: George Bell & Son.
Pott, Prof. A. F. Allgemeine Sprachwissenschaft und Carl Abels Ægyptische Studien. Leipzig: W. Friedrich.
Prohl, H. Tannenwiese; or, a Happy Home. Philadelphia: Lutheran Publication Society. 90 cents.
Reid, Capt. M. The Land of Fire: A Tale of Adventure. Illustrated. Frederick Warne & Co. $1.50.
Rexford, E. E. Grandmother's Garden. Illustrated by Mary Cecilia Spaulding. Chicago: A. C. McClurg & Co. $3.00.
Ross, C. The Silent Workman: A Story. G. P. Putnam's Sons. 75 cents.
Sanders, D. Deutsches Stil-Musterbuch, mit Erläuterungen und Anmerkungen. Berlin: H. W. Müller.
Sanders, D. Fürs deutsche Haus: Blüthenlese aus der Bibel, etc. Berlin: S. Rosenbaum.
Schmidt, E. Charakteristiken. Berlin: Weidmann.
Snider, D. J. Goethe's Faust. First and Second Parts. A Commentary on the Literary Bibles of the Occident. Boston: Ticknor & Co. $3.50.
Stephen, L. Dictionary of National Biography. Vol. viii Burton-Cantwell. Macmillan & Co. $3 25.
Stickney—Peabody. Occupation, Recreation, and Instruction for the First Weeks at School. Boston: Ginn & Co. 14 cents.
Stinde, J. Frau Wilhelmine (der Familie Buchholz letzter Theil). B. Western ann & Co.
Symonds, J. A. Sir Philip Sidney. Harper & Brothers.
Talks with Socrates about Life. Translations from the 'Gorgias' and the 'Republic' of Plato. Charles Scribner's Sons. $1.00.
Tiedman, Prof. C. G. A Treatise on the Limitations of Police Power in the United States. St. Louis: The F. H. Thomas Law Book Co.
Warner, C. D. Their Pilgrimage. Illustrated by C. S. Reinhart. Harper & Brothers.

Fine Arts.

AMERICAN ART ASSOCIATION.

THE exhibition now open at the galleries of the American Art Association is unusually good for an autumn exhibition, and its excellence is particularly worthy of remark from the fact that only 20 out of 170 artist contributors reside abroad. An autumn exhibition composed in great part of pictures by American artists abroad, sent here after being shown at the Salon in the spring—such a one as was the inaugural exhibition at these galleries in the autumn of 1884—would be reasonably certain to be of a high average quality, but the present exhibition has no such important nucleus, and is made up almost entirely of pictures by painters now residing in the United States. Considering the weakness of the fall exhibition at the Academy this year, this fact becomes still more remarkable. It indicates that the best work, especially that of the younger artists, has been sent to the Association. The reason why is not far to seek. Young artists

have been coming from Europe and establishing themselves in New York for the past seven or eight years. Every year they come in increasing numbers. They paint well, as a rule, and naturally wish to exhibit. Now the accommodations of the Academy are limited. The Academicians and Associates, by a right of previous possession that cannot in justice, from their point of view, be denied them, must be looked out for first, and their pictures must be hung where they can be properly seen. When this is done and good places also are given to a number of artists who do not belong to the Academy, but do hold a good position in American art by reason of long residence and recognized ability, the space left for the new-comers is small, and what there is of it is by no means desirable.

The Society of American Artists was expected to supply the vigorous young school with a fitting place to exhibit, but it has not of late years been able, from a variety of causes, principally on account of the lack of suitable galleries, to hold what might be called a successful exhibition; successful, that is, in a popular sense. The last exhibition of the Society was held at the Metropolitan Museum. It was highly creditable, but obtained only a *succès d'estime*. The American Art Association therefore, with a central location and spacious galleries at its disposal, has had the good luck to get the bulk of the pictures painted by these younger artists for its regular exhibitions, and that, too, in the face of the fact that it is managed by laymen, and that the names of the members of its Jury of Admission and Hanging Committee, whether composed of laymen or artists or both, are not made public. Besides this source of supply, most of the well-established artists not held in exclusive allegiance to the Academy send pictures there also, and it has always been sure of a good quota of contributions from American painters in Europe, with whom the Association seems to be in high good favor.

The exhibition this season, as already stated, is of unusually good quality. Mr. Herbert Denman, an arrival of only this year, is the painter of one of the most important pictures in the galleries. "The Trio" was exhibited at the Salon of 1886, and the artist was rewarded by the jury with an honorable mention. It is a large canvas with three life-size figures. The subject is simple—three young ladies in a room playing, or about to play, on a harp, violoncello, and violin, respectively. The figure on the right with the harp has a red dress, the figure on the left with the violoncello a pink one, and the violinist seen between them in the back part of the picture is clad in a robe of dark, dull red. The color scheme of the picture is red throughout, running from the pink of the dress of one of the young women down to the dark reddish tones of the walls, with the brilliant scarlet of a folding screen introduced as a telling note in the middle of the picture. There is a little blue in the stripes of a sofa cover which is sufficient to catch the eye a moment and refresh it—no more. The painting of the heads and hands in this picture is decidedly clever, but a trifle flimsy. The violinist's head in the background is the most solid of the three, although it is entirely in the shadow. The others are well drawn and neatly modelled, but there is a slight feeling of emptiness and transparency about them. The stuffs are simply painted and very good in texture. "Mandolinata," by the same painter, is a pretty young girl with a small mandolin in her hands. The figure is life-size and is clad in white. The flimsiness or lack of solidity slightly noticeable in parts of "The Trio" appears in this picture in a more marked degree. The figure is so flat as almost to be taken for a piece of wall decoration, but it is well drawn and charming in color. It is a study in white, as "The Trio" is in red. "Courtyard in Venice," a delicate little picture with a single figure of a young girl at a well, cleverly drawn again, and simply painted, is the third of Mr. Denman's contributions.

Chas. S. Parker, like Mr. Denman a new-comer, is represented by a large picture, "The Cooper." The life-size figure of an old man at work in his shop in the midst of his staves and hoops, and with a nearly finished barrel at his side, is presented in a strong side-light. The effect is not a very difficult one to paint under ordinary conditions, but Mr. Parker has made a thoroughly good study, and so managed his lights and shadows in the interior of the shop as to make of it an interesting picture. It is deserving of praise for its truth of values and its excellent quality of atmosphere. If the subject, a single figure painted in a studio light, does smack a little of the school, it is at least well done; and such work as this, honest studies from nature, painted with all the truth of observation possible, are what our young artists should do, for the coming school of American art, so much talked of and written about, must be built on strong foundations, or it will never come at all. Harry R. Mills, another new-comer, exhibits a picture called "Young English Fisherman," a boy coming along a road at nightfall, carrying his nets in his hand. The dark shadow on the landscape, and the low-toned figure of the lad with his head covered with a dingy oilskin hat in silhouette against the warm evening sky, painted with much truth and feeling, make this one of the most poetic pictures in the exhibition. "Les Bavardages," a group of Breton women and children at a fountain or public well, and "Allez donc, Mollie," a Brittany interior, with two young peasant women looking at a child making its first attempts at walking, are the titles of two creditable pictures by Charles Danforth, a new name in New York exhibitions. Commendable qualities of frankness and honesty are shown in the painting of both. "Bringing Fish Ashore, Cornwall," a sea-shore view, with small figures wading in to land through the rolling surf, a picture painted in a light key by Howard R. Butler; "Walbresnick, a Study," by W. R. Derrick; "The Cup that Cheers," a strongly painted seated figure of a lady in a tan-colored and pink robe taking tea, and "In a Picardy Orchard," a broadly handled out-door study by M. L. Fairchild; "Landscape and Sheep," a picture too closely resembling the manner of the Anglo-Parisian painter Thompson, but not without serious merits of its own, by Olive Cheritree; "Village Street, Grez," by R. V. Sewell; "Sunset on the Woernitz," a rather artificial landscape, but with a certain rich quality of color, by B. R. Fitz; and "A Misty Morning, Late Autumn," by W. L. Metcalf, are other noticeable pictures bearing new names.

Charles F. Ulrich sends from Venice three clever small studies. They show more breadth and less hardness in painting than characterized the work he exhibited in New York prior to his return to Europe, while he seems to have lost none of his exact and careful drawing. "The New Model," a girl in a pink bodice and a pale green kerchief, is the best of the three examples. The head is well constructed and modelled and it is simply drawn. "The End of the Day," by George W. Chambers, a large picture of three negro field laborers, a man, a woman, and a child, coming home after work, is soberly treated, and is a notable example of an essentially American subject decently painted. "In the Street," a group of children playing on the sidewalk, is another American subject with figures of life size, painted by Frederick Juengling. It is earnest and honest in treatment, but marred by a lack of true out-door feeling and some striking faults of proportion. "Girl Reading," an example of F. D. Millet's pictures of English interiors; "Nymph," a delicate bit of gray tone by G. W. Maynard; "Evening Primroses," a pretty picture by Hamilton Hamilton of a lady in black velvet robe and hat at the top of a hilly road, plucking wild flowers, with quiet fields and a hamlet lying under the evening sky behind her; two brilliant little scenes in Venice, "On the Riva" and "The Pigeons of St. Mark's," and a quiet bit of landscape with a figure, "Milking Time," by Rhoda H. Nicholls; and "La Tricoteuse," a small head of a Dutch girl, well drawn and fine in color, by J. G. Melchers, are among the best works by other figure painters.

In landscape there is great variety and a large amount of exceptionally good work. "Twilight, November," by D. W. Tryon, is a small canvas with a simple motive, a stretch of country with a village lying among the hills under the last feeble light of day. It is a picture of fine poetic feeling. A landscape possessing great qualities of sincere sentiment is "April," by John R. Stites. This picture, in which the wet April atmosphere is excellently rendered, is charming in color. It is serious in purpose and absolutely free from trickiness or false prettiness. It is not striking nor strong in effect; on the contrary, it is quiet and unassuming, and has only genuine truth to nature to recommend it. It is thoroughly good landscape painting. T. C. Steele's "On the Muscatuck," good in composition and style; Bruce Crane's "After Rain"; C. H. Davis's "A Rosy Twilight," a slight variation of his usual theme; Charles Platt's "Coast of Morbihan"; Charles W. Eaton's "Twilight near Grez"; R. W. Van Boskerck's "The Downs at Manomet" and "A Roadway near Plymouth"; Andrew Teggin's "The Valley Farm"; W. Sartain's "Shore of Buzzard's Bay"; F. K. M. Rehn's "The Old Wharf"; Walter Palmer's "Bait Fishers, Venice"; Warren Sheppard's "The Warm Southern Sea"; Burr H. Nicholl's "The Road to the Village"; R. C. Minor's "Evening" and C. M. Dewey's "The Harvest Moon," are of the best of the other landscapes.

There are some panoramic views of the familiar "fireboard" style in the exhibition, but they are not sufficiently numerous to do much harm. A large picture of a "Normandy Bull" lying in his stall, by W. H. Howe, is a strong piece of animal painting, and, being a cattle picture, and sent from France, it is refreshing to find that it is entirely unlike anything Van Marcke ever painted. Carleton Wiggins is exemplified by an unusually good landscape, with cows winding over a sandy moor, "The Road from the Sea." A. P. Ryder, with a stable interior, with horses, shows a more intimate knowledge of the process of obtaining so-called "tone" by rubbing down crude color with brown paint and varnish, than of the principles of form and proportion. A small genre by C. X. Harris, "Surprised," shows an astonishing perfection of finish in painting details, but is hard in modelling and disagreeable in color. Two pictures of Indian life by George De F. Brush, "Hunting the Night Heron," and "Plumage Hunting," are not wanting in picturesqueness of subject, but are dryly painted, and marked by an unwonted carelessness of drawing. It is to be regretted that one wall of the first gallery should be monopolized by the colossal "Jesus of Nazareth," which has already been exhibited at the Metropolitan Museum. Visitors to such a good exhibition as the one at the American Art Association might be spared the disagreeable sensation of meeting this wax-figure atrocity every time they go in or out. Besides, it is decidedly out of place in an exhibition of works of art.

The Nation.

NEW YORK, THURSDAY, DECEMBER 23, 1886.

The Week.

THE Senate has done well in passing the bill to repeal the Tenure-of-Office Act. The House will of course concur, and the act will soon disappear from the statute book. Its passage in Andrew Johnson's time was only justifiable as a sort of "military necessity," and it ought to have been repealed long ago. The whole drift of public opinion in recent years is towards centring responsibility upon the Executive, and freedom to remove a subordinate is an essential part of such responsibility.

The artlessness of Senator Aldrich's proposition respecting the disposition to be made of the sugar duties is its most impressive feature. The proposition is that the President be requested to enter into negotiations with various sugar producing countries, with a view to reciprocal trade on the basis of our admitting sugar free of duty and their admitting American manufactures free of duty. The naïveté of this plan is two-fold. It presumes, in the first place, that the sugar-producing countries (Spain, for example) do not understand the exigencies of American finance which are driving the protectionists on to the reduction or repeal of the sugar duties willy-nilly. It presumes, also, that the Louisiana planters will allow the tariff on a Southern product to be used as a makeweight to secure advantages in foreign markets for Northern products. Now the Spaniards are not exactly fools. They know that they have only to wait a short time until our 3 per cent. bonds are actually paid off, in order to secure without reciprocity all that Mr. Aldrich offers them with reciprocity. The Louisiana planters are not only not fools, but they are alert and active. They might submit to a repeal of the sugar duties pure and simple, on the score of overruling necessity, but if such a measure should come to them coupled with a plan to secure further protection for manufacturers by means of a bargain with foreign sugar-producers, they would "make Rome howl." It should be added that Mr. Aldrich himself is not a fool. He must be aware that his plan has no chance whatever of being carried into effect. He intends probably to bring the sugar duties up for general debate. To this there can be no objection.

The House Committee on Territories has amended the Senate bill which provides for the admission of Washington Territory as a State, by adding a section to admit Montana as a State. It is to be hoped that the Senate will not concur. Montana is not fit to become a State. In 1880 it had a population of only 39,159, of whom 1,663 were Indians and 1,765 Chinese, and it cast 14,170 votes. In 1886 it cast 32,262 votes, which, on the same ratio of votes to population, would give it about 90,000 people now. It is claimed in the Territory that the population is 110,000, but even that total would not justify Congress in giving such a frontier community a Congressman, two Senators, and three votes in the Electoral College, which might turn the scales in a Presidential election. The House joins Montana to Washington because the former has usually gone Democratic and the latter Republican, and for the same reason the Senate may doubtless be trusted to refuse its consent. Partisanship, of course, ought to have no place in such matters, but it always does, and sometimes when the two branches of Congress are of opposite politics it serves the public interest, as promises to be the case with Montana.

The politicians who some time ago divided among themselves the Senatorships, Governorship, and other snug offices of the proposed State of South Dakota are growing impatient at the refusal of Congress to do its share toward carrying through their scheme, and they now talk of setting their State running without waiting for the sanction of the Federal Government. The Constitutional Convention met at Huron on Wednesday last, and adopted an ordinance rescinding that section of the Constitution which forbids action as a State until after admission to the Union, and adopted resolutions proposing that if Congress does not meanwhile make South Dakota a State, it shall become a State without Congressional sanction a year hence. Nothing could do more to convince the country that the division scheme is a political dodge than the adoption of such a programme as this. These politicians and their Eastern sympathizers make a great ado about the hardship to which the people of Dakota are subjected, because Congress will not admit the lower half of the Territory as a State. The hardship can be ended whenever these politicians will consent to the essential preliminary to the constitution of any State—that is, a declaration by the people at a popular election on the fundamental question whether they want to come into the Union as one State or two. Evidence multiplies as time passes that a majority of the voters favor having only a single State, and the refusal of the South Dakota politicians to allow an election upon the question strengthens this impression. Such a thing was never heard of as the admission of a State without an election which showed that the people of the Territory favored the scheme of the proposed State, and the House of Representatives would fail in its duty if it should permit Dakota to be split in two without the evidence of a popular vote that the people of Dakota favor the division.

We invite the attention of all occupants of "Chairs of Journalism" to the extremely able way in which the Cincinnati *Commercial Gazette* has got out of its awkward mistake about a recent appointment. We have seen nothing so perfect in this branch of journalism for a long time. The editor was in a very trying position. He had charged that T. S. Dabney, recently appointed an examiner in the Pension Bureau, had been a Confederate guard in Andersonville prison during the war, and he had published the charge under a long series of bloody-shirt headlines, among which were: "Cleveland's Insults—To the Heroic Veterans of the Union Army—Horrors of the Rebellion Reviewed.' He had followed this up for several days with columns of "Glimpses of Life in the Prison Pen," had begun to talk about a mass-meeting of indignant citizens to protest against the outrage, and had finally capped the climax with a whole page of illustrations of Andersonville prison, "where so many Union prisoners were tortured and where hundreds were virtually murdered." The day before the illustrations appeared, the discovery was announced that the paper had got hold of the wrong Dabney, and that the one who had received the appointment was only eleven years old when the war broke out; but the editor did not suppress his pictures on that account. He published them on Sunday. Then on Wednesday he put forth the following explanation, which we unhesitatingly pronounce a journalistic masterpiece:

> "T. S. Dabney, Medical Examiner, doesn't seem to be the man the soldiers who survived the horrors of Andersonville took him for. He says:
>
> "'I never was enlisted in any army; that I never was at Andersonville in my life; that I never served as a guard anywhere; that I never fired a gun at any person in my life.'
>
> "It is pleasing to learn that Dr. Dabney is a man of peace. The statement that he corrects has at least given the country at large the opportunity to know what the survivors of the prison-pens think of the Andersonville administration."

Now observe carefully the artistic perfection of that statement. In the opening sentence the editor slyly slips the whole responsibility for the blunder from his own shoulders to those of the "soldiers who survived the horrors of Andersonville." This lets him out and at the same time keeps the horrors before the reader's eye. Then he eludes the whole series of point-blank denials in Dr. Dabney's communication by expressing his delight at learning that he is a man of peace, as if this had been a matter of real doubt. Then he closes the subject with another skilful allusion to the horrors as being, after all, a fine subject for public contemplation. Not for a moment does he yield to any weak promptings to apologize either to his readers, or to the President, or to Dr. Dabney, which a less experienced journalist might succumb to. That would be very "unjournalistic," and would betray the hand of a novice at once. There is, in fact, in this brief quotation from the *Commercial Gazette* ample material for an entire lecture on journalism, and the student who should master the whole art of it would possess everything that a "Chair of Journalism" would be able to teach him.

In his Pennsylvania speeches about the condition of negro laborers at the South, Mr. Blaine, who has never been in the South since he taught school in Kentucky, alleged that they lived in "huts" which cost only $9 apiece. Congressman Kelley of Pennsylvania, who has been making an investigation, contributes this interesting statement of facts bearing upon the point in question: "Mr. Perry of Albany has bought ten acres

at South Pittsburgh, Ala., upon which to erect stove works, and twenty upon which to set up dwellings for his operatives. He brought with him the plans for both shops and houses. After he had seen the quarters occupied by operatives already employed [negroes], he decided that his own plans would have to be revised in order to bring them up to the standard reached by his predecessors, and they were accordingly changed for the better." It is plainly high time for Mr. Blaine to declare that the stenographers misreported him.

In every way the verdict against McQuade is most encouraging. The jury agreed at once, without argument or discussion, and many of them have said, since they were dismissed, that their minds were made up before either the arguments of the counsel or the Recorder's charge had been made. They were convinced by the evidence. This was due to the admirable way in which the case against McQuade was presented, and for this Mr. Delancey Nicoll, the Assistant District Attorney, is entitled to the chief praise. In fact, the conviction is the result of his intelligent and persevering labors extending over many months, for he has had charge of all the Aldermanic cases, and has secured all the evidence which has been collected. McQuade's conviction must inevitably be followed by that of the three other members of the original thirteen in the "combine" who are within the jurisdiction of the courts, namely, Reilly, Cleary, and O'Neil. Two others, McLoughlin and Kenney, are dead, Dempsey, De Lacy, and Sayles are in Canada, McCabe is insane, Duffy and Fullgraff have turned State's evidence, and Jaehne is in prison.

Jacob Sharp's reasons for asking to have his trial take place elsewhere than in this city amount simply to an elaborate plea to be taken to some place where he is not so well known. In other words, he is anxious to get away from his own reputation. He says the newspapers all call him "Jake," and all take it for granted that he is guilty of bribery. This, then, is the reputation which he has built up for himself in this community after a long and active life. So strong is the feeling about him, he says, that as soon as he becomes interested in any project it is at once spoken of as "Jake Sharp's" measure, and nobody else connected with it gets any credit or discredit. He thinks the newspapers are responsible for this, but we are inclined to think that he gives them too much credit. In the Broadway Railway matter, for example, the best of reasons were given in his testimony before the Senate Investigating Committee for calling it Jake Sharp's road. He made a bargain with himself to build the road; he took 9,520 of the 10,000 shares of stock; he took the entire issue of $2,500,000 worth of bonds; he bought out the old stage lines, and paid, out of the treasury of the Seventh Avenue Railway Company, the expenses of building the road. If these things did not constitute the road Jake Sharp's road, what could have made it so? He took everything except 480 shares of stock, and those were used by him to pay some of the road's bills.

Commenting upon Mr. Fishback's statements concerning the use of money in elections in Indiana, the Trenton *State Gazette*, one of the most devoted Republican organs of New Jersey, makes this remarkable home confession:

"In the election in this State last fall the corruption fund was larger than usual, on account of the important positions of Governor and United States Senator, and especially the latter, being involved. The funds raised by the party managers were so large as entirely to exhaust the banks in this city, and most likely in several other towns in the State, of all their small bills. We would not like to say how many thousand dollars were used by the two parties in Mercer County alone. We have too much respect for the reputation of the capital and for the State. In some counties in New Jersey the corruption fund was practically limitless, its employment being limited only by the supply of purchasable material. We do not pretend that one party is any less guilty than the other. If one party used less money than the other, it was because its resources were smaller, and not because its virtue was greater."

The *Gazette* thinks that money is used with similar freedom in nearly every State in the Union, and probably it is in all the States where the result is in any way doubtful. And what has been the chief cause of this new force in politics? Why, simply the wealth of the Republican party and its enormous campaign funds, made up of assessments upon office-holders and levies upon the great protected manufacturers. The Republican managers have raised these funds during the past ten or twelve years to maintain their hold upon States which were slipping away from them. The usual name for this is "redeeming" a State. In order to prevent this redeeming, the Democrats have raised large counter funds, and so it has gone on from bad to worse.

The treatment in the press of the doings of Mike Cregan and his "captains" at the late election, in so far as they have been noticed at all, has generally been humorous. This is natural enough, for they are very funny. The "captains" appear to be taken from the very dregs of the city population, and appear to make affidavits on both sides with perfect impartiality. One has testified that Mike employed him on election day to distribute ballots, because he helped him to control the primaries by supplying fraudulent votes. Two at least accuse him of cheating them in paying them for their services at the polls. Bad as Mike is himself, the "captains" appear a trifle worse. In fact, they belong to a class that few people would intrust with the carriage of a parcel as far as the next block. There is, however, a very serious side to the matter, which we trust the friends of reform, who are preparing for the Constitutional Convention, will not overlook. What the misdeeds of Mike and the other Boys bring out clearly is that, after a candidate has received a party nomination in this city, he has actually to make a contract with a band of men of the lowest character, to deliver to him the party vote for a fixed sum of money or other valuable consideration. Now, this is certainly not a laughing matter. It would be a very shocking and disgraceful thing, even if he were sure to get the vote in this way. But it is made more shocking and disgraceful by the fact that even after he has paid his money, he is not at all sure of getting what he bargained for, and that he is almost certain to be cheated if it is discovered that something may be made by cheating him in addition to what he himself has paid. This is, indeed, corruption worse corrupted. What it amounts to is, that we actually allow a band of men hardly one degree above the class of professional criminals to deal in our votes, as they might deal in pork or flour, and not only deal in them, but retail or peddle them. Mike, for instance, sold some Republican votes to Rice and some to Spinola, and had there been any other candidates in the field willing to pay for them, he would have let them also have a few.

At the bottom of all this shame and scandal is the failure of the State to take charge of the ballots. The result of leaving the parties to supply them through their own agents at the polls, is that they are actually peddled by criminals, who use them to defraud both the candidates and the voters. The remedy is to have the ballots furnished by the State—every ticket in the field to every voter, who, if he blunders or is deceived after he gets them into his hands, will have only himself to blame. This and the provision of a paid officer to distribute them at the polling places, with some precautions to secure secrecy, would be all that is necessary to break up the nefarious business now carried on by the Republican and other Boys. The evil has reached such proportions that exposures of it now make people laugh, but men who care for their country or its institutions feel it to be no laughing matter.

The recent flurry in Wall Street is rightly ascribed to the extravagant and senseless speculation in the "fancies" of the Stock Exchange—*i. e.*, in stocks which do not pay dividends, and about which there is so great a cloud of mystery that the imagination may easily run riot respecting their internal composition. Such are Reading, Richmond Terminal, New York and New England, and a lot of new-fledged coal companies with which the Street has been greatly impressed, because it knew nothing about them except their names. Reading may be taken as a type of the lot. It may possibly be a very good property. It may be worth much more than it is selling for. But how is the investor to know? It consists of a main line and branches "owned," 327 miles; then 48 branch lines leased or controlled, 1,255 miles; two canals leased, with steam colliers and coal barges, together with a Coal and Iron Company of portentous magnitude. It has sterling loans, and dollar loans, general mortgages, consolidated mortgages, improvement mortgages, real-estate mortgages, debenture loans and debenture convertible loans, adjustment scrip and plain scrip, income mortgage bonds and deferred income bonds, unfunded coupons, car-trust certificates, receiver's certificates, preferred stock and common stock, the whole amounting to upwards of $150,000,000. Now, this gigantic tangle it is impossible for anybody to see through except, perhaps, a few veterans who have given their entire lives to the study, like that small band of astronomers who give their lives to the task of mapping the paths of the asteroids. The investor in Reading is as helpless as the buyer of

a lottery ticket, and the "points" he gets from those whom he believes to be well informed are as valueless as the divinations of a gypsy over a pack of cards, because the "pointer" is usually no better informed than the pointee. Now, if this is true in regard to Reading, a property almost within sight of the high buildings in Wall Street, and one which has long been on the Stock Exchange list and frequently reported on, what must be said of the new and distant "fancies" which have been boomed so industriously during the past few weeks?

Our esteemed contemporary the *Financial Chronicle* has misconceived our meaning as to one branch of the silver controversy. We said that "prices, values, and wages have, since the German demonetization, become adjusted to the gold *standard*." The *Chronicle* construes this to mean that prices, values, and wages have adjusted themselves to an absolute disuse of silver as a circulating medium. The latter is a very different condition of things, and, we may add, a wholly imaginary condition. We conceive that prices, wages, and values have adjusted themselves to the gold *standard* in every country where gold is the standard. And this we conceive to be an axiom as true as that the atmosphere has adjusted itself to the temperature indicated by the thermometer. Now, the establishment of the gold standard does not imply or necessitate the disuse of silver thalers in Germany, or of silver five-franc pieces in France and the other countries of the Latin Union. It merely confines those coins to the countries where they respectively belong. They have ceased to have an international circulation. What would result from their total suppression? Undoubtedly the price of silver would fall when the disused metal should come upon the market for sale. It does not follow that the prices of other things would fall, or that wages would fall. Since the German demonetization we have had three periods of marked change in general prices: first, a decline from 1873 to 1879, then an advance from 1879 to 1882, then a decline from 1882 to the beginning of the present year, since when the indications have been those of rising rather than of falling prices. There have been no changes in the use or disuse of silver by mankind corresponding with these fluctuations in general prices—nothing by which the one can be connected with the other or referred to it in any possible way, except perhaps in the first-named period. We adhere to our proposition that prices, wages, and values *are* adjusted to the gold standard in the commercial world, and that if there is to be a fresh disturbance growing out of currency changes, the onus of proving that it would be beneficial rests upon those who advocate bimetallism.

The *Independent* contains an answer to our recent article on "Religious Statistics," which has a lamentable resemblance to all such articles in religious periodicals. It says simply that it does not believe our assertions, and does not agree with our opinions. But our contemporary must see that even the lower animals can do as well as this in discussion—that is, they can express simple dissent and dissatisfaction by bellowing or growling. An editor ought to be able to do better—that is, give articulate reasons for dissent and dissatisfaction—so that his opponent may have a chance to reply, according to the human custom.

If the syndicate or company of capitalists who have bought the Madison Square property will include in their proposed building a fine music hall, they will supply a want which has long been felt. We have no hall suitable for large concerts, either orchestral or choral, and none large enough to make popular concerts, with a low admission fee, profitable. All the more important concerts at present are given in the Metropolitan Opera-house, which, whatever else may be said of its merits, is a very poor concert hall. A large hall, capable of seating at least 5,000 people comfortably, and arranged on the most approved modern plans, would be a most desirable acquisition. Such a hall would be very useful for other purposes than concerts. We have now no place except the cellar of Cooper Institute in which to hold large public meetings, and there are enough of these in every campaign or time of popular excitement to furnish a considerable income.

The recent failure of ex-Mayor Martin of Boston shows what happens when the Knights of Labor are allowed to have their own way with a business. Mr. Martin is a man of the highest character, and a shoe manufacturer of long experience. He has made an assignment, and he shows from his books that the result is due to the fact that for three years he has had practically no control of his business. A year ago, when trade was dull and there was no market for the goods, he tried to induce his employees to accept a necessary 10 per cent. reduction, but they refused; last spring, when he had made a contract to deliver a large order in the West, the operatives demanded an advance, which he was compelled to grant, although by so doing he lost heavily on the order. These are only samples of the way things have gone "since the employees assumed control of the boot and shoe manufacturing of New England." Mr. Martin says that he has a fine set of operatives, and that there would never have been any trouble but for the interference of outsiders who make a living by stirring up strife between employers and employed. He thinks that this bad system will soon be broken up, because the men will see that they are ruining their own interests; and the growing signs of disintegration among the Knights support his theory.

The Campbell divorce case in London has at last ended, both sides having failed in their suits, and having each to pay a bill of costs which will probably be ruinous. Lady Colin Campbell's father is an Irish landlord, and, like most of his class, just now poor. The Duke of Argyll has always been poor for a duke, and his bill will be the larger, amounting, according to one story, to about $175,000. Lord Colin has come off worst, in reputation, having been very roughly handled by the Judge in his charge. The evidence was shockingly indecent, indeed, unprecedentedly so, it is said; but several London newspapers printed it verbatim, and the resulting "sales" were enormous. The moral and religious public has been so much shocked by this that legislation is talked of to restrain this sort of reporting.

Our newspapers did not do as well by the scandal as they did by some former ones, such as the Stead filthiness or the Dilke case. The *World* started off with pretty full reports, but was dazed and discouraged by a letter of great filthiness, which the *Tribune* obtained exclusively, and copyrighted. After that the *Herald* had almost undisturbed possession of whatever nastiness there was, and must have profited by it. One cause of this reserve was probably the approach of the close of the year, when subscriptions have to be renewed, and the prejudices of people who can afford to pay for their paper in advance by the year, have to be consulted. In fact, if we may judge from the prospectuses, there is a good time coming now in journalism. The *Tribune* says:

"The *Tribune*, while complete with respect to all the general news of the day, and the special features which characterize a useful newspaper, has also this distinct feature: it has never lowered its tone and opened its columns to crime and coarseness, although it could at any time gain a large increase of circulation by doing so. It gives the news; but it seeks for and reports with especial fulness those higher matters which are of keen interest to people of thoughtful occupations and earnest purposes in life. The *Tribune* is preëminently the newspaper which CAN BE TAKEN AT HOME."

The *Times* promises hereafter an equally blameless career:

"The *Times* is a newspaper for intelligent men and women. It concerns itself as little as possible with the froth or the dregs of life, and aims to give its readers something more attractive and profitable than a daily chronicle of human follies and frailties. The really important, wholesome, and interesting news of the day is presented with unsurpassed completeness and accuracy by the *Times*."

With these two journals reserving themselves for the "really important" news of the day, avoiding "the froth or the dregs of life," and eschewing coarseness and blackguardism of every description, "the people of thoughtful occupations and earnest purposes in life" will, in this city, have what the *Tribune* might call "a real nice time" in 1887.

The full reports of the Campbell trial given by the London dailies provoke the *Spectator* to an earnest protest against "great cases," which it says are becoming great public nuisances and ought to be stamped out. It points out that through such publications "a people who shriek at immodest literature, and are honestly revolted by French novels, become familiar with dramas beside which Zola's are comparatively clean, and writings like 'Ouida's' models of good taste" But English newspaper readers are much better off than American, for, as the *Spectator* says, in England "the journalists do not report, and the public will not read about Smith, Brown, and Robinson and their womenkind, their quarrellings, their sufferings, or their intrigues," but the people concerned must be high in the social scale. In this country nobody is too low to have his quarrels, sufferings, or intrigues set forth at length; and the papers teem with "spicy" reports of the elopements of bartenders and servant-girls, the scandals of unknown families, and the divorce suits of people whom nobody ever heard of.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 15, to TUESDAY, December 21, 1886, inclusive.]

DOMESTIC.

THE President on Monday nominated W. A. Walker to succeed A. K. Delaney, Gen. Bragg's rival, as United States District Attorney for the Wisconsin Eastern District. He also again sent to the Senate the nomination of James C. Matthews (colored) to be Recorder of Deeds for the District of Columbia.

The Senate on Wednesday laid on the table the Platt resolution for open executive sessions by 33 to 21.

The Conference report on the Inter-State Commerce Bill was made to the Senate on Wednesday afternoon. Senator Cullom says that he anticipates very determined opposition to the bill in the Senate.

The House bill to extend the free-delivery system of the Post-office Department (passed by the House on December 9) was passed by the Senate on Friday. It provides that letter carriers shall be employed for free delivery at every incorporated city, village, or borough containing a population of 50,000 within its corporate limits, and may be so employed at every place containing a population of not less than 10,000 within its corporate limits, according to the last general census, or at any post-office which produced a gross revenue for the preceding fiscal year of not less than $10,000. The bill to repeal the Tenure-of-Office Act was passed on Friday—30 to 22.

Mr. Aldrich (Rep., R. I.) introduced in the Senate on Friday a bill to provide for the reduction of interest on the bonded debt of the United States. Referred. It authorizes the Secretary of the Treasury to receive 4 and 4½ per cent. bonds, and to issue in exchange for them 2½ per cent. bonds, payable in 1907; but not to be subject to be called in and paid so long as other higher-interest bonds are outstanding; the 2½ per cent. bonds to be available as deposits for bank circulation.

On Friday the Senate passed a trade-dollar bill providing that until July 1, 1887, United States trade dollars, if not defaced, mutilated, or stamped, shall be received at the office of the Treasurer or any assistant treasurer of the United States, in exchange for a like amount, dollar for dollar, of standard silver dollars of the United States, and that at the expense of the United States they shall be transmitted to the coinage mints, and shall be regarded and treated as silver bullion, and, at their bullion value, shall be deducted from the amount of bullion required to be purchased and coined by the act of Feb. 8, 1878, and shall be recoined into standard silver dollars, according to the provisions of said act; provided that the amount to be so deducted as provided in this section shall not exceed $500,000 in any month.

The Senate bill for the allotment of lands in severalty to Indians was passed by the House on Thursday, with amendments recommended by the Committee on Indian Affairs. It provides for the allotment of reservation lands in severalty to the Indians located thereon, on their application, in quantities as follows: To each head of a family, one-quarter of a section; to each single person over eighteen years of age, one-eighth of a section; to each orphan child under eighteen years, one-eighth of a section; to each other person under eighteen years, one-sixteenth of a section. If there is not sufficient land on the reservation to allot to each individual the quantity as provided, then the land shall be allotted to each individual pro rata. The bill prohibits for the period of twenty-five years the conveyance of any such allotted land; makes the allottees subject to State and Territorial law, and prohibits any Territory from passing any law denying to any such Indian within its jurisdiction the equal protection of the law. The rights and privileges of citizenship are conferred upon every Indian born within the territorial limits of the United States, to whom allotments have been made, and upon every Indian who has voluntarily taken up his residence apart from any tribe of Indians and adopted the habits of civilized life. The bill does not apply to the civilized tribes in the Indian Territory, to the Seneca Nation of New York, nor to the strip of Nebraska adjoining the Sioux Nation.

The Senate on Tuesday passed the following bills: A bill to fix the charges for passports at $1; the House bill making appropriations to supply the deficiencies for the public printing, with an amendment requiring the money to be expended ratably; appointing James B. Angell of Michigan member of the Board of Regents of the Smithsonian Institution.

Mr. Morrison (Dem., Ill.) moved on Saturday that the House resolve itself into a Committee of the Whole to consider revenue bills. The following Democrats voted in the negative: Messrs. Bliss, Boyle, Campbell of Ohio, Curtin, Ermentrout, Foran, Gay, Geddes, Green of New Jersey, Irion, Lawler, LeFevre, Martin, McAdoo, Merriman, Muller, Randall, Seney, Sowden, Spriggs, Stahlnecker, St. Martin, Wallace, Ward of Illinois, Warner of Ohio, and Wilkins. The following Republicans voted in the affirmative: Hayden, Nelson, Stone of Massachusetts, Strait, Wakefield, and White of Minnesota. There were some changes in the record of June 18 last, when the vote was 140 to 157. Stone and Hayden of Massachusetts, who voted against consideration last June, voted with the Democrats for consideration. James of New York, on the other hand, who voted to consider in June, voted against consideration. The Minnesota Republicans voted for consideration, except Gilfillan. Viele and Tim Campbell of New York, who voted with Randall last year, changed their vote on Saturday. The Louisiana men present voted against consideration. Findlay of Maryland, who voted against consideration in June, voted for consideration on Saturday.

There is such a demand for tariff legislation that it is probable that new attempts to reduce the surplus will be made after the holidays. Conferences are to be held during the recess by the representatives of both sides of the question, and some new plan is expected in January. One of the plans under consideration for a reduction of the surplus is to present a measure providing for the abolition of the tax on domestic tobacco, so far as the grower is concerned, without reference to the manufacturers, a rebate for alcoholic spirits used in the arts and manufacture, and a reduction of the duty on sugar. The promoters of this scheme claim that they can command from 160 to 170 votes for such a proposition. To an almost solid Republican vote they count upon additions from Virginia, West Virginia, Georgia, Alabama, and Tennessee.

Congress will adjourn from December 22 to January 4.

The two houses of Congress are making preparations for the holiday recess. The consideration of the Funding Bill was postponed in the Senate on Monday till after New Year's. The Inter-State Commerce Bill will also be postponed. Senator Aldrich of Rhode Island on Monday introduced a resolution which will secure strong support, and which has in view at least partial reciprocity with many countries, and would effect a very considerable reduction of the surplus. It requests the President to enter into correspondence with sugar-producing countries, with a view to abolishing the duty on sugar from those countries which in turn will admit American manufactures. The House on Monday, by a vote of 75 to 255, refused to suspend the rules and pass a bill which practically increases the rate of duty on Sumatra tobacco.

Acting Secretary Fairchild has accepted the offer of the Nashville, Chattanooga and St. Louis Railroad Company to pay the sum of $153,600 in compromise of the claim of the United States, now in suit against that company in the middle district of Tennessee, founded on certain matured and unpaid interest coupons of bonds issued by the company and held by the United States.

A movement for an organization of anti-Gorman Democrats was begun in Maryland on Thursday.

At the annual meeting of the New Haven Civil-Service Reform Association on Friday night the Executive Committee's report was adopted. It praised Postmaster English's administration of the local Post office according to the Civil-Service Law. President Cleveland's utterances, it says, have been clear and emphatic, and, quoting his message and circular to office-holders, it says: "It is greatly to be regretted that the author of such ringing phrases should have permitted the exigencies of party to lead him to actions such as to almost justify the conclusion, that official activity becomes pernicious when directed against the Democratic party only."

The Ohio Supreme Court on Thursday rendered a decision sustaining the constitutionality of the Dow Liquor Tax Law in all its features, including tax and lien provisions.

A decision of the New York Court of Appeals was handed down on Friday morning affirming the order of the General Term of the Supreme Court in the matter of the petition of the New York Cable Railway Company. The General Term had denied the motion of the Cable Company to confirm a report of Commissioners, under which it was allowed to build about seventy miles of railway in the streets of this city. The present decision, therefore, puts an end to all cable schemes for the present in New York city.

The trial of ex-Alderman McQuade of this city was concluded on Wednesday evening with a verdict of guilty. The jury arrived at that result on the first ballot. On Monday McQuade was sentenced to seven years in State's Prison and to pay a fine of $5,000.

Albert Stickney, the attorney for Jacob Sharp in the criminal proceedings against him for bribery in connection with the Broadway Railroad franchise, served on District-Attorney Martine on Monday notice of motion for the removal of the case against Sharp from the Court of General Sessions to the Court of Oyer and Terminer, and then from the Oyer and Terminer of this county to the Oyer and Terminer of another county, on the ground that he cannot have a fair and impartial trial in this city.

There was a flurry on Wednesday in Wall Street and one failure. Prices, however, rallied on Thursday.

An appeal for Walt Whitman has been circulated in England and Scotland asserting that he is in want of the necessities of life. The aged poet says he is comfortable, thanks to his friends, but will not decline any gift that may be given him.

Marshall P. Wilder died in Roxbury, Mass., on Thursday morning at the age of eighty-six. Mr. Wilder had for many years been one of the most prominent men in the city, besides having a wide reputation as one of the foremost pomologists and horticulturists of the country. He was President of the American Pomological Society, and was making active preparations for a meeting of that society in Boston in 1887 at the time of his death. He was also prominent in politics.

James D. Warren, editor of the Buffalo *Commercial Advertiser*, died at his home in Buffalo on Friday evening. He was born in Bennington, Wyoming County, N. Y., January 19, 1823. Mr. Warren was an active and influential Republican politician of the Stalwart type. He was one of the 306 who voted for Grant at the Chicago Convention of 1880. In 1884 he urged the nomination of Arthur,

but, as Chairman of the New York State Committee, did vigorous work for Blaine during the campaign. He was opposed to the disastrous Delmonico dinner and ministers' meeting.

Ex-Gov. Frederick W. Pitkin of Colorado died in Pueblo of consumption on Saturday, at the age of forty-nine. He was a direct descendant of an early Governor of Connecticut.

Henry G. Kingsley, Treasurer of Yale College, died in New Haven on Sunday, at the age of seventy-one. He was gradua ed from Yale in 1836.

FOREIGN.

An immense Nationalist demonstration was held at Loughrea, County Galway, Ireland, on Thursday. Father Cunningham presided, and a number of other clergymen and Messrs. Dillon, O'Brien, Harris, and Sheehy were on the platform. A large contingent of Lord Clanricarde's tenants were present. Messrs. Dillon and O'Brien addressed the meeting, and then opened Nationalist rent offices. Hundreds of tenants came forward and paid their rents. Suddenly the police raided the offices. Inspector Davies seized money, documents, and books, and arrested Mr. Dillon. Mr. Dillon struggled with the Inspector for possession of the money. The police proceeded up stairs and took possession of more money and documents. They then arrested Mr. O'Brien, editor of *United Ireland*, and afterwards Matthew Harris, M. P. for East Galway, and David Sheehy, M. P. for South Galway. The specific charge against the four gentlemen is that they were conspiring to induce the tenants not to pay their lawful rents. They gave bail in £200 each. The police have been instructed to pursue a similar course in the case of other Nationalist rent collectors. The National League leaders have decided to continue their present tactics. Commenting on these arrests, the London *Daily News* says: "We regret that the Irish Nationalists meditate open defiance of the law. We emphatically state that English Liberals can have nothing whatever to do with out rage, dishonesty, or resistance to the law."

The arrests caused great excitement in London and in Ireland. The *Standard* said: "The arrests at Loughrea mark the beginning of a death struggle between the League and the law. The Nationalists imagine that Sir Michael Hicks-Beach will shrink from filling the prisons with Irish priests and commoners. It is the duty of the Ministers to show these crafty schemers that they have miscalculated their strength."

The British Government has decided to proceed against all concerned in the plan of campaign on a charge of conspiracy. Mr. William O'Brien, who was in Dublin on Saturday, received a summons similar to the one served on him at Loughrea, to appear and answer to another charge of "conspiracy to defraud." The alleged conspiracy to defraud consists in accepting as trustees for tenants the reduced rents refused by the landlords. Similar summonses have been served on William Redmond and other Parnellites.

The court at Dublin on Tuesday refused Mr. John Dillon's application for a stay of the order against him to furnish bonds in the sum of £1,000, with sureties in the sum of £1,000 each, for future good behavior, pending the outcome of an appeal from the sentence. Mr. John Dillon said he would continue to carry out the plan of campaign in defiance of the Government. "Nobody," he said, "has a right to say the plan of campaign is illegal until a jury has decided on the facts." Mr. Dillon also said the leaders in this new movement desire to benefit the tenants in Ireland without the assistance of the moonlighters.

In a recent interview Mr. Goschen, now recognized, after Lord Hartington, as the leader of the Liberal Unionists, expressed great satisfaction with the determined stand taken by the Government against the plan of campaign in Ireland, to which Mr. Parnell has not yet given any open adhesion.

Mr. Parnell will soon go to Ireland to investigate the plan of campaign. He declares that he was not aware that the plan of cam paign had been proposed until it had been published. The London *Standard* interprets Mr. Parnell's "sudden" appearance in London as showing an intention on his part to make a virtue of necessity by refusing to sanction the continuance of the campaign. "The Parnellite leaders," it says, "are not likely to support Mr. William O'Brien's hint to let loose the energies of crime." Mr. Joseph Richard Cox, Mr. Jeremiah Jordan, and Mr. Joseph Edward Kenney, Parnellite members for East and West Clare and South Cork, respectively, succeeded on Sunday in totally hoodwinking the police, and in collecting and escaping with all the rents due from tenants on the Vandeleur estates in County Clare.

At the regular fortnightly meeting of the Executive Committee of the Irish National League in Dublin on Tuesday, it was announced that since the last meeting there had been received in donations from Ireland $2,700, and from America $25,000.

Father Fahy, the priest who early in September was sentenced to six months' imprisonment for refusing to give bail for good behavior, was on Monday released unconditionally from the Galway Jail.

The farmers in the north of Wales are resisting the collection of the church tithes. In one section of the country the farmers expelled the collecting bailiffs from the farms and escorted them out of the district. It is feared that the movement on the part of the Welshmen may lead to serious results.

The jury in the Lord Colin Campbell case returned a verdict on Monday night. They found that Lord Colin Campbell had not committed adultery, and that Lady Colin had not committed adultery with any of the co-respondents. The juror added a rider that the conduct of Gen. Butler was unworthy of a gentleman and an officer, and had caused the only difficulty which the jury experienced in reaching a decision. The Judge granted Lady Colin £150 costs in her suit against her husband, and the full costs of her defence against her husband's suit. He also granted full costs to the Duke of Marlborough, Chief Shaw, and Dr. Bird, co-respondents in Lord Colin's suit against his wife. Gen. Butler, another co respondent, did not apply for costs.

In the appeal of James Gordon Bennett against the decision awarding Cyrus W. Field £5,000 damages for statements derogatory to the latter published in the New York *Herald*, the British Court of Appeals on Wednesday quashed the verdict against Mr. Bennett. The present decision takes the ground that Mr. Bennett, not being a British subject nor a resident of Great Britain, the substituted service on him in London upon which the verdict was obtained was illegal. The court condemns Mr. Field to pay the costs.

Robert Hogarth Patterson, a distinguished British writer, is dead at the age of sixty-five. His work, 'The New Revolution, or the Napoleonic Policy in Europe' (1860), attracted much attention, as some of its prophecies were soon fulfilled. Among his other works are 'Essays in History and Art,' 'The Economy of Capital,' 'The Science of Finance,' 'The State of the Poor and the Country.'

The London *Post* of Monday morning, in an inspired article, warns Turkey against further coquetting with Russia. The British Government, it says, has undergone great sacrifices to uphold the integrity of Turkey, even against the opinion of a large portion of the English people. Any hesitation on the part of Turkey will now compel England to adopt a course to counteract Russia's threats, by measures that will speedily impress the Porte with the fact that her present doubtful policy is the worst for her real interests.

The *Journal de St.-Pétersbourg* says that Russia's refusal to accept the candidacy of Prince Ferdinand of Saxe-Coburg-Gotha for the Bulgarian throne is not due to personal objections, the Prince enjoying general esteem at St. Petersburg.

Count Herbert Bismarck, Under-Secretary of State for Foreign Affairs, at the reception of the Bulgarian deputation in Berlin on Sunday, advised the Bulgarians to reach an understanding with Russia. It is said that the deputation are satisfied with their interview.

The sitting of the Commission on the German Military Bill on Thursday was an exciting one, and the Government's plans were materially modified. The Commission finally voted in favor of 450,000 men for three years, instead of 438,400 for seven years, as propo.ed by the bill. The result was due to a coalition. The majority consisted of 5 Progressists, 2 Socialists, 8 Centrists, and 1 Pole, and the minority of 4 National Liberals, 6 Conservatives, and 2 Free Conservatives. The Commission have concluded the debate on the first reading of the measure. Gen. von Schellendorff declared that it was impossible to accept the bill as modified by the Commission. An adjournment was taken, probably till after the holidays. The belief is general that the Reichstag will soon be dissolved.

The German Reichstag Military Commission, by a majority of 12, has exempted clergymen from military service.

Germany has annexed several of the Solomon Islands, in conformity with an agreement with England.

Uneasiness is felt in Paris over the rapidity with which the Government is working to place the armament of France in the completest condition possible. The State manufactories of arms and ammunition are all being pushed to their utmost capacity. It is reported from Rome that Italy is arming. Advices from Berlin state that Germany is increasing her troops in Alsace-Lorraine.

The Hovas have paid the 400,000 francs war indemnity due France under the terms of the treaty of peace, and the evacuation of Tamatave by the French in consequence is imminent

Baron Charles Arthur Bourgeois, the French sculptor, is dead at the age of forty-eight.

In the Italian Chamber of Deputies on Thursday Signor Ricotti, Minister of War, declared that Italy was now in a position to mobilize and victual 400,000 troops, not counting the reserves. The work of providing the troops with repeating rifles had already begun, he said, and 1,000,000 of them would be in use by 1888. He believed that Italy would be well prepared in the event of an outbreak of hostilities.

The Italian Chamber of Deputies has approved an extra credit of $5,000,000 for the War and Marine Departments.

Signor Magliani, Minister of Finance, announced in the Italian Chamber of Deputies on Sunday that the budget of 1885–86 showed a deficit of $5,000,000. He hoped that in the budget for 1886–87 the receipts and expenditures would balance in spite of the increase in appropriations for the army and navy, and that the budget for 1887-88 would show a surplus of $400,000.

M. N. Droz, now Vice-President, has been elected President of Switzerland for 1887.

Dr. William Junker, the Russian explorer and companion of Emin Bey, who first brought to the outside world news of Emin's defence of the Egyptian provinces intrusted to his charge, telegraphs from Zanzibar to the *Herald*: "An expedition to rescue Emin most urgent. The routes are now practicable if a strong, thoroughly well-organized expedition is sent. Best thing would be a strong expedition under command of Stanley. There will be fighting. I shall reach Cairo January 8."

THE TREASURY SURPLUS.

THE vote taken on Saturday, by which the House of Representatives refused again to consider the Morrison Tariff Bill, may possibly close out the discussion for this session. If it were disconnected from the surplus question, we should say that it would be quite useless to try to bring it up again. But the circumstances of the Treasury are such as to require imperatively some action to stop the inflow of superfluous and unusable funds Considerable range of opinion may exist as to the proper method of reducing the surplus. It is even possible to reduce it to some extent without lowering the taxes. Mr. Dawes, for example, thought that something might be done in this way by increasing the duties on tin plates to a point which would stop, or seriously curtail, the importation of that article. Such a measure would reduce the surplus and increase the taxes so far as tin plates go. Other measures of like tendency are on foot, some at the Treasury Department, some in Congress. The wool-growers are trying again to get the duties on their product increased so as to compel the carpet-manufacturers to import and pay duty on a pound of dirt and grease with every pound of wool. The owners of iron mines are laboring with zeal and steadiness to compel the smelters to pay 75 cents per ton duty on the water absorbed by foreign ore when in transit to this country. Success in these endeavors would probably lead to diminished importations, and thus "reduce the surplus" somewhat. But no general scheme of adequate proportions has been brought forward by anybody, and, on a test vote whether the question shall be considered at all, the House has voted in the negative by a majority of six.

But by this vote the present Congress merely proclaims its own incompetency to deal with an unavoidable problem, and passes it over to the next one. The 3 per cent. bonds will not all be paid off till midsummer or later. The perplexities of outgoing members may be eased by pushing them over to their successors in office. Those who have been re-elected cannot shirk the task, although they may adjourn it for a few months. Failure to act now will inevitably bring on an extra session of the Fiftieth Congress. The President will have no option but to call one as soon as the members can be got together after the 4th of March. There is, however, one way of getting the subject again before the present House. Mr. Randall himself introduced a tariff bill last session. Assuming that he would vote to take up his own bill, it would be practicable in a parliamentary sense to amend it by repealing the sugar duties and striking out everything else. Probably Mr. Randall would prefer to repeal the tobacco tax, and he might be willing to sacrifice his tariff changes in order to accomplish that. We can perceive no other way to bring the subject again before the House, now that the Morrison bill has been refused consideration.

Since it is well to look at every side of the question, we may look at alternative measures if the Congress did nothing at all to reduce the surplus either at the present or the extra session. Mr. Hewitt has offered a bill which virtually proposes to anticipate the payment of all the interest on the 4 per cent. bonds in excess of 2½ per cent., the present value of the remainder (1½ per cent.) for twenty years being computed according to the tables of annuities and paid in advance. This would require something over $200,000,000, provided that all the holders of the 4 per cents would accept such payment in advance. The plan is economically sound. It has been mooted before. Comptroller Knox recommended it in one of his annual reports, but it found no favor with Congress, for the reason, probably, that it came as a measure for relieving the tension on the national-bank circulation. Congress did not care to relieve that tension, but it does desire to relieve the tension caused by the Treasury surplus, if it can do so without "treading on anybody's corns"—that is, without repealing any protective duties. There is consequently some chance that Mr. Hewitt's suggestion may be followed, although it has to encounter a formidable difficulty, namely, that of making people understand that it is right to pay the bondholders a part of their interest in advance. If this difficulty can be surmounted, the amount of surplus disposed of will be uncertain, but if all holders of 4 per cent. bonds avail themselves of its terms, the difficulty of the surplus may be carried over to the midsummer of 1889, leaving still an interval of two years before the 4½ per cents fall due. But it is not probable that all the 4 per cents would come in. Many of them are tied up in trusts so that they cannot be disturbed, and many more have been laid away in an express manner upon the calculation of a uniform rate of interest at 4 per cent. and repayment of the principal at a fixed time.

The Randall Democrats are said to intend to bring forward a measure to solve the difficulty by repealing "nearly all" of the internal-revenue duties. We suppose that they will leave the oleomargarine tax in force, that being in the nature of a protective duty, and repeal the whiskey tax in order to keep the sugar duties and the wool duties alive. That plan will supply an issue for the next national election which will be entirely agreeable to revenue reformers.

THE INTER-STATE COMMERCE BILL.

THERE is evidently a strong political influence supporting the Inter-State Commerce Bill, which has received a considerable impetus from the Supreme Court's decision in the Wabash case. The Western States, although compelled to repeal the arbitrary provisions of the Granger laws, have adhered strongly to the underlying idea that the State has the right to regulate railway charges, and that the railways must take their chances of getting justice out of the common sense and spirit of fair dealing habitual to the American people. But the principle of the Granger legislation broke down at the State boundaries, under the Wabash decision. The laws of Iowa could not project themselves beyond the Mississippi on one side or the Missouri on the other. The Supreme Court swept away nine-tenths of the railway-rate laws when it declared that no State could adopt regulations affecting the movements of commerce among different States or with foreign countries. The decision was clearly right, but it simply removed the struggle from the local legislatures to the general legislature at Washington.

Before this decision was made, it was doubtful whether any inter-State commerce bill would pass. The Reagan bill had been on the calendar for years and years. The Cullom bill, a much wiser measure, had stopped the way of the Reagan bill, and the latter had stopped the way of the former. There was no impelling power sufficiently strong to give one of these measures a preponderant force, or to compel a compromise between the two. The needed impulse has been supplied by the decision in the Wabash case. There is no doubt that members of Congress from the West and Southwest are afraid to face their constituents if they allow another session to pass without coming to a vote on some bill of this kind. The fear which controls them affects the two political parties in the same way. Neither of them can allow the other to gain a local advantage. If the West and the Southwest are determined to have an inter-State commerce bill, and if other sections of the Union are indifferent, both parties will naturally support it.

It does not follow that the measure now proposed, or any measure which embraces the "long haul and short haul" clause, will be satisfactory to all the Western States. In fact, it will be so disadvantageous to those furthest removed from the seaboard that they will need only one taste of it to become its strenuous opponents. The relatively low rate for the long haul is in their interest. It is also in the general interest of the community, since it furnishes food products to all of us at the lowest possible cost. This is the end to which all collective human endeavor tends and should tend. It is in the same beneficial line with improved agricultural machinery and better methods of culture, serving to give more food with less effort. It is equally to the advantage of the farmer in the distant West. Already we hear that the Senators from the frontier States are opposed to this clause of the bill. Those who favor it are Middle Western States, whose agricultural industry would gain an advantage if the long-haul clause were adopted. A compromise has been effected by which the proposed Railway Commission may suspend the operation of the long-haul clause in special cases after investigation. This feature of the bill involves an inconsistency, but it is probably the smallest grain of mischief that we can look for in view of the determination of Congress to attack what are considered to be railway discriminations. There is nothing in the bill, however, to prevent a railway company from buying grain in a far Western State, carrying it to market, and selling it for what it will bring. Cases have been known where a railway company has resorted to this practice in order to get freight for empty cars returning home over long distances, where the hauling of the car itself is a matter of expense, and where the difference in cost between hauling a loaded car and an empty one is only the price of a little cheap fuel.

The second and third sections of the bill,

which prohibit discriminations between individual shippers, are entirely just. The exasperation which has grown out of such discriminations in the past is one of the prime reasons why there is now an inter-State commerce bill pending. It is not necessary to enlarge upon this point, since no railway now defends or apologizes for such discriminations. Formerly it was said that a lower rate ought to be given to a man or corporation who furnishes a larger amount of business—that is, that an inequality of advantages between two traders which exists naturally, ought to be aggravated and multiplied by the common carrier until the weaker is crushed. This is not to the advantage of the common carrier himself in the long run. It is certainly not to the advantage of the community. It ought to be stopped peremptorily. The clause which prohibits "pooling" is open to more question Pooling operates to prevent discriminations It takes away from the common carrier the motive to discriminate, since he no longer gains by it. Instead of passing a law to prohibit pools, it would be better to legalize them outright. There is no danger that they will grow to an oppressive degree, or that any railway abuse will become really serious in the face of a public opinion which supports so stringent a measure as the one now pending.

THE INDIANS AND THE GOVERNMENT.

The management of Indian affairs during the last year is very clearly set forth in the annual reports of Secretary Lamar and Commissioner Atkins, which have just been presented to Congress. The tone of both these documents shows that the two officers of the Government who are most directly concerned in the control and care of the Indians desire in the main to treat the nation's wards honestly, to protect them in their rights, and to hasten the day when the Indians, can maintain these rights as individuals, just as white citizens maintain theirs, and without the constant intervention of governmental protective power. It is reassuring to be told, as we are at the outset, that, of the total Indian population of 260,000, less than 100 were at war with the Government during the last year. These 100—Apaches of Arizona—are now subdued and practically imprisoned. All the others are on reservations, where they are supervised by agents, and can discuss peacefully their wants. It is encouraging also to be told that the estimate for carrying on the Indian service for the fiscal year 1888 is about $1,700,000 less than was the estimate for 1886. It would be more commendable if the Government officers could say that this economy was practised with entire justice to the Indians themselves.

But this is not the case. Secretary Lamar has for two years been urging Congress to pass a bill authorizing the appointment of a commission to inspect every reservation, and report on the needs of the Indians there collected, and suggest reforms in agency affairs. This suggestion has been warmly seconded by President Cleveland, but Congress has failed to act upon it. There is another instance of a still more flagrant omission of the lawmakers. The statute provides that the produce of all pasturage, and all other products of the Indian reservations, except those of civilized tribes, which are not the result of individual labor, shall be covered into the Treasury for the benefit of the tribes for whom the reservations are held, to be expended under regulations of the Secretary of the Interior. The Indians themselves and the Secretary of the Interior supposed that this money was to be employed to aid the Indians in their efforts to carry on civilized pursuits. But the Secretary of the Treasury decided that this fund, when once paid into the Treasury, could only be paid out again after the passage of an act by Congress authorizing its use. The Indians have been quick to understand the injustice of this situation, and in one instance, Commissioner Atkins explains, have put in practice a sort of "plan of campaign," by appointing one of their own number to collect from farmers, herders, and others the money due for grazing, hay, etc. and divide it among them. Secretary Lamar earnestly recommends that the law be changed so that this money can be paid to the Indians to whom it belongs. One other instance of injustice may be mentioned. A commission is required to make a just settlement with the Mission Indians of California, whose wrongs Mrs. H. H. Jackson has so vividly portrayed. But Congress has failed to enact the necessary law, and white settlers are encroaching on the Indian lands so persistently that it may require the use of troops to dislodge them.

The two questions regarding the Indians which excite most discussion, are the future of the Indian Territory and the division of Indian lands among individual owners instead of continuing to hold them for the tribes in common. In his report last year Secretary Lamar said: "The practice of moving the Indian to more distant reservations can be continued no longer. He must make his final stand for existence where he is now." Conceding this, what follows more naturally than the assertion that the Government should afford him all possible protection in the narrow boundaries to which he has been driven, and especially should encourage him, by meting out the most exact justice, to advance in civilization, and place himself under such legal restrictions as the white man has adopted? How can he be expected to do this if the white man, after guaranteeing him a territory, violates the agreement under the plea of the "necessity of civilization"? And yet Commissioner Atkins, directly, and Secretary Lamar, more indirectly, seek to find excuses for throwing open the Indian Territory, more or less extensively, to the white man's use. Congress has asserted its right to grant rights of way through this Territory to railroad companies in the face of treaty obligations. Commissioner Atkins waves aside such obligations by arguments like these: "These Indians have no right to obstruct civilization and commerce and set up an exclusive claim to self-government. . . . I repeat, to maintain any such view is to acknowledge a foreign sovereignty, with the right of eminent domain, upon American soil—a theory utterly repugnant to the spirit and genius of our laws, and wholly unwarranted by the Constitution of the United States." We must submit that such language is more fitted for the speech of the Chairman of a Territorial Convention than for a sober Government report, and we would refer the Commissioner, as a mental sedative, to that article of the Federal Constitution which says explicitly that (among other things) "*all* treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land." There is nothing in this section about "excluding Indians not taxed."

The fact is, that it is in the Indian Territory, where the Indians have been kept uncontaminated by the influences of the worst classes of whites, that we see the only examples of high Indian civilization, with methodical government, churches, schools, and individual wealth. Secretary Lamar admits in one sentence that "railroads introduce into the Indian country an element not easily controlled by this Department under existing laws," and then, in the next, excuses the opening of Indian boundaries to railroads by suggesting that they "enhance the value of the Indian lands" and "aid in breaking down the natural aversion of the Indians to the division of their lands for individual holdings." What success can be hoped for in the experiment of creating individual Indian land-owners if the Indian, before the experiment is fairly under way, is to be subjected to influences which break down his health, destroy his conception of morality, and unfit him to manage the homestead when it comes into his control? It is Secretary Lamar, in this same report, who, commending the suggestion that the Indians on certain reservations be allowed to pasture the cattle of neighboring cattlemen on their surplus lands and be paid for so doing, says: "It should, however, be so restricted and regulated *as to prevent white men from going upon the reservations*"; and Commissioner Atkins advances as an argument for moving all the Territory Indians east of the 98th meridian that "the Indians would be together in a more compact form, while the whites would be by themselves."

Justice and expediency, in a word, both require that our treaty obligations with the Indian Territory tribes be sacredly respected. It is by doing this, and not by proving to them the falsity of white men's promises, that they will be induced to adopt the white man's system of government. Much is said about the unnecessary amount of land which these Indians now possess. It is, in fact, counting good and poor, about 500 acres per capita. A white settler in Dakota can take up 480 acres. When we remember that the Indians have the right to this land, it does not seem as if their allowance is excessive, especially in view of the time, which their best friends hope is approaching, when the fathers' possessions may be allotted to the children and divided among them as are those of the whites.

A NEGLECTED SIDE OF "THE LABOR PROBLEM."

The movement which is now on foot in this city for the introduction of industrial training for girls into our public schools, probably touches a more important part of "the labor problem" than any other. There is something almost hideous in the mis-

chief and waste of much of the education which is given at the public expense to the children of the poor. The daughters of laborers and mechanics and hackmen, who must perforce earn their bread somehow, are taken by the hundred every year and laboriously instructed in belles-lettres, music, and languages, in preparation for the Normal College, where they expect to get the final touches of preparation to be teachers. There are said to be every year 300 more women candidates for admission to this institution than there is room for, and it turns out so many graduates that there are said to be twenty-five of them applying for every vacancy in the teacherships of the public schools in this city. The amount of disappointment, and bitterness, and failure among young women which this represents, and for which the management of our public schools is directly responsible, is almost sickening to think of. There can hardly be a more miserable or helpless being than a female teacher, fond of city life, who can find no place in a city school. There is nothing else she can turn her hand to. She is a surplus member of one of the most overstocked professions, and she only knows enough to enable her to instruct those who know hardly anything at all.

But the personal misery of the unsuccessful, over-educated girls is only a small part of the evil. Every one of them causes more or less disturbance, and sometimes fatal disturbance, in the paternal household. The father is, in a vast number of cases, a poor man, who can barely make ends meet by his wages. As soon as his daughter begins to prepare to be a teacher, and read the magazines, and have dreams of a literary life, discontent with her humble surroundings sets in. The standard of food and dress and furniture is raised. Very probably a hired piano appears on the scene. The father and mother's pride is excited by her prospect of becoming a "lady," and habits of expense creep in. If there are sons, their sister's ways help to disgust them too with manual labor of any kind, and make them aspire to some kind of "clerking" or speculation, and fill them with envy of the men who go out to "Gabe" Case's behind fast horses on fine afternoons; and it is well if they do not decline work altogether, and try to live in idleness "off the old man." Jay Gould and Vanderbilt become more and more subjects of meditation and conversation around the family stove in the evenings. The old man begins to run in debt, thinking Maggie or Josie will help him to pay it off when she gets a place after leaving the Normal School, which she is supposed to be sure to get into. Very likely, too, he, in his extremity, makes free with his employer's property, and gets turned adrift when the appetites of the young people for genteel life are fully formed. This is not a fancy picture. Such cases by the dozen are within the knowledge of large numbers of our readers in this city. They are so numerous, in fact, as almost to warrant the assertion that the education we give the daughters of the poor is one of the curses of our society. It feeds the immense and cruel delusion and prejudice to which we owe the class of starving "sales-ladies" and sewing-women—one of the most woe-begone and forlorn in the civilized world.

For it must be remembered that few or none of these women learn, in their learning years, to do anything for the promotion either of their own material comfort or that of anybody else, or to follow any calling for which there is a real and growing demand. They seldom know how to cook, or sew, or cut out, or make, or mend, or wash, or iron, or clean, or decorate, or ever think of learning it. They cannot manufacture anything which anybody wants to buy, or render any service in which any dexterity of hand or eye comes into play. All the manual arts are unknown to them, the common as well as the fine. Their fate in this age of the world is, therefore, a most pitiful one, and every taxpayer here helps to bring it upon them.

It is time, and high time, that this most ridiculous and most un-American waste of money came to an end. Belles-lettres scholars ought not to be turned out at the expense of the poor people who pay the bulk of the taxes. But even if they ought, the opportunity of industrial training—that is, of learning the arts which make life comfortable and convenient, for which the demand increases with the growth of wealth and civilization—should also be put within the reach of the children of the people. The clerical force, both male and female, of the United States is too large already. We also have a superabundance of teachers, and writers, and thinkers of moderate or no capacity. "Sales-ladies" also are deplorably abundant. But good seamstresses, housekeepers, cooks, laundresses, bakers, and good artisans of every description, both male and female, are scarce, and seem to grow scarcer in proportion to population. Oral laborers, in short, multiply apace; but the honest and excellent manual laborers, who can stand on their own feet and be the self-respecting and independent members of a free commonwealth, like the old New England mechanics, do not. In these days of protection it is time the production of them was encouraged by law in some other way than by taxing commodities.

VOLTAIRE IN SWITZERLAND.—III.

PARIS, December 2, 1886.

I AM afraid I have been somewhat unjust towards the authors of 'La vie intime de Voltaire aux Délices et à Ferney.' They have certainly used more original and inedited documents in their last work than in their two works on Mme. d'Épinay, which made me think too often of the verse:

"Un dîner réchauffé ne valut jamais rien."

What is particularly interesting in the 'Vie intime de Voltaire' is the account of the effect produced by the great Frenchman on the Genevese society. I left Voltaire, in my last article, struggling for the Calas, and finally triumphing over injustice and intolerance. His health, which was always bad, had become worse; often he could not write. "My eyes are as red as a drunkard's, and I have not the honor to be one." No more actors, no more actresses—the theatre was closed; the Consistory had triumphed. Mme. Denis, always a very practical lady, spreads the linen in the dramatic chamber, Voltaire shuts himself up and will see nobody. An Englishman arrives and says that he came from London on purpose to see Voltaire. "Does he take me for a curious beast? Well, let him pay six livres or he shall not see me." "There are twelve," says the Englishman, "but I shall come back to-morrow." Voltaire hears, however, that Mlle. Clairon, who has quarrelled with the French Theatre, is at Lyons, and he invites her at once. She comes. He had not seen her for seventeen years. When she sees him she throws herself at his knees. He falls on his knees also, and says: "Now, mademoiselle, how do you do?" (Huber made an engraving of this pleasant scene.) Voltaire had the pleasure of hearing Clairon in her best parts. She was treated like a princess. Voltaire wrote verses for her, made her presents, amused her with fireworks. After Clairon, came the Count and Countess Shuvaloff and the dear friend Damilaville. The Countess lent all her diamonds (worth 200,000 *écus*) to Mme. Denis when Mme. Denis played before her the part of *Mérope*. Shuvaloff was a great admirer of Voltaire, with whom he corresponded, and who pronounced him "a prodigy of wit, grace, and philosophy."

The letters and writings of Rousseau had not been without effect in Geneva. The struggle between Jean Jacques and the philosophers had been the signal for a struggle between the old Genevese aristocracy and the people. When the 'Nouvelle Héloise' and the 'Émile' were published, the "Petit Conseil" had ordered these books to be burned by the public executioner, and Rousseau himself was condemned to imprisonment. He protested, and asked to be judged not before the "Petit Conseil," but before a "General Council." Finally France and the Cantons of Zurich and Berne had to offer their mediation between the popular and the aristocratic parties. The French mediator was a M. de Beauteville; Voltaire found in him an ally. The Council of Geneva was obliged to tolerate a theatre during the period of the mediation. The plenipotentiaries of Zurich and Berne had agreed on this point with the French minister. The company was French, and played the comic opera, which was then in its infancy—"Annette et Lubin," "Rose et Colas," "La Partie de chasse d'Henri IV." This was a great triumph for Voltaire; but the plenipotentiaries, unable to succeed in their mission, retired to Soleure, and as soon as they were gone the theatre was closed and the French company dismissed. The theatre was burned, and many thought that the fire was not an accident.

Voltaire composed an heroic poem, "La Guerre civile de Genève," in which he ridiculed the principal inhabitants of Geneva. He read it to his friends only, and was angry when he heard that copies of it were circulating in Paris and in Geneva. The culprit was young La Harpe, whom Voltaire had always treated as a child. La Harpe had also taken the manuscript of the 'Mémoires pour servir à la vie de Voltaire.' Voltaire dismissed him from his house. Mme. Denis, though she was sixty years old, had taken a great fancy to the young poet, and Geneva learned with surprise that she had left her uncle. Grimm, in his correspondence, writes: "If you believe the bad tongues of Geneva, Mme. Denis, notwithstanding her bitter ugliness (*sa laideur amère*), has always been very *galante*." Voltaire said nothing, or tried to explain Mme. Denis's departure by natural reasons. He writes to Mme. Du Deffand: "I have been for forty years the landlord of Europe, and I am tired of the profession. I have received three or four hundred Englishmen, etc. . . . My age of seventy-four years and my continual maladies condemn me to retirement. This life could not suit Mme. Denis, who had forced her nature when she lived with me in the country; she needed continual fêtes in order to support the horrors of my desert. . . . Mme. Denis needs Paris; the little Corneille needs it still more."

Voltaire is now almost alone, with a secretary, and a harmless chaplain, Père Adam. He took

the communion with great publicity, in order to disarm his enemies; the news of this ceremony made a great noise at Paris and at Versailles. Voltaire gained little by it, and was accused of hypocrisy and blasphemy as well as of infidelity. The Bishop of Annecy blamed the curate of Ferney who had given the communion to Voltaire, and Voltaire was not satisfied till he found the means of taking the sacrament again. He simulated a mortal malady, procured a surgeon's certificate, and sent in the night for a priest. He succeeded, but his best friends disapproved of his actions. Tronchin calls them "les polissonneries de Voltaire avec son curé."

Voltaire gave Mme. Denis, who lived in Paris, a pension of 20,000 livres; he had given her 60,000 livres when she left Ferney. Grimm draws an amusing portrait of her: "God made her without *esprit* and gave her a *bourgeois* soul, adorned with all the suitable qualities. She is what is called in society a good woman—an expression which implies no effective virtue or goodness. Nature had formed her for a vegetative life: for games of cards with the women of the quarter, and dull gossip; but chance would give her as an uncle the first man in the country. She has learned to speak of letters and of dramatic literature, as a bird learns to sing." Mme. Denis, to her great astonishment, was not much regretted by her uncle. She wrote letters to her friends at Geneva which are remarkable for their erratic orthography. She was afraid that Voltaire would forget her, especially in his will. She begged to be allowed to come back, and, after a long negotiation, Voltaire gave his consent.

The famous Pigalle was sent to Ferney by the Encyclopædists, who had decided, in a dinner at Mme. Necker's, to bear the expense of a statue of the author of "Mérope." In vain did Voltaire write: "I am seventy-six years old. . . . M. Pigalle wishes to model my face; but, madam, I have no face: one can hardly distinguish its place. My eyes are sunken, my cheeks are pieces of old parchment on bone, my last teeth are gone. Was ever a man sculptured in such a state?" Pigalle came, however, and began his work. Voltaire could not keep quiet an instant, and Pigalle nearly renounced finishing his bust. All those who know the Foyer of the French Theatre must thank him for his perseverance: his Voltaire is truly alive, and it is impossible to express better in marble the peculiar genius of the philosopher and dramatist. I will say, by the by, that the French sculptors of busts, at the end of the last century, formed a school which has not yet been surpassed; they are every day more admired, and they deserve to be.

Lekain, the tragedian, came to Switzerland about the same time, and played several times before Voltaire, who was so delighted that he said, "It is not I who wrote my tragedies—it is he." Voltaire became very ill in the last part of 1773, and the rumor of his death was spread all over Europe. Thanks to Tronchin, he recovered and received many more illustrious guests. Grimm came in 1775, and was coldly received. Voltaire probably knew how Grimm had judged some of his productions in the 'Literary Correspondence.' In the year 1777 the Emperor Joseph II. arrived at Geneva under the name of Count Falkenstein. It was a great revolution for the little city. Everybody thought that the Emperor stopped at Geneva in order to see Voltaire, but he never asked for him; when he left, his carriage stopped at a little distance from Ferney, and the postilions asked him if he was not going to Voltaire. He answered angrily that he was not, and bade them go on. Voltaire was waiting for Joseph II., and was quite disappointed. Frederic of Prussia wrote to D'Alembert: "I hear that Count Falkenstein has seen ports, arsenals, ships, manufactories, and that he has not seen Voltaire. Such things are visible everywhere, but a Voltaire appears only once in centuries."

Voltaire, since his arrival in Switzerland, had always wished to return to Paris, but a tacit interdiction forbade it. Louis XV. abhorred him, and nothing could overcome his hatred, not even the prayers of Mme. de Pompadour and of Mme. Du Barry. Voltaire became more confident when Louis XVI. ascended the throne; in 1778 he made a pretext of the rehearsal of a new tragedy, "Irène." He left Ferney and announced that he was going to Paris only for six weeks. Mme. Denis started first, with Mme. de Villette, a young lady who had married the Marquis de Villette at Ferney. Voltaire followed soon afterwards, and was in Paris the guest of M. de Villette. His first visit was to the Comte d'Argental, well known to all those who have read his correspondence. He went to see him on foot, along the quays of the Seine, with the fine fur coat and the fur cap which had been given to him by the Empress Catharine. He still wore the large wig of the Regency, which was no longer in fashion; it is said that the little boys ran after him. Grimm writes that "an apparition could not have caused greater surprise and wonder than the arrival of Voltaire." He became at once the idol of the capital; but the idol was ill, and sent for Tronchin. Voltaire was well enough to attend a representation of "Irène," which was a triumph. He was crowned with laurel in his box, and asked, with tears in his eyes, "Do you want me to die of pleasure?" Moreau le Jeune made a charming engraving of this scene, which is counted among the most marvellous specimens of the art at the end of the eighteenth century. It figures in the catalogues under the title of "Le Couronnement de Voltaire." Tronchin advised Voltaire to leave for Ferney, fearing for him the excitement and the fatigues of Paris. MM. Lucien Perey and Gaston Maugras have been fortunate enough to find the letters addressed by Voltaire during those days to his secretary at Ferney in order to make certain arrangements. These are the last letters he wrote.

Voltaire, at the solicitation of his niece, had taken a house in the Rue Richelieu, but he did not live in it, and died on the 30th of May, 1778. The details of his last moments, of his confession, of his conversations with the curate of Saint Sulpice have been often given. Tronchin, in a letter to Bonnet, says that Voltaire died hard, that death was to him "le roy des épouvantements." He adds in the letter: "I always told him the truth, and I am the only man who never deceived him." Voltaire would probably have lived a few months longer had he remained at Ferney; but the day after the scene at the Théâtre-Français, the Academy sent him a deputation and asked him to accept the functions of director. This direction lasts three months, and Voltaire considered himself bound to remain. Tronchin enters into all these details, and says that Voltaire drugged himself without reason. "He committed all the follies which hastened his death, and which threw him into a state of despair and made him demented. I cannot recall it without horror. . . . Remember the furies of Orestes. *Furiis agitatus obiit.*"

Correspondence.

PRECEPT AND EXAMPLE.

To the Editor of The Nation:

Sir: If my theories are tedious, the illustrations of them are numerous and vivid enough to give them practical force. Several now present themselves, which, though starting from different beginnings, all point to one end.

(1.) Last Monday Mr. Dawes made a speech in the Senate upon a resolution to the effect that, as there is no hope of reforming the tariff without hurting somebody, Congress had better not try to reform it at all. He admitted at the start that there was no occasion for the speech, as the matter was in the hands of the Finance Committee, and, besides, that the Senate Committee had no authority to initiate any tariff measure. His remarks, therefore, and those of the Senators who followed him, were mere generalities and completely in the air. He expressed, however, an opinion that the taxes should be first taken off of sugar and tobacco, which, considering the relation of Massachusetts to those articles, and that Mr. Dawes represents Massachusetts only, reminds one of Artemus Ward's willingness that all his wife's relations should go to the war rather than surrender to the South. Every Senator and Representative must speak from a local and not a national standpoint. But the most marked feature of Mr. Dawes's speech was a fierce attack upon the Secretary of the Treasury for "causing alarm and bewilderment to the broad industries that fill this land, by propositions so novel, conflicting, and incompatible," for his "wanton, careless, and thoughtless manner in dealing with industries," charging that "the Secretary's hand is raised in deadly attitude to strike them down," reproaching the Secretary for not going to the manufacturers for information, and sneering at the statists of the departments.

Does it not seem strange that the one man who holds a national position in relation to the finances, and to whom it would naturally fall to submit definite plans for discussion, should be wholly unable to reply to such an attack as this, and, having submitted one written essay which is shelved by being referred to a committee, should thenceforth be condemned to total silence?

(2.) Though the President has, we may think wisely, declined to use private influence with Congress for public ends, I see by the papers that Mr. Carlisle has lately had a private interview with him. But everybody knows that unless the President does use "influence"—that is, offices—his opinions will have rather less weight with Congress than that of an ordinary citizen. The proceeding can only excite suspicion, and is wholly beneath the dignity of the independent executive branch of the Government. The only manly and effective way is to let the President urge his views publicly upon Congress and the country through his chosen finance minister.

(3.) The stock objection against admitting the Cabinet officers to seats in Congress is, that the English Ministry resign upon a defeat in Parliament, and that this cannot be done under our constitutional methods. The letter of your Swiss correspondent is an admirable contribution upon this point. The Executive Council is chosen for three years, and has the right of speech both in the Senate and the House of Representatives, yet neither the whole body nor any of its members feels bound to resign upon an adverse vote in the legislature, but serve out their term of office. The practical results are, he says, that the Swiss Executive Council are elected with a view to administrative ability. Its members need not necessarily belong to one party, while reëlection is rather a rule than the exception, and men of eminence have remained on the Council for sixteen years or more. "Men chosen for business capacity turn out on the whole good men of business"; and, after enumerating their duties, he adds: "These tasks are difficult. That they are well performed is certain, for failure would lead either to internal disturbance or external embarrassments. Switzerland is at peace at home and is neither defied nor insulted abroad."

I have drawn too often the moral which these things teach to need to repeat it now. They speak loudly enough for themselves. G. B.

BOSTON, December 18, 1886.

THE INTER-STATE COMMERCE BILL.

TO THE EDITOR OF THE NATION:

SIR: As you say in your number for December 16, "there seems to be a determination to pass something" in the way of an inter-State commerce bill, and perhaps "the compromise bill . . . is the least harmful measure that can be looked for." But it does not follow that those who see the crass ignorance and spirit of spoliation out of which this bill springs, should be silent regarding it. The bill, or some one more or less like it, will probably be passed, for it is the legitimate outcome of average opinion. But if, as it must, it result in manifest injury to the business of the country, the time will come when it will be repealed, and every means should be taken to hasten that time.

Any argument on the particular features of the bill, such as the prohibition of pools or the rule adopted known as the short-haul rule, is out of place, because among all persons who take the trouble to read and think before making up their minds, these questions are already settled. The time has come when the matter must be put in this way; for enough testimony on this point, by the first experts in the world, was taken by the Cullom Committee to make it clear that demagogy, and demagogy alone, is the means of inserting these provisions. It may be said once more, however, that if the short-haul principle is adhered to, not a grain of Dakota wheat will reach the mechanics of New York. If distance is to regulate rates, the railroads will have to keep short-haul carriage, which would be made unremunerative, and drop long-haul carriage, to save the bulk of paying business.

What I especially wish to call attention to is this: that the normal development of the finest railway system in the world is interrupted, and is about to be subjected to that official supervision which European countries exhibit. This is simply a defiance of the results of experience. Our own railways, under the guidance of self-interest alone, give better rates and very much better accommodation than any system in the world. In England, Germany, France, Italy, and Belgium, where Mr. Reagan's ideas and similar ones have prevailed in a thousand shapes (each one demonstrating its uselessness in a few years and giving way to the next), the railways are infinitely less accommodating, less efficient, and more exorbitant and irresponsible than they are here, under the restraint of the old doctrines of the common law, and under the guidance of self-interest. During the Granger agitation the Potter railroad law was enacted in Wisconsin. The result was that the railroads of that State were rendered profitless, in consequence of which there was scarcely any railroad building for two years. At the end of that time the law was repealed. This encouraging fact should be kept in mind by the hundreds of thousands of holders of railroad securities in the United States, and by those shippers whose only security consists in the establishment of the pooling principle—the only means of preventing secret cuts and rebates. It should inspire them to protest vigorously against this foolish bill, and to give politicians to understand that pandering to ignorance and prejudice is frequently a very expensive matter. There will be no solution of the political aspects of the railway problem until the million railway investors of the country make it generally known that their rights are neither more nor less than those of other people, and until the people at last become impressed with this complex idea. But even before that time it may not be altogether useless to urge that the making of general rules for railway management, which not an expert in the world would undertake, should not be confided to the pothouse politicians who (according to Mr. Hewitt) dominate in Congress.

CHARLES S. ASHLEY.

TOLEDO, OHIO, December 18, 1886.

THE COMMISSIONER OF NAVIGATION.

TO THE EDITOR OF THE NATION:

SIR: One of your readers who is interested in a general way in the efficiency of the civil service has looked in vain in your valued journal for some comment upon what seems to be one of the most flagrant violations by President Cleveland of his professions in that regard—namely, the displacement of Capt. Jarvis Patten, late Commissioner of Navigation, to make room for a "party worker" and chronic office-seeker, who, whatever may be his personal qualities, is fitted neither by education nor experience for the position.

Capt. Patten is not an ordinary sailor-man, but, besides being a former ship-owner and a ship-master of many years' successful experience in the foreign trade, is a man of fine education and acquirements and much statistical knowledge. He took up the duties of the new office *con amore*, and has done a much needed work in a manner highly satisfactory to the interests represented. That he is in no sense an "offensive partisan" may be inferred from the fact that Senator Frye is quoted as saying recently that "Patten never was more than half Republican, and may now be a Democrat for aught I know"; and the consequent refusal of that gentleman to take any interest in the matter. It is within the writer's knowledge that the change in this office has met with almost universal disapproval from persons interested in navigation from Maine to New York, regardless of party.

While writing the above, the *Nautical Gazette* comes to hand (issue of December 15), containing several letters pertinent to this matter.—Respectfully, YOUNG DOWN-EASTER.

BATH, ME., December 18, 1886.

PROGRESSIVE TAXATION.

TO THE EDITOR OF THE NATION:

SIR: A noteworthy article in the *Nation* of November 9, on "Progressive Taxation in Switzerland," stated that it would be interesting to see what effect the progressive tax has on the owners of movable property in the Canton de Vaud.

This effect is already palpable; it was foretold successively by M. de Laveleye and by M. Baudrillart in the *Revue des Deux Mondes*, by a remarkable essay in the *Bulletin de statistique et de législation*, and finally by the *Siècle*, an unquestionably liberal paper of Paris, which concluded in the following words: "L'expérience du Canton de Vaud mérite d'être signalée. On y voit comment le radicalisme fiscal peut détruire les principaux éléments de la vitalité d'un pays. La République florentine a connu de semblables épreuves, et elle a fini par en mourir." (The Canton de Vaud's experience is worth notice. It shows how fiscal radicalism may destroy the elements of a nation's vitality. The Florentine Republic was acquainted with such experiments, and perished in consequence.)

Now to facts. I could quote several; I select one, the most significant of all. M. J. J. Mercier, the head of an ancient, important, and respected firm, a rich tanner of Lausanne, is moving his huge business—which actually gave employment, if I am not mistaken, to *several* hundred workingmen—from his native place to Evian (France), on the opposite shore of the Lake of Geneva. In a letter, published some weeks ago by the *Gazette de Lausanne*, he explained the important step which he was compelled to take. "Up to this time," said he, "I have paid over twenty thousand francs in State and town taxes. The new law would raise that figure to *eighty* thousand francs or more. I owe it to my family to withdraw out of reach of what I cannot consider otherwise than downright spoliation."

On the budget of a diminutive State like the Canton de Vaud, such a deduction will tell at once. As was lucidly demonstrated in the last "Assemblée constituante" (where the introduction of a progressive tax was discussed and voted)—as was demonstrated, I say, by the conservative orators, and among them by M. L. Rambert, brother of the distinguished writer whose sudden death the *Nation* has recently registered—a progressive tax is absolutely impracticable in this age of cosmopolitan intercourse. Many are the countries where any one may find the same conveniences and resources as at home; and capital, when harassed and ostracized by invidious legislation, emigrates whither it may find rest and security. The close, exclusive, hallowed *civitas*, which made life worth living, for the citizen, only within the precincts of his native town, the privileged territory of his domestic gods, is an institution of the past; and it may be said, in general, that the wide scope of modern civilization has, to a great extent, loosened the grip of local tyrants upon the private individual. Therefore, as long at least as all civilized nations have not joined together in one all-encircling, all-absorbing Socialistic Utopia, progressive taxation is fated to generate national impoverishment. Thank heaven, the demagogic, communistic, and short-sighted innovators who actually rule over the Canton de Vaud, do not, as yet, wield the universal and inevitable power of David's Jehovah! (Ps. cxxxix, v. 7, 8, 9, 10). A. DU FOUR.

SPARTANBURG, S. C., December 18, 1886.

THE NEW SOUTH.

TO THE EDITOR OF THE NATION:

SIR: In proof of the correctness of Mr. Phelan's representation of the sentiments of the "new South," as given in the *Nation* of December 7, it may be worth while to quote a sentiment expressed last evening by Mr. Maurice Thompson in a lecture before Vanderbilt University. Mr. Thompson fought through the war on the Southern side and was wounded in battle. He lives now in Indiana and knows the best sentiment of both sections. Speaking of the intense interest and sympathy with which the North is watching the South as she works out her destiny, he said: "But is she loyal? I hear some voice piping from a vague distance. Loyal! Let the crucial test come; let some powerful but misguided nation dare menace the old flag that flutters yonder, and the very earth will tremble with the tread of Southern patriots rushing to guard the sacred threshold of freedom."

The audience was perhaps the largest ever gathered in the halls of the University, composed largely of the young men and women of college and city, and the enthusiasm with which this remark was received surpassed anything I have ever seen in Nashville. C. F. S.

NASHVILLE, TENN., December 15, 1886.

THE EDUCATION OF YOUNG MEN BY THE CHURCH.

TO THE EDITOR OF THE NATION:

SIR: Your recent reference to President Robinson's article, "How I was Educated," suggests

to me that a few plain words on the education of young men for the Christian ministry by the Church might be acceptable to your readers. Leaving out of view the theological seminary, there are valid reasons why the Church should not, save in exceptional cases, help ministerial candidates through the college course. Such help encourages decision for the ministry before the candidate has sufficient age and maturity to know what is involved in the choice he makes, and tempts the indigent young man to choose the ministry as the easiest road to education and its advantages. That the young men are generally sincere enough, I grant; but who of us is master of his motives? Worst of all, those who apply to the Church for help are too often young men of quite second-rate ability, and, it may be, of only negatively good character. Here lies the great objection to the practice I am combating; for it is want of mental and moral force, rather than false ideas of "ambition" as unworthy of them, that makes so many of these ministerial candidates superficial in their college work. Their determination to become ministers, and the acceptance of them as candidates by the Church, rest too little on promise of mentality and general fitness for the work, and too much on their recognition of an indefinable "call," a "feel-as-if-I-ought." Though set apart to expound the teachings of the most difficult of books, the deepest of systems of thought, they leave college wholly unprepared to teach even the simplest subjects. With such men as ministers the Church can only suffer.

But ministers we must have, and how else are we to get them? Young men of more promise prefer other pursuits. A word in answer to this question.

To pay our ministers better would be *one* means of inducing talented young men to choose the ministry, and, if need be, to educate themselves for it as they do for other callings. Self-educated men are numerous in every other walk of life; why not in the ministry? As ministers of the Gospel are now paid in many parts of the Southern States (I am not informed as to the North), the young man that decides to devote himself to the Church, and thus to the good of mankind in general, too often decides thereby to neglect those for whom he is especially responsible—too often assumes new responsibilities at the great risk of being thus rendered unable to meet those he already has. T.

KENTUCKY, December 15, 1886.

DOMESTIC SERVICE.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the crying need of families for domestic help, and the equally urgent need of women for paying occupation, I wish to offer a word for a class of young women, higher than the average domestic, who are urged to follow the laws of supply and demand, and go where they are most wanted. Below are some of the reasons why they do not. A short time ago the following question was raised in the Philadelphia Working Women's Guild, a society embracing some seventy-two occupations: "Why do not intelligent, refined girls more frequently choose house service as a support?" The replies here given are as nearly as possible verbatim.

(1.) Loss of freedom; this is as dear to women as to men, although we don't get so much of it. The day of a saleswoman or a factory hand may be long, but when it is done she is her own mistress; but in service, except when she is actually out of the house, she has no hour, no minute, when her soul is her own.

(2.) Hurts to self-respect; one thing that makes housework unpleasant—chamberwork for instance, and waiting on table—is that it is a kind of personal service, one human being waiting on another. The very thing you would do without a thought in your own home, for your own family, seems menial when it is demanded by a stranger.

(3.) The very words, service and servant, are hateful. It is all well enough to talk about service being divine, but that is not the way the world looks at it.

(4.) Say that a young woman, well brought up, undertakes to do chamberwork; she is obliged to associate with the other girls, no matter how uncongenial they may be, what may be their language or personal habits or table manners. If she tries to keep to herself, the rest think she is taking airs, and combine to make her life unbearable.

(5.) Or say she takes a place for general housework; to be alone in the midst of others is crushing—quite different from being alone in one's own lodgings.

(6.) I suppose a soldier doesn't mind being ordered round by his captain; but in a family the mistress and maid are so mixed up that it is much harder to keep the lines from tangling. It takes a very superior person, on both sides, to do it.

(7.) I knew an educated woman—a lady—who tried it as a sort of upper housemaid. The work was easy and the pay good, and she never had a harsh word; but they just seemed unconscious of her existence. She said the gentlemen of the house, father and son, would come in and stand before her to have her take their umbrellas or help them off with their coats, sometimes without speaking to her or even looking at her. There was something so humiliating about it that she couldn't stand it, but went back to slop-shop sewing.

(8.) Many mistresses have no standard of the amount of work a girl ought to do. They know nothing about housework themselves. If a girl is deliberate, and saves herself, they call her slow; if she is ambitious, and gets her work done early, and they see her sitting down in working hours, they conclude that she is not earning her wages, and hunt up some extra job for her. No matter if you can't find anything undone, if she is found sitting about, she *must* be lazy.

(9.) Some employers think that after the more violent work is done, it is only a rest for the girl to look after the child awhile. They don't seem to realize that if the mother finds it such a relief to get rid of her own child for an hour or so, it is likely to be still less interesting to take care of somebody else's child.

(10.) Many people think the position of a child's nurse is very light work indeed—mostly just sitting round; so they don't hesitate to give her the care of one or two children all day, not even arranging for her to get her meals without the oversight of them; and then most likely put the baby to sleep with her at night. Any one minute of such a day may not be heavy; but to have it for twenty-four hours is enough to wear out the strongest human being ever made.

(11.) I knew a school teacher who thought more active occupation would better suit her health; she took a place as child's nurse. She loved children, and found no objection to the work; but soon the employer concluded to put her in a *bonne's* cap and apron. My friend would have worn and liked a nurse's uniform, but she objected to a family livery. On this question they parted, and her employer hired an uncouth, ignorant woman to be her child's companion, and to give it its first impressions.

(13.) In most houses, however elegant, the girls have no home privacy; they must sleep not only in the same room, but most frequently in the same bed; it is rarely thought necessary to make that room pleasant or even warm for them to dress by or to sit in to do their own sewing. The little tastes and notions of each member of the family, down to the youngest, are provided for; but a "girl" is not supposed to have any. She is just a "girl," as a gridiron is a gridiron, an article bought for the convenience of the family. If she suits, use her till she is worn out, and then throw her away.

(13.) To go into house service, even from the most wretched slop or factory work, is to lose caste in our own world; it may be a very narrow world, but it is all to us. A saleswoman, or cashier, or teacher is ashamed to associate with servants.

(15.) The very words, "No followers," would keep us out of such occupation. No self-respecting young woman is going to put herself in a position where she is not allowed to entertain her friends, both male and female; nor where, if allowed, the only place thought fit for them is the kitchen.

Now the above is not theory, but testimony, taken by the present writer from the lips of intelligent working girls, many of whom would be better off at housework than at their present occupations, except for the objections. And from a consideration thereof results this query: Given a certain number of young women of a class superior to the imported, willing to take service under the following conditions, how many housekeepers would agree to the conditions?

(1.) The heaviest work, as washing, carrying coal, scrubbing pavements, and the like, to be provided for if this be asked, with consequent deduction in wages.

(2.) In families where practicable, certain hours of absolute freedom while in the house; especially with the child's nurse.

(3.) Such a way of speaking, both to and of your house help, as testifies to the world that you really do consider housework as respectable as other occupations.

(4.) A well-warmed, well-furnished room, with separate beds when desired; and the use of a decent place and appointments at meals.

(5.) The privilege of seeing friends, whether male or female; of a better part of the house than the kitchen in which to receive them; and security from espionage during their visits—this accompanied by proper restrictions as to evening hours, and under the condition that the work is not neglected.

(6.) No livery, if objected to.

I am aware that such a systematizing of relations between employer and employed is more difficult in a family than in outside business; but it might be done more nearly than at present; and it is very certain that, until it is done, the ideal service will not be found. A. S.

PHILADELPHIA, December 13, 1886.

WILL AND WOULD.

TO THE EDITOR OF THE NATION:

SIR: I notice that your correspondent, "E. R. S.," in No. 1117, designates the substitution of *will* for *shall*, and of *would* for *should*, as "the Southern use," and speaks of it as transgressing "the all but universal usage as found in other modern English written speech" than that of the South. Now, I have for many years been in the constant habit of running through Northern journals, and I have rarely read a column of one, the *Nation* excepted, in which this substitution has not met my eye. "E. R. S." is certainly unaware that the corruption to which he refers has been for generations a Scotticism and Irishism. The *Edinburgh Review* once gravely defended it. Doubtless it was owing to the influence of Scotch and Irish elements in the population that the barbarism became established in the South; and the same influence has, of late, led to much the same result in the North. Here in England I rarely

listen for five minutes to the conversation of a Northerner without being shocked by his misusing *will* or *would*. I may add that a distinguished American philologist assured me, not long ago, that the rights of these auxiliaries were coming by degrees to be as generally disregarded in New England as elsewhere in the United States, and even by the most highly educated. With regard to *would* for *should*, one cannot but infer, from its very frequent occurrence in London newspapers, that exceedingly few of their reporters are Englishmen. In the spoken language the mistake is by no means common here.

If, in the last sentence but one, I had put "*quite* frequent occurrence," it is to be supposed that "E. R. S." would have seen nothing amiss. Similar is his own "*quite* interesting," which, if he would purge himself of Americanisms, he would do well to avoid. An expression of this sort never drops from the pen of an Englishman, with whom *quite* denotes "entirely," "fully." Again, as to "E. R. S.'s" "belittling," the word, apart—or, in American, *aside*—from its perplexing vagueness, is confined to the inhabitants of the United States and a petty scattering of recent English writers who ill-advisedly imitate them.

Your obedient servant, F. H.

London, December 6, 1886.

LIBERTY FOR THE INFINITIVE.

To the Editor of The Nation:

Sir: "Language, like everything else in the world, is subject to change," yet we often find those who should most fully appreciate the force of this truth, advocating Swift's strange proposition of "ascertaining and fixing our language for ever." A recent illustration of the old-time solecism of placing an adverb between *to*, the sign of the infinitive mood, and its verb calls forth a protest from Bishop A. C. Coxe in the October *Forum*. The prerogative of *to* has been encroached upon by no less person than the Queen herself, in a speech to Parliament. Mr. Gladstone, like a true Liberal, noting the opportune moment for reform, endorsed the innovation by employing a similar construction, a week later, in his letter to Mr. Bright.

The learned Bishop affirms his right of inquiry by quoting that corollary of Magna Charta, "A cat may look at a king." While the privilege of free speech—saving under conditions of voluntary acceptance, or as regulated by a wise public policy—is a statute of freedom so authentic that no American need plead or prove it, the idea, in its completeness, is so modern that my right to speak needs, perhaps, to be supported by repeating this conservative quotation as applying to myself in presuming to "look" at Bishop Coxe.

With all respect for one whose rare talents have raised him to such exalted rank—and merit is the only rank for which I have even a "decent regard"—I should question the wisdom and fairness of striking off as "illogical and vulgar" every departure from old and uncouth modes of expression that occurs in that ever-changing medium of thought, human language. Were it not that such changes constitute the growth of language, and that we are the gainers by this growth, such criticisms might well be passed over in silence. It is easy to sympathize with a disrelish of change, since the feeling is almost universal. As a result of this prejudice, "custom doth often reason overrule," not only in the use of language, but also in every other department of thought and action. Every one, however, ought to have the deepest interest in the true development of language, and to lift up his voice, though it be but a feeble one, whenever this moulding process is attacked in a quarter where it is doing good work.

Although of a by no means iconoclastic turn of mind, the infinitive has always stirred in me the desire to see it dismembered. Other verbs can, for convenience of qualification, be separated from their signs, their auxiliaries. Why should not the infinitive likewise conform to the genius of our language? In some instances, as after "make" and "dare"—being generally cases where the infinitive has a subject—we omit the "to" altogether as being in the way and an unnecessary load for the verb to carry. In other cases, where usage permits the sign to remain, why should it be suffered to occupy a position of honor immediately preceding the verb, to the practical exclusion of a qualifying word essential to the complete idea of the verb? Since the importance of the object usually requires that it immediately follow the verb, and the peaceable and immemorial occupancy by "to" has preëmpted the other desirable place, the adverb, though often conveying the pith of the thought, is forced into awkward and misleading conjunction with some other word of the sentence. Surely this iron-clad rule favoring the sign of the infinitive is "illogical"; though it must be admitted that no taint of the "vulgar" can be imputed, since error fortified by long-established usage is ever respectable. E. M. D.

St. Louis, Mo., December 14, 1886.

A BOYCOTTED CHURCH.

To the Editor of The Nation:

Sir: I have been reading the letters from the subscribers of your excellent journal in reference to the influence which its teachings exert over them, and was induced to consider what had been its effect upon me in moulding and shaping my political, moral, and religious sentiments.

Some weeks ago I was requested to deliver a sermon to the "Knights of Labor," quite a number of whom are regular attendants upon my church. In fulfilling their request I gave mortal offence to some of their most prominent men, because I denounced the "walking delegates" and certain other officials. The consequence has been that they have "boycotted" my church. Your journal is responsible to a great extent for this, but I think we can survive the shock, and trust that "their loss will be our gain."

For several years I have been a regular reader of the *Nation*, and regard it as the strongest and manliest paper that comes into my home. Perhaps I have not become *immersed* in its religious teachings as our worthy "Baptist Parson," but I admit that I have been pretty well *sprinkled*.

Notwithstanding the "boycott," I cannot afford to do without the *Nation*. Enclosed please find check in payment for another year's subscription. Yours, etc.,

Methodist Parson.

Mt. Washington, Md., December 13, 1886.

Notes.

The 'Cyclopædia of American Biography,' edited by Gen. James Grant Wilson and Mr. John Fiske, will begin to be issued by subscription during the present month by D. Appleton & Co. It will make six volumes similar to those of the 'American Cyclopædia,' and portraits will be a marked feature—ten to a volume on steel, and between one and two thousand vignettes altogether in the text. Other illustrations will be facsimiles of autographs and views of birthplaces, homes, monuments, and the like.

D. Appleton & Co. have in press 'The Geographical and Geological Distribution of Animals,' by Angelo Heilprin, which will form the next volume of "The International Scientific Series"; 'The Origin of the Fittest,' by Prof. E. D. Cope, fully illustrated; 'Creation or Evolution?' by George Ticknor Curtis; 'On the Susquehanna,' a novel, by Dr. W. A. Hammond; 'Miss Churchill, a Study,' by Christian Reid; 'Brazil, its Condition and Prospects,' by Gen. C. C. Andrews, formerly United States Consul to Rio Janeiro; 'The Rise and Early Constitution of Universities, with a Survey of Mediæval Education,' by Prof. S. S. Laurie, in the "International Education Series"; 'A Zealot in Tulle,' a novel, by Mrs. Wildrick; 'The Poison Problem: or, The Cause and Cure of Intemperance,' by Dr. Felix L Oswald; 'The Master of Ceremonies,' a novel, by George Manville Fenn.

D. Lothrop & Co., Boston, will publish during the present week 'Faith and Action,' from F. D. Maurice, with an introduction by Phillips Brooks; 'Common Sense Science,' by Grant Allen; 'A Story Book of Science,' by Lydia Hoyt Farmer; and 'Perry's Saints,' an account of the work of a famous regiment in the war for the Union, by Col. James M. Nichols, with illustrations.

Ginn & Co. promise for January 'A Primer of Botany,' by Mrs. A. A. Knight.

We expect to return to the new edition—and the first to which the public is admitted even partially—of Mrs. Susan I. Lesley's 'Recollections of My Mother' (Boston: W. B. Clarke & Carruth.). We mention it now because it is an excellent gift-book, especially for grown girls, though by no means is its interest confined to them. These intimate revelations have been pronounced "one of the best and most wholesome pictures of our better New England life half a century ago that exist anywhere"; which is the same as saying that they are calculated to elevate and dignify the family of the present day.

The earlier poems of Pope; Monk Lewis's 'Bravo of Venice'; Plutarch's Lives of Demetrius, Mark Antony, and Themistocles; Peter Plymley's Letters and Selected Essays; and Travels in England in 1782, by C. P. Moritz, a Prussian, are among the most recent issues in "Cassell's National Library." Prof. Morley has done well to include this itinerary of Moritz's, which is thoroughly entertaining, not more for what is now obsolete than for that which persists in English character and customs.

Laura C. Holloway's 'Buddhist Diet Book' (Funk & Wagnalls) is a vegetarian receipt-book which has its value irrespective of the Buddhist preparation its use will insure the buyer. The compiler leaves it an open question whether the true believer can use eggs in cooking or otherwise, but for the most part she refrains from introducing them in her receipts. We may improve the opportunity to mention—we can do no more—several larger works of the same class, having, however, no religious end to subserve: the 'Virginia Cookery Book,' by Mary Stuart Smith (Harpers); 'The Unrivalled Cook-Book and Housekeeper's Guide,' by "Mrs. Washington" (Harpers), who calls attention to her 200 Creole receipts, among others; Miss Juliet Corson's 'Practical American Cookery and Household Management' (Dodd, Mead & Co.), with illustrations; the 'Philadelphia Cook-Book: A Manual of Home Economics,' by Mrs. S. T. Rorer, Principal of the Philadelphia Cooking School (Geo. H. Buchanan & Co.); and 'French Dishes for American Tables,' translated by Mrs. Frederic Sherman from the French of Pierre Caron (D. Appleton & Co.). The three largest of these works are suitably bound in glazed cloth for the kitchen.

'The Globe Dictionary of the English Language as it is Spoken and Written, Edited and compiled by Hyde Clarke,' just published by the Aldine Book Publishing Co. of Boston, with the date 1887 on the title-page, is an old book with a new name. It is an unchanged reprint, apparently from old stereotype plates, of the fifth edi-

tion of Hyde Clarke's 'New and Comprehensive Dictionary of the English Language,' published in London as long ago as 1869.

In a pamphlet, "The Old State-house defended from unfounded attacks upon its integrity," Mr. W. H. Whitmore replies to Dr. George H. Moore's second paper, read before the Bostonian Society in February last. The points in dispute are insignificant, but, however they may be settled, Mr. Whitmore cannot be controverted when, complaining of the personalities of Dr. Moore's argument, he says: "He is especially rancorous when he has an opportunity to assail any person or thing relating to Massachusetts, and he has recourse to ways in vogue in past centuries, but happily since discarded by literary men." We ourselves long ago remarked upon this peculiarity of temper in Dr. Moore, which so vitiates with *Tendenz* his most valuable historical disquisitions.

The seventh annual report of the Harvard "Annex" tells of a surprising increase in attendance—73 against 55 in 1884-85—partly to be attributed to the newly-acquired local habitation. The health of the students has been satisfactory. The demand upon the graduates for teachers has continued, and in other ways it is evident that the School is leavening in remote sections the higher education of women. The tuition expenses are more than met by the income from students, but money is still needed for necessary enlargements of the School building, especially for scientific work, and for other advantages. Some $8,000 had, on August 1, still to be raised for the purchase of the Fay House.

The *Bibliographical Notices, I.*, which Prof. Willard Fiske is on the eve of issuing at Florence, comprises a list of such of his books from Icelandic presses, during the years 1578-1844, as are not enumerated in the catalogue of books printed in Iceland published by the British Museum. For the period in question the catalogue enumerates 170 titles, and Prof. Fiske owns 84 of these. He therefore describes in his supplementary list only 139 titles, or the remainder of the 223 in his possession. From 1845 to 1880, the date at which the Museum catalogue ends, the disparity is still greater in favor of Prof. Fiske's collection.

The Leonard Scott Publication Company, Philadelphia, will hereafter add to their reprints of the British quarterlies the *Scottish Review*.

"Misunderstandings: Halleck and Grant," is the well-chosen title of a weighty and temperate article in the December *Magazine of American History*, by Gen. James B. Fry. Its aim is to demolish the Badeau-Grant allegation of injustice to the latter on the part of Gen. Halleck, and it shows clearly that Gen. Grant's references to this subject in his Memoirs contradict his earlier expressions towards and concerning Halleck, and are not borne out by the documents. A capital portrait of Gen. Halleck accompanies this paper. Under the caption, "Creole Peculiarities," Mr. P. F. de Gournay gives a very pleasant and compact sketch of the development of New Orleans out of the four nationalities, French, Spanish, English, and German, with some remarks on the characteristic traits of the Creoles. The segregation of the several colonies goes far to explain the obstacles to the growth of public spirit in the chief city of Louisiana.

Unwin's Christmas Annual, 'The Witching Time,' edited by Mr. Henry Norman, is even better this year than it was last. Austin Dobson introduces it with some appropriate rhymes, and eight stories and two other poems complete its contents. Most of the tales are of the ghostly kind immemorially associated with the season; Crawford, Laurence Alma-Tadema, Norris, Vernon Lee, and William Archer are names that insure entertainment, and, except for the vampire-horror of Von Degen, none carry on the game repulsively. Natural explanations account for the wonders in most, and in Mr. Norris's contribution the mingling of realism and the supernatural is inexpressibly comical. Some of them have no ghosts, and of these is Mr. Norman's own sketch, well set and well told. In literary merit and in narrative power this Annual is far ahead of rivals for Christmas favor.

The Christmas number of the London *Art Journal* (New York: International News Company) is wholly given up to "L. Alma-Tadema, R.A.: his Life and Work," by Helen Zimmern. The tone of this long article or sketch may be judged as well from this sentence as from any other: "Alma-Tadema's archæological knowledge is admittedly unrivalled, and we may be quite certain that every detail is scientifically accurate." Our reasons for holding the contrary opinion are fresh in the minds of our readers. The reproductions of the artist's pictures accompanying Miss Zimmern's thin and fulsome discourse are of various kinds and of great unevenness, the best being none too good.

In Cassell's *Magazine of Art* for January the opening paper, by Mr. Charles De Kay, is on "Movements in American Painting: the Clarke Collection in New York," with illustrations: and, for the rest, some discourse about Mrs. Siddons, with a group of portraits, is most noteworthy. America again comes to the front in *L'Art* for November 15 (Macmillan), M. Alexandre de Latour having something to say about American Art Museums, in consequence of the article on "The Western Art Movement" in a late *Century*—"une revue mensuelle que l'on ne saurait trop justement louer." The writer sees in the spontaneous endowment of art in this country an industrial danger to France, of which evidence is already visible, he says, in the American art products exposed for sale on the Avenue de l'Opéra. In the December *Portfolio* we remark the fine Amand Durand reproduction of Van Dyck's etching of the portrait of his fellow-artist Jean de Wael, in its first state.

Cassell's Family Magazine for January presents some very instructive views of the changes wrought by the recent tremendous volcanic action in the Hot Lake district of New Zealand. Two lovely "pink" and "white" terraces, such as similar conditions have produced in the Yellowstone Park, were once favorite places of resort, and were pictured in the same magazine four years ago. They are now reproduced, and beside them are cuts of the same sites after the eruption—the very abomination of desolation.

The readers of Prof. Thorold Rogers's 'Agriculture and Prices' and 'Six Centuries of Work and Wages,' who have been interested in his citations from the treatise of Walter de Henley on farming, which Prof. Rogers attributes to the thirteenth century, and which was supposed to exist only in manuscript, will be glad to learn that it has been printed and is not difficult of access. In the "Bibliothèque de l'École des Chartes," 4th series, vol. ii (1856), pp. 123-41 and 367-81, was published a manuscript of the thirteenth century, of unknown authorship, under the title of 'Traité d'économie rurale composé en Angleterre au XIIIe siècle.' In the London *Academy* of October 30 Mr. Bourne of Yale University suggested that this work probably had some close relation to Walter de Henley's, and perhaps was an abstract of it, inasmuch as there was a great similarity in the contents of the two treatises, and many sentences quoted from the Henley manuscript by Prof. Rogers were to be found in the 'Traité.' Prof. Rogers immediately replied in a characteristic letter to the *Academy* of November 6, in which he says that he has compared the 'Traité' with the Bodleian MS. of Walter de Henley, and that they are the same work, except that, besides many variations in the text, the 'Traité' as printed is without the preface which is found in the MS. Prof. Rogers raises one or two interesting questions about Walter de Henley. He has read somewhere that Bishop Grosseteste was the real author of this little treatise, but that he believes to be impossible.

Boussod, Valadon et Cie. have republished Halévy's 'Princesse,' with all the illustrations of *Les Lettres et les Arts*, and upon the same paper, in an edition of fifty numbered copies, only thirty of which are offered for sale. These copies are forty francs each, which is almost as much as the Paris price of the two numbers of the *Revue* containing the story and so much besides.

The Italian copyright law appears to embrace newspapers in respect to the requirement of a deposit with the National Library at Florence. The last number of the *Bollettino* issued by this institution, for example, describes with the greatest technical particularity twelve new journals. Whether complete files have to be maintained, we are unable to state.

The peculiar sunrise-shadow of Adam's Peak in Ceylon has been a matter of note with many travellers. Instead of lying flat on the ground, the shadow appears to rise up in front of the spectator like a veil and then suddenly to fall down to its proper level. Among the various theories propounded to account for this, that of a mirage of some sort has been generally accepted; but in the course of his late meteorological tour around the world the Hon. Ralph Abercromby spent the night on the top of the Peak, nearly 7,400 feet above the sea level, and obtained unmistakable evidence that the appearance is due to light wreaths of thin morning mist being driven past the western side of the mountain by the prevailing northeast monsoon up a neighboring gorge. The shadow is caught by the mist at a level higher than the earth, and then falls to its own plane on the ground, as the condensed vapor moves on. In a paper communicated to the late meeting of the British Association, the thermometric observations of Mr. Abercromby completely disprove the idea that this phenomenon is due to mirage of any kind. It is, in fact, a phenomenon peculiar to Adam's Peak; for the proper combination of a high, isolated pyramid, a prevailing wind, and a valley to direct suitable mist at a proper height on the western side of a mountain, is only rarely met with.

—The new *Scribner's* has a marked individuality which is not confined to its plain, unpretentious covers. It begins, at least, by attempting to carry out its promise to be a literary magazine first of all, to have good reading, and let the text take care of the illustrations. The division of the contents among different departments may fairly be taken to be indicative of the future programme. About one-third of the space is given to fiction, and it is by authors whose reputations are still in the making. Mr. Harold Frederick opens a serial of life in the northern country of New York with some strongly drawn chapters which introduce a group of definite, living characters, detail a good deal of family history, and depict some scenes of a dreary but powerful kind; it is an excellent beginning, but one foresees there is to be more truth than charm in the story. The second serial is by Mr. Bunner, on whom the heavens look favorably, and in this introduction the New York of the first years of the century is picturesquely set before us, and in the treatment one perceives the union of grace and strength which may denote the work of a writer of the first contemporary rank in America. The two short stories have less distinction. Two papers belong to the province of history in its popular form. The extracts from the diaries

of Gouverneur Morris seem to be the foretaste of a full publication, and they suffer from the lack of skilful handling; the scene should have been placed before the reader, the comment have been less obtrusive, and the extracts continuous. Ex-Minister Washburne's reminiscences of the scenes in Paris before Sedan are interesting, though without vividness: he saw only the *ensemble*; the eye for significant detail, which is the gift of the true historic observer, was not his. Nevertheless, the words of a witness to great events, who is merely a spectator of intelligence and experience, are always invaluable. Dr. Ward's discussion of the Babylonian seals is perhaps not more technical than an archæological article ought to be. Prof. Walker's contribution on Socialism is of the most excellent kind, and must, by its open-mindedness in the main questions, its clear and powerful dealing with definitions of Government action, and its strong conservative sense, do something to free the minds of intelligent and humanitarian thinkers from the confusion that envelops the subject. The poetry is up to the average quality of current verse. Altogether, the number, which makes no attempt to advance the magazine by any sensationalism of text or cuts, is a good omen of the future. The portraits are in the best style of this now highly developed art. A literary magazine of this general character has for some years been needed, and all who are interested in the further development of our literature will wish the new venture entire success.

—The *Atlantic* for January shows markedly an increasing tendency toward short articles. The list of subjects is long, and the papers correspondingly brief. Mr. Hamerton maintains his place as the most interesting writer, and devotes this month's observations on the French and English to bringing out the extent to which Puritanism made England a peculiar country. Before that movement arose the English were still like their Continental neighbors, and now, after it has passed its prime, he thinks they will approximate nearer to the French in national habit and taste. He dwells much on "the Sabbath," and tells an amusing story of an English lady requesting a visitor, who was playing on the violin in his room, to desist, and, on being told that the music was from Handel's "Messiah," answered, "The music might be sacred, but the instrument was not." In connection with this fine distinction he notes also that the Scotch object to sailing while allowing rowing, and says that once when he was indulging in the former recreation in their waters, they thought he ought at least to have taken in his flag—the cross of St. Andrew and St. George. He observes significantly that our literary purity belongs only to the Victorian age, and may be transitory; and to those who object to it as a prudishness which misrepresents life, he replies that it errs no more on that side than the French "lubricity" does on the other, and of the two errors he prefers the English. Other shorter articles are by Edith Thomas, Prof. Sill, and Prof. Hardy—the last consisting of a mathematician's marginal notes, which apply some out-of-the-way reflections, drawn from science, to theology. There is, too, a very sensible paper on children's books, which may fitly be recommended to the attention of all moral instructors. The new year signifies its advent by the first chapters of a novel by Crawford, which opens in Constantinople with good scene-painting laid on with that writer's crude and violent color—but successfully, for all that; and the promised serial story by Mrs. Oliphant and Mr. Aldrich, in partnership, is also pleasantly begun.

— We would particularly call the attention of those interested in the higher education to the discussion of the "Possible Limitations of the Elective System" begun by Prof. Geo. H. Palmer in the *Andover Review* for December. It is a summary consideration of the criticism evoked by a former article of his in the same magazine in November, 1885. A few disconnected sentences will stimulate a desire to read this very vigorous, but equally candid and moderate, paper. "In reality, each college creates its constituency. Its students come, in the main, from the inert mass of the uncollegiate public. Only one in eight among Harvard students is a son of a Harvard graduate; and probably the smaller colleges beget afresh an even larger percentage of their students." As to relieving the University by "persuading our high schools to accept the prescribed subjects of the colleges," or in other words, to become Gymnasia: "The great public schools of England—Eton, Rugby, Harrow, Winchester, Westminister, Cheltenham—are of no higher order than, under the proposed plan, Andover and Exeter would become. From these two academies nearly ninety-five per cent. of the senior classes now enter some college. But of the young men graduating from the English schools named, so far as I can ascertain, less than fifty per cent. go to the University." As to the "rapid and fateful revolution" now going on in the higher education of New England, in proportion to the wealth of the colleges concerned: "The new modes are expensive. It is not disapproval which is holding the colleges back, it is inability to meet the cost." As to the impracticability of uniting elective and prescribed studies: "This is why the younger teachers in all the colleges are eager to give increased scope to the elective studies. They cannot any longer get first-rate work done in the prescribed. . . . If prescribed studies are ever exceptional, ineffective, and obnoxious, they certainly become more so as they diminish in number. A college which retains one of them is in a condition of unstable equilibrium." As between the elective and the group system: "Obviously, for the young, foresight is a hard matter. While disciplining them in the intricate art of looking ahead, I should think it wise to furnish frequently a means of repairing errors. Penalties for bad choices should not be too severe." "One does not feel quite easy in allowing nobody but a lawyer or a devotee of modern languages to read a page of English or American history (see the Johns Hopkins *University Register*, pp. 47-53)." "Confronted with the exigencies of operation, the so-called group system turns into an elective system, with highly specialized lines of study strongly recommended."

—Apropos of therapeutic homicide noticed in No. 1117, a correspondent writes:

"Seeing a friend incurably diseased and yet in anguish long drawn out, men have always felt that cutting short his pangs was a kindness. Yet our English ancestors, while thus hastening a happy despatch for those whom they counted it cruelty to let stretch longer on the rack, seem to have had some conscience qualms. These they quieted, and excused themselves by the ingenious pretence, or superstition, that a sick man could not die if his bed had in it any game (that is, wild) feathers. Some said that pigeon feathers had special power to prolong agony. Accordingly, when a poor soul did not pass away so soon as was expected, friends would say, 'We must change his bed, or, if there is no other bed, we must lay him on the floor.' Others would snatch the pillows from under his head, letting it hang down. Thanks to such kindnesses, his death-struggles could not be long protracted by game feathers. These expedients for keeping friends from being, as Charles II. was, 'an unconscionable time in dying,' are described in *Notes and Queries* (i, 5, 413. iv, 8, 66) as even to this day familiar to English servants and nurses, so that it is unsafe to leave a sick person alone with them. Heroic relief of this sort may well give place to modern anodynes and opiates—'sweet oblivious antidotes.' But if we may justifiably shorten another's life that has become not worth living, he surely has a right to shorten his own. Then the canon against self-slaughter must be repealed, and we must fall back on the Stoic maxim, 'If the house smokes, quit it.'"

— During the winter of 1885-'86, Prof. Angelo Heilprin and Mr. Joseph Willcox of Philadelphia engaged in an interesting voyage in south Florida under the auspices of the Wagner Free Institute of Science, in which the former gentleman is professor of geology. The Institute has just issued the last part of the report on the expedition, containing the "General Summary and Conclusions," by Prof. Heilprin, including the description of a number of new fossils of the pliocene formation of the Caloosabatchee. The researches of the United States Coast Survey, culminating in the relief map of the Gulf of Mexico, gave the death-blow some years since to the theory that the peninsula was due to mud accumulations checked on their way to the ocean by coral reefs. The previously unsuspected elevation of the central ridges of north Florida (some 200 feet) and the researches of Profs. Eugene Smith and Heilprin, Dr. Neill, and various members of the United States Geological Survey, have, within the last few years, given an entirely new aspect to the received opinions in regard to the geological history of Florida, which it is not surprising to find fully confirmed by the observations made on the present occasion. Florida, as far as yet determined, is of tertiary growth, and has grown very regularly and evenly, so that whatever changes of absolute level have occurred, the horizontality of the strata has been but little disturbed. The youngest formations are at the South, where there is a considerable coral tract, which gave rise to the discarded theories. The peninsula has long been inhabited by man, as the fossil human bones of Lake Monroe, found by Pourtalès, and recent discoveries at Sarasota Bay, show beyond question. In the last case the bones were wholly converted into limonite. The beautiful preservation of the fossils obtained and the regularity of the strata will enable palæontologists to follow the development of species from age to age through the Floridian rocks in a manner which, in the broken-up tertiary strata of most countries hitherto studied, has not been practicable. The present publication contains a number of scientific details which will be very welcome to students everywhere.

—A most amusing book for those who have the historic sense strongly developed and love to watch the development of manners and customs and the origin of traditions and by-words, is 'The Curiosities of Ale and Beer' (Scribner & Welford). In this portly octavo Mr. John Bickerdyke has put into shape the notes gathered by the late John Greville Fennell, together with his own accumulations, being aided in the task by a writer whose name is given only as Mr. J. M. D——. In fifteen chapters of simple narrative, free from the faults so common to books of this class—discursiveness and attempted wit—a prodigious mass of information is brought together, and this is made partly available by an index which, however, is not full enough to give all one may want. The author's plunge into the central matter is a pleasant thing to see at the beginning. Before a page has been read we are being taught how to brew beer at home. Having brewed, in imagination, a quart or two of "bitter," we go on to read of the difference between ale and beer, of ancient opinions unfavorable to wine as compared with the English brew; of the origin of barley wine, and what the early specimens of it were like; of Home-brewed, the mighty ale that few moderns know or have ever seen; of hops, a late but a welcome addition to malt liquor; of ancient laws and customs connected with the manufacture and sale of beer; and (for we must

take breath) of ancient traditions of brewing. Chapter vii compares different kinds of barley-broth one with another, and expresses a characteristic and natural conviction that "our own ales and beers" are "far superior to any brewed in Germany," which the American critic notes with complacency as being himself in a higher sphere of unbiassed judgment and able to appreciate both. Chapter viii has to do with taverns and signs—a long chapter, fifty pages of famous good reading. Chapter ix deals with English festivals and merry-makings. Chapter xi tells of old songs and ballads, though, indeed, there has been a deal of that subject before, *passim*. Chapter xii tells of brewing at the present time, and of the great establishments, Barclay & Perkins's, Alsop's, Bass's, the Guiness brewery in Dublin, which has so recently been turned into a "company" and which is here said to be the greatest producer of malt liquors in the world, and many others less famous. There is only one more serious fault to find with a pleasant book, that it is not in two light volumes instead of one heavy one.

— *Les Lettres et les Arts* (Paris: Boussod, Valadon et Cie.; New York: Charles Scribner's Sons) has been received rather late for November. It is a number that recalls the price at which the *revue* is published. There are but seven articles in all, none of them signed by any of the great names of literature, unless that of M. Ludovic Halévy of the Académie Française can be considered one. But when the reader reflects that it is not quite reasonable to expect every number to be as satisfactory as all those that have preceded, and that an occasional less brilliant issue brings out the beauty of those immediately following, he cannot but turn the leaves with a certain degree of resignation, and a confident expectation of what will be offered in the final number of the present year, and in the initial one of the year to come. If after this he should be attracted by the paper upon "Holbein décorateur," by M. Fernand Calmettes, he will be a very inveterate grumbler indeed if he does not forget all dissatisfaction in the enjoyment of one of the most suggestive criticisms which *Les Letters et les Arts* has ever published. There is a very characteristic story, "Lilith," by an author little known, remarkable, however, both as a writer and a thinker, M. Édouard Rod, a pessimist of the deepest dye, by the side of whom M. Paul Bourget, for instance, is pale. Whether the second and concluding part of M. Ludovic Halévy's "Princesse" will satisfy the expectation excited by the beginning of the story in the October number, is doubtful, but the fine observation and delicate rendering of character are as delightful as ever.

— The publication, a few years ago, of Dr. Wilhelm Heyd's 'Geschichte des Levantehandels im Mittelalter' (Stuttgart, 1879), placed within the reach of students of the Middle Ages the results of more than twenty years of investigation of one of the most interesting topics in mediæval history. Dr. Heyd, in his position as head librarian of the Royal Public Library in Stuttgart, had unusual facilities for such work, and his book shows upon every page that he improved them with extraordinary industry. The edition of 1879 could in a certain sense, as the author remarks, be called the third, since large portions of the contents had appeared twice before. During the years 1858–64 Dr. Heyd published in the Tübingen *Zeitschrift für die gesammte Staatswissenschaft* a series of essays upon the trade of the Italians with the East and with Africa in the Middle Ages. In bulk these amount to about one-half the later history. These essays, revised and enlarged, were translated into Italian by Prof. Müller of Turin, and appeared under the title, 'Le Colonie Commerciali degli Italiani in Oriente nel medio evo" (Venice and Turin, 1866-8). Dr. Heyd then conceived the plan of writing a general history of the commercial relations of the Latin and German peoples with the Levant in the middle ages. In this work, the subject of our note, were incorporated, with additions and revisions, all the previous studies upon the Italian trade save the one on the trading colonies in north Africa from Tripoli to Morocco (in the Tübingen *Zeitschrift*, vol. xx., pp. 617-60), and in addition the trade of the other European peoples was discussed with great fulness and detail. In an appendix of 160 pages was given an interesting critical account of the chief articles imported from the East, the whole forming one of the most complete and learned works ever written in the field of economic history. The narrative is flowing and easy in style, the notes are full, serving as a complete guide to the literature of the subject, which is far larger than one would suspect, while an index of more than fifty pages gives the student convenient access to the multitude of facts stored in the 1,300 octavo pages of these two volumes.

— What may be styled perhaps an *édition définitive* of this great work has just come from the house of Otto Harrassowitz, Leipzig, with the title: 'Histoire du Commerce du Levant au Moyen-Âge, Édition française refondue et considérablement augmentée par l'auteur, publiée sous le patronage de la Société de l'Orient latin, par Furcy Raynaud.' The translator informs us that all the materials collected by the author in view of a second German edition have been incorporated in this translation, every page of which has passed under Dr. Heyd's eye. Besides this, certain chapters have been entirely rewritten, and many additions have been made to the notes. The latter assertion is justified very easily by a brief examination of the French edition: even so late a work as Pigeonneau's 'Histoire du Commerce de la France' (Paris, 1885) is referred to several times. The style of the translation is remarkably succinct. Usually translations from the German exceed the originals in length on every page, but M. Raynaud's version rarely if ever does, while its faithful rendering of the German exhibits in a singular degree the capacity of the French language for compact yet lucid expression. The index of the French edition is fuller by several pages, and the volumes are handsomer.

MR. LOWELL'S NEW VOLUME.

Democracy, and Other Addresses. By James Russell Lowell. Boston: Houghton, Mifflin & Co. 1887.

An essay is the freest, an address one of the most enslaving, forms of literary expression. The speaker is subject to the moment, with all that appanage of accident and circumstance which has so commanding an influence in determining what words are fit then and there; and, although an orator gains often from the concentration of life in a memorable hour and makes it the very stuff of his triumph, the man of letters seldom finds any compensation of this sort possible to him. Such considerations prepare one for what seems a lack of customary freedom in some of these occasional speeches of Mr. Lowell, and for a novel attitude of the author, which may be expressed by saying that he does not talk with you, as he was wont to do, but at you. Tact is an admirable quality, and when one must observe so many and various amenities as a foreign minister who enters into the intellectual and social life of a great nation, it is of incalculable utility; but the necessity to employ it is an inconvenience to the thinker.

In the address which Mr. Lowell made before the Wordsworth Society, for example, his position as the retiring president was evidently an embarrassment to him as a critic, and the windings he makes, not, like Burke, into his subject, but out of it, are a lesson how to tell the truth without making a martyr of one's self, which the most skilled master of literary fence might lay to heart. In the Harvard address, on the contrary, the constraint of the hour was evidenced by the complete liberty of speech which he sensibly accorded to himself: as one in the house of his friends, he magnanimously determined to say his say, irrespective of who might be critical, sure of amiable tolerance if not of cordial agreement. But in an essay he would not have apologized for plain-speaking. The moral is this: that however successful these addresses were, and however delightful in themselves, let us not be flattered into believing that the man of letters can be so admirable as a speaker as he is as a writer, or is ever in so favorable an element as when he is composing a book for the fit audience, though few, which is impanelled silently year after year.

This warning springs from a natural jealousy for Mr. Lowell's literary fame. The address, nevertheless, has proved a fruitful form of expression for his later thought. One would not say that he was in earlier writings characteristically discursive, but the extraordinary fulness of his mind and the restless spontaneity of its action make him seem so. This copiousness was always his, and age has brought a mellower ripeness and more of charm. For a man whose mental wealth is so constituted, and who yet has never shown a disposition to reduce and systematize thought, any literary form which takes the surplusage of the mind and holds it, is sure to be serviceable. This is the essential character of the contents of this volume, which is less a reasoned criticism of books or life or institutions than the overflow of an opulent mind. It would be as impossible to submit such work to criticism as it would be unfruitful; and it is unnecessary to notice anew the traits of style, the felicities of phrase, the charm, eloquence, and humor which are familiar to two generations of our people. The old knowledge how to quote still stands him in good stead, as when he repels Carlyle's sneer that "America meant only roast turkey every day for everybody" by the home-thrust, "he forgot that states, as Bacon said of wars, go on their bellies." The poetic touch, too, is as swift and tender as ever, as in the line concerning the ancient quiet of Oxford, that "the very stones seemed happier for being there," and in the dozen other perfect sentences which, like

"— captain jewels in the carcanet,"

are "thinly placed" in the Harvard address, and of which the tribute to Theocritus is one that shines in the memory. But to point out such matters as these is superfluous, in the same way as to review what is said of Fielding or Cervantes. It is of interest, however, to inquire what is the general temper of mind in these addresses—what things Mr. Lowell has finally found to be of most worth in literature and in life; and to this point, which seems to us at once important and instructive to men of cultivation, we shall confine what little it is our place to say regarding this volume.

In the first rank stands the query, What does Mr. Lowell think of America? Those who listened to him at Birmingham, when he spoke on Democracy, heard him more simply as an American than his auditors here can do: he was a Minister standing for the institutions of his country in their eyes, and justifying them in a speech peculiarly difficult to make because his topic was all but a political issue in the practical sphere. Here the case is different, and public curiosity is alive to his words rather because he is the most eminent representative of that group of cultivated men who are commonly believed, and not without grounds, to distrust democratic institutions and to look askance upon the power of the

masses. There can be no doubt that Mr. Lowell has faith in our national destiny, as perfect as was ever possessed by a patriot aware of dangers, yet supremely confident of mastery over them. The basis of this belief is nowhere made apparent; it lies deep in those foundations of reverence, of trust in divine purpose, of patriotic and humanitarian sentiment, of emotions strongly stirred in the war time—in a word, it lies, where alone all faith is justified, in character. The address does not help one much who seeks the why of the orator's conviction, though it illustrates the course of his thought when it is exercised upon the subject of popular government in general. It is not, as it has been called, a profound and full exposition of the democratic principle. It has rather the consecutiveness of life than the sequence of logic, as indeed Mr. Lowell himself conceived it, when he announced his purpose to speak from "some experimental knowledge derived from the use of such eyes and ears as Nature had been pleased to endow me." He told his Birmingham hearers what he had observed in the working of his home institutions, spoke of Lincoln and Emerson, who each bore authentically the mould of the democratic spirit, and other things of note; and he drove home this report of things known to him from experience by many weighty maxims drawn from the higher region of philosophy, or thought applied to the general conditions of human life. The sanity of his remarks is the most striking of their qualities; they are altogether free from panic, a liability to which is the political weakness of culture, and they thus keep proportion marvellously. It is with a brief and almost careless stroke that he brushes aside a whole host of confusion when he says: "The last thing we need be anxious about is property." In meeting the objection that to arrive at truth by a count of hands is a transparent absurdity, there is something like humor in his admission of it, while at the same time he points out that in politics it is not truth that is to be arrived at, but a working arrangement; and the count of hands which now prevails as a method of decision is rightly contrasted, not with the balance of wisdom in that never-existing republic where philosophers are kings, but with the historic methods of count of pikes, count of stars and garters, count of dollars. The way in which the speculative intellect, in dealing with questions of suffrage and civil equality, misses the point, through a lack of the political habit of mind, was never more cheerfully exposed. The maxim that it is not the Rights, but the Wrongs of men that make all the trouble, is phrased and rephrased as one shapes glowing metal with strokes of the hammer; and no part of the rational groundwork of democracy is slighted.

It is not in these matters, which belong to the past of accomplished fact with us, that the most interesting part of the political spirit of Mr. Lowell lies, for Americans; but in those sentences which look to the future, which deal with wealth and poverty, with the means of satisfying desires which democracy has created, with the possibility of modifying those conditions which are the source of suffering and injustice to the common people, and like themes. He knows the large proportion of woe and want that springs from human nature, and is irremediable except by the regeneration of the individual, but he thinks that something of the burden on the lower orders of mankind is due to defective social arrangements. He is quite sensible of the place of wealth in sustaining society, of its beneficence, and of the increase of conscience in its holders; but he says sharply that wealth bears those burdens "which can most easily be borne, but poverty pays with its person the chief expenses of war, pestilence, and famine," and adds that all the vast charity of well-meaning and laborious philanthropists in the expenditure of money is no more than "as if we should apply plasters to a single pustule of the smallpox with a view of driving out the disease." The bearing of this view of the relative positions of wealth and poverty under conditions which admit of change, is too wide-reaching to be followed out here. The whole course of thought seems to come to its head in his remarks upon Henry George, whose political economy he parries with a witticism, but affirms that he "is right in his impelling motives"; and, not fearful of words, he continues, with a disclaimer of communism on the one hand and of State socialism on the other, "but socialism means, or wishes to mean, coöperation and community of interests, sympathy, the giving to the hands not so large a share as to the brains, but a larger share than hitherto in the wealth they must combine to produce—means, in short, the practical application of Christianity to life, and has in it"—we italicize the words—"*the secret of an orderly and benign reconstruction.*"

The second point which is to be reckoned lies in the literary field. It is no news to say that Mr. Lowell is an idealist. It is, nevertheless, worth emphasizing; partly because he is the fittest to be called as a witness of any public man, and partly because he himself emphasizes the fact strenuously. There is no form of the older criticism that he does not use to give wings or weight, as the case may be, to his words. He draws the distinction as markedly now as in years gone by between the imagination and the understanding, and classifies authors as in one or the other realm. He believes as unreservedly as ever in the higher worth of the imagination, and in its higher function. Coleridge, he says, taught the English mind "to recognize in the imagination an important factor not only in the happiness but in the destiny of man"; and he does but develop Coleridge and those who fed the mind of Coleridge originally, when he says elsewhere, "The most vivid sensations of which our moral and intellectual nature is capable are received through the imagination," or, "We hold all the deepest, all the highest satisfactions of life as tenants of the imagination." He is careful, too, to remind us that when imagination allies itself "as best it may" with the understanding, only lower ends are possible to it. Again, he defines the world of the imagination as "not the world of abstraction and nonentity, as some conceive, but a world formed out of chaos by a sense of the beauty that is in man and the earth on which he dwells." He elucidates the subject further by repeating once more the old idea that the imagination deals with the type. Thus, of Cervantes's characters: "They are not so much taken from life as informed with it; . . . not the matter-of-fact work of a detective's watchfulness, products of a quick eye and a faithful memory, but the true children of the imaginative faculty, from which all the dregs of observation and memory have been distilled away, leaving only what is elementary and universal." And if the reader has patience for another quotation, the character of pure literature—of that cast, as he would say, in the *forma mentis æterna*—was never more nobly and exactly described than where he writes of its works as "those in which intellect, infused with the sense of beauty, aims rather to produce delight than conviction, or, if conviction, then through intuition rather than formal logic, and leaving what Donne wisely calls

'Unconcerning things matters of fact'

to science and the understanding, seeks to give ideal expression to those abiding realities of the spiritual world for which the outward and visible world serves at best but as the husk and symbol." In that sentence lies the whole organon of the higher criticism. If one masters it, he is a graduate of literary art, and there is no department of the works of creative genius to which he does not hold the key of interpretation. But a view of the art of literature which is so pronounced and so frankly set forth by the only critic of the highest rank that our country has ever produced, does not call for more than statement in this place; as we noted the general characteristics of Mr. Lowell's democracy, so here it is our purpose to do no more than direct attention to the principles of his criticism, and to dwell on the prominence he gives to the imagination, on his old-fashioned adherence to the doctrine that the type is the only thing real in an exact sense, and that art consists in identifying the individual with the type, which is the peculiar faculty of genius—its creativeness.

These are the two most noticeable traits of the ripened convictions of Mr. Lowell as made known in this volume—the democratic and the idealistic temper in forms of extraordinary purity. It is evident that he believes in the gods who have fashionod his own clay, and he wishes their power to continue over new generations, because he has experienced its enlightening and civilizing influence in his own life-long culture. At the Harvard Commemoration he was defending his own masters who had brought him to such happy issues of thought, and pleading that the nurture of our youth be still intrusted to those humane studies which were the fecundating intellectual principle of modern civilization. It is natural for him, it is well-nigh a filial duty, to take this view. But have not four centuries of compulsory classical study in our institutions of learning incorporated the immortal part of the ancient culture in our general intellectual life as closely as the Judean religious impulse has entered into our common spiritual life, so that special training in the Latin and Greek may safely be left to the literary class as Hebrew to the clerical class? Plutarch is an inspiring author for the young and strengthening to the mature; but that American whom Mr. Lowell singled out as "one of Plutarch's men," and who alone of our countrymen could support that simple and heroic phrase, was not indebted to "insolent Greece or haughty Rome" for one tittle of his personal greatness. Was that very one whose literary fame braved the classical tradition in that audacious line of Jonson's eulogy—was Shakspere so deeply obliged, in any direct way, to antiquity by virtue of his "small Latin and less Greek"? And as a sign of how wide the stream of Virgil's speech has spread abroad, it may be mentioned that Mr. Lowell quotes often from Dante, but neglects Dante's master. It is not our intention to argue the subject further than by these few suggestions to intimate that the Renaissance teaching need not survive after the work of the Renaissance has been accomplished. Our culture is so permeated with the old wisdom, so articulated with classical canons, so informed with rationality that the new birth of learning may be regarded as complete; one draws on the ancient fountain-head whenever he taps a modern literature, and thereby the necessity of an original acquaintance with the classics for every man who aspires to be liberally educated, is greatly lessened if not destroyed. For the very few who may hope to reach any distinction in refinement, leaders in culture, the men of letters and of art, interested mainly only in the best things produced by the spirit of man, the training by which Mr. Lowell has been moulded will still be needful; it is got, not in colleges, but in the private study. Professors cannot give it, for it is self-imposed, and, after all, it is less a discipline than an inner growth. In what worth of substance it results, in what attractive charm of manner, in what universal efficacy of thought, these addresses illustrate, by the impression they

make of both the quality and volume of the settled and habitual wisdom of which they are so partial and fragmentary a record. They are a better defence of the rights of humane study than any advocate could frame. The best moral is implicit in things, not explicit in words; and in this volume there is the authentic impress of the classical spirit—age seasons every page, and yet every page is young.

BENJAMIN'S PERSIA.

Persia and the Persians. By S. G. W. Benjamin, lately Minister of the United States to Persia. Boston: Ticknor & Co. Illustrated. 8vo.

MANY of our foreign representatives have as little to tell us of the peoples they have dwelt among as the gruff English captain who, as his official report on the manners and customs of the modern Persians, filed the laconic statement, "Customs, beastly; manners, none." In this book we have the experience of a trained writer and observer, and it is a good illustration of the wiser policy of the Government in frequently giving important diplomatic appointments to men of letters.

Mr. Benjamin was appointed in 1883 by President Arthur to be Minister Resident and Consul-General near the court of the Shah-in-Shah, and remained in Teheran until the summer of 1885. During this time he received many attentions from the Persian Khans, and seems to have enjoyed the especial friendship of the Shah. His official station, together with his own early life in Turkey and his consequent familiarity with Oriental habits of thought, gave him a peculiarly good opportunity for observing the men and manners of modern Persia. His insight into Persian character and his hearty appreciation of the best features of Persian civilization give his work a value above that of the records of most travellers. There is some ground for thinking, however, that the author has taken a rather too favorable view, both of the Persians themselves and of the practical resources and prospects of the country. He seems to have found the Persian gentlemen very agreeable and responsive, in spite of their weaknesses; and, basing his opinions partly on the former glory and strength of the nation, is not without decided hope for the ultimate progress and prosperity of Persia.

The truth is, however, that the Persian gentleman, though he may be very courteous, intelligent, and refined in many of his tastes, is almost always lacking in personal integrity, practises lying as a fine art, and is enslaved by all the sensual brutality of the Orient. The European residents of Teheran will tell you plainly that they never trust a Persian. The Shah himself is, no doubt, a very amiable specimen of the Oriental autocrat; yet this is far removed from the "Good Despot" of the books. As a field for enterprise, the country is utterly discouraging. New projects for developing the resources of Persia interest the Shah and the nobles as toys please children—till they weary of them. The alacrity of ministers and officials disappears when the presents and bribes of the *entrepreneur* cease. The lack of patriotism and the want of moral stamina and serious purpose, evident throughout all classes of the community, stand seriously in the way of any real progress.

Mr. Benjamin was best known in this country as a magazinist and art critic, and his book excels in bits of genre word-painting and in appreciative criticism of the decorative art of Persia. His accounts of his entrance into the country and his different trips among the Elburz Mountains are very readable, and we are especially interested in the descriptions of the country seats and gardens in the cluster of villages called the Shimiran, or "Eyes of Persia." Here on the foothills of the mountains to the north of the city all the wealthier Persian and European residents of Teheran spend the summer, among the shady alleys and beside the artificial streams and pools of water. These carefully irrigated gardens of plane-trees and pomegranates, of jasmines and roses, are but little oases on the broad parched desert, where there is scarcely any rain from April to November. The groves of the Shimiran have been laid out within a few years, and the already considerable area of woodland is believed to have had a very appreciable effect on the climate of the region. The average summer temperature has been reduced several degrees Fahrenheit, and where formerly no rain fell during the summer months there are now occasionally slight showers at night.

The region between the Shimiran Mountains and the city is ramified by the system of long underground aqueducts which supplies all the water used in the city and the gardens. These cannaughts, as they are called, consist of a series of wells dug in a line extending up the slope, and connected at the bottom by a tunnel which brings a small stream of water to the surface lower down. The supply is gradually collected from the ground water—not, as Mr. Benjamin suggests, from the mountain springs and streams, which are dry in midsummer. This method of procuring water, which the author supposes to be peculiar to Persia, is employed successfully in southern California. The engineers call it "developing water," and consider it perfectly feasible wherever the necessity warrants the expense.

In the chapter on the arts of Persia we are told that Persian art is essentially decorative and industrial, and is a true expression of the artistic temperament of the people. Artist and artisan are one, and the advantages of the combination are evident in the abundance of good ornament on objects of ordinary use, and in the great variety of treatment of even the commonest designs. The author does not overstate in the least the widespread influence of Persian design. The best part of Moorish, Saracenic, and Turkish art is undoubtedly of Persian origin. Col. Murdock Smith, in his handbook on Persian art, says that the Alhambra was probably the work of Persian architects. Modern Persian architecture, though quite as ornate and picturesque as Mr. Benjamin describes it, lacks much in the direction of stability and repose, and the execution of even the best work is exceedingly crude. One would think that the Persian architect of to-day never took the pains to study out his design beyond the rough preliminary sketches, and that mason and plasterer worked without supervision. There is a painful lack of conscience and accuracy in all their work which is very disappointing to one who has seen the painstaking toil expended on some of the minor arts. "The beauties of their art, as of their character," Col. Smith writes, "lie on the surface, while the defects of both are carefully concealed by a pleasing lacquer of polished refinement." All but the most important structures are built of sun-dried bricks, the adobe of Mexico, with nothing but mud and straw for mortar. The author says that these walls, fortified at the corners with burnt brick, will last for ages. This must be an oversight, for the houses of Teheran require constant repair, and, if unoccupied and uncared for, will fall to ruin after a few winters. He also says that some of the towers of Rhei, still standing after twelve centuries, are of this seemingly perishable material. With the exception of a stone ruin, there now stands at Rhei only one tower, and this is of burnt brick. There is an illustration showing this curious mausoleum on page 58, and the author says on the following page, "It is probably the tomb of Khalil Sultan, a grandson and successor of Timour Leuk" (Timur Lenk, or Tamerlane). Khalil died in 1409, and the tower is therefore about five centuries old. Of the ancient city of Rhei (or Rhages) itself there is little to be seen but shapeless mounds, and it is hard to follow for any distance the line of the walls.

That Mr. Benjamin has carefully studied the men with whom he has had to deal, is apparent from his happy characterization of the Shah and the court officials. These sketches, enlivened with numerous telling anecdotes of Persian court life and ceremony, will do much to keep the Persian mission from going begging in future. He shows very clearly that the Persian policy is wavering, alternately dominated by Russian and by English influence, though at heart animated by a distrust and hatred of both, and an eagerness to gain support from more distant countries whose ulterior motives the Shah does not fear. That the Russians are now predominant at Teheran is due to the dangerous proximity of the Czar's armies, and to the free use of money by his agents.

Chapters on the Products and Trade, the Conditions of Service, and the Law of Persia, show that the Minister has not neglected the consular functions of his office. Persian law consists of the "Shahr" and the "Urf." The "Shahr" is founded on the Koran, and is interpreted by priestly Mollahs. The "Urf," or common law, is a combination of tradition and precedent, and is administered by secular magistrates. Roughly speaking, the "Urf" is criminal, the "Shahr" civil law, although cases are sometimes appealed from the former to the latter, which is the more sacred and important. The author explains that as the law and constitution of the country are so directly dependent on the Koran, the Shah is forced to maintain the Mohammedan religion as the main prop of his throne. Though the Persians are very loose in their private beliefs, and the country is honeycombed with mystical Sufiism and communistic Babism, yet outwardly they conform to the tenets of the Shiite sect of Mohammedanism.

Mr. Benjamin has written an interesting and valuable book, though we should hesitate to call it scholarly or profound. The material is grouped systematically, and, although the author frequently wanders from the immediate subject in hand, yet any one of the chapters might appear, as several already have done, as an attractive article in a popular magazine. The style is easy and flowing, and the interest is well sustained by the steady stream of incident and anecdote. The author, like most writers on Persia, seems to have invented his own system of spelling Oriental names. This freak would have been less confusing if he had adhered to a uniform method. The wide margins and the clear and well-spaced type, together with the abundance of aptly chosen and carefully rendered illustration, make this one of the most attractive volumes of the present season.

BOOKS ABOUT THE STAGE.

Roscius Anglicanus, or, an Historical Review of the Stage from 1660 to 1706. By John Downes. With an historical preface by Joseph Knight. London: J. W. Jarvis & Son; New York: Scribner & Welford.

The Truth about the Stage. By Corin. London: Wyman & Sons; New York: Scribner & Welford.

Famous Plays. With a Discourse, by way of Prologue, on the Playhouses of the Restoration. By J. Fitzgerald Molloy. London: Ward & Downey; New York: Scribner & Welford.

Histoire de le Comédie en France, depuis les origines jusqu'à nos jours. Par C. Barthélemy. Paris: A. Dupret; New York: F. W. Christern.

Histoire littéraire, critique et anecdotique du Théâtre du Palais Royal, 1784-1884. Par Eugène Hugot. Paris: Paul Ollendorff; New York: F. W. Christern.

Fêtes et Spectacles du Vieux Paris. Par Édouard Neukomm. Paris: Dentu; New York: F. W. Christern.

L'Incendie des Folies-Plastiques. Par Abraham Dreyfus. Paris: Calmann Lévy; New York: F. W. Christern.

ALL students of the stage are indebted to the accomplished editor of *Notes and Queries* for the admirable reprint of the exceedingly scarce sketch of the English theatre during the last half of the seventeenth century, to which John Downes, the prompter, gave the loud-sounding title of 'Roscius Anglicanus.' Published originally in 1708, it was republished in 1789 by Tom Davies, the biographer of Garrick, who was at once an actor, an author, a publisher, and the husband of a "very pretty wife," as Churchill has recorded for us. Mr. Knight's edition is an exact facsimile of the original of 1708, made, curiously enough, from the same copy which was used for the reprint of a century ago. But the dramatic critic of the *Athenæum* is a more adroit and careful editor than the author of 'Dramatic Miscellanies.' He has availed himself to the full of Davies's labors, and has added much from his own abundant stores of theatrical lore. He has been aided also by Mr. Robert W. Lowe, who is surpassed by none in his knowledge of the details of dramatic biography. Mr. Knight, in his preface, remarks that "in no respect, however, can Downes be regarded as superfluously accurate"; and he proves the truth of this remark by many corrections of the old prompter's negligent assertions. The 'Roscius Anglicanus' is, in a way, a most tantalizing book, for its author omitted to set down much which he knew and saw, and which would now be of the greatest interest and value for us. The period during which he was attached to the theatre is one of most important changes, not to be traced adequately in any other work. "To mention two things only," as Mr. Knight remarks, "it is during the period covered by the review of Downes that the use of scenery began, and that women first appeared regularly on the stage as the exponents of feminine characters." And the literary quality of the plays produced in these forty or fifty years is evident enough when we remember that among them were several of Dryden's, two of Etherege's, two of Otway's, one of Vanbrugh's, and all of Congreve's. 'Roscius Anglicanus' is supplemented by a reprint of the equally rare 'Declaration of the Lords and Commons' against stage-plays, first published on September 3, 1642, and now reproduced in facsimile.

'The Truth about the Stage' is not the whole truth, although one may be willing to concede that it is nothing but the truth as far as the witness is acquainted with the circumstances of the case. "Corin" is evidently a man of no culture, of little education, and of very slight aptitude for the stage, who sought, however, to make his living in the theatre, and who has since thought better of it, as his experience seems to have been thoroughly uncomfortable. He is apparently a perfectly honest and well-meaning man, who has set down in good faith what he has seen and heard. For him the glamour of the footlights has faded, the scales have fallen from his eyes, and he is now ready to burn what once he adored. Beyond all question he had a hard time, and we are inclined to believe that "going on a tour" is a hard road to travel, except for the star in his private car. He began "at the bottom of the ladder," where all histrionic aspirants are advised to begin, and he was never able to mount even the second round. He found the life of the strolling player unceasingly laborious and indisputably degrading. He presents one view of one side of the present condition of the English theatres with great force, although with no literary skill. We should be sorry to believe that his sorrowful experience was universal or even common; but his record is an excellent book to put in the hands of any young man who happens to be stage-struck.

Mr. Fitzgerald Molloy is almost as happy as Mr. Percy Fitzgerald in hitting on good subjects, and almost as careless in the way he carries them out. Mr. Molloy's Life of Peg Woffington is even more slovenly in its execution than Mr. Fitzgerald's Life of David Garrick; of both books it may be said that they are interesting in spite of their authors. Mr. Molloy's latest book is much what might be expected. It contains brief biographies of eight dramatists (Congreve, Addison, Gay, Dr. Johnson, Goldsmith, Sheridan, Sheridan Knowles, and the late Lord Lytton), with accounts of the circumstances under which their chief plays were written and performed. Of Addison's "Cato" and of Dr. Johnson's "Irene," both undramatic plays by men who were not dramatists, Mr. Molloy writes without revealing any distinct understanding of the real merits and demerits of these tales in dialogue. Of Congreve and Gay, of Goldsmith and Sheridan, he tells again the twenty-times-told tale, adding nothing of his own save a few needless blunders, but rattling along with a happy-go lucky and devil-may-care ease not altogether without charm. We may note that Mr. Molloy prefixes a formidable list of books and pamphlets consulted in making the book—a list at once grossly inaccurate and hopelessly inadequate; he does not, for example, avail himself at all of the investigations of Sheridan's latest biographer and editor. Quite the best part of 'Famous Plays,' and by far the most useful and welcome, is the final quarter, wherein the author breaks comparatively new ground, and tells us about Sheridan Knowles's "Virginius" and the "Hunchback," and about Lord Lytton's "Lady of Lyons," "Money," and "Richelieu." There is no index.

M. Barthélemy's history of comedy in France comes to us from the publisher of the new *Revue d'Art Dramatique*, which we have taken pleasure in praising, but it is not worthy of the association. A good history of French comedy in a single volume is a work greatly to be desired. M. Barthélemy has not provided us with it. He is perfunctory and uncritical. His is rather an easy-going compilation by a well-read man than a genuine book made by an author understanding the principles of the drama, and familiar with the best that has been written for and about the theatre. Especially flabby in its criticism is the final chapter on the Romantic movement and the realist reaction of the present day.

In "Foyers et Coulisses," the series of little books published by Tresse & Stock, there was already a history of the Palais-Royal Theatre, but M. Hugot's is none the less welcome. In the abundance of books about the stage, there is a lack of local histories, so to call them—of histories of single theatres like the Théâtre-Français and the Porte-Saint-Martin in Paris, Drury Lane and the Haymarket in London, Wallack's in New York, and the Museum in Boston. M. Hugot is not an ideal historian; he is both careless and prejudiced. He points a paragraph on the failure of a play of M. Sardou's with a remark about the success of a *revue* of which he was himself part author (p. 220); and he reveals an unmistakable and altogether misplaced dislike of M. Labiche, the author of the most successful and most amusing plays ever acted at the Palais-Royal. But, although he does not show a tithe of the philosophic grasp of the subject to be seen in M. Sarcey's little sketch of the same theatre, contributed to the *Nineteenth Century* and the *Revue Bleue* several years ago, he has written a book likely to be useful. We may note a strange blunder on p. 285, where "Le Prix Martin" of MM. Augier and Labiche is credited to MM. Labiche and Gondinet.

M. Neukomm's 'Fêtes et Spectacles du Vieux Paris' is a mere piece of book-making got ready for the midsummer festivals of a few months ago. As the material is very rich, the result is not uninteresting, although the compiler has not shown either special competence for the task or special care in its execution. It reads as though it were a hurried collection of hastily written newspaper articles.

The readers of M. Abraham Dreyfus's delightful 'Scènes de la vie théâtrale' will need no advice to get his second collection of theatrical sketches, called, after the first and longest, 'L'Incendie des Folies-Plastiques.' There is a sharp brilliancy and a certainty of touch about these little studies of life before and behind the curtain which give them an extraordinary relief. Those who think that the modern Frenchman is deficient in humor may be recommended to read 'La Matinée d'un Critique'—the critic being obviously M. Sarcey, whose library-study is adroitly suggested, and whose turns of style are most comically exaggerated. But perhaps the slight and simple sketch of 'Le Second Régisseur' is the best thing in the book; its pathos is fresh and unforced.

THE DUCHESS OF TOURZEL.

Memoirs of the Duchess de Tourzel, governess to the Children of France during the years 1789, 1790, 1791, 1792, 1793, and 1795. Published by the Duc des Cars. 2 vols. London: Remington & Co.; New York: Scribner & Welford. 1886.

THE title of Madame de Tourzel's Memoirs is by itself sufficient evidence of the extreme interest and importance of the publication. We have here a picture of the life of the royal family of France through the most stirring scenes of the Revolution, from the hand of a member of the family itself. The events of the 5th and 6th of October, the journey to Varennes, and the terrible experiences of the 20th of June, the 10th of August, and the 2d and 3d of September, as well as the 13th Vendémiaire, are narrated in full detail, and with the most vivid delineation, by one who was not merely an eye-witness, but herself a participant. It is not too much to say that it would be hard, in the most sensational romance, to find a narration fuller of thrilling incident than the account here given of the escape of Madame de Tourzel and her daughter Pauline from the horrors of the September massacre.

These memoirs had for a long time been known to exist, but until a few years ago the descendants of the author, in whose hands they were, refused to have them published. The reasons for this refusal are easy to understand. Why these reasons ceased to exist—why "the moment seems propitious" for their publication—we are not told, but here, too, we cannot be wrong in our surmise. It is but a moment since the passage of the decree banishing the royal princes from France, and a well-known passage in the manifesto of the Comte de Paris finds an echo in the following words of the introduction (p. 15): "So it will be until the day when disillusionized France shall understand that she must repair the broken chain of her secular traditions if she does not wish, after having been the first among civilized peoples, to become a sad example of the decay into which nations are dragged by reason of their abandonment of all great political

and religious principles." This is, therefore, a book with a *tendency;* and by saying this, we do not wish to condemn its motives or to undervalue its historical importance. Rather, it enables us to estimate more justly its historical value. This value consists in the inside view of the royal family and the events in which they were concerned, which makes this document indeed "unique of its kind," and not to be "compared with any of those comprised in the rich collection of memoirs relating to the French Revolution." The simple honesty of the King, joined with a fatal infirmity of purpose, stands clearly before us, and one feels—as every student of the French Revolution must feel—that it was largely this want of kingly qualities that was fatal, not only to himself and his family, but to his country; an hereditary king is not a guarantee for the maintenance of order. So, too, Marie Antoinette stands clearly before us, more kingly than her husband, a strong, as well as an upright character; but the reader has no opportunity to mark that inborn haughtiness of the daughter of the Hapsburgs which made her so detested in spite of her virtues —a quality as fatal, we suppose, as Louis's lack of will. Of the Dauphin we have a charming picture. His governess may be pardoned if his virtues are more conspicuous and his faults less noticeable than perhaps they really were. But the picture is, no doubt, in the main correct: a combination of the winning, intelligent, not over-precocious child, with the dignity and self-reliance of the born king. Perhaps if he had lived, we should have had a ruler who inherited from his mother enough of the Hapsburg temper to be masterful without being arrogant.

Along with this picture of the royal family we have a current history of the times; and here we see on every page the aristocratic temper which was incapable of understanding the real grievances and needs of France, or even of appreciating the differences of temper and motive in the several popular leaders. Necker, Mirabeau, La Fayette, Bailly, Barnave, Pétion, Roland, Vergniaud, Robespierre, Danton—all are alike the object of hatred and scorn. The reality of abuses, and any honesty of purpose in remedying them, are never so much as hinted at. All members of the "Left" are "rebels" and "miscreants." This sentiment, which runs through the book, is in itself an historical fact of great importance. We see that from the first there was no possibility of an understanding between a court which would admit no need of reform, and an assembly which could see no good in the existing state of things. That the King honestly endeavored to adapt himself to the successive constitutional changes to which he was forced to give his consent, and that men like La Fayette had an ideal of government which should secure an effective reform without giving up its hold upon tradition, or sacrificing vested interests, were facts of no potency in the face of the real underlying contest. Neither the King nor La Fayette had the moral force which alone could have made them masters of the situation, and the only man of the time who possessed at once the requisite ability, strength of will, and moderation—Mirabeau—died just when these qualities were most needed. Even if he had lived, he lacked another quality quite as essential—that sincerity and singleness of purpose which alone could inspire confidence and give assurance of success.

Another fact brought out incidentally in this account is the gradual transformation of public opinion. We have been taught by Taine's writings to look upon the French Revolution as the work of a small minority, very much in earnest, while the mass of the people of France were either indifferent or secretly hostile. We must say that this book does not give this impression; and while we would not assert that a purely one-sided account like this is to have greater weight than all the evidence that M. Taine has accumulated, it appears to us nevertheless to be entitled to a good deal of consideration. The reader receives an impression in the early chapters wholly corresponding with Taine's view, and confirmed likewise by Lord Gower's recently published despatches, that down to the time of the King's flight, and even all through 1791, the constitutional party was not only in possession of power, but had the support of a decided majority of the people. But after this—no doubt largely the result of the distrust inspired by the flight, and the irritation caused by the Declaration of Pilnitz —one seems to see a real revolution in sentiment; and it is hard to believe that, except in such reactionary districts as La Vendée, there was in the summer of 1792 any hearty monarchical sentiment. Of the genuineness of the republican sentiment there can be no question; it was fanatical, crazy, grotesque, and the best proof of its thorough earnestness and its belief in the King's bad faith is found in the circumstances of the massacre of September. We notice in this narrative what has been so often pointed out—the strange union of ferocity in the immolation of the victims and of hearty delight when any one was acquitted. They were, in all seriousness, offering a sacrifice to the cause of liberty; but as men they rejoiced whenever the sacrifice could be spared. Remarkable, too, is the fact (vol. ii., p. 224) that on the 10th of August there was no plundering by the mob—only destruction.

It is interesting to know that Mme. de Tourzel believed firmly in the death of Louis XVII. Her reasons for this belief, although resting upon second-hand evidence, are very strong, and sufficiently explain her constant refusal to allow interviews to the various pretenders who undertook to pass themselves off for the Prince. She was "unwilling to lend herself to a manœuvre from which it might have been assumed that she was not convinced of the death of the young Prince." The evidence consists in, first, the testimony of Dr. Jeanroi, who assisted in the post-mortem examination, and who, although previously unacquainted with the Dauphin, at once recognized a portrait in her possession; secondly, the recognition of a bust of the Prince, by Pelletan, the surgeon in charge at the time of his death; and, thirdly, an examination, which she had accidentally an opportunity to make, of the register containing the diary of the Commissioners, in which she "saw the progress of his malady, the details of his last moments, and even those relating to his burial" (vol. ii., p. 324).

Among the many significant actions and utterances of the royal family, perhaps the most striking is the remark of the King, on the road to Varennes, when he supposed that he was fairly out of danger of capture: "Here I am, outside that town of Paris, where I have experienced so much bitterness. You may be quite sure that when I am once firmly seated in the saddle, I shall be very different from myself as you have seen me up to now" (vol. i., p. 329). He proceeded to speak of what he would do, and among other things of "the possibility of reëstablishing religion and repairing the evils which his compulsory sanctions might have caused." We have no reason to doubt the King's word when he declared that he had no intention of leaving France, or of associating himself with foreign enemies; but, if he had reached Montmédy, could he have helped doing so? He was not a man to take the reins in his own hands; is it not morally certain that if he had once joined his brothers and his brother-in-law, he would have become a mere tool in their hands for the reëstablishment of all the despotism and intolerance which had been abolished? We do not say that this would not have been preferable to what did actually take place. What we do say is, that the leaders of the Revolution—who, we must remember, were still of the school of La Fayette—were fully justified in regarding his flight as an act of hostility, and as proving that he did not intend to carry out in good faith the reforms which had been enacted. It would have been a very different thing, an action wholly consistent with good faith, if he had done as he was urged to do at the festival of the Federation, the summer before (July, 1790). "If the King had taken advantage of this opportunity to take a trip through his provinces, and had announced at this review that he was about to respond to the wish expressed by the mouths of their deputies; if he had chosen to dispense with all other guard than the inhabitants of the places he was about to visit; and if he had elected to be accompanied in his visits only by the good Federates who evinced such attachment for him, he would have disconcerted the Assembly, and would have placed it in the position of being dependent on his good-will" (vol. i., p. 166). This view is confirmed by the remark made by Barnave to Madame Elizabeth on the return from Varennes: "Ah! Madame, do not complain of this epoch [the Federation], for if the King had known how to profit by it, we should all of us have been lost."

The translation is excellent, but with an occasional inaccuracy. *Château* is always translated "castle," while with regard to the Tuileries "palace" would be more proper. So we have "charts" for "charters" (vol. i., p. 132), "forfeiture" for "misdemeanor" (*forfaiture*) (p. 79), "pretended" for "claimed" (p. 190); and everywhere "transpired" for "occurred."

Richard Wagner. Sa Vie et ses Œuvres. Par Adolphe Jullien. Paris: J. Rouam.

It seems paradoxical that the most interesting and complete biography of Wagner hitherto placed in the market should come from France, where his "Tannhäuser" was hissed without being heard, and where ever since a strict quarantine has been observed against his operas. But Pasdeloup and other concert-givers have been constantly producing selections from Wagner's works, the effect of which has been not only to create a large circle of Wagnerites in Paris, but to make the performance of "Lohengrin," at any rate, an imperative necessity within a year or two. "The only thing that the theatres of Paris dream of at present is the performance of Wagner's works," says M. Jullien, and he hints that the greatest obstacle at present is not so much the managers' fears of "patriotic" rows, as the fears of the official composers connected with these theatres for their own works.

M. Jullien evidently feels humiliated at the silly attitude of his countrymen, and he endeavors in various ways to combat the patriotic prejudice against Wagner. Among other things he shows that Mozart, although infinitely better treated by the French when he visited them than Wagner, retaliated by calling them in his letters donkeys, fools, boobies, and *patauds.* These words have been carefully suppressed by Mozart's French admirers and biographers. M. Jullien might have made his case still stronger by putting some of Wagner's complimentary utterances on French music in parallel columns with his tirades against many German musicians and their works.

M. Jullien is a Wagner enthusiast, but this does not prevent him from dwelling on Wagner's personal foibles and mistakes. His object is to write as if Wagner had died centuries ago. One of the most curious chapters in his book is one in which he shows how Rossini and Auber apparently quizzed Wagner, who naïvely took them seriously. From Glasenapp's biography of Wagner, Jullien's differs favorably by the absence of all

bombastic declamation, and a much better style and love of facts. Glasenapp's analyses of Wagner's æsthetic treatises are more complete, but Jullien's analyses of Wagner's operas and music-dramas are singularly clear and readable; and they are rendered the more interesting by a large number of pictures, illustrating scenes in these operas as first brought out, at Dresden, Munich, and Bayreuth. M. Fantin-Latour also contributes fourteen lithographs of fanciful situations taken from the operas. There are no fewer than fifteen portraits of Wagner, of various periods, some of them unique and rare. There are pictures of the house in Venice in which Wagner died, as well as of his Bayreuth villa, and several of the Wagner Theatre inside and outside. One of the most curious pictures is a back view of the Rhine maidens swimming about under the Rhine, showing the mechanism by which this marvellous illusion was accomplished. Scattered through the text are a vast number of caricatures taken from French, German, and English comic papers. Wagnerism has passed the stage in which such caricatures could do it any harm, or annoy any one; indeed, M. Jullien justly reasons that caricatures are the best of advertisements, bringing a man to the notice of thousands who would never take the trouble to read an article about him. One of the best of them represents Wagner in heaven, listening to the harp-chorus of the angels, and suggesting that they could produce more effect by adding drums and trombones. Another one, by Oberländer, represents an audience on a night when the composer is present. All the box occupants are doubled over, those in the parquet turned round, each with an opera-glass; the musicians play by heart, looking at the composer, and even the prompter appears on deck with a glass.

As we are in the midst of the most successful Wagner campaign ever known in New York, M. Jullien's work will probably find all the purchasers he desires. For a holiday gift to a musical person, or for a parlor-table ornament, nothing more desirable could be found.

BOOKS OF THE WEEK.

Champagne ANALYZED.

Champagne. with a minimum of alcohol, is by far the wholesomest and possesses remarkable exhilarating power.

THOMAS KING CHAMBERS, M.D., F.R.C.P.,

Honorary Physician to H. R. H. the Prince of Wales.

Having occasion to investigate the question of wholesome beverages, I have made chemical analyses of the most prominent brands of Champagne.

I find G. H. Mumm & Co.'s Extra Dry to contain in a marked degree less alcohol than the others. I therefore most cordially commend it not only for its purity, but as the most wholesome of the Champagnes.

R. OGDEN DOREMUS, M.D., LL.D.,

Prof. Chemistry, Bellevue Hospital Med. College, N. Y.

Champagne, whilst only possessing the alcoholic strength of natural wines, is useful for exciting the flagging powers in case of exhaustion.

F. W. PAVY, M.D., F.R.S.,

Lecturer on Physiology at Guy's Hospital, London.

Champagne containing the smallest percentage of spirits is the most wholesome.

JOHN SWINBURNE, M.D.,

Former Health Officer of Port of New York.

SEVEN AND TWO-THIRDS PER cent. can be realized by changing four per cent. Government Bonds into 6 per cent. Debentures. Capital $600,000. Large reserve guarantee fund. Pamphlets. AMERICAN INVESTMENT CO., 150 Nassau St., N. Y.

Principles of Hygiene.

Including the essentials of Anatomy and Physiology. By EZRA M. HUNT., A.M., M.D., Sc.D., Instructor in Hygiene in the State Normal School of New Jersey. 12mo, cloth, illustrated. 400 pages.

An authoritative work on an original plan which makes the knowledge of Hygiene and the practice of its principles the first aim, using the study of Anatomy and Physiology as a means to this end and not the end itself. Price, $1.00.

Webster's Condensed Dictionary.

800 Pages. 1,500 Illustrations.

A new compilation on a novel and original plan, which allows more matter in the same space and with the same type than any other. It treats about 60,000 words and in its etymologies and definitions is more thorough and accurate than any other abridged dictionary. A Pronouncing Vocabulary of 24,000 Proper Names is given in the Appendix. Price, by mail, $1.80.

Handy Atlas of the World.

Thirty-eight maps and valuable statistics. It is bound in flexible cloth, and is the most beautiful work of its class ever issued from the American press. Each edition revised to date of issue. Price, 50 cents.

The Nation.

NEW YORK, THURSDAY, DECEMBER 30, 1886.

The Week.

THE name of Gen. John A. Logan has been inscribed on the page of his country's history by meritorious and conspicuous service in war. Yet a military career was not the one he had marked out for himself, or had much liking for. A leader of his party in southern Illinois before the secession movement began, he had conceived, as how many American youths have done, the idea of becoming some day President of the United States by signal services to the Democratic party. Stephen A. Douglas was his leader and model. It was a great disappointment to him that war broke out between the North and the South. It shattered all his political theories, and for a brief interval left him without star or compass to guide him. He had been intensely Southern in his leanings and prejudices, as were all his neighbors and friends in southern Illinois. The district that he represented in Congress had just reëlected him by 16,000 majority. He had not the insight into the designs of the Southern slaveholders that greater experience had given to Douglas. Nor had he enjoyed the benefit of the Northern training that Douglas had received and had never been able wholly to shake off. Southern Illinois in its feelings and prejudices in the year 1860 was pretty much the same as northern Kentucky and central Missouri. Logan's instincts were identical with those of his constituents.

What would have happened in that quarter if there had been no Douglas, it is impossible now to say. Probably southern Illinois, and with it Logan, then only thirty-four years of age, would have found their places on the right side, after taking a little time to digest their deep and bitter disappointment. It was fortunate for them and for the country that the Northern Democrats had a leader able to come to an instant decision, and to support it by masterly argument and overwhelming passion. There is evidence, however, that Logan did not "fall into line" with the greatest alacrity. It was not his nature to change his mind suddenly. His prejudices, as well as his settled beliefs, were deep-rooted, and it was not possible for him, then or at any other time, to keep silent when he was the prey of conflicting emotions. Some hot expressions of his dissent from Douglas gained currency before he presented himself at Springfield, in conjunction with McClernand, as described in Gen. Grant's Memoirs, and gave his influence and his sword unreservedly to the Union. From these hasty words grew the wretched slander of later years that he once tried to enlist soldiers for the Confederacy. His army career and the later events in his political life are familiar to all. His fame rests upon his military achievements, and these were due rather to prodigious energy than to great generalship. He was enterprising in war as in everything else that he put his hand to, and he had the indispensable faculty of imparting courage and confidence to those under his command. Among the volunteer officers of the great conflict he holds the foremost place, unless Gen. Terry may be said to dispute the palm with him.

The Republican Senate is put in an awkward position by the President's act in sending in again the name of Mr. Matthews for Recorder of the District of Columbia. Mr. Matthews is a colored man whom the President named for this position during the last session of Congress. The Senate rejected the nomination, Democrats voting against Mr. Matthews because he was a negro, the Republicans voting against him because he was not merely a negro but a Democratic negro. The excuse which the Republicans made was, that Mr. Matthews was not a resident of the District. After the Senate adjourned, the President reappointed Mr. Matthews, and he has been discharging the duties of the office with great credit. It will not be possible for the Republicans to give their old excuse for rejecting him now, and if they refuse to confirm him, as it is thought they will, they will be obliged to take the ground openly that they reject him because he is a Democratic negro, while their hearts beat warmly for Republican negroes only.

Senator Blair has introduced a new pension bill, which seems to have many of the familiar characteristics of his former measures for emptying the national Treasury. This bill provides for granting pensions to all persons who were disabled while in the military service of the United States, whether they were mustered out or not, and to all women nurses in the war who have arrived at the age of fifty and are without the means of comfortable support. It also removes the limitation of the Arrears of Pensions Act, and makes the fact of enlistment evidence of physical soundness at the time of entering the service. No estimate is given of the amount which the bill would be likely to draw from the Treasury if it were to become a law, but Mr. Blair is not the man we take him for if he has failed to construct a measure which would dispose of a large part of the surplus. The only surprising thing about his bill is, that he has stopped short of Gen. Logan's latest pension position, namely, that every man who ever served in the war at all is entitled to a pension.

The debate on the Inter-State Commerce Bill is bringing out some ugly facts regarding railroad discriminations, some of them of recent date and others of a continuing nature. The letter from one of the Standard Oil Company's subordinates to the Louisville and Nashville Railroad, directing the latter to "turn on another screw," has been extensively published and commented on. The significance of this missive was that a firm in Nashville had received seventy barrels of oil from some rival concern at "the usual fifth-class rate," which the Standard Company could not abide. So it required the railroad company to fix an unusual rate for future shipments made by the rival concern, and the railroad company complied, the rate being raised from $41.50 to $63. The live-stock and dressed-beef dispute has also been brought into prominence again. In this case the rule was sought to be enforced by the railroads that they must be paid more for carrying the beefsteaks and roasting pieces of an animal than for the animal itself. Still another grievance comes from the mining regions, where the rule prevails that you must pay for hauling metals according to their value and not according to their weight. Instances are cited where miners, in order to avoid heavy freight charges on their ores, have erected expensive machinery for concentrating the ores so as to leave the refuse material behind, but have been charged for carrying the small weight as much as for the greater. All these tricks and extortions are either cut off by the anti-discrimination clauses of the Inter-State Commerce Bill, or put under the jurisdiction of the proposed national railroad commission. They have no bearing, however, upon the two clauses of the bill upon which the main controversy arises, viz., the long-haul and short-haul clause and the pooling clause, and it is not right that resentment growing out of discriminations should be used to promote the enactment of measures having quite different aims. The railroad companies appear to be content to accept any legislation, no matter how severe, against discriminations, provided they can be protected against the two clauses above mentioned. There is a good deal of force in Mr. Blanchard's criticism of the bill, that it is not wise to attempt to regulate the length of haul in the first national railway act ever passed. Better give the Commission a year or two to examine the subject on all sides. We do not need an inter-State commerce bill now, any more than we have needed it during the past twenty years, indeed, not so much as we have needed it at some periods. It is more in accord with the scientific spirit to make changes gradually, especially those of such magnitude as are contemplated in the pending measure.

The letter which Mr. Combs, the removed General Appraiser of Maryland, has sent to the President is a manly statement of his case, and confirms the view which we took of it at the outset, namely, that it is one of the worst offences yet charged to the Cleveland Administration. Mr. Combs was not only removed without cause but without courtesy. He makes the serious charge that an official answer from Secretary Manning to his telegram of inquiry about his removal was suppressed by Eugene Higgins, the disgraceful Appointment Clerk of the Treasury Department. Higgins made the excuse that it was not sent "because they feared it might complicate the appointment." This is a charge which Mr. Manning ought not to allow to go unanswered. If Higgins has power to suppress official documents and communications, his presence in the Department is a much worse scandal than has hitherto been supposed, and it has always been bad enough.

In Mr. Blaine's Boston *Concio ad Clerum* he did not fail to display his characteristic readiness to speak with great positiveness on matters which he has but superficially studied. In fact, one is irresistibly reminded, all through his address, of Pascal's "Je suis devenu grand théologien en peu de temps, et vous en allez voir des marques." He appeared, he said, in the guise of a "Pennsylvania Presbyterian" addressing the Congregationalists of New England, yet he said at least two things which no genuine "Pennsylvania Presbyterian" would ever be betrayed into. He spoke of Dr. Bushnell as "one of the most eminent of New England ministers." Now, in Pennsylvania Presbyterianism, "Bushnellism" is a name of direst significance, and it is impossible to conceive of a typical "Pennsylvania Presbyterian" referring to Bushnell as Mr. Blaine did—at least not without some serious qualification, such as "far as he departed from a sound theology," or, "much as his influence in some respects is to be deplored." Then Mr Blaine affirmed that the differences which keep apart Presbyterians and Congregationalists are "child's play." But he would have known, if he had really understood Pennsylvania Presbyterianism, that it is nothing if not of the high-church and divine-right stripe, looking upon independency as, by nature, the mother of heresies and insubordination, and as just now in New England running into Socinianism as fast as possible.

The Senatorial contest in this State continues to be waged on the lines of our inestimable tariff. It appears that there are a number of undying supporters of the duty on salt who would like to vote for Mr. Morton, but are embarrassed by that gentleman's vote in Congress to repeal the duty, and by his subsequent statement in an interview that he so voted because the farmers and dairymen wanted free salt to their pork and butter. One of these, Mr. Lewis T. Hawley of Syracuse, accordingly addressed a letter to the Albany *Evening Journal*, and sent a copy of it to Mr. Morton, enforcing the necessity of "protecting the salt industry of this State." Mr. Morton replied that the revision of the tariff should be made by the Republican party only, they being its true friends. This was a safe position to take in a political sense, but a little awkward to carry into practice, since the Constitution allows the Democrats to vote also. The *Evening Journal* improves on Mr. Morton's reply by "having not the slightest doubt" that Mr. Morton would even vote to increase the salt duty "if it should be established that the salt industry of New York needed greater protection than the present tariff affords." The salt boilers can "establish" this as easily as the owners of iron mines established the need of an increased duty on iron ore. Mr. Morton's position ought now to be satisfactory to everybody, but especially to the farmers, the salt boilers, and the Republican party.

The feature of the New England Society's dinner on Forefathers' night was the speech of Mr. Henry W. Grady of Atlanta, Ga., on "The New South." It was in every way a most notable address—full of an eloquence which stands the severe test of perusal in print the following morning; lightened by a humor which is well sampled in the delicious allusion to Gen Sherman as one "who is considered an able man in our parts, though some people think he is a kind of careless man about fire"; instinct with a patriotic spirit which stirs the blood of the reader; infused with the vital qualities of that oratory which touches the heart because there is sincere feeling behind the speaker's words. It was the perfect expression of what has so seldom been adequately set forth by any Southern man or fully understood by the North—the real attitude of the younger generation of the South towards the past and the future: its clear perception that the overthrow of slavery was a blessing; its consistent blending of honor to the memory of men who fought unsuccessfully for what they believed to be right, with a confession that Providence was most kind in dooming them to failure; its manly resolution to work out the tremendous problems imposed by emancipation, enfranchisement, and a revolution in material conditions no less complete than that produced in political relations by the new amendments to the Federal Constitution. Mr. Grady is himself an admirable type of a class which we think it fair to say has done more than any other class of society in his section to bring about the acceptance by the Southern people of the new order of things. We refer to the progressive men, chiefly of Mr. Grady's generation, who have of late years come largely into control of the Southern press, and who in their various fields have done a service to their countrymen which has not yet received the recognition that it merits. Mr. Grady is the editor of the Atlanta *Constitution*, which under his charge has come to have a national reputation, but he is only one of a number of men who, in various fields, have labored to the same ends, of arousing the people from the supineness inevitable after their defeat in war, breaking down ingrained prejudices, and preaching the gospel of work.

One of the most shocking things in "politics" in this city has always been the fact that the care of the criminals and paupers was part of the "spoils." When one considers what the responsibilities of a civilized Christian community are towards these classes, what a difficult and complicated question the proper treatment of them is, how much knowledge, and skill, and experience, and conscientiousness it requires—in short, what a tremendously solemn trust before God and man it imposes—the committal of it to the kind of men who get their living out of city politics is little short of a public crime. The appointment of "Fatty" Walsh, a notorious "tough," rough, gambler, and liquor-dealer, one of the peculiar products of the vice and crime of this metropolis, a kind of man who was, during the greater part of his life, a walking disgrace to our laws, our manners, our religion, to be a warden in the city prison, shows that the old disease still lurks in the system. It is a kind of incident which should be exhibited nowhere but on the opéra-bouffe stage, where colonels are promoted for cowardice on the field, and bank presidents get testimonials from the stockholders for having left a small sum in the bank vaults Of course there is a great deal of political capital in it for both sides. One party has paid its debt to Walsh with it, and then the other is able to use him as an awful example of its opponent's wickedness. He is, in fact, almost as useful to the working politicians as the reindeer to the Laplander. Some say Mayor Grace did it, and others say Mayor Hewitt was going to do it, but the man whom the public ought to hold responsible is Mr. Henry Hobart Porter, the Commissioner of Charities and Correction, without whose vote it could not have been done. Mr. Porter belongs to what is called the "better element" in New York politics. He is a man of education and fortune, and has nothing to lose by devotion to the great interests of morality and order, and much to lose by any real or apparent indifference to the value of character as a qualification for public office. How he can face either family or friends after putting a man like Walsh in charge of the prisoners in a jail, is happily something which he, and not we, has to settle.

The importance of this Walsh case, we must beg the industrious moral and religious public of this city to remember, lies in the fact that the great difficulty of our city government is that we have too many "Fatty" Walshes. All our churches, and schools, and charitable and philanthropic associations, and our civil-service regulations, are intended to keep down the number of Walshes, and to diminish their influence in our political and social life. If there were no Walshes among us—that is, no liquor-dealing, gambling, law-breaking professional politicians—the rowdy and criminal element in the population would be greatly diminished. They are and have been for many a day the curse and shame of New York. What then must be the effect on the young men who are inclined to criminal and violent courses, and to whom regular industry is distasteful, of seeing a leading member of this odious class, a man who has lived half his lifetime without a lawful calling, actually made governor of the City Prison? Was there ever such a premium offered to lawlessness, turbulence, and vice? Walsh would not, under the civil-service regulation, be allowed even to compete for admission to a subordinate office in the Department of Charities and Correction, because he could not satisfactorily answer the question, "Have you ever been complained of, indicted for, or convicted of any criminal offence?" or the question, "What is your regular occupation?" Nor could he obtain the certificate of respectable citizens "that he is a man of good moral character, of sober and industrious habits, and that they have never known him to be guilty of or convicted of any criminal act or disorderly conduct."

Under the title "The Increasing Curse," the Prohibition organ, the *Voice*, presents a table compiled from the reports of the Internal Revenue Bureau, which gives the number of dealers in liquor paying the United States tax imposed upon everybody who sells liquor, and the amount of liquor produced, in both 1885 and 1886. The total number of dealers in the

country increased from 201,435 to 209,500, and the amount of liquor (both distilled and malt) produced, from 669,679,885 to 723,887,961 gallons. Unfortunately the latter figures do not represent the amount of liquor consumed, which is the important thing to know, as production is always more or less affected by trade fluctuations, while the number of dealers is necessarily governed by the popular demand. The increase here, it will be seen, is almost exactly four per cent., taking the country at large, or just about the rate at which population is increasing. But while this is true of the country at large, the *Voice's* table brings out the very startling fact that in the prohibitory State of Vermont, which has long remained almost stationary in population, the number of liquor-dealers has grown in the past year from 494 to 573, or more than 15 per cent. The last census gave Vermont 332,286 people, and the proportion of liquor-dealers is therefore 1 to every 580 of population. But Maine is almost as badly off, with 1,040 dealers for 648,936 people, or 1 to every 624, while New Hampshire, another prohibitory State, leaves her neighbors far behind, with 1,354 dealers for 346,991 people, or 1 to every 256. A small proportion of these dealers in prohibition States are druggists who do a legitimate business in selling liquor solely for medicinal purposes, but the overwhelming majority are regular saloonkeepers, like the sixty in Bennington.

Mr. Powderly's amiable scheme of combining all the laborers of the country into a kind of social-science brotherhood, for their own moral and intellectual improvement, appears to have suffered an irremediable shock when he succeeded in having his salary raised to $5,000. The Knights were uneasy before that event, and were showing signs that they did not care particularly about intellectual development, but they were willing he should go on talking harmlessly about it until he raised the price of his services. From that moment dissensions have multiplied with alarming rapidity, and the chances for dissolution of the Order are so imminent that it is doubtful if he will succeed in getting even one year's salary at the advanced rate. He declares that he is undismayed, however, and does not mind a few seceders here and there. The trouble is, that every assembly which secedes makes it necessary to increase the assessments upon those which remain, and this is the surest way of breaking up the Order.

The greatest "beat" in the Campbell case, since the *Tribune* copyrighted the most filthy document of the trial, was secured by the *World* of Friday, in the form of what purports to be a long interview with Lady Colin Campbell sent by cable from London. In the course of the interview the following passage occurs:

"Lady Colin talked with much spirit and animation. I asked her if she would not like to say something to the American people through the *World*.

"'Oh, yes,' said she. 'I really am glad of the opportunity. The case in which I have had the misfortune to become so conspicuous a figure has, I understand, been very fully reported in America. I only hope justice will be done to me by the American press and by the American people. I know the *World*. It has, I believe, the largest circulation in America, and I think it would be doing myself an injustice were I not to consent to your visit. The proceedings of the late trial have been emptied out like a flood all over the earth. I am glad now, after it is all over, if I may be permitted to have some sort of a fair and just representation. I was never in America, but I have always wanted to go there, and I may go there yet some day.'"

She did not say that her heart "beats warmly for the whole American people," but it is evident that that is the way she feels. What the effect of that allusion to the *World's* circulation will be upon the *Herald*, remains to be seen. She says she knows the *World*, but it will be observed that she does not say how well she knows it. This leaves the way open for a *Herald* interviewer to get from her a statement that she knows the *Herald* better even than the *World*. There is not the slightest need of going to London for it, for any member of the *Herald* staff can write it just as well here.

The London correspondent of the *Tribune* has been lecturing the British press severely for publishing the bad parts of the Campbell divorce case. No doubt they need admonition on this point quite as much as the *Tribune* itself. His last letter, dated December 14, implies that there are some details known to himself which even the British public are not generally acquainted with. "You may tax your imagination," he says, "to conceive the full horrors of Lord Colin's treatment of the beautiful creature whom he married—you will tax it in vain." He little knows, however, what the imagination of the *Tribune* can do when well "taxed." Then he acquaints us in guarded phrase with the substance of the letter from Lady Campbell to her husband which was published and copyrighted in the *Tribune* on November 29, the printing of which the *Tribune* thought was justifiable on the score of properly showing up Lord Colin in this community, where neither he nor his wife had ever been heard of except in connection with their divorce suits. If any *Tribune* reader should "tax his imagination" on that subject, he would indeed "tax it in vain," but not in the sense that the correspondent implies.

The London *Economist* dissents from Secretary Manning's argument on the silver question in so far as the latter maintains that the suspension of silver coinage by the United States would impel England toward bimetallism, by throwing larger quantities of silver on the market and lowering the price and disorganizing the exchanges with India. On the contrary, says the *Economist*, "it would have the very opposite effect." England does not want a currency that is on the down grade. The more you prove to her that silver is on the decline, the less of it she will care to have in her pocket. The *Economist* thinks that the silver coinage in the United States cannot be of long duration because it is "so egregiously foolish." The people will wake up one of these days and wonder why they have been taxing themselves $25,000,000 per year, to no end except the profit of the owners of silver mines, and then they will have an account to settle with the Blands and the Becks, who have led them into the quagmire. In Germany the bimetallists are accusing Prince Bismarck of duplicity in effecting the recent sale of silver to Egypt. The *Kreuz-Zeitung*, the organ of the silverites, says: "We are unprejudiced enough to see in this step a great victory of the gold-currency party." Then, losing its temper a bit, it adds: "We must confess with sincere regret that the mighty German Empire has not shown itself strong enough to put an end to this Witches' Sabbath of a gold-currency swindle." The *Kreuz-Zeitung* also falls into the error ascribed by the *Economist* to Secretary Manning of supposing that the renewal of sales of silver by Germany will prove too much for England, and will compel her to take the lead in the "rehabilitation" of that deserving metal. We agree with the *Economist* that if England feels any pressure at all by reason of the decline of silver, it will be felt quite on the opposite side, and that the sales made by Germany will work very much like the efforts of the wind, in Æsop's fable, to make the traveller take off his cloak.

The great Powers are apparently all getting ready for a war in the spring, but each is nevertheless vigorously protesting that it desires peace above all things. The two principal sources of danger are Russia and France. Russia has suffered a rebuff in Bulgaria, which becomes more mortifying every day, and which both the Government and the people find it difficult to stomach, and has a secret consciousness that the decision of the long-pending question, Who is to have Constantinople? is close at hand. France probably shrinks from war, in spite of all the newspaper talk of revenge, but she has been overtaken by a great calamity in the advent of Gen. Boulanger. That is to say, after the experiences of 1870, the French were profoundly impressed with the danger of taking the field without a War Minister or General of capacity. As long as no such person appeared, they were therefore pretty certain to remain in a pacific state of mind. Unhappily, in one way or another, Gen. Boulanger has taken hold of the popular imagination, as a man competent to put the French armies in the field and make them fight, and he has now become apparently the permanent Minister of War, and is as much a favorite with the army as with the people. When the French have a man who they think has the makings of a military hero in him, nobody can tell what will happen. The non-appearance of such a man during the last fifteen years has been a most fortunate circumstance, and there appeared for a moment a chance that Gen. Boulanger might be ruined by the discovery that he had been telling lies about his relations with the Duc d'Aumale. The failure of this revelation to hurt him was very ominous, and the chances seem now to be that the French will sooner or later try their luck with him in the field. He has done a good deal for the organization and equipment of the French army, but of his capacity to wield masses of men nothing whatever is known, and he may go down under the German hammer just as rapidly as Bazaine or MacMahon.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 22, to TUESDAY, December 28, 1886, inclusive.]

DOMESTIC.

GEN. JOHN ALEXANDER LOGAN died in Washington at 2:58 o'clock on Sunday afternoon of rheumatism, followed by congestion of the brain. He was born near Murphysborough, Illinois, on February 9, 1826. He was the eldest of the eleven children of Dr. John Logan, who came from Ireland and married Elizabeth Jenkins, a native of Tennessee. His early education was obtained at home, and at a local academy. In his twentieth year he enlisted in an Illinois regiment of volunteers for the Mexican war, and was soon made a second lieutenant. At the close of the war he returned to his home with a good record of service, and studied law. He was soon chosen Prosecuting Attorney for the Third Judicial District of his State, and in 1852 he was elected to the Illinois Legislature. He was twice reëlected to that body as a Democrat, and in the Presidential election of 1856 was a Buchanan elector. In 1858 he was elected to Congress, and in 1860, when he supported Douglas for the Presidency, he was reëlected. On the outbreak of the rebellion he resigned his seat in Congress, and served as a private with a Michigan regiment at the first battle of Bull Run. Returning to Illinois, he raised a regiment of infantry, was made its colonel, and took the field in McClernand's brigade on September 13, 1861. In the battle of Belmont he led a bayonet charge, and his horse was shot under him. At Forts Henry and Donelson he led his regiment to the assault. In March, 1862, he was made a brigadier-general of volunteers. He was actively engaged in Grant's Mississippi campaign, distinguishing himself by his gallantry, and in November, 1862, he was promoted to the rank of major-general, and commanded the centre of McPherson's line at Vicksburg. Gen. Logan was made Military Governor of Vicksburg on its surrender, and was presented with a gold medal of honor on behalf of the Seventeenth Corps. In October, 1863, he was appointed to the command of the Fifteenth Army Corps, and in 1864 he led the advance of the Army of the Tennessee while Sherman was marching to the sea. In the battles of Resaca and Kenesaw Mountain he rendered valuable service, and at the bloody engagement of Peach Tree Creek he succeeded to the command of the Union forces on the death of McPherson. After the fall of Atlanta he returned to the North and made campaign speeches for the reëlection of President Lincoln. At the end of the war he declined the Mexican mission, which was tendered to him by President Johnson, and in 1866 he was elected Congressman-at-Large from Illinois, as a Republican, by a majority of 60,000 In the House of Representatives he served as Chairman of the Committee on Military Affairs and was one of the managers of the impeachment of President Johnson. In 1868 and 1870 he was reëlected to the House, which he left March, 1871, having been chosen Senator from Illinois. He was reëlected to the Senate in 1879, and again last year. In 1884 Gen. Logan was a prominent candidate for the Republican nomination for the Presidency, and was finally nominated for Vice President on the Blaine ticket. He was one of the founders of the Grand Army of the Republic, and its first Commander-in-Chief. He married in 1855 Miss Mary Cunningham of Shawneetown, Ill., whose counsel, tact, and encouragement are believed to have had considerable influence in the promotion of his political successes.

The death of Gen. Logan called forth expressions of deep regret throughout the country from all parties. In Washington the sensation created was only less than that caused by President Garfield's assassination. Bills will be introduced in both houses of Congress immediately after the holiday recess, awarding to Mrs. Logan the pension she would have received had her husband died of wounds in the service instead of from a disease the foundation of which, it is asserted, was laid by the exposures of his army life. A fund for the benefit of Mrs. Logan was started on Tuesday by the editor of the Washington *National Tribune*, and $10,000 were raised in five hours. Funeral services will be held in the Senate Chamber at Washington on December 31, and the body will be temporarily placed in a receiving vault. Its final resting-place will probably be Chicago.

Senator Edmunds's bill to prohibit the importation of opium into China by American citizens, and into the United States by Chinese subjects, is another tardy attempt to comply with a plain provision of the Chinese Treaty of 1880. A similar bill passed the Senate in 1884, but failed of action by the House.

The Supreme Court of North Carolina has decided that the Vance Railroad Law, which forbids discrimination in freight rates, is unconstitutional wherever the freight was marked and entered for shipment beyond the limits of the State, or from a point outside to a point within the State, because it undertakes to regulate commerce between the States.

The Brooklyn Civil-Service Commission submitted to Mayor Whitney on Thursday a report of their work for the last year. The total number of examinations of candidates for positions under the city government, which by law are required to be filled in conformity with the civil-service regulations, was 69, while during 1885 but 15 were held. The candidates numbered 1,241, as against 1,177 for the preceding year. The number reaching the standard required for eligibility was 581, whereas only 445 are credited to 1885. From the eligible lists 258 appointments were made, 49 of which were taken from among those examined before January last.

Judge Peckham of the Supreme Court has decided that the Broadway repeal legislation of last winter is constitutional, and that the mortgages are a lien on the property. The case is that of the People vs. O'Brien, Receiver of the Broadway Railroad. Explaining this decision, Attorney-General O'Brien says that Judge Peckham's decision holds that the Broadway Charter Repeal Act is valid; that the act turning the franchise over to the city is not valid, and that the feature of the act winding up the affairs of the corporation, which provides specifically how alleged creditors may present their claims, is invalid. This last feature is regarded as too narrow in its limitations. The Broadway Surface creditors, it is held, should be allowed the same latitude that other creditors have in prosecuting their claims. The Attorney-General says that the case will be appealed by the concurrence probably of all the parties, and that the Court of Appeals will have to make a final disposition of it.

About 2,000 horse-car drivers and conductors struck in Brooklyn on Thursday because their complaints about over hours, etc., were not heeded. Attempts were made to run cars with new men, and serious disorders occurred with some bloodshed. Eleven horse-car lines were tied up. The demands of the men were practically yielded later in the day, and cars began running as usual at 8 P. M.

The conference between President Lewis of the Brooklyn City Railroad Company and thirteen employees, representing the eleven lines of the company, in reference to the list of grievances presented by the Executive Committee of the Empire Protective Association, resulted on Monday afternoon in an agreement by Mr. Lewis to recognize the latter organization and its Executive Board, and refer to arbitration any future question on which an agreement cannot be reached.

Thomas ("Fatty") Walsh has been appointed Warden of the city prison by the Commissioners of Charities and Correction in this city. Mayor Grace, Edward Cooper, E. E. Anderson, Henry K. Beekman, and Maurice J. Power recommended his appointment. He is a notoriously unfit man for the place.

Mayor Grace has sent a copy of a letter to James C. Carter, Wheeler H. Peckham, Elihu Root, Francis L. Stetson, E. L. Godkin, E. Ellery Anderson, Simon Sterne, Walter Howe, William M. Ivins, E. Henry Lacombe, Thomas Allison, F. W. Whitridge, and Francis M. Scott, in the course of which he says: "As you are well aware, the passage of the special laws affecting this city have been productive of great evil in the past, and it is probable that similar evil in the future can only be effectually prevented by express constitutional amendment. I therefore suggest to you, with any other citizens who may desire to associate with you, that you organize yourselves into a voluntary committee to take into consideration the whole subject of the proper relation of the State to the cities, and with a view, if possible, of agreeing upon and urging the adoption of a constitutional amendment, independent of all partisan considerations whatever, which will serve to protect the city from a recurrence and perpetuation of the evils which have resulted in the past from special legislation; and further to prepare, if possible, a form of a general character, which, with such variations as the differences in population will necessitate, might be enacted by the Legislature in conformity with constitutional provision for the government of the several cities of this State, and which may adequately protect the interests of all cities alike."

Gov. Hill's decision in the case of Mrs. Druse, sentenced to be hanged for murder, is that she be respited for two months, and that unless the Legislature changes the law she must be hanged on February 28.

The hearing of the charges against the Andover professors began in Boston on Tuesday. The counsel for complainants were Judge Hoar, Judge French, and A. W. Wellman; for the professors there were Charles T. Russell, formerly on the Board of Visitors; Prof. Baldwin of Yale, ex-Gov. Gaston, and Prof. T. W. Dwight of New York. The Board of Visitors decided to take up Prof. Smyth's case first, and Judge French put in as further evidence an *Andover Review* editorial and Prof Smyth's address at the meeting of the American Board at Des Moines. It was agreed by complainants to accept the suggestion of the professors and put in the whole book, 'Progressive Orthodoxy,' so as to get its entire scope. Then Prof. Dwight made the opening speech for Prof. Smyth. He attacked the complainants for their "duplicity and underhanded" way of appearing at first as a committee of alumni, when there was no committee except of the whole; then he argued that there were no real plaintiffs in the case because the complainants had no personal interest in the Seminary. Further, there is no heterodoxy there, for heterodoxy has never been defined in the eighty years of the Seminary's existence, and there is no departure from common beliefs, but only from the special creed. A court decision has been given that the creed must be interpreted in a liberal spirit, and the Visitors are bound by it. Prof. Dwight argued that professors were allowed much latitude by the creed in saying that they should teach "according to the best light which God may give them."

Prof. Charles Short, for many years Professor of Latin in Columbia College, died on Friday at his home in this city. He was born in Haverhill, Mass., in 1821, and was graduated from Harvard College in 1846. Throughout his life he was engaged in teaching, being at one time President of Kenyon College, Ohio. He edited a number of Greek and Latin text-books, and was a member of the American Committee in the revision of the New Testament.

Ashbel H. Barney died in this city on Monday at the age of seventy. He was prominent in many important business enterprises,

FOREIGN.

It was unexpectedly announced on Thursday morning in London that Lord Randolph Churchill, Chancellor of the Exchequer, had resigned his seat in the British Cabinet, alleging that Mr. Smith and Lord George Hamilton prepared exorbitant estimates for the Army and Navy Departments. Lord Salisbury supported them. Lord Randolph further considered that the legislative measures for Great Britain proposed for the next session of Parliament were inadequate. The London *Times* approved Lord Salisbury's decision to support the defences of the country. Lord Randolph's resignation, said the *Times*, deprives the Government of its ablest member, and completely changes the political situation. "Lord Salisbury," it continued, "will do well to renew overtures to Lord Hartington for a coalition Government. A reconstructed Conservative Cabinet without new blood cannot last long, and will lead to the return of Mr. Gladstone to office."

A well-informed correspondent says: "Lord Hartington has been summoned from Italy by telegraph. I am assured by the next to the highest military authority, that the army and navy estimates afford no justification whatever for Lord Randolph's resignation, not being at all in excess of the ordinary demands. They are merely a pretext which he as Chancellor of the Exchequer has adopted to cover his retreat on domestic and Irish questions, in face of the impossibility of presenting the economical budget which he had promised. To describe the excitement in political, and especially Tory circles, would be impossible. The Queen herself is known to be extremely indignant, Churchill not having taken the usual course of informing her of his intention."

Mr. Chamberlain made a significant speech at a private meeting of the Birmingham Liberal Conference on Thursday evening. He said that the political situation was an extraordinary and critical one. It had totally changed within twenty-four hours. He continued as follows: "Although I have often differed with Lord Randolph Churchill, I have never failed to do justice to his great ability and quick appreciation of public sentiment. Though reared in old Toryism, he has repeatedly risen superior to it, and his position in the present Government was a guarantee to me that they would not pursue a reactionary policy. Churchill's recent speeches displayed liberal principles upon most important questions. Now, gentlemen, in view of this startling change, I ask myself, What are the Gladstonians going to do? It seems to me they have a great, and perhaps a final opportunity. We Liberals agree upon ninety-nine points and disagree upon only one point. Even upon Irish matters, when I look into the thing, I am more surprised at the number of points whereon we are agreed than at the remainder, upon which for the present we must be content to differ. My opposition to Mr. Gladstone's bill has been grossly misrepresented. I never said that I was opposed to the great land scheme. I opposed the Gladstone bill mainly upon two grounds: first, I believed it would involve a loss which the British taxpayer ought not to bear; second, I was not prepared to do anything preluding an arrangement to make Ireland practically independent. It is one thing to use all the resources of the State to benefit your fellow-citizens; it is a different thing altogether to undertake a risk for those about to drift from you. But I never doubted that it was possible to devise a plan for the settlement of the land question. I am convinced that any of the three Liberal leaders can soon arrange a scheme which, without throwing an unfair risk on the British taxpayer, will in a short time make the Irish tenant the owner of the land he cultivates. We could go even further in the direction of unity. Even on the question of local government the difference recedes. We have all agreed on a scheme applicable to England and Scotland, and we are prepared to apply it, with the necessary change of details, to Ireland. Are we to remain disjointed, fighting and in internecine strife for the benefit of our opponents, or are we to make this honest attempt? If we do not agree on every point, at least we can agree to carry these important reforms on which there is no difference of opinion between us, and leave it to time and a frank discussion of the subject to say whether, when we have accomplished these reforms, we may not go a step further in the direction of the views of those who are now, unfortunately, our opponents."

In an authorized interview on Thursday evening Mr. Parnell said that the Government, now that Lord Randolph Churchill had resigned, would have something else to think of than coercing Ireland; it would have to struggle for existence. Regarding the legality of the campaign, Mr. Parnell said he was unwilling to take the law from either Justice O'Brien or Justice Johnston, both of whom were strong political partisans, who had received their offices in reward for political services, and who were notoriously lawyers of mediocre ability. There was confusion in the judgment itself as well as in the proclamation. "In any case," continued Mr. Parnell, "if it should be finally and clearly decided by a high legal opinion of recognized authority that the campaign is illegal, you must remember it will be only technically illegal, and only so because the same right of combination which the Legislature, after much agitation, legalized for British workmen under the name of trades-unionism, has not yet been extended to Irish tenant farmers."

Though private gossip in London interprets the political situation to be unchanged, it is known that the bulk of the Conservatives are opposed to Lord Hartington as the successor of Lord Randolph Churchill, and wish to maintain a purely Conservative Cabinet, holding that the vacancy in the Ministry should be filled by one of their own number. Mr. Joseph Chamberlain's recent speech at Birmingham has greatly impressed the Home-Rulers with the prospect of a reunion of the Liberal party.

At the meeting of the British Cabinet on Tuesday, Lord Salisbury announced that Lord Hartington refused to take office in the Cabinet and strongly favored a Tory successor to Lord Randolph Churchill. Lord Salisbury informed the Cabinet that he would not attempt to conciliate Churchill, and that if Lord Hartington finally refused to accept office or to guarantee the Government adequate support from the Unionists, he proposed to dissolve Parliament and appeal to the country on the former Unionist platform, adding planks in favor of the adoption of new procedure rules, the precedence of an English local-government measure over an Irish measure, a vigorous foreign policy, and moderate estimates. Churchill's reasons for resigning, as stated at the Cabinet Council, included objections to allowing a sum for increasing the defences of the ports and coaling stations in the budget. Mr. Morley has made overtures to Mr. Chamberlain to concert a platform on which to unite the Liberals.

It is officially announced that the meeting of Parliament has been postponed until February.

An interchange of views between Mr. Gladstone and his colleagues of the last Liberal Cabinet on the attitude to be adopted by the Liberal party at the opening of Parliament has resulted in an agreement to support the Government in all legal efforts to suppress the anti-rent campaign, but to urge the immediate enforcement of some form of Mr. Parnell's bill for the suspension of evictions. The anti-rent leaders have been warned that the coöperation of Mr. Gladstone will not continue unless they submit to Mr. Parnell.

Mr. Gladstone has written for the January number of the *Nineteenth Century* an article entitled "Locksley Hall and the Jubilee." The article is a criticism of the poem by the light of events of the past fifty years.

The British Government, it is reported, has resolved to prosecute Mr. John Dillon and Mr. Healy for their declarations at the recent meeting of the Executive Committee of the National League, that they would continue to carry out the plan of campaign in defiance of the Government.

The anti-rent agitation in Ulster is spreading daily, and many tenants are joining the movement for lower rents.

The *Journal de St. Pétersbourg*, commenting on the recent inspired article in the London *Post* warning Turkey against coquetting any further with Russia, says: "The inspirers of the *Post* chose a moment to utter their threats of war when all the European cabinets were conscientiously seeking to reconcile the divergent interests which the Bulgarian crisis had created, and when Turkey and Russia had agreed upon a solution reconciling their interests in conformity with the Berlin treaty. We reserve judgment on the question whether the general tendency towards conciliation has upset certain calculations. If the article in the *Post* had some other and ulterior object, the Powers who reprove a firebrand policy ought to affirm their resolution to preserve the peace, and should act firmly against any attempt to intimidate Turkey. We hope the Powers will not fail to do so. The Sultan should be advised that so long as he seeks conciliation and peace, he will find powerful sympathies and energetic support.'

It is reported that Count Tolstoi will succeed M. de Giers as Russian Minister of Foreign Affairs.

It is semi-officially stated that the report that Germany and Russia have reached an agreement concerning Bulgaria is untrue.

German students in Switzerland have been ordered to rejoin their regiments immediately. Many officers on furlough have also been ordered to return to Germany.

Prince Nicholas of Montenegro has called out 35,000 troops. They will be armed with repeating rifles.

It is reported in Constantinople that England threatens a permanent occupation of Egypt unless Turkey breaks with Russia.

The Paris *Journal des Débats* renews its attack on England, which it accuses of being the only Power whose conduct has aggravated the trouble which has culminated in the present crisis in southeastern Europe, and declares that she has sought to embroil Austria and Russia in a dispute.

The Comte de Paris and the Duc d'Aumale will soon visit the Pope.

The Paris newspapers say that M. de Lesseps in the course of a recent speech stated that 137,500,000 francs ($27,500,000) were still needed to complete the Panama Canal.

The Socialists of Brussels on Saturday opened a coöperative provision and recreation house, and many members of the party gathered to celebrate the event. The Marseillaise was sung and violent speeches were made, but there was no disorder.

Henry M. Stanley is still in London. He will start December 30 for Zanzibar It is asserted that he has declined an offer of $40,000 to return to America and complete his lecturing tour.

A Spanish red-book has been issued giving an account of the negotiations with the United States relative to Cuban commerce. It is stated in the book that the delay in concluding a convention is due to the fact that the United States Government wants exclusive privileges, to the prejudice of English and other interests. Señor Moret, Minister of Foreign Affairs, is opposed to granting exclusive privileges to the United States.

A GREAT SCANDAL.

A COMPLAINT was lodged some months ago against Mr. Mathews, our Consul at Tangier (Morocco), by Mr. Perdicaris, an American resident in that place, for having wrongfully imprisoned and fined him. The affair hung for a good while in the State Department, but has ended in official disapproval of Mathews's conduct, and an order to him to return the money taken by way of fine. But it ought not to end here, because it has brought to light a state of things which reflects great discredit on the American name.

In Morocco, as in other Mohammedan countries, in which the ministers and consuls of the Christian Power enjoy civil and criminal jurisdiction over the citizens of their own State, the practice of selling or bestowing "protections" on persons of other nationalities or of no nationality, has long prevailed. It has been tolerated or winked at by the Christian Powers, owing to the deplorable condition of the Government in most Mussulman countries. It seemed a clear gain for humanity to give any foreigner in those countries who had no Government of his own strong enough to look after him, a title to the protection of a government which was strong enough. But of course this liberality has been greatly abused. Every consulate in those countries, and especially in Morocco, is surrounded by a parcel of adventurers of every clime and creed, who have in some manner acquired "protection," either through favor or for cash, and use it as a means of preying on the natives. A considerable body of these quasi-Americans surrounds Mr. Mathews at Tangier.

But now comes the worst of the matter. The diplomatic agents of foreign Powers in Morocco, as in other Mussulman countries, have, as we have said, civil and criminal jurisdiction over their fellow-citizens sojourning within their sphere of duty. In addition to this they have, through the courtesy of the native Government, the power of enforcing the claims of their protégés against the natives through the native police—that is, when one of Consul Mathews's protégés says that a man owes him money, the Consul can examine the claim, award judgment against the defendant, and get the Moorish authorities to imprison him till he pays the amount. Now in Morocco there is but one prison for debtors and criminals. It is what European prisons were in the Middle Ages, a filthy dungeon, without light, ventilation, or furniture, in which the prisoners pig together, in chains, on scanty and irregularly served fare, and are punished by the lash. It is, in fact, an imprisonment which only the very vigorous survive long, and from which nobody issues without broken health. Mr. Perdicaris found that Consul Mathews was in the habit of calling on the Moorish authorities to enforce claims against Moorish subjects, by this sort of imprisonment. He protested, and a quarrel arose, ending in the attack on Mr. Perdicaris himself which the State Department has censured.

Now, there are, of course, two sides to all quarrels of this sort, and it may be said that until Consul Mathews is heard from he ought not to be condemned. But he has been heard from. His correspondence with Mr. Perdicaris has been printed. There is no question as to the gross abuse of these "protections." Sir John Drummond Hay, the British Minister in Morocco, has taken the lead in trying to have them, if not suppressed, regulated. There is no question as to the manner in which the claims of the protégés against Moorish subjects are enforced, or as to the fraudulent or extortionate character of a large number of these claims. There is no question, too, as to the condition of Moorish prisons. Here is a description of those of Tangier, contained in a report made to the Committee of the British and Foreign Anti-Slavery Society by Mr. Crawford, late Acting H. B. M. Consul in Cuba, and Mr. Allen, the Secretary of the Society, in the present year, as the result of actual inspection:

"These two gloomy buildings stand side by side on the top of the hill on which the town is built. They are most dreary dungeons. There is a door, but it is fast locked, and open only to let in a prisoner or a jailer, or to let one out. In this door is a diamond-shaped hole through which you can peep in, or a prisoner can peep out. A good photograph of these gloomy prison doors, with the wan, yellow, sad, pinched face of a poor Moor set in the hole, like a picture in a frame, would be valuable. Even through this hole he cannot look out into the world or see the sky, for it is only a dreary stone passage in which the inexorable, unpitying old jailers sit, covered up in their dirty jellabeers. You look through and you see a dismal, damp, arched chamber, into which some light and air come through iron gratings high up in the wall. The prisoners may be seen scattered about—some weaving baskets, some walking, but most crouching in corners. Many are very heavily ironed, a bar of iron being fastened on to each ankle by rings, thus keeping the feet wide apart. These victims cannot walk—they only waddle. Others there are with massive iron collars, but as they are chained to the wall they are not visible through the one peep-hole. Day and night, night and day, week after week, month after month, and often year after year, the poor creatures drag on the hard monotony of this prison existence—life it can scarcely be called. No change of clothes—no bed, nor matting on which to lie, and hardly any water for washing. A few lean and miserable cats were walking about the prison floor, probably looking for mice. Unlike the human inmates, they can come out when they please through the peep-hole; but they seem used to it, for one pussy was seen to jump up and enter the prison of her own accord.

"There are at the present moment 110 men in these two Tangier prisons who have had no trial—many are only there on suspicion—some are for debt, and very many are merely undergoing what is called the 'squeezing' process. They have some money, or it is thought they have, and somebody thinks he would like to get it, so a charge is trumped up and he is clapped into jail. If likely to prove obstinate, he is ironed. Thieves, murderers, and real criminals of all sorts are there, but it is share and share alike. The only difference is in the matter of irons. In this country few officials, except the Custom-house officers, are paid a farthing. Even the army is not paid. They all live by 'squeezing' their neighbors. Hence arise many of these villanies. It should be borne in mind that the prison of Tangier is almost within cannon shot of Europe, and it only stands five minutes' walk from the large and well-appointed 'Continental Hotel,' in the midst of every comfort, and where tourists come and stay week after week, unmindful for the most part that close to them, as they sit enjoying their excellent *table d'hôte*, more than a hundred fellow-creatures are starving, and dragging their fetters over the damp floor of an oubliette fit only for the worst times of the Middle Ages!"

To these frightful abodes an American consul commits, or causes to be committed on his mere order, all persons against whom the band of nondescript foreigners to whom he has given the protection of the American flag choose to make claims. Here is what he himself says about it in answer to Mr. Perdicaris's first remonstrance:

"While being quite willing to do justice to all alike, while deeply regretting the cruelties to which natives are subjected by local authorities, while deploring the maladministration of justice practised by native functionaries, I cannot lose sight of the fact that my official duty demands that the interests of American citizens, their agents and protégés should be watched over and have justice done them."

That is, while using these cruelties and this maladministration in the prosecution of claims, he is willing to "deplore" them, as the best he can do.

Further on he adds:

"I quite agree with you that the system of imprisonment in this country is most atrocious in its horrors, but the native Government must alone bear the blame of it; and I should be most happy if my colleagues, under the direction of the doyen of the diplomatic corps, would make up their minds and call a meeting to act collectively in an effort to induce the Sultan's Government to introduce reforms in the penal system."

We thus see that, though in his own eyes a man of the reforming turn, it is none of his business if the prisons to which he commits debtors are "atrocious in their horror." Here is something better than all, however. He does not commit the debtors to these places—they actually go of their own accord.

"As to the idea that a number of men have been put into the dungeons at the request of American protégés, nothing is more preposterous; it is the debtors themselves who prefer going there, sooner than pay their debts, as we have daily examples."

We need only add here that Mr. Mathews's "protégés" are about 150 in number, and consist chiefly of Jews of foreign birth and Moors. There are few if any American citizens among them. We have no trade with Morocco. The United States owes these men no protection whatever, much less assistance in collecting their debts. But even if they were every man of them native-born American citizens, and old soldiers to boot, it would be a crying shame and disgrace to use the flag to get their debtors, of any race or nationality, tortured into payment by confinement in Moorish dungeons.

We trust Mr. Bayard is not going to rest satisfied with making Mr. Mathews offer some atonement for the outrage he committed on one American citizen, who was rich enough and able enough to come home and complain and make himself heard. The Secretary owes it to the conscience and good fame of the country to shut up peremptorily the Mathews collecting agency. He ought to tell him once for all that the "protégés" must wait for their money until that "reform in the penal system" of Morocco takes place which Mr. Mathews says he should "be most happy" to see his colleagues undertake. Even if we had any commercial relations with Morocco, even if there were an American colony there, even if every other country in the world took the Mathews view of the sanctity of "claims," we ought not to be found mixed up in such barbarous transactions, and our "protégés" should be sent to get their rights through some Power professing less respect for humanity.

JEFFERSONIAN SIMPLICITY IN BUENOS AYRES.

IT was scarcely to have been expected that a plain Indiana Democrat should be able to rival

and even surpass the high-flown style and stately courtesy of a Spaniard, but our Minister to the Argentine Republic, Mr. Bayless W. Hanna, appears to have beaten the Hispano-Americans on their own ground. Proof of this is found in a letter addressed by Mr. Hanna to ex-President Roca, and given to the Buenos Ayres press. Gen. Roca, it seems, had invited the Diplomatic Corps to a farewell reception, at which the American representative could not be present, for reasons set forth below. But he more than made good his absence by the note of explanation which he sent to the ex-President, and which, it is not too much to say, left the Argentinos completely stunned. We give a few extracts:

"An untoward accident prevented me yesterday from joining the Diplomatic Corps in their farewell call. It was a source of much annoyance and disappointment to me. . . . You have been exceedingly considerate in our official relations, which fact, coupled with your undisguised admiration of the civilization and government of my country, has invested your name with a charm time cannot obliterate. I have watched the progress of your administration with more than a passing interest. How well you have repaid the public confidence at your disposal, and, by so doing, placed another laurel leaf on the anointed head of our political divinity! . . . The dignity, power, and humanity of the Argentine Government have been suddenly advanced beyond their years. . . . You put on the robes of office on a field of battle, and you put them off in the applauding presence of the beauty and chivalry of a united, prosperous, brave nation, exulting in its deliverance, and impatient to render the homage justly due, that it has been so happily achieved. . . . The United States and the Argentine Republic are the twin daughters of a common destiny—both born of what now seems in the light of history to have been a righteous revolution—both consecrated with the baptism of fire. More than a hundred years ago the sneering dynasties of the Old World said the American idea was meteoric; but it has proved to be a heavenly body, as fixed, and we believe as enduring, as the divine law of its attraction. . . . Your place here in your country's development corresponds to that of Mr. Jefferson in mine. He and you have both adhered to the inviolable prerogatives of the States, bound up securely in the superior authority and domination of a Federal Constitution. It is a grand thought, and in your passing years, I trust, like our illustrious statesman of Montecello [*sic*], you will live to see the golden fruit of the selected tree you have so wisely planted. I am very happy that I have thus had the opportunity to write what the disparity of our language has hitherto prevented me from saying in person, an occasion I now value all the more, because of the relaxed restraints of official propriety."

The comments of *La Nacion* of Buenos Ayres on this production display a spirit of petty jealousy and spite which we will not undertake to characterize. It even pretends not to know what Mr. Hanna meant by "the anointed head of our political divinity." But we can best show its malice by translating a few of its remarks on the literary ability and the political knowledge of the American Ambassador:

"Were it not that the extreme exaggeration of a eulogy detracts somewhat from its value, no one could fail to be pleased with the good will shown in the judgments of the Minister of the United States, as they have been given in the press. A few days ago, when the city of La Plata was being discussed, that distinguished diplomat seized his pen and wrote a note in which he declared it the 'miracle of the century. Here are some of his enthusiastic words: 'La Plata, the enchanting city of the pampas, is the miracle of the century. I have already advised the Department of State of the United States of its great importance as the capital of this flourishing province, and of its remarkable spirit of enterprise.' However progressive La Plata may be supposed to be, it seems a little hasty to say that, during the past eighty-six years, the world has seen no event equal to the founding of this city. However, this praise of a city harms no one. But the same cannot be said of other eulogies, clothed in the same epic language, and addressed to persons, with evident depreciation of things and persons far more important. Thus, for example, the American Minister, who was unable to be present with the Diplomatic Corps to bid farewell to the ex-President, availed himself of the opportunity to write a note to Gen. Roca, in which he declared that the General holds the same place in our history as that which the illustrious Thomas Jefferson fills in the history of the United States. If this were true, it would be unfortunate for the latter; but, happily, the reasons which the Minister gives for his opinion seem as if advanced precisely to discredit it. As there is not a single inhabitant of the Argentine Republic who does not know that the only mission of Gen. Roca has been to put his will in the place of the voice of the nation, thus suppressing the national Constitution, and as to accomplish this the first requisite was that he should control the provincial governments, that is, destroy 'the inviolable prerogatives of the States,' it is easy to see the beautiful analogy which exists between the Presidency of Gen. Roca and that of Jefferson."

We are sure that we do no wrong to Mr. Hanna, but, on the contrary, are giving him an increased popularity with his Indiana constituents, when we explain the "untoward accident" which gave him so much "annoyance and disappointment." Gen. Roca's invitation stated that his guests would be expected to present themselves *en fraque*. Mr. Hanna, owing to the "disparity of language" to which he refers, took this to mean "in a frock coat," and proceeded to array himself in a gorgeous blue garment of that variety. We can hardly regret the occurrence, as his inability to obtain admission in such a costume was the occasion of the revelation to the world of his unsuspected literary powers. It seems clear to us that Mr. Hanna made the mistake of his life in declining the Persian mission. Nature evidently meant him for a life in the midst of the elaborate ceremonial and lofty politeness of an Oriental court.

ECONOMIC ASPECTS OF COÖPERATION.

A CONSIDERABLE body of writers in this country, possessing greater or less pretensions to an acquaintance with political economy, have for some years been engaged in attempts to reconstruct that science. Their purpose is, to use their own language, to effect a "reunion of ethics with political economy." They maintain that the great English economists who formed what has come to be known as the orthodox school, taught doctrines that were not only dismal, but also heathenish. Two cardinal principles seem to have had an especially exasperating influence upon this class of "thinkers"; one, the fundamental principle upon which the whole fabric of the science rests, namely, that men in their industrial operations are governed in the main by considerations of self-interest; the other, a principle less distinctly formulated but not less fundamental, that natural selection operates upon men as well as upon inferior animals. To discredit these doctrines seems to be the aim, more or less clearly understood, of much of the so-called economic writing of the time. It is hardly necessary to say that there is a difference between an economist and a professor of economics, and that these writers have generally confounded what is, with what, in their view, ought to be. Whether they have effected a reunion of ethics with political economy or not, they have at least succeeded in injecting a large amount of emotion into the discussion of scientific problems, with results that are not salutary for either the minds or the morals of the public.

It is true that this school of writers has encountered a serious difficulty, in that the older political economy corresponds very closely with the actual facts of our industrial system. They have courageously met this obstacle, however, by asserting that it was so much the worse for the facts; that the industrial system ought to be so modified as to conform to a Christian system of economics. And with this end in view they—or the saner and honester portion of them—have busied themselves with the exploitation of various schemes for the renovation of society. Coöperation especially has found favor in their eyes, and altogether the most useful part of their labors, it may well be thought, has consisted in directing the attention of the public at large, and working people in particular, to this form of enterprise.

A recent publication of the American Economic Association describes the remarkable success of the coopers of Minneapolis in setting their business upon a co-operative basis. The emotional economists can hardly do otherwise than exult in this transformation; but what is, after all, the most instructive thing about it is the striking illustration it presents of the play of the very principles which have aroused so much hostility. In fact, coöperation tends not to revolutionize the present industrial system, but to develop it upon the old lines. The truth of the detested doctrines is proved by the very means which have been employed to discredit them. Coöperation being called upon to curse the older economists, like the prophet Balaam, turns around and blesses them altogether. Its success as a form of productive industry is due in part to the clearness and intensity with which it appeals to the self-interest of the workmen, and in part to the free play it gives to the principle of natural selection. The workmen are made to see that their prosperity depends upon their doing faithful work, and it is the hope of attaining this prosperity that stimulates them. The truth of this is so obvious upon *à priori* grounds that it hardly needs verification, but the account to which we have referred affords confirmation in ample measure.

As to the principle of natural selection, its application in these coöperative shops seems to be complete. Not only does the system of piece-work prevail, but incapable, lazy, drunken, and dishonest workmen are either not admitted or are very soon extruded. Every man is an inspector in his own interest, and supervision is much more effective than is possible under ordinary circumstances. The inferior men are sometimes employed as laborers in the coöperative shops, but they are generally driven to the "boss" shops, where their wages are very low and their employment very precarious. The tendency to classify and reward men according to their abilities is, to say the least, much more pronounced than under the ordinary system of production, and what the Darwinians would call advantageous variations in individuals are much more likely to be laid hold of.

Of course it is unnecessary to say that the

orthodox economists are just as much interested in the success of coöperation as other people. No economist of note can be named who would not have sympathized most heartily with these Minnesota coopers. But it would have been upon the ground that their enterprises were in conformity with laws that are natural and irresistible, and not in opposition to them. There is only one way to end the strife between capital and labor, and that is to make the laborers capitalists. This end can be promoted by coöperative schemes, not only because, as we have seen, these schemes appeal to an enlightened self-interest, but because they stimulate saving, the mother of capital. The law of the survival of the fittest, although its operation requires to be modified by human charity, is the law under which the human race must exist. The suffering arising from physical or even mental deficiency appeals properly to benevolence; but to attempt by social or political devices to do away with the punishment that falls upon moral weakness, is to engage in a mischievous struggle against a beneficent law of Providence. Until our philanthropists learn this distinction, they may as well abandon the effort to unite a sound political economy with a false and feeble ethics.

A POSSIBLE "ISSUE."

THE bulky volume in which Commissioner Frank A. Flower makes the second biennial report of the Wisconsin Bureau of Labor and Industrial Statistics, contains, among much other matter of great interest to all students of our social problems, a chapter which must command the thoughtful attention of politicians in search of an "issue." One of the questions to which Mr. Flower invited replies from employers of labor was as to the desirability of restricting immigration to this country, with a view to keeping out disturbers and undesirable characters, and in part ix. of the report he summarizes the results of this inquiry. It was discovered not only that there was an overwhelming sentiment in favor of measures which would hereafter bar out paupers, criminals, and Anarchists, but an unexpectedly strong feeling in favor of stopping immigration of all sorts, for a while at least.

The opinions of 484 persons engaged in all sorts of industries were secured, and only sixty-three opposed restriction, while seventy were for total prohibition, and all the rest would establish obstacles of some sort. Ninety-eight of the replies, which are fairly representative of the whole number, are printed. They are for the most part admirably clear and concise, and constitute five pages of uncommonly interesting reading. Only ten answer no to the question, and of these ten one qualifies his negative by adding that he does not think "honest labor" should be prohibited from this country, and another proposes a long term of residence before foreigners should be allowed to vote.

Among the nine-tenths who sent affirmative replies to the Commissioner's question there was naturally a wide range of opinion as to how far interference should go. Some came out unqualifiedly in favor of absolute prohibition for an indefinite period. "Pull in our latch-string totally until we Americanize what we have here," said one. "No more foreigners of any stamp; we have now a good start, and can populate our land fast enough," declared another. "We can produce enough loafers, as well as desirable people, ourselves," was the verdict of a third. Others recommended a trial of the prohibitive policy for a certain period, as three, five, seven, or ten years, "and then," as an advocate of the latter period says, "ten years longer if needed." Another class would have a rigid inspection of all applicants for admission, either at the ports where they arrive in this country or by our consuls in the countries which they leave, and would send back, or refuse consular certificates, to those who cannot meet the requirements, which range all the way from a voucher of "good moral character," or the ability to read, to a tax per capita of $500 or a property qualification of $300, $1,000, $2,000, or even $5,000. A number of persons suggest a refusal of suffrage to the foreigner until after a residence of five, ten, or even twenty one years

So general a consensus of opinion in favor of a new departure in the matter of immigration would be noteworthy in any commonwealth, but there are special reasons which give it a peculiar significance in the case of Wisconsin. Of all the States in the Union that one contains the largest proportion of foreign-born to the whole population, the census of 1880 showing that the foreign-born voters outnumbered the native by no less than 40,000. Moreover, Mr. Flower points out that of his hundreds of correspondents "a very large percentage of even those demanding total prohibition for longer or shorter periods are foreign-born, and some mention this circumstance as a reason why they know better than others the necessity of taking the question thoroughly in hand." It is worth while to quote the words of two or three such writers:

> A trunk-maker—Yes. I would require all immigrants to be able to read and write their own language. I am a foreigner, but had a good education when I arrived here at the age of fifteen, and worked my way up with no help but my education and kind Providence.
>
> A vinegar manufacturer—Yes. I think it would be well if immigration were prohibited entirely for a few years. I am foreign-born, but see that the thing is overdone.
>
> Rev. F. S. Stein of Kenosha—Indiscriminate labor immigration should be limited, if not prohibited. Not merely the number, but the character of immigrants should be taken into account. One-eighth of the population of the country and one-third of the insane are of foreign birth, making the number of insane of foreign birth three times as great as it should be. One-fourth of the population of New York State and two-thirds of the paupers are of foreign birth, making the proportion of paupers of foreign birth nearly three times as great as it should be. Truly, these are most suggestive figures, and call for active legislation, proving that Europe systematically exports her paupers and the scum of the country to our shores. Why should our legislators discriminate against a few helpful and industrious Chinese, while they make no effort to stay this polluting tide? I am myself of foreign birth, and I thank God, who brought me to this land, yet I am none the less able to discern the dangerous tendencies of the wholesale influx of foreign laborers.

The opinions given above, with the exception of the last, are those of employers. A similar canvass of the employees would have been extremely valuable, but is lacking. Despite the absence of such a showing, we find elsewhere in the report reason to suppose that opposition to immigration would find as much support among that class. Part x. of the report presents a "symposium" of the views and wishes of Wisconsin workingmen upon different phases of the labor problem. Four expressions are given upon the immigration question, and they agree in favoring some action. A Milwaukee tanner says that he and his shopmates do not want any more European labor at present, but could spare several thousands in Milwaukee and not miss them at all; "there should be laws passed to put a stop to or at least restrict immigration." A Marinette carpenter complains that "we poor native-born citizens are just pulled around same as dogs by foreign people; we do not stand any show, and it seems as though everything is coming to the very worst in the near future unless free immigration is stopped." A laborer of the same town recommends the stopping of immigration for four or five years, "so as to give us time to have everything settled quietly and without strikes or any other trouble," since there are too many men in the country now for the work to be done, working even on the ten-hour system. A lumber laborer of Peshtigo thinks that immigration ought to be stopped, for a while, at any rate, except the immigrant brings a certain amount of money or property with him, as "the supply of labor is now largely in excess of the demand."

It has long been evident that a large proportion of our native stock would gladly support measures of severe restriction upon immigration in future, believing that the national stomach has already received as much as it can digest. But little attempt to formulate any such rules has been made, because the managers who control party policies have supposed that a step of this sort would offend the "foreign vote." The investigation of the Wisconsin Commissioner of Labor Statistics shows an unexpected sentiment against further immigration among foreign-born citizens. It really looks as though the most popular thing a politician in that State could do would be to come out against further immigration except under severe restrictions. A test will soon be afforded. Wisconsin has for some years put a premium upon immigration by supporting a State Board to set the attractions of the commonwealth before Europeans, and more than one of Mr. Flower's correspondents calls for its abolition by the Legislature at the approaching session. If there should be a ready adoption of this suggestion, and thus a clear proof that public sentiment in one State is pronounced upon this question, we may look to see the politicians throughout the country who are now so eagerly seeking an "issue," decide to try an experiment with the immigration question.

ENGLISH AFFAIRS.

LONDON, December 16.

THE probability of the Government lasting through the coming session is anxiously canvassed among their followers and antagonists. Ministries seldom trip over obvious obstacles. They are not usually wounded in their most vulnerable point. It is not likely that the Irish question will be fatal to Lord Salisbury. Lord Hartington and he are, indeed, supposed to have decided that

there shall be no Irish question this year. This, however, is a little in excess of their powers. They cannot prevent an Irish question. Mr. Gladstone and Mr. Parnell will see to that. But they may possibly hinder a Government or Parliamentary answer to the Irish question. In the event of events accommodating themselves to the Ministerial programme, the first business, after the debate on the address in reply to the throne, will be the procedure of the House of Commons. There is one instance, I believe, nearly a hundred years old, of a session being opened without a speech from the throne, but this unique precedent, if that can be called a precedent which nothing has followed, is likely to remain unique. The debate may last ten days or a fortnight. The omission of any promise of legislation for Ireland will probably be censured in an amendment which is more likely to be proposed by some member or leading English supporter of Mr. Gladstone's late Government than from the Irish benches. It has no chance of being carried. The union of the Unionists is, at least at this early stage of the business, strong enough to prevent that.

Then will come the consideration of procedure. It is possible that Mr. Gladstone may insist that the course which he himself took is the proper one to follow, and that a separate session should be held to deal with the proposed rule. The Home-Rulers would support him, but probably not all of his own party would go with him in this matter; and if the project of immediate legislation for Ireland is set aside on the debate on the address, perhaps he may not think it worth while to reopen the matter. The immediate danger to the Government lies, according to some very close and interested observers, in the character of their procedure proposals. If Lord Randolph Churchill carries his point of closure by a bare majority in the Cabinet, it is very doubtful whether he will carry it in the House of Commons. Mr. Gladstone, I believe, favors it, and might possibly vote with him. But a very large number of Conservatives agree with Mr. Chaplin in something more than deprecating it; the Home-Rulers will resist it tooth and nail on its own merits, and as a means of showing their power to upset governments. In the event of Ministers being defeated on this proposal, Lord Salisbury would, it is thought, resign, Lord Hartington would be sent for, and a moderate Liberal Government would be formed, resting for its support on the Conservative party, thus reversing the parts played by the two sections of the Unionist party in the present arrangement. Those who think this arrangement probable or desirable, hold that Conservative support of a moderate Liberal Ministry presents a stronger combination than moderate Liberal support of a Conservative administration. The example of Lord Palmerston's long and peaceful Government is cited in confirmation of this view, which has something to say for itself, and would have more if Lord Hartington were Lord Palmerston. But he is not; and further it must be remembered that Lord Palmerston's own followers were a majority of the House of Commons, while Lord Hartington's are, and are likely to remain, a small minority. Of course, if Lord Salisbury strongly desired to retain office, he would take care to avoid procedure rules such as a majority of the House may wish to accept, even at the cost of having to part with Lord Randolph Churchill. But Lord Salisbury's health is delicate, and he is understood always to have thought that a Ministry presided over by Lord Hartington would be more stable than one of which he was the head. An arrangement of this kind, however, would leave undetermined two unknown and rather unmanageable quantities in the political equation. Mr. Chamberlain could not very well be a member of a moderate Liberal Government depending on Conservative support; Lord Randolph Churchill would scarcely retain the leadership of a party which had revolted from him. These two adventurous persons, who have much in common, and a strong natural liking, might possibly come together, in which case any ministry would have lively times.

This forecast, which, of course, is subject to all sorts of provisos and conditions, is, I know, entertained by some members of Mr. Gladstone's last Government. I confess that I do not quite share their belief in its realization. Lord Hartington would, I believe, with difficulty be persuaded to take office as the leader of a Parliamentary minority, and therefore dependent on and obedient to a Conservative majority. Nor would that majority lend itself readily to the arrangement. The spoils will be to the strongest. Then there is the chapter of accidents which defies foresight. It is possible that Ministers may decide to ask for further powers for the maintenance of law and order in Ireland; in that case procedure rules and local-government bills will be adjourned into a Parliamentary *Ewigkeit*. The judges of the Irish Queen's Bench having pronounced Mr. Dillon's "plan of the campaign" to be a criminal conspiracy, Lord Salisbury may proclaim the National League, as Mr. Gladstone proclaimed the Land League. But then Mr. Gladstone had the most rigorous coercion act at his disposal which any Minister ever possessed, and could and did lock up, without intervention of judge or jury, anybody whom it was inconvenient to allow to be at large. Lord Salisbury has no such "resource of civilization" at his disposal; it would take a long time for him to get it, and without it the proclamation of the League would be a bull against the comet. In any case, the Local Government Bill for England, on which a committee of the Cabinet has deliberated, and of which the President and Secretary of the Local Government have sketched the outlines, is not very likely to become law next session. The indication of its provisions given by Mr. Ritchie and Mr. Walter Long does not augur well for it. The system of representing classes, whether by having *ex-officio* members of the County Boards, or by fancy franchises, or indirect elections, is one which public opinion is scarcely prepared even to consider. But Lord Salisbury may be riding for a fall on this measure if he cannot get one on the procedure business.

While politics are in the conditional mood, the world of London takes its pleasure in its routine fashion. There is one unfortunate breach in the routine. Miss Ellen Terry's strength, and possibly her patience, have given way under the repetition of *Margaret*, I am afraid to say how often—in algebraic formula, for the *n*th time. As no actor or actress can ever take a holiday without going to the play, as he or she must always be in a theatre, before the footlights if not behind them, Miss Terry has betaken herself to Paris in order to see "Hamlet" at the Théâtre-Français, to compare M. Mounet-Sully's personation of the *Prince of Denmark* with Mr. Irving's, and possibly Mlle. Reichemberg's rendering of *Ophelia* with her own. During this interval the part of *Margaret* is being acted with much grace and tenderness by Miss Winifred Emery, who is usually Miss Terry's "understudy," to use the slang of the stage, and who is as good a substitute as could be found for her, though in only one respect has she a superior qualification for the part, and that is a chronological one. It is the tragedy of the stage that on it, far more emphatically than in any other pursuit, while art is long, life is short, and that, when the artist is most consummate, large provinces of his kingdom slip from him. In France they manage these things better. A *Romeo* of fifty or a *Hamlet* of sixty would not be tolerated, would scarcely tolerate himself. It is curious, in comparing a French playbill of to-day with the list of the personages in an original edition of the drama which may be in question, to see how the youthful lover of the first production has become the noble father of the revival, and the tender *ingénue* has developed into the stately matron. The notion of the English stage that there must be always one leading man, or one leading lady, who must take the leading business, that *Lear* must be *Romeo*, and *Lady Constance*, *Rosalind*, shows how egotism and love of self-display tend to overpower not only artistic feeling, but even the sense of personal propriety. In Mrs Chippendale, when Mr. Irving comes over, the American play-goer will see a possible *Martha*; in Mrs. Sterling, comely old lady though she was, the English audience have until lately had a *Martha* whose art could not hide the outrages of nature, which has no human respect for age, but wantonly insults and deforms it.

The return of Mr. Toole to his theatre, or rather, as *Horatio* says, of a piece of him, for long illness has restored to him the gracility of his youth, has been cordially welcomed. Mr. Toole is the last representative of farce in England. It has its solitary home on King William Street. A good farce was a good thing, but apparently the English public have had too much of it, and in any other part of the world an English farce of the present day would be unintelligible. The beings that it represents exist nowhere, though they have a certain distant resemblance in accent, gesture, and dress, to some classes of Englishmen. But abroad, even in the United States, they must appear as unreal as a centaur, or a unicorn, or a mermaid. In Mr. Toole, farce has deprived the stage of a comedian. The habit of acting simply in parts written up to his own peculiarities has led him to exaggerate those peculiarities, until the announcement that Mr. Toole will appear in another dress would sufficiently indicate the only variety in his so-called characters. Nevertheless Mr. Toole has a strong hold upon the audiences. There is perhaps too much of a disposition in England to convert the theatre into a sort of Young Men's and Young Women's Mutual Improvement Society. At the Lyceum, the audience listen gravely as they might do to a more or less popular lecture on science, with experimental illustrations. They would almost as soon applaud in a church as there. Mr. Irving is a sort of high priest celebrating a solemn ritual, with his acolytes and attendant ministers. This is all very well. The reaction which it presents was, perhaps, inevitable from the legs, the costumeless indecency, and the music-hall imbecility of burlesque. But the reaction has gone to an extreme length; for, after all, the primary object of an amusement is to amuse. An accomplished actor, formerly a member of the Lyceum company, says that the absence of any response at the Lyceum Theatre, and the melancholy attention of the audience, are almost paralyzing. Empty benches, artists' manikins, or tailors' dummies would, save for the effects on the treasury, be as agreeable to act to.

The rush of academic youth and persons of fashion to the stage continues. Mr. Robert Benson, an Oxford man whom the passion of the stage struck when he was performing in the "Agamemnon," now traverses the country, Thespis-like, with a company of his own. His principal actress is, I believe, a very accomplished

young lady from Girton or Newnham. Lady Monckton, the wife of the Town Clerk of London, a very great person not only officially in the city, but socially outside of it, has apparently made the stage a profession. She is working for nearly the two hundredth night at the Haymarket. Mrs. Greenall, who is doing *Lady Teazle* at the Strand, is the wife of a colonel in a crack regiment, a near relative of Sir Gilbert Greenall, a Conservative baronet of Mr. Disraeli's creation. Mr. Brookfield of the Haymarket, one of the best character actors of the time, is the son of the late well-known Canon Brookfield, formerly chaplain to the Queen. Mr. Beerbohm Tree belongs to a well-known city family. Mr. Arthur Cecil, born Mr. Arthur Blunt, is a nephew of the Rector of Chelsea, and Mr. John Clayton, properly Mr. Calthrop, his colleague in the managership of the Court, is the son of a country gentleman of Lincolnshire, I believe. The Messrs. Hawtrey, of the Globe Theatre, belong to the family of Dr. Hawtrey, the former headmaster of Eton. The gentleman calling himself Mr. Carton is the son of the late Mr. Crickett, and the brother of Mr. Anderson Crickett, the eminent oculist. Mr. Morell, a new comer at the Strand, is the son of the equally eminent Dr. Morell Mackenzie. In Shakspere's time the universities contributed no small proportion of actors and poets to the stage. Ben Jonson's disparagement of Shakspere's small Latin and less Greek, and Robert Greene's ridicule of "Shake-scene," probably represented a feeling not rare among his academic comrades. The stage in England has been throughout its history —as much as the sea or the road—a refuge for adventurers more or less well born or well taught, who were not content to jog along in the deep ruts which the heavy-laden traffic of society makes for itself.

The accidental mention in the last paragraph of Girton and Newnham—homes for girl-graduates, with or without golden hair, prudes for proctors, and dowagers for deans—reminds me that Mrs. Pfeiffer, the well-known poetess, recently your visitor, whose 'Flying Leaves from the East and West' records her impressions of Asia and America, is about to take up arms for the higher education of women. She has a little treatise in preparation directed against the doctors and some "perverts" of her own sex, Mrs. Lynn Linton, for example, who maintains that the temperament and strength of girls are not equal to the strain put upon them by the University system of education. Mrs. Pfeiffer will, I believe, contend that the mental cultivation of women, followed in the manner which is now frankly challenged, directly and largely contributes to physical health and strength; such precautions, of course, being taken as prudence observes in every pursuit. L. L.

TENDENCIES, EVENTS, AND FORCES AT WORK IN IRELAND.

DUBLIN, December 11, 1886.

NOTHING has more tended to strengthen the confidence of the Irish masses in their political leaders than the great extent to which the advice of those leaders—Mr. Parnell and his lieutenants —has been, whether from prescience or good luck, proved wise, at least from a worldly point of view. A steady rise of rent, based chiefly upon the improvements of the tenant, a rise in the standard of living which had affected all classes of the community, a doubling of the rate of wages (which, it is true, did not much affect the cottier classes, who depended upon their own labor)—these, added to a few bad seasons, gave fresh impetus to the agrarian agitation in Ireland. But there were many who had sympathized with the agitation, who yet regarded it as almost cruel to advise the tenants generally against taking the fullest advantage of the new Land Act, and entering into fresh contracts with their landlords under court settlements. A heavy fall all round in prices of agricultural produce has fully justified the warnings put forth five years ago, and few except the most rigid upholders of the theoretical sacredness of contract now deny that as a rule it will be impossible for tenants to pay even the rents fixed by the Land Commission. The Commissioners themselves, by their late decisions, are emphasizing the conclusions of the tenants. Most considerate and wise landlords are voluntarily giving large abatements; and the land question, if it were ever closed, may be said to be fully opened again. Against the Marquis of Clanricarde and others, who are determined to extract their full or only partially reduced rents, and perhaps against some whose rents are not unduly high, "a plan of campaign" has been inaugurated and is assuming portentous dimensions. The tenants come together and agree as to what reduction they are to "demand." If their proposals are not accepted, they pay the proffered rent into the hands of trustees bound to utilize the fund for the benefit of evicted tenants, who are thus enabled to defy the landlord to do his worst.

We are only at the beginning of the campaign, so can hardly tell how the plan will work. It may be stated that the landlord has his remedy in eviction: but no one in the present temper of the country would touch the farms at any rent, and a landlord working boycotted land under police protection on his own account cannot make it pay. Apart from this, as Mr. Stead, who has fully studied the possibilities on the spot, shows, in a late number of the *Pall Mall Gazette*, eviction upon a large scale would be attended with great difficulties:

"On the Clanricarde estate there are two thousand tenants, on the Dillon estate at least as many who have adopted the Plan of Campaign. Are these four thousand families to be evicted 'at once'? Even if no delays could be interposed which would postpone the issue of the decrees till January, there are only 310 days in the Sheriff's year, and, even if there be no active resistance offered, it will take him a full year in each county to evict the tenants on these two estates alone. Evictions can only take place between sunrise and sunset. The days are short in winter, and it will take him all his time even to identify the evicted farms. On the Clanricarde estate there is not a man left who will guide him to the place where the farms lie, and the Government has just forbidden the police to act as guides to the evictors. Even if the tenants are evicted, that will not bring his rent in to the landlord. The fact of the matter is that, however unpleasant it may be for us to recognize the fact, the Irish tenants have only to stick together in demanding reasonable reductions in order to bring their enemies to their knees. That is the fact, and it will not help the matter to go into fits of fury and to cry aloud to the Government to display more 'energy and alacrity' in enforcing the law."

For the present, then, the tenantry are jubilant. *United Ireland* writes "Victory," and several trusted members of the Parliamentary party are busily engaged giving rent receipts for thousands in different parts of the country and handing the money over to trustees, who invest it out of the country. It is openly recommended that these trustees should be men of straw, against whom "garnishee" orders would not avail, and the implicit and I believe justified confidence placed in such men by the people is a refutation of accusations of personal greed and dishonesty which have invariably been made by the opponents of the national cause. The honesty of "the campaign" is another question. It is based upon the acknowledgment that both landlord and tenant have now a property in the holding, and that the landlord party have rejected all attempts at the institution of a tribunal for judging the fairness of present rents. Still, the very persistency of the protestations of some of its advocates betrays a certain doubt which will not, however, in any way interfere with the plan being carried out against the landlords. Several landlords have already been "brought to their knees." It would be more honorable on the part of the tenants, and would tend more to landlords granting reductions without letting matters go to extremity, if in such cases the tenants paid the amounts they originally proposed. This is not always done. The Dawson tenants in the County Westmeath offered to pay on a reduction of 15 per cent. This was refused, and they entered on the campaign. The landlord gave in, and the trustees of the fund have just paid the rents, not on the reduction of 15 per cent., but 20 per cent. on judicial rents, 30 per cent. on non-judicial rents, and 50 per cent. off "in certain special cases."

A bygone statute of Edward III. was, during the Land-League agitation, furbished up and made to do duty against people whom juries would not convict. John Dillon, for his utterances in connection with the "plan of campaign," has been summoned under this act before the Judges of the Queen's Bench, and there being very little doubt that he would be ordered to give bail to be of good behavior, and that an uncompromising man like him would, as Mr. Davitt and Mr. Healy did under like circumstances, refuse to give bail, it was very generally believed he would be imprisoned. But circumstances have occurred which it is supposed may moderate the action of the Government. The omniscience of the National party, even in the arcana of the Castle, has been shown by the manner in which upon several occasions Government documents of the most confidential character have been brought to light. And this is what has happened now. The confidential written opinion of Mr. Holmes, the Attorney-General, "I do not see how any action can be taken by the Executive" regarding the collection of rents by trustees under the "campaign," has, through some extraordinary piece of stupidity or treachery on the part of some Government employee, been given to the public; and this has shaken the confidence of the Government party in proceedings against an advocate of the campaign.

The Government has yet another complication on its hands under the following circumstances: There were, some weeks ago, evictions at Woodford. They were resisted by the people, who, under the very eyes of a force of some 500 constabulary, went to the extent of throwing boiling water and quicklime on the bailiffs, and letting loose hives of bees against them. A number of persons accused in this connection were sent forward to be tried at the Sligo assizes. The National party challenged the fairness of the jury lists under which these men would be tried. An indignation meeting was announced. The Government "proclaimed" it upon the grounds that it was an attempt to terrorize the jurors by whom the prisoners would be tried. The meeting at Sligo was suppressed by force, not without some broken heads; and the police and military were led chasing all around the neighborhood after bogus or real gatherings of a like character. The assizes came on a few days ago, the jury panel was formally challenged and tried, and Chief Baron Palles, a judge of great independence, declared that although the sub-sheriff "was not guilty of fraud, partiality, or wilful misconduct," still, "if the law allowed him any discretion, he himself would quash the panel, owing to the irregularities which had been proved." The Government have acted on the spirit of what the Chief Baron said. The assizes have been adjourned, and a new panel is to be arraigned. And so in many respects within the past few weeks the Government and the Executive have been placed in a false

position. This is no doubt gratifying to the League party, but that it must or should be so is no cause for congratulation to the country. Respect for the law, the police, and the foundations upon which society rests is being more and more broken down, and more and more arduous will be the task of reconstruction upon whomsoever it may fall.

Regarding the agitation as a whole, two tendencies are observable. It is now pretty generally acknowledged that some real settlement of the land and home-rule questions is absolutely necessary. A small but influential Protestant Home-Rule Association has been formed, but at the same time those actively and openly engaged in guiding the National League appear fewer than ever, and are certainly less in touch with the general life of the community apart from politics than ever before since the suspects were in prison under Mr. Forster's rule. There is little of the hot enthusiasm that there used to be. The affairs of life have caused many to subside or to betake themselves exclusively to their own concerns. The management of the cause falls increasingly into the hands of a few persons who may be said to depend on and make a profession of it. I do not hint at there being anything necessarily wrong in this. I believe these men are acting from the best of motives according to convictions, and that no movement of like dimensions and importance was ever worked more economically and honorably. But there is great danger in all this—in such a movement not being guided considerably by men who are also under the influence and in full contact with the commercial and outside world. This weakness is attributable mainly to the perhaps necessary, but certainly embarrassing and often questionable, support which the League gives at times (it may be only tacitly) to the unfair treatment of some landlords; to the want of distinction between reasonable protest or assertion and injurious agitation, and to the unscrupulousness (certainly not confined to Nationalists) of supporting and endorsing everything done by those who are on the same political platform. So that while there are numbers willing to subscribe and to attend meetings upon particular occasions, those who throw themselves heart and soul into the guidance of the movement are comparatively few. The Executive has never been elected, no accounts are published, there are no reports or annual meetings. Most of the machinery is wanting which we are accustomed to associate with great constitutional agitations. The deserved confidence which the Irish people place in the cause and its workers is an additional instance of the terms upon which a democracy is willing to be led, if only its confidence be won. What leader ever occupied a stronger position than Mr. Parnell at the present moment? No one knows where he is, he never shows his hand, he holds none of the court or position before the public which such leaders have hitherto held in Ireland. Yet the movement goes on as if he managed each detail; his lieutenants are ready to wear themselves out in his service; his influence is over everything; and his power, wherever he cares to exercise it, is greater than ever.

Since the rising of Parliament the most important factor in the discussion of the main question of home rule has been the appearance of Mr. Dicey's 'England's Case against Home Rule.' It is a book which compels attention. Mr. Dicey's convictions and that of the school which he represents against the wisdom of England's conceding home rule in any form, are well known. They are here combined, summarized, and stated with candor and force, and upon the highest grounds. No one can read the book without benefit, and those responsibly concerned in the formation of public opinion in Ireland are bound to study it. The responsibilities of public life are too great to permit of our blinking difficulties or seeking mental peace by refusing to listen to a thinker like Mr. Dicey. The difference of our point of view throughout is, however, indicated at page 137, where he says: "What is really needed to meet the real wants of which the cry for home rule is a more or less factitious expression is, he [an observer] would note, much more a change in the spirit of Englishmen than an alteration in the constitution of England"; and again, where (page 281) he quotes Bishop Butler: "Things and actions are what they are, and the consequences of them will be what they will be. Why, then, should we desire to be deceived?" And again (on page 289), his application of Burke's language: "If a great change is to be made in human affairs, the minds of men will be fitted to it; the general opinions and feelings will draw that way. Every fear, every hope, will forward it; and then they who persist in opposing this mighty current in human affairs will appear rather to resist the decrees of Providence itself than the mere designs of men. They will not be resolute and firm, but perverse and obstinate." It appears to those who regard home rule in some form as essential, that it would be easier to change the constitution of England than the spirit of Englishmen; that the decrees of Providence do favor the reform; and that general opinions and feelings at present draw that way. Nor is there anything final in home rule. The present arrangements have been proved long enough. They cannot be said to work well. Matters as regarding class feeling in Ireland, and as between the countries, could not be much worse. If the change were tried, and if Irishmen worked home-rule institutions factiously and wickedly, to the manifest detriment of themselves, their neighbors, and the empire, Government would then have a moral sanction for reverting to the present or to a completely autocratic policy. D. B.

Correspondence.

THE STEEL MONOPOLY AND THE FARMER.

To the Editor of The Nation:

Sir: I wish to call your attention to an editorial in the New York *Tribune* of December 11, entitled "A Test Question." For outrageous logic, false premises, and distorted facts, I think it can hardly be excelled. The writer aims to show the great benefits the country has enjoyed by paying a tax of $17.92 on steel rails. Let us examine his facts, or rather assumptions. He says: "They [the farmers] have been enabled to pocket in payment for farm products sold a large part of the $40,000,000 expended for American steel rails." What warrant has he for such a statement? The principal item of cost in the manufacture of steel rails is the raw materials—Bessemer pig-iron, and spiegel or ferro-manganese—a large proportion of which is imported. Again, of the Bessemer pig-iron made in this country a large proportion is made of imported ores. A few years ago for a considerable period steel rails were sold at $26 per ton. It is not likely that the mills sold at a loss; and, assuming that figure as cost, we can safely put the average cost for 1886 at $28, the average advance in Bessemer pig for the year being about $1 per ton iron, and in wages less than $1 per ton rails made. This makes the total money paid out by the mills for the 1,350,000 tons domestic rails made and sold less than $38,000,000. I do not know that statistics show what proportion of imported pig-iron is Bessemer, spiegel, and ferro-manganese, and what proportion of the imported ore is used to make Bessemer iron, but I am sure that if the facts could be ascertained, it would be found that not far from one-half the $38,000,000 would have to be deducted to find the amount which the American farmer is supposed to get. (I have ignored the amount of farm products which the handful of stockholders of the baker's dozen of steel-rail mills consumed, as being an insignificant item. I do not suppose any protectionist will claim that such consumption bears any relation to the profits the mills make.)

From this balance the farmer is supposed to get must be deducted royalties and profits on the domestic ore, fuel, and limestone used to make the domestic pig-iron, and the profit on the latter, so that his balance must be still further reduced. The tariff on 1,350,000 tons of rails is a little more than $24,000,000. We see, therefore, that the amount the farmer (and all others who supply the wants of the workingman) is benefited amounts to considerably less than the country is taxed for this purpose.

I quote again: "What would have been the state of trade in New York, New Jersey, Pennsylvania, Ohio, Virginia, West Virginia, and Alabama if there had been no chance to sell this important product of home industry, except in local competition with foreign rails, etc.?" I reply that with a *moderate* tariff it would have been not different from what it has been, as far as the employees of blast furnaces, ore mines, and even the steel mills, are concerned. Nor would business in general have been any less prosperous. But this is not the point I am after. I want to show the complete insincerity and unfairness of this writer, because I consider this case a typical one, illustrating well the humbuggery and hypocrisy of protectionism. He would have us believe that the iron-ore and pig-iron industries of the States mentioned were entirely dependent on the Bessemer steel-rail mills. But how different the facts! But little of the iron ore mined in New York State is Bessemer, and but very few of its furnaces are making Bessemer iron of domestic ores. I know of no Bessemer ores in New Jersey. Pennsylvania has practically none, the Bessemer iron made being chiefly from imported and Lake Superior ores. The last three States named have no Bessemer ores, and, I believe, make no Bessemer iron. There has been a recent attempt to make Bessemer iron in the South from a North Carolina ore, and a rail mill has been talked of; but, with this exception, no Bessemer iron is or has been made in the South, and that section of the country, with all its wealth of iron ores, is destitute of the Bessemer variety.

It is a notorious fact, published by the protectionist organs, that the Bessemer syndicate have pushed up the price of steel rails to a point just under the figure that would bring in the foreign article. With a reduction of $6 per ton on the tariff, the mills could have made rails at a profit, while the cost to the consumers would have been that much less. Just as many steel rails would have been made as were made; the workingmen would have had as much employment as they have had, and at as good wages as they have received; the farmers would have sold as much produce as they did, and at the same prices as they did receive; while the people of the United States would have saved over $8,000,000 in this one year.

Now, to show further the insincerity of the Bessemer people and their allies, let me state a matter well known to the trade, but of which the general public may not be aware. For iron to make Bessemer steel by the original (acid) process, ores free from phosporus are required. A small proportion only of the iron ores of the United States fulfil this requirement, and, with the one exception above mentioned, no Bessemer ores have yet

been found in the South. There is, however, an English process, the patent on which in this country is owned by the steel-rail syndicate, whereby the ordinary phosphoretic ores can be used. But the steel-rail monopolists neither use the patent themselves nor allow others to use it; so that, granting the tariff on steel rails is a benefit to those outside the business, the South is debarred from such benefits by the action of a powerful and selfish body of protectionists.

The *Tribune* writer instances the prosperity of Birmingham, Ala., and would have us believe that the rapid development of its industry and the consequent general boom in business there are due to the high tariff on steel rails; but as not a pound of Bessemer iron, spiegel, or ferro-manganese is made there, and not a pound of Bessemer ore mined there, and as not an article or tool used in the manufacture of Bessemer-steel rails is made or sold there, I cannot see how a few mills located a thousand miles or so away can be of the most remote benefit to the farmers in the vicinity of Birmingham, or in any part of the State of Alabama. COMO.

PHILLIPSBURG, N. J., December 17, 1886.

PARTISAN RENEWAL OF THE CIVIL SERVICE.

TO THE EDITOR OF THE NATION:

SIR: A few days since I had occasion to summarize the statistics recently published in the Boston *Civil Service Record* to which you refer in your number of October 14 as "full of encouragement to the friends of civil-service reform." I give the results below. The figures show the total number of new appointments to office made under the present Administration from March 4, 1885, up to the dates affixed, chiefly made to fill vacancies caused by removals, resignations and expired terms.

Changes in the *Department of Justice* (Presidential Offices) to about July 1, 1886, 119 out of 180, or 66 per cent., (Departmental Offices) 46 out of 137, or 33 per cent.; *War Department*, to June 15, 1886, 54 out of 818, or 7 per cent.; *Department of Interior* (Presidential Offices) to October 1, 268 out of 377, or 71 per cent., (Departmental Offices) to June 30, 450 out of 1,080, or 42 per cent.; *Bureau of Printing and Engraving*, to October 1, 18 out of 817, or 2 per cent.; *Post-office*, estimated by the *Record* to June 30, 1885, at 4,244, statistics to June 30, 1886, 22,747, total 26,991, out of 53,614, or 50 per cent.

No date is given as to the report of the State Department, so those statistics cannot be used. (The *Nation*, however, in October, stated the total change to be 44 per cent. in "more than a year.") The Treasury Department proper is not reported, nor the Navy Department, nor about 8,000 offices in the War Department.

The total number of changes in the offices reported, calculated to the average date of July 1, 1886, amounts to 27,900 out of 57,023, or about 49 per cent. of the offices changed in one year and four months.

Is it not time to cry halt? Admitting that a large number of these changes were justified on account of the rotten condition into which many of the departments had fallen; admitting also that as a matter of fair play and expediency it is justifiable to appoint Democrats to office until the number of Republicans and Democrats are evenly divided—granting all this, still is it not evident that this changing process must stop and stop at once?

Forty-nine per cent. of Democrats substituted for Republicans in one year and a third. Continue this rate to the end of Cleveland's Administration, or let that Administration, without making any more removals, only continue to appoint Democrats to every office becoming vacant under the four years' limitation act, and at the end of his term the civil service will be as completely Democratic as at the beginning it was Republican. A complete change, even though slowly made, is scarcely more defensible than a sudden one; at the end civil-service reform will have made no advance. Supposing that a Republican is elected as the next President, no argument has been gained against another clean sweep in return.

As one of your readers in thorough sympathy with the civil-service reform movement, and heretofore a hearty admirer of the stand which President Cleveland has seemed to take in favor of that reform, and to carry out single-handed in spite of the apathy of the great mass of the people and the bitter opposition of the herd of Democratic spoilsmen, I should earnestly desire to read your comments upon these disheartening statistics, and to know if there are any reasons by which their apparent force is weakened.—Respectfully, EDWARD T. SANFORD.

CAMBRIDGE, MASS., December 20, 1886.

IN SEASON AND OUT OF SEASON.

TO THE EDITOR OF THE NATION:

SIR: A friend observed the other day that he was equally surprised and amused by the way in which I turn everything to the support of my hobby. In truth, the difficulty is not to find illustrations for the purpose, but to choose among the flood which pours onward like the rush of the tide. This time it is the London *Times*, which comes into the field almost as if it had set itself to maintain the exact proposition. The argument will soon be in a stage to excite suspicion of "British gold."

In an editorial of December 7 upon President Cleveland's message, the *Times*, after speaking of the tariff, says:

"The maintenance of the Bland Act is another illustration of the enormous strength of individual trade interests in Congress. It is absurd, of course, to build vaults for the purpose of storing silver which cannot be used as currency, but this is only one of the absurdities of a measure for which there never was anything to be said. The act is a mine-owners' job, and it will last, we suppose, until the influence of the general community is stronger in Congress than that of the mine-owners. If argument and reason were of any avail, it would never have passed, and therefore it is not very likely that argument and reason will effect its repeal."

Now the lesson which I have persistently striven to teach through your paper is, that Congress is so organized as to give all power to local and private interests. The committees which control everything are made up of local members and do their work in secret. The Speaker, who makes up the committees, is a local member. Neither in the committees nor in the House is the national interest represented at all. Nor would the case be any better if a certain number of members were chosen by the nation at large on the "scrutin de liste" principle. They would be merely a minority of units exactly equal to the others, and powerless against a majority which would always combine to defeat them. The only persons who can represent the national interest with adequate authority, who can bring the national and private interests to a public trial of strength on an open field, are the chief agents and advisers of the President who form his Cabinet. And this brings us to another point.

Your Swiss correspondent has pointed out the advantage which results from the election of the Swiss Executive Council for three years, so that its members do not resign upon an adverse vote of the Assembly. Right upon the heels of his letter follows an illustration from Great Britain of the disadvantage of the opposite method. The resignation of Lord Randolph Churchill has shaken the Ministry to its foundation. The question at the meeting of Parliament will be not what business is to be done, but how any ministry, under conditions of unstable equilibrium, can be placed and kept on its feet. As Parliament makes and unmakes ministries, that, and not the doing of business, becomes the object of every effort. This difficulty, which has steadily grown in magnitude with the extension of the suffrage, is perhaps the most threatening danger in British politics. Our Cabinet, under the fixed term of the President, approaches more nearly to the Swiss system. But we have another and a still greater advantage. Parliament practically appoints the Ministry because, the Queen being permanent, there is nobody else to do it. The people can have no direct voice in the matter, unless, which is not very likely to happen, the Prime Minister should be chosen by a national vote. In France, the President is chosen by the Chambers, and even if he appointed the Ministry, which, in accordance with the English system, he does not, the nation could have no direct voice in the matter. The Swiss Executive Council is chosen by the Assembly, and there again the Swiss people have no direct voice in the choice of their rulers. We, on the other hand, have a President, responsible for the acts of his Cabinet, chosen every four years directly, or practically so, by the people. It is just the Swiss "referendum"; only, instead of particular measures, the whole administration, embodied in one man, is referred to the people for judgment. If instead of a mere instrument in the hands of Congress, the executive was really an independent branch, and if the whole course of the Government was constantly discussed between the Cabinet and Congress, the interest of the country would be aroused to an intense degree, and we should get the voice of a nation in a way never yet seen in the world.

We have an opportunity, at no cost or risk, to try the most magnificent political experiment in history. The one difficulty, and it is a great one, is, how to get Congress to pass a measure to which, by its very nature, it is inexorably opposed. It cannot be done by introducing resolutions into Congress to be defeated by the too familiar tricks. It can be done when some public man, President, Cabinet officer, Senator, or Representative, leaving Congress to its own devices, shall take the question resolutely to the country on the stump. If Mr. Blaine were statesman enough, instead of stumbling to his fall over the tariff and civil-service reform, to see the weapon which lies at his hand, he might yet retrieve himself. Luckily for us he is not, but I have a strong faith that the man will some day come who will see it; and if he does, and has adequate personal qualities, he can make himself President of the United States, in spite of either the Republican or the Democratic machine. G. B.

BOSTON, December 24, 1886.

RELIGIOUS NEWSPAPERS: A DISCRIMINATION.

TO THE EDITOR OF THE NATION:

SIR: While I think what the "Baptist Parson" says about *some* religious newspapers is true, I do not think his remarks should be taken as a standard to measure all religious papers. An undenominational journal is known to the *Nation* (for it is often referred to by it) which is, I believe, "a fearless, unvarying, and uncompromising champion of the righteousness of God" (using the words of our brother in speaking of the *Nation*). I believe that there are many religious newspapers which are doing good; and I venture to assert that the country would be worse off if some of them were not in existence. We all

readers of the *Nation*, have a "passion to be just," I hope. Let us then be just, and not judge the many by the few. G. H. B.

DECEMBER 20, 1886.

THE TEST OF MINISTERIAL SUCCESS.

TO THE EDITOR OF THE NATION:

SIR: I am glad to see the *Nation* open its columns to expose a very great abuse. Those who desire to reform from within can get no standing place. Some of our "first-class" denominational papers will print all I may care to send them of myself and the great work I am doing, but if I send a quarter of a column of plain truth-telling, they will throw it aside because it may seem "harsh," or to "reflect upon" some one of influence.

Hence the words of "Baptist Parson" are most timely. So also is your editorial on "Religious Statistics." I think your statement that the lists of membership and of church benevolences are notoriously inflated will hardly be justified upon more careful examination, but what you say of "the chief test of ministerial success" strikes at the root of a corruption as notorious as it is threatening to the well-being of the Church. If you shall prosecute this matter still further, though you will have against you the "religious" newspapers, you will enlist the sympathy of those within the Church who love truth and righteousness, and who believe that they should always be exalted, even at the expense of the most dazzling "success." BAPTIST BISHOP.

CHURCH ATTENDANCE AND CLERICAL DETERIORATION.

TO THE EDITOR OF THE NATION:

SIR: Your words about "Religious Statistics" touch the truth and the hearts of many ministers. It is, indeed, true that "managerial qualities are now more in demand than those which used to be considered the highest in a clergyman." I hoped you would go on and show how strong this makes the temptation to ministers to develop the manners of politicians rather than the character of high-minded students of spiritual truth. That they stand the pressure so well is to their credit, I submit.

But I trust the cause of all this may be found, not in the low ideals of church-attending people, but in the general low ebb of church attendance. This has brought about a struggle for existence among the churches which obliges them to think more of mere survival than formerly, and puts the question of existence before that of genuine life. I should be glad to have your views upon these points—the secularization of the clergy, and the change which the gasping for breath is making in the character of our churches. I have always looked eagerly for what you have to say about the religious situation, finding it always sensible and suggestive, often corrective.

Yours sincerely, W. H. L.

ROXBURY, MASS., December 21, 1886.

POLITENESS AND URBANITY.

TO THE EDITOR OF THE NATION:

SIR: Mr. Lowell makes humble apologies for having, in an unguarded moment, hinted that "politeness" was derived from πόλις. You will find the same thing, however, not hinted merely, but stated in the most express terms, in a note contributed by W. T. Harris, M.A., LL.D., to Rosenkranz's 'Philosophy of Education,' lately published by Appleton & Co. "Notice," says the learned doctor, on page 148 of the work in question, "that *urbanity* is from *urbs*, the Latin for *city*, while *politeness* is from *polis*, the Greek for *city*." This can hardly be considered a case of "heterophasia." It looks more like ignorance than anything else I can think of at the present moment.—Yours very truly,

CANADIAN READER.

OTTAWA, December 22, 1886.

Notes.

W. S. GOTTSBERGER has in press 'The Invalid's Own Book,' recipes collected by the Hon. Lady Cust; a new and revised edition of the poems of Rose Terry Cooke; 'Tales of Hellas,' translated by Mary J. Safford from the Danish of P. Mariager; and a great variety of English versions of foreign novels — Tolstoi's 'Cossacks,' in Eugene Schuyler's translation; Ebers's 'Bride of the Nile,' done by Clara Bell; Galdós's 'Leon Roch,' by the same hand; 'La Baigneuse de Brousse,' 'The Story of Jewad,' etc.

'Village Photographs,' a series of papers of New England life, character, and scenery, which have been running through the *Evening Post* for several months, are to be published in book form by Henry Holt & Co.

Antonio Rosmini Serbati's 'Methods in Education,' translated into English by Mrs. William Grey, is promised at an early date by D. C. Heath & Co., Boston.

"Cosette," "Marius," "Saint Denis," "Jean Valjean" complete the five handsome volumes of 'Les Misérables' issued by Geo. Routledge & Sons. The typography, as we remarked in the case of "Fantine," much surpasses in quality the illustrations, which are very uneven, and sometimes naïve, as design or as engraving. They relieve the text rather than adorn or illuminate it, and seem more fitting for Eugene Sue than for Victor Hugo. For the rest, seldom has a plea for the outcast been clothed in finer linen.

'The Lorgnette' (George J. Coombes) is a series of cartoons in the well-known manner of *Life*, designed by Mr. Van Schaick, and pointed with very good legends by Mr. J. K. Bangs. These social satires all have sufficient cleverness for the paper named or any paper of its class. Bound together in no greater number, they hardly make a book of consequence.

A little late for the height of the gift season comes Hallam Tennyson's 'Jack and the Bean-Stalk' (Macmillan), told in hexameters, and illustrated by Randolph Caldecott—his last work before his untimely end. These designs do not, as a whole, do him justice, being obviously only preliminary studies, in which the giant, for example, is conceived in a variety of ways, without settling upon a type. "Fancy departs, no more invent," is not the proper explanation of defects which would, had Caldecott lived, have been concealed in his portfolio. To give these sketches to the light gratifies the collector, and they will amuse the children, to whom Caldecott was a true friend. We have not tried Mr. Tennyson's hexameters on young readers or listeners, but we do not doubt their acceptability.

The ever-youthful *Almanach de Gotha* (B. Westermann & Co.) arrives with its customary punctuality for the new year. Its editors have to tell of extensive overhauling to keep pace with the march of events—the death of sovereigns like the kings of Bavaria and of Spain, the abdication of Alexander of Battenberg, the colonial ambitions and anexations and protectorates (Madagascar being now definitely assigned to French, and Bosnia and Herzegovina to Austrian, protection), the latest censuses, etc., etc. Some little—or perhaps we should say no little—feeling was caused by the invidious separation, in the genealogical portion, of reigning families from those which have no chance of reigning, but still are able to contract marriage with the more fortunate branches. This has now been rectified, and the old confusion or commingling restored. The regulation portraits are of Prince Henry of Battenberg and the Princess Louise; of Luitpold, Regent of Bavaria; and of Richard, Prince de Metternich-Winnebourg.

D. Appleton & Co. are the American publishers of the entertaining Christmas Annual, 'The Witching Time,' edited by Mr. Henry Norman.

The new catalogue of Harvard University has made its appearance (New York: F. W. Christern). The number of students has increased, though not notably. The most significant novelty is the list of preachers to the University, whose functions, however, are nowhere set forth. Under the heading "Religious Services," it is quietly stated that "Daily prayers are held in the chapel during term-time." Nobody needs to be told that compulsion has given way to freedom.

Rand, McNally & Co., Chicago, send us indexed pocket maps of New York and New Jersey, in the general style of those in their well-known 'Business Atlas,' but on a larger scale. So far as we can test them, they are sufficiently accurate, and are certainly very minute. We notice that the change of the U. S. Express from the Erie system to the D., L. and W. R. R. has been overlooked, thus vitiating the express indications for a considerable portion of both the States in question.

No. 5 in the papers of the New York Shakspeare Society contains studies of "Time in the Play of Hamlet," by Edward P. Vining, and of "The Once-Used Words in Shakspere," by Prof. J. D. Butler. The latter alone calls for notice. Prof. Butler has made only an incomplete examination of his subject, which is a large one if measured by the work involved in it, and draws his inferences mainly from the letter 'M.' If his calculations are correct, some five thousand words—a number nearly equal to the entire vocabulary of Dante's 'Divina Commedia'—were used only once by Shakspere, *i. e.*, about twenty per cent. of his vocabulary. This is an astonishing number, but the method of reckoning needs to be more clearly exhibited; the compound words and single meanings of the same word form a large proportion of the list. The further investigation of the matter would be a curious verbal study, and some time it will be made.

The *Portfolio* for 1887 (Macmillan) promises a series of papers by the editor, Mr. Hamerton, on "Book Illustration: its Influence on Literature and Art"; a paper by Mr. W. M. Conway on "Collecting Photographs"; an account of the works of Mr. G. F. Watts, by Mr. F. G. Stephens, who will also contribute two papers on Mulready; papers on the "Elizabethan Mansions of Charlecote and Montacute," by Mr. Sydney L. Lea; another on "Half-Timber Houses in the Weald of Kent," by Mr. Reginald Blomfield; a series on Scottish painters, by Mr. Walter Armstrong; articles on Correggio by Miss Cartwright, etc., etc. Most of these will be illustrated, and the pictorial side of the magazine will be well looked after. An etching after Watts's "Midday Rest," by Rhead, and one by Rajon after Murillo's "Spanish Flower-Girl" in the Dulwich Gallery, with possibly one by Brunet-Debaines after Turner's "Vessel off Yarmouth making Signals of Distress," are conspicuous in this class of engraving, which will be abundantly employed as usual. The *Portfolio* remains the best periodical of its kind in the English language.

Benj. R. Tucker, Box 3366, Boston, Mass., sends us the prospectus of a monthly journal to be issued by him on January 1, 1887, and called the *Proudhon Library*. The object is nothing less than the publication, for the first time, of an English translation of the complete works of P. J. Proudhon, including his correspondence, in parts of sixty-four pages each. 'What is Property?' will not appear in the *Library*, for the reason that Mr. Tucker has already translated

and published it in a style to which the *Library* will conform. There will be not far from fifty volumes of 500 pages each.

The January *Harper's* has an unusually large proportion of fiction, in which is included the opening instalment of a novel by Kathleen O'Meara, which cultivates the Russian field. A description of the French Navy, and a paper by Frank Millet upon the Cossacks which pleasantly mingles adventure, travel, and manners and customs, are noticeable; but the prime article of the number is a beautifully illustrated account of New Orleans, in which the text, by Charles Dudley Warner, is as charming as the designs. The many-sided picturesqueness of the old city, glimpses of the remnants of the old French régime, and some portraits from the life, together with such sensible remarks about the city and its surroundings as would occur to a Northerner with an eye to improvement, make up a varied paper such as only "an old hand" can write.

Lippincott's begins its promised series of articles on social life in our leading colleges with Mr. Barrett Wendell's account of Harvard. The writer speaks from an experience extending over the last fourteen years, as student and instructor; and since the beginning of this period coincides with the destruction of class lines in the college as the ground of association among the undergraduates, he really describes the effect of the new education upon college society. He exhibits much impartiality, and makes it out that the state of affairs is very good, which, we believe, is the opinion unanimously held among the officers. He confines himself, however, to an analysis of the organization of the social life of the students, in clubs, societies, etc., without attempting to give the public any but the most general notion of what the life in these actually is; and he pleads strenuously for a grand University Club, including everybody, where officers and students can meet habitually and informally. This idea has been a favorite one in speculation for some years, and will realize itself in time with beneficial effects.

We learn from the London *Educational Times* that the Chantangna (*sic*) Literary and Scientific Circle has a membership of over 100,000 pupils, that it has already established a branch in Scotland and is about to do so in London, that the Reading Union for teachers has been joined by every teacher in some of the American towns, and that the highest educational authorities in the country have thrown themselves into the movement.

The *Revue Historique* contains in two numbers (September-October and November-December) an article by M. Charles Bémont, whose 'Simon de Montfort' we reviewed recently (see *Nation*, No. 1101), upon a subject of general interest to English students, "De la condemnation de Jean Sans-terre par la cour des pairs de France en 1202." In this article two or three prevalent errors of opinion are exploded. In the first place, it is shown that the Court of the Twelve Peers, which is generally held to have been organized for the trial of King John, is of much later institution: John was tried by the regular feudal court of his liege lord, and there is no record by which it can be ascertained what peers sat in the court which condemned him. The principal part of the article is devoted to showing that the double condemnation usually asserted—first to forfeiture of his fiefs on the complaint of his vassals of Poitou, and secondly to death, after the murder of Arthur—is a mistake. The second trial and condemnation is not mentioned by any contemporary authority, and the story of it appears to have been trumped up in 1216 by Philip Augustus and his son Louis, influenced by "political interest, personal ambition, and the fear of the pontifical thunderbolts," in order to justify the invasion of England by Louis, and his claim to the English throne.

The triple holiday number of the *Revue Illustrée* (International News Co.) is gay and entertaining, opening with a dramatic phantasy behind the scenes by Ludovic Halévy. This is followed by an amusing child's story by Abraham Dreyfus, "La Vente de Suzanne," with very clever illustrations. A blood-curdling short story, "La Chambre Close," succeeds, in most artistic contrast. "Ce qui se dit à un dîner de chasse" has an opposite effect upon the spirits, as does the "Modes Originales." Alfred de Musset's "Horace et Lydie," set to music by J. Massenet, and an account of the chocolate industry, complete the main contents of the number, though the illustrated review of gift-books adds much to the general attractiveness.

Four recent French works will bear mention for the promise of their titles: 'Histoire de la Participation de la France à l'établissement des États-Unis d'Amérique,' by Henri Doniol, based on diplomatic correspondence and other documents—two vols., 4to, illustrated; 'L'Expansion Coloniale de la France,' by J. L. de Lanessan; 'Les Maîtres italiens au service de la Maison d'Autriche'—viz., Leone Leoni, sculptor to Charles V., and Pompeo Leoni, sculptor to Philip II.—by Eugène Plon; and 'John Wyclyff: sa vie, ses œuvres, sa doctrine,' by Prof. Victor Vattier (New York: Christern).

The editor of the *Astronomical Register* has announced his intention of closing its publication at the end of the present year, thus completing a series of twenty-four volumes.

—Those who recall the great public interest awakened by the visit to this country of Profs. Huxley and Tyndall, can but feel surprise that their fellow-scientist, Dr. Alfred Russel Wallace, is receiving less attention—that his presence in this country is, indeed, hardly known away from Boston, where he has lately delivered a very acceptable course of "Lowell lectures." The author of so many popular works of travel, possessing a high degree of interest and authority; the co-discoverer with Darwin of the doctrine of natural selection, should not, in consequence of a modesty which he equally shares with Darwin, fail of a hearty welcome wherever he goes. He is now, we believe, in Washington, and will shortly be making his Western tour, and the bare enumeration of the topics of his lectures will show how rich an entertainment is in store for his hearers. They are—The Darwinian Theory: What it is, and how it is demonstrated; The Origin and Use of the Colors of Animals; Mimicry, and other exceptional Modes of Coloration; Origin and Uses of the Colors of Plants; The Permanence of Oceans, and the Relations of Islands and Continents; Oceanic Islands and their Living Organisms; Biological History of Continental Islands, Recent and Ancient; Biological and Physical Relations of New Zealand and Australia. Dr. Wallace has also (for he is an independent thinker in many ways) a shorter series of lectures, on Social Economy vs. Political Economy; General Causes of the Depression of Trade and of Poverty among Civilized Communities; Private Property in Land inconsistent with the Permanent Well-being of Nations. We may add that Dr. Wallace's delivery is well spoken of, as being above that of the average of cultivated Englishmen who have lectured in this country. His engagements are directed by the Williams Lecture Bureau, Boston.

—Mr. W. J. Stillman has an interesting article in the current number of *Babyhood*, on the proper course to pursue in order to give children a right artistic direction while they are still in the nursery. In default of schools where they might play with water-colors, and have their infantile conceptions comprehended and guided by good teachers, much may be done by the parents. These may not be able to give much technical assistance, but they can put the child in the way of picking up something by himself. They can give him plenty of clean paper and a box of good water-colors—not more than half-a-dozen colors; show him how to dissolve the color and how to wash simple tints, and to make greens and grays and browns by mixture. He should work with color rather than with the pencil at first—coloring woodcuts, for instance—until the desire for new forms arises, when he will take to the pencil if needed, but always as subsidiary if there be any real feeling for color. From the first he is not to draw from nature, but from his idea of nature, if he is to be something more than a realist when he grows up. Let him draw a horse freely, and as he conceives it; then show him by comparison with a real horse wherein he fails, and the next time he will draw it more like. The essential thing is that he should keep alive a keen enjoyment in his work, and not stifle his inborn artistic sense by mechanical copying. He may not become an artist, but it will do him no harm if art has been allowed to get a start over other forms of training and education. It is a pity that the sense and perception of all ideal things should be for ever destroyed in the nursery, and the "idle" propensities of the might-be poet or painter coerced into arithmetic, grammar, and geography. Education in these must be later, for a large mind only can entertain large ideals, but it must contain as little science as possible. The spirit of science is most antagonistic to that of art, especially physical science, anatomy, geology; they tend to make an artist see things as they are known to be and are constructed, not as they seem to be to the sense of beauty and the uses of art.

—In 1876 the National Library of Brazil was reorganized in all its departments and a new life infused into it. In 1880 it undertook a very successful commemorative Camoens exhibition, for which a special catalogue was made; and the next year a Brazilian historical exhibition, the catalogue for which filled two great quarto volumes. It has now formed an "Exposição permanente dos cimelios da Bibliotheca Nacional," and we are indebted to the Librarian, Dr. João de Saldanha da Gama, for the sumptuous 'Catalogo' and its modest tender and abridgment, the 'Guia,' published for the information of visitors. The exhibition is small for want of room, the section of printed books and maps numbering but 248 titles. The next section is of manuscripts, and the others of engravings and coins. Each is preceded by an historical introduction, and the bibliographical description of every article in the exhibition is almost lavishly minute and full. The nucleus of the Bibliotheca Nacional was the Royal Library of Lisbon brought over by John VI. from its quarters in the Ajuda Palace in 1807-8, when he abandoned the Old World for the New. The collection had been formed by Joseph I. to replace that destroyed by the earthquake of 1755. In 1814 it numbered 60,000 volumes, and now apparently contains 140,000. It was augmented for many years by the *propinas* sent by the Lisbon publishers in the spirit of our law on the deposit of copyright works with the Congressional Library, and it has received many noble donations from private citizens. Four products of the press of the United States are exhibited: Bailey's 'Festus,' illustrated by Hammatt Billings (Boston, 1860, 4to); Schoolcraft (Philadelphia, 1851-1860, 6 vols., 4to); 'Picturesque America' (New York, 1872, 2 vols., 4to); and 'The State of New York' under Gov. Cornell (Boston, 1882, 3 vols., 4to). Indexes, a bibliography of the works cited under Engravings, a table of marks

and monograms, and a few facsimiles of woodcuts complete the equipment of the Catalogue. The little 'Guide' makes selections from the larger list. In closing, we remark that the first efforts at cataloguing the Library proper date back to 1824; and that the penultimate librarian was Dr. Benjamin Franklin Ramiz Galvão—a name predestined to be associated with popular enlightenment.

—In the *Nation* of September 17, 1885, we briefly noticed the first ten sheets of a work by Dr. Moritz Trautmann, professor in the University of Bonn, 'On the Sounds of Speech in General and on the Sounds of the English, French, and German in Particular.' The remainder of the volume is now before us, and we can pronounce the general estimate of its value which we then promised. The characteristic principle of Dr. Trautmann's system, which, as he himself says, runs through the whole work, is, that the sounds of speech must be defined by their "Klang," or, in other words, by the musical notes of which they are composed, and not by the position assumed by the organs of speech in producing them. He admits that the position of the organs is a matter of importance, and a knowledge of it is necessary to a complete conception of any given sound; but its importance is altogether subordinate to a knowledge of the tones of which the given sound is composed. Of the various arguments which he advances in support of his theory, we can only notice one, but that is the one on which he lays most stress. He maintains that to define a given sound of speech by describing the position of the organs necessary to its production is difficult, uncertain, and unsatisfactory; but the pitch of its characteristic note can be determined with absolute precision, and we thus arrive at a certain and satisfactory result. This raises a question of fact. Can the pitch of its characteristic note, even supposing that any such exists, be easily and precisely determined? Of all men living or dead probably Prof. Helmholtz has had the most experience in investigations of this kind. He has spent a great deal of time in the investigation of this particular subject. He has been so fortunately situated that he was able to employ every mechanical contrivance known to modern science. Whatever he wanted to aid him he was able on short notice to procure. Any one reading the fourth edition of his 'Tonempfindungen' cannot help being astonished at the extent and variety of the apparatus which he had ready at hand. Tuning-forks, resonators, electrical machines, musical instruments of all kinds—in fact, everything that he could imagine as useful in furthering his researches, he could lay his hand on; and yet he not only arrives at a general theory entirely different from Dr. Trautmann's, but, in the case of some sounds, he acknowledges that the difficulties of ascertaining the characteristic tone are so great that he has not as yet entirely overcome them. Now all this proves, not that Dr. Trautmann's theory is false and Helmholtz's true, but that the difficulties of the investigation are greater than one would infer from Dr. Trautmann's book, and that the argument in favor of his theory which he bases upon its superior facility and certainty is of very little force.

—The fact is, that the true key to the explanation of the sounds of speech has not yet been discovered, or, if discovered, has not yet been made known to the world. Such men as Merkel, Brücke, Trautmann, Ellis, Sweet, and a hundred others have brought to the investigation of the sounds of speech an amount of ability, experience, and care equal to that applied to any other branch of physical or physiological science, and with the most discordant results on the most important points. The universal alphabet about which men have dreamed so long is still a thing of the future. In the meanwhile we regard Dr. Trautmann's system as a step in advance, and, though formed under much less favorable circumstances, we think its fundamental principles, in so far as they differ from those of Helmholtz, are nearer the truth. But the vital point of a true theory has not yet been touched, and we must wait. Dr. Trautmann urges the necessity of establishing a standard spoken, as they already have a standard written, language for all Germans. To accomplish this he would not have the speech of any one city or province adopted as the standard, but would have one created in accordance with fixed rules, so that every one might know how he ought to speak, although for a time every one would in some respects speak as he ought not to. Dr. Trautmann further contends, and he has to some extent put it in practice in his book, that German writers, in seeking for equivalents for foreign words, instead of forming long and awkward compounds, should adopt short and simple words from Old and Middle High German and from the different living dialects of the German language. Of this we can only say that while the long and awkward compounds are generally intelligible to any one who has even a superficial acquaintance with the language, the dialectic and antiquated words which Dr. Trautmann in some cases adopts and in others recommends are, without a deal of explanation, unintelligible to the great mass alike of Germans and foreigners.

—Those who, relying on the testimony of Saint-Simon and other contemporaries, have formed opinions in regard to Mme. de Maintenon not at all to her credit, may have to modify if not wholly to change their views. M. Geffroy has been reading to the Académie des Sciences Morales et Politiques the portions that he has completed of his work on the authentic letters of Mme. de Maintenon and what may be inferred from them. He considers one by one the principal accusations that have been made against her. He finds no proof that she ever exercised any great influence over the political actions of Louis XIV. Even as regards her correspondence with Mme. des Ursins in Spain, he shows that she did no more than to transmit obediently the views and advices of the old King without herself having the least initiative. And so in regard to other allegations which have passed as elementary historical information: her action towards the revocation of the Edict of Nantes, her influence in bringing about the appointment of unworthy people to high places, and many other reproaches. M. Geffroy sifts all these, and seems to prove that what has passed as true is all false; that, in short, though having the narrow views of her age and surroundings, "her life ever bore the stamp of a firm and solid unity."

—Three different translations have recently appeared in Paris of the work of Tolstoi, called in one of them 'Souvenirs' and in another 'Mémoires,' with the sub-title in each, "Enfance—Adolescence—Jeunesse." This is the title which M. E. M. de Vogüé gives to the work in his 'Roman russe' as that under which it was published. He calls it "the scarcely disguised autobiography" of Tolstoi, and also his *notes intimes*, in which he reveals the secret of his own moral development, and essays upon himself that "penetrating and inexorable analysis" which later he exercised upon society. The first published of these translations is the one by Arvède Barine (Paris: Hachette; Boston: Schoenhof), portions of which appeared last winter in the *Revue Bleue*. The volume, which is uniform with the other works of Tolstoi from the same publishing house, appeared about November 20, and it has upon its title-page: "Ouvrage traduit du russe avec l'autorisation de l'auteur." It contains a preface by the translator, in which she explains why she has not given the whole of the work as it appears in any of the Russian editions. These differ materially from each other, as the different editions of Russian books seem frequently to do; for Russian authors, like those of more western lands, but with added reason in the censorship, are never tired of correcting and retouching their work. The work was written at intervals in the years immediately following the Crimean war, between 1851 and 1857, and then abruptly dropped and never again taken up by the author. In her preface Arvède Barine says that Tolstoi himself seems to have hesitated, when he came to collect these fragments, in regard to what he should reprint and what he should omit of the work as first published. Paragraphs and even whole chapters were printed, then suppressed in a subsequent edition, and in a still later one reprinted again. While affirming the duty of a translator to make a complete and unmutilated presentation of the original work of an author, she adds: "Still, what is true concerning completed works, those to which the author has put the finishing touches, those which have a beginning, a middle, and an end, is not quite true of fragments. We have carefully collected from the volume all that referred to the hero and that was of a character to enlighten us upon his inmost nature (*for intérieur*); we have restored the greater part of the passages suppressed in a recent edition; but we have omitted those portions which, in the actual state of the book, seemed to us without object and without interest." The second translation of the same work, by M. Halpérine, also "avec l'autorisation de l'auteur," is called 'Mes Mémoires.' It was published by Perrin (New York: Christern) only a few days later than the other. M. Halpérine has given twenty-one chapters not found in the other version. The third is announced among the "Livres d'étrennes" of Hetzel under the title 'Enfance et Adolescence,' with illustrations by Bennet and Roux, and was first published in the *Magazin d'Éducation et de Récréation*. The translator's name is Delines.

—At the November meeting of the Royal Meteorological Society, Mr. C. Harding, a Fellow of the Society, presented the results of his studies of the storm of October 15, 16, 1886, which was a gale of exceptional severity in the region of the British Islands. By the aid of observations on shipboard, the storm was successfully traced a long distance across the Atlantic, and appears to have originated as early as October 12, at a point about 250 miles to the southeast of Newfoundland, being encountered by many ocean steamers on the following day. When the storm-centre had advanced to a region about 520 miles southwest of the Irish coast, it was already travelling at the rate of nearly fifty miles an hour, and began to give indication of approaching bad weather by the fluctuations of the barometer and wind-instruments. The storm-centre remained over the British Islands about a day and a half, traversing a path some 500 miles long, crossing Ireland, the Irish Sea, the western Midlands and the southern counties of England, afterwards passing over the English Channel into France, and subsequently taking a northeasterly course and expending itself over the Netherlands. In Ireland, Wales, and the southwest of England the rainfall was exceptionally heavy, serious floods occurring in many parts of the country. Sailing vessels and steamships encountered a terrific sea on the western coasts and in the English Channel, the total number of casualties being no less than 158. The boats of the Royal National Lifeboat Institution were launched fourteen times during the gale, and were instrumental in saving thirty-six lives. The force

of the gale was unusually prolonged, the velocity remaining at one place above sixty miles an hour for nearly an entire day, while at other places it was above thirty miles an hour for fifty or sixty hours. Before the approach of the storm to the British Islands a barrier of high barometer readings existed in Northern Europe, which accounts to a certain extent for the erratic course of the storm and its slow rate of travel. The great condensation of heavy rains in the rear of the storm also tended in a measure to retard its progress. The lowest barometer reading was 28½ inches, the duration of low barometer being as marked as the unusual period of high wind-velocity. It was estimated that in squalls this velocity reached for a minute or so the hourly rate of 120 miles, equivalent to a pressure of seventy pounds to the square foot. The highest recorded hourly velocity was, however, much less than this, falling slightly below eighty miles at Scilly on the morning of the 16th.

CATALOGUING EXTRAORDINARY.

A Catalogue of the Harris Collection of American Poetry, with Biographical and Bibliographical Notes. By John C. Stockbridge. Providence, R. I. 1886.

It would be difficult to discover an intellectual quality which is not required in the maker of a complete catalogue to a large collection of books on a variety of subjects. He must have a high degree of imagination in the truest sense—enough to put himself in the place of every possible inquirer, so as to know by a sort of instinct under what heads information on any subject will be sought. He must have the logical faculty which knows what to omit as well as what to insert. He must know the works with which he is to deal both with mechanical precision and with intellectual mastery. He is expected to direct the first practising physician of the day to the best information for his practical guidance in a case that puzzles life-long experience by its novelty and peculiarity; to indicate the authoritative book on idealism or numismatics, and to guide the theologian to the source of the doctrine of penance. Indeed, his is an unenviable position. He requires qualities whose possession would place him above his work, and yet he cannot do his work efficiently without them. The result is, that there is scarcely such a thing as a complete catalogue in the world. Nevertheless, satisfactory lists of small collections, say 5,000 or 10,000 volumes, have been made; nor is the making of them extremely difficult. For a general collection, it requires in the maker only skill, patience, and accuracy. If the collection is of especial interest—if, for instance, it is the best collection on some specific subject—one more qualification is demanded of the cataloguer: he should have a comprehensive acquaintance with the subject to which the collection relates; he should be able, by means of scholarly notes, to make his catalogue a valuable bibliographical monograph.

Such a special collection is the Harris Collection of American Poetry, bequeathed to Brown University by the late Senator Henry B. Anthony. Referring to this collection, so competent an authority as the late John Russell Bartlett, author of the catalogue of the John Carter Brown library, wrote: "We do not hesitate to say that there is no collection in the United States (in the department of American literature to which these books appertain) that can in completeness compare with that which is to grace the shelves of Brown University." In truth, the collection richly deserves a good catalogue—such a one as Prof. Willard Fiske's 'Catalogue of Petrarch Books'—which should serve as a bibliographical monograph on American poetry, a check-list for libraries, and a guide for students of American literature the world over. The obligation to make such a catalogue was fully appreciated by Senator Anthony. With his approval and encouragement, Mr. Bartlett decided to catalogue the collection, "giving full titles and collations of every book and pamphlet it contained," with "biographical and bibliographical notes on the rarer and little known poets and their writings." But ill-health prevented the fulfilment of his intention. Brown University, on receiving the collection, recognized the accompanying obligation, and a prospectus was soon issued, announcing that a catalogue would be prepared and published under the auspices of that institution: "The gentleman who proposes to take it up and carry it forward, substantially on the lines above indicated, is Rev. John C. Stockbridge of Providence, a member of the Library Committee of Brown University, and already possessing a great familiarity with the contents of the collection."

The result of Dr. Stockbridge's labors is before us. The questions that must be asked of it are: Is it systematic? is it accurate? is it a valuable bibliographical monograph? And to each of these questions the only possible answer is an emphatic and unqualified No.

The faults of the catalogue are of two sorts: faults of system and faults of execution, or, in other words, mistakes of method and mistakes of fact. Numerous inconsistencies in the arrangement and mechanical disposition of the names, titles, and notes cause interminable confusion. Some biographical notes are placed between the name of the writer and the title (*vide* Arnold, p. 12); others are separated from the name to which they refer by the intervening title (*v.* Anthon, p. 11). Some bibliographical notes follow the titles to which they refer (*v.* Shelton, 'Trollopiad,' p. 236); others precede their titles (*v.* Shea, p. 236, where we are told that "this volume is dedicated to W. C. Bryant." Five volumes follow the note, making it impossible to tell in which volume Bryant was honored). Under H. B. Anthony (p. 11) the note, "For sketch, see introduction," is printed as if it were a part of the title of Senator Anthony's poem; under A. G. Greene a similar note (p. 105) is printed in a dissimilar place and in distinctive type.

As regards "catch-words" the variation is even more extensive. In general, there are three approved methods of selecting the catch-word which determines the place of a title in an alphabetical catalogue. The cataloguer may use the most important word in the title (*v.* "Rhyme, the Age of," p. 221), or the first substantive (*v.* "Effort, The Humble," p. 85), or the first word not an article (*v.* "Concise Answer, A," etc., p. 62). But the basis of choice once adopted must be adhered to throughout the catalogue—any departure from it may cause incalculable disorder. It is therefore a serious fault that the compiler of the Harris catalogue, in addition to the indiscriminate use of all recognized sorts of catch-words, has introduced others of his own, as "Poor Young Man, The Romance of A" (p. 208), "First Voyage, The Sailor Boy's" (p. 93). Moreover, titles in foreign languages are entered under the article, as (p. 139) "La Araucana," "La Déesse," "La Gazza Ladra." Among instances of the confusion due to this want of method, it may be noted that 'Rejected Addresses' is entered (p. 3) under "addresses," while 'Ejected Addresses' is entered (p. 86) under "ejected"; one edition of 'A Concise Answer to the Question, Who and What are the Shakers?' is entered (p. 11) under "answer," another edition (p. 62) under "concise," and a poem entitled 'Some Lines in Verse about Shakers' is entered (p. 235) under "Shakers." Some married women are entered under their maiden names (*v.* [Mrs.] E. C. Akers [Allen], p. 5), others under the names of their husbands (*v.* Mrs. H. B. Allen, p. 7). Some translations appear under the translator's name only (*v.* Bryant's 'Iliad,' p. 43), others are entered under the name of the author also (*v.* Miss H. W. Preston's Mistral's 'Mirèio,' pp. 171 and 210).

In the case of anonymous works greater confusion is achievable, and greater confusion is accordingly achieved. Works whose author was not discovered are entered under their title—under what part soever the caprice of the compiler dictated. Some anonymous works whose authors have been discovered are entered under their titles only (*v.* "Infidelity, The Triumph of," p. 129. A note shows that the compiler knew that the author of this poem was President Timothy Dwight, yet the poem is not mentioned under Dwight's name, which appears on p. 83). Still other anonymous works are entered under the name of the author, and not under the title. To be specific, a poem entitled 'Horace in New York' was published in New York in 1826. The name of the author, Isaac S. Clason, does not appear on the book, and there is nothing about the book to indicate that he wrote it. Nevertheless, the book is entered (p. 58) under his name and not elsewhere. In case the author used a pseudonym, and the compiler of the catalogue did not discover his true name (as too commonly he did not), he has entered some books under the pseudonym only (*v.* "Autodicus," p. 14), and others under the title only (*v.* 'Ass on Parnassus,' p. 13). When he has succeeded in finding the true name, one more element of possible confusion is introduced, and of this element the compiler ably avails himself. Some such poems are entered under the title only. For instance, the once famous "Croaker" poems do not appear under "Croaker," or under Halleck, or under Drake, but they may be found (p. 206) under "poems"! Other pseudonymous books have been entered under the author's name only (*v.* Denison, p. 76). If an inquirer is searching in this catalogue for an anonymous or pseudonymous book whose author the compiler of the catalogue did not discover, his task is comparatively simple. He has only to open the catalogue at the alphabetical place of every word in his title, including articles, and sooner or later he will find the book, if it is in the collection. The method, though slow, is reasonably sure. But if the compiler has discovered the author of the book, the best thing the inquirer can do is to read the catalogue through from A to Z. No briefer method will decide beyond doubt whether the book is in the collection or not. In addition to these sources of confusion, the alphabetization is frequently incorrect (*v.* pp. 9, 52, 62, 71, 147, 155), and the punctuation is chaotic.

Such are some of the faults of form in this catalogue. The citations which have been made in proof of these faults are examples, not instances; each is typical, a representative of dozens of its fellows. But conspicuous as are these errors of method, errors of execution are more flagrant and (if more be possible) more provoking. Within a compass of forty pages occur at least four astounding cases of ignorance (or of carelessness, which is worse). An American reprint of Coventry Patmore's best-known poem is entered (p. 11) as "Angel in the House, etc. (Anon.) 16°, pp. x, 201. Boston, 1856," without a hint as to its author. The compiler betrays no suspicion that Horace and James Smith wrote the famous 'Rejected Addresses' (p. 3). The 'Bon Gaultier Ballads,' by Sir Theodore Martin and Prof. William Edmondstoune Aytoun, he enters thus, "Ballads, The Book of. Edited by Gaultier, and Illustrated by Doyle, Leech, and Crowquill." Neither Martin nor Aytoun finds place in the catalogue. Two editions of James Rus-

sell Lowell's 'Fable for Critics' are attributed (p. 43) to William Cullen Bryant, while, by some saving accident, another copy of one of the editions is placed under Lowell (p. 153). The biographical notes might have been compiled, as they probably were, exclusively from such common books of reference as Allibone's 'Dictionary of Authors' and Dr. Thomas's (Lippincott's) 'Pronouncing Biographical Dictionary.' These are good authorities in their way, but scarcely adequate for the compilation of "biographical and bibliographical notes on the rarer and little-known poets and their writings."

The feature of these notes chiefly worthy of attention is the careless way in which they are transcribed. Not to multiply instances, the date of John Quincy Adams's death is given (p. 3) as February 21, 1848, instead of February 23. Chancellor William Kilty of Maryland figures (p. 137) as "F. Kilton." The compiler, following Allibone as is his wont, has discovered that Thomas Bailey Aldrich was assistant editor of the New York *Home Journal*, but not that he is editor of the *Atlantic Monthly* (p. 6). Mrs. Anna C. Lynch Botta's death is chronicled in 1870. If Dr. Stockbridge had taken the trouble to consult the last edition of Mrs. Botta's 'Handbook of Universal Literature' (Boston, 1885), revised and enlarged by the author, he might have saved himself from this and some others of his little blunders. The work of identifying pseudonymous writers has been very carelessly done, when it has been done at all. We will mention but three instances, all occurring within the first half-dozen pages of the catalogue. On page 5 an entry reads, "Akers, (Eliz.) (Florence Perry.)" The reader can infer what he pleases. If he happens to know that Mrs. Elizabeth Chase Akers Allen sometimes used 'Florence Percy' as a pseudonym, he may not be misled by the note. Also, Dr. Stockbridge should have discovered that 'Alderman Rooney' (p. 5) was Daniel O'Connell Townley; and that Benjamin Church was the author of the poem which is entered as "Address, An, to a Provincial Bashaw. (By a Son of Liberty.) . . . Printed in the Tyrannic Administration of St. Francisco. (Probably Sir Francis Bernard.)" From this entry it is impossible to tell whether the cataloguer thinks that Gov. Bernard was the provincial Bashaw, or the Son of Liberty, or St. Francisco. But, after all, what this cataloguer thinks is a matter of small moment. Dr. Church, who wrote the poem and ought to know, was of the opinion that Bernard was the Bashaw. Among the more comical mistakes are the division (p. 122) of the pseudonym "A. Greenhorne, M. P." into two parts, thus: "Horne (A. G., M. P.)", and the printing of the line Del Señor Jovellanos thus: "Jovellanos (Del Senor)." Evidently Dr. Stockbridge thinks that Jovellanos's Christian name is Del Señor. Typographical errors abound. The date of one book—"Nancy Blake's" (Ruth M. Cromwell's) 'Letters to a Western Cousin'—is given in one place (p. 30) as 1864, and in another place (p. 306) as 1868. Thomas Powell, editor of the 'Living Poets of America,' appears as I. Powell. Mistral's 'Mirèio' is once (p. 171) Mirèio, and once (p. 210) Morèio.

As a rule, the bibliographical notes, so called, are worse than valueless. The following are fair samples: "This volume, published in the attractive style in which Charles Scribner's Sons send out their productions" (Bunner, p. 44); "Elegantly bound" (Colman, p. 62); "one of the most unique and most valuable volumes in the Harris Collection" (p. 213); "The copy . . . is richly bound, with gilt upper edges and the front and lower edges untrimmed" (Sargent, p. 229). Under Æsop we are informed (p. 4) by a "*pseud?*" that the compiler thinks "Marmaduke Park" a disguise of the author's real name, but we do not learn (what would be as near a bibliographical note as any in the volume) that Park's book is largely a plagiarism from Jeffreys Taylor's 'Æsop in Rhyme,' London, 1820. On page 18, after giving the author's name with the vernacular title and imprint, "Barels (Anna.) Op Het Zalic Afsterven, etc. Steenwyk, no date," the compiler cannot restrain the enthusiasm caused by his recognition of an outlandish tongue, but exclaims, in a triumphant "bibliographical" note, "This is a Dutch poem."

To all intents and purposes the Harris Collection of American Poetry stands in as great need of a catalogue to-day as it did when Brown University received it, and the present cataloguer, who has failed in every other respect, has succeeded in making this need more manifest than it ever was before. With all his confusion in methods, with all his blunders, with all his lack of bibliographical knowledge, Dr. Stockbridge, though he has concealed all other things worth knowing about the collection, cannot conceal the central fact that this is a remarkable assemblage of American books, worthy the best catalogue with which the system and accuracy of a trained bibliographer can provide it. In 1874, when the collection numbered 4,129 volumes, a beginning towards such a catalogue was made by Mr. Harris, who printed an 'Index to American Poetry and Plays' in his possession. Copies of the volume were sent to a large number of interested persons, who replied with many details, especially respecting anonymous and pseudonymous poems, and the dates of the births and deaths of authors. The information thus gathered was an important addition to the vast number of such facts that Mr. Harris had already incorporated in his 'Index.' It seems that this information was almost entirely neglected by Dr. Stockbridge. Since the publication of the 'Index,' the number of books in the collection has increased to more than 5,500, so that now there are something like 1,371 more reasons why the Collection should have a good catalogue than there were in 1874, when Mr. Harris took the preliminary step towards one. Nevertheless, years must now elapse before such a catalogue can appear, if, indeed, it ever appears. In the meantime, students of American poetry who have been expecting great things from this catalogue, and have been disappointed at learning nothing in addition to what they knew before—that the Harris Collection was the finest in America—may well profit, in common with other people who want catalogues made, by this concrete exemplification of the truth that not every well-educated gentleman is a cataloguer, or can become one. A board of trustees cannot order a catalogue as they might order a dinner. A catalogue implies a cataloguer, a man of special natural endowments, of long training in habits of system and accuracy, of untiring diligence. He must be possessed of thorough mastery over bibliographical details, and large acquaintance with the books on which he is to work. These necessary qualifications Dr. Stockbridge does not possess, as the result of his work conclusively shows. His book represents much labor and is doubtless the best he could make it; but it would not be tolerated as the auction catalogue of a New York book-sale.

A Fortnight in Heaven. By Harold Brydges. Henry Holt & Co.

Among Stockton's stories, collected in two volumes, there is one called "His Wife's Deceased Sister." In this Mr. Stockton tells how a young author, who had slowly worked his way into the favor of magazine editors, was inspired by the bliss of his honeymoon to write a story which caught public fancy. What seemed to be the making of the man proved his undoing, for, ever after, the friendly editors declined his work, declaring that it fell below the mark of "His Wife's Deceased Sister," and would surely disappoint popular expectation—a crime to which the tenderest of editors could not permit himself to be accessory. If the device of adopting a *nom de guerre* had not occurred to him, that young author and his young wife would certainly have starved in the streets. The story illustrates the truth of what Matthew Arnold says about the necessity for the concurrence of the power of the man and the power of the moment in creative work. But the indiscriminate binding together of an author's tales and sketches, placing them in such close juxtaposition that comparison is inevitable, is as forcible if not as amusing an illustration of that truth. This test of comparison is rather a cruel one, and if in half-a-dozen out of a score of examples the concurrence of the power of the man and the power of the moment is unmistakably evident, an author may be said to stand it well. The proportion of completely successful work is in Mr. Stockton's case even larger, and fairly entitles him to distinction as an original, imaginative writer. No faculty is rarer than that of narrating an unqualified impossibility so as to exclude the impossibility from the reader's consciousness. Mr. Stockton shares that faculty with others, but his way of exhibiting it is unique. His *point-d'appui* is a pure invention, always absurd, frequently grotesque. He rejects the props of dramatic structure and literary embellishment, and tells of miracles and prodigies as plainly and soberly as we talk about the weather. He excites no feeling except curiosity, and he satisfies no craving but that for mental distraction. Yet what he attempts to do he never wholly fails in, and, at his best, does perfectly. It is only in a long story, or a novel, that his limitations force themselves on our notice. Though 'The Casting Away of Mrs. Lecks and Mrs. Aleshine' is not a very long story, it is too long for the restricted range of feeling to which it appeals. Only an exceptionally morose person will fail to laugh heartily over the prosaic behavior of the two worthy women in their highly romantic situation, and one must be very dull not to appreciate the humorous incongruity between the extravagance of their adventures and their serene indifference to the unusual. On the other hand, the pull on our sense of delightful absurdity is too strong, and the spell of illusion not powerful enough to tide us through. The end of this most marvellous of sea tales is, however, as tantalizing as the end of 'The Lady or the Tiger?' There is no satisfactory fairy-story winding up beyond which the speculative spirit can no further inquire. Who were the Dusantes? Did

those vagabond proprietors of a comfortable dwelling-house, with all modern improvements, situated on an island in the middle of the Pacific, ever come back and find their board money in the ginger-jar? Everybody aches to know, and is indignant with Mr. Stockton for withholding the information. The intensity of our curiosity and resentment is, perhaps, the finest compliment to the author's skill, and may nullify the significance of any depreciatory criticism.

Miss Woolson's stories, included under the title 'Castle Nowhere,' bear intrinsic evidence of having been written at various stages of the author's literary development. They are mostly romantic in idea and treatment, and two at least just fall short of the best works of their school. "Castle Nowhere," with a more flexible hero, with the crime of Old Fog's past untold, might have passed into the legendary lore of the people, and become a stock myth of the Great Lakes. If "The Lady" in her dove-colored gown had been permitted to glide away from "Little Fishing" mysteriously as she came, the imaginative tourist must for ever have seen her flitting along the desolate shores, the wilderness blossoming like the rose, as she passed. These two and several others seem to belong to those days between which and the present there is a wider gap in art-knowledge than in time—the days when authors used to make stories, not to tell them. In the episodes of the German Separatist Communities in Ohio there is noticeable hesitancy between realism and romance, but not such deliberate intention of story-making. But "Peter the Parson," whether the earliest or latest production, is a genuine bit of life. It is melancholy, depressing, almost harsh, yet both the brutal miners and the physically timid, brave-souled clergyman of the Episcopal Mission are unsparingly realized. Form is not Miss Woolson's strong point, any more than that of other writers of a romantic school, and since form is almost as essential to a short story as to poetry, she can hardly be expected to rival the achievements of those who have grasped the importance of the mechanism of such work.

In Miss Jewett's 'White Heron' there is no breath of romanticism or taint of literary sentimentality. Her stories are word paintings of New England landscape, enlivened by a few characters indigenous to the soil. They are more remarkable as specimens of excellent workmanship than as the expression of creative ability or of fine idea. If throughout a tendency towards puritanically moral instructiveness be observable, it does not seem to be premeditated, but rather an unconscious manifestation of the author's individuality. The last story, "The Two Browns," has no sort of resemblance in scene or incident to its companion sketches. The attraction which its meaningless complication may have had for the author is not shared by the reader, and the enigma of its reason of existence is undecipherable.

Taken together, the sketches in 'Poverty Grass' make up a pretty complete picture of life among the operatives in manufacturing towns; a most wretched and pitiable phase of life it is. At work, at home, and at play, the mill-hand appears an unenviable being. The evidence of the sketches is that the responsibility for his degradation rests about equally on himself and on conditions beyond his control. It follows from the subject that these sketches are the reverse of pleasant reading. They seem to be the utterance of a heart and mind oppressed by the burden of poverty and its grim attendants, not untinged by its bitterness and hopelessness. This is their great merit, for the writer speaks not from experience in her own person, but from sympathy.

The illustration of poverty, misfortune, and vice in 'Misfits and Remnants' is more picturesque than in 'Poverty Grass,' and therefore less harrowing. The picturesqueness is partly in the characters, chosen from the foreign population of New York, and partly in the incidents which bring them before us. They do not bear the stamp of relentless truth, but, on the contrary, suggest a manipulation of truth to suit the author's leaning towards sentiment and notion of fitness in fiction. This tenderness is not a blemish in such sweet and touching stories as "Peppino" and "Graziella," but, where the basis of fact is sensational and exceptional, no purpose is served either by qualification or exaggeration of truth. As realistic worth, the chief value of these fragments is in the pervading atmosphere of melancholy. One closes the book with the definite impression that misfortune presents to strangers in a strange land a face with a peculiar and characteristic sadness.

The preface to 'A Phantom Lover' is an apology for writing a story which, when told by the fireside, fascinated the listener. It is hardly probable that the bewildering verbal combinations which flow from Vernon Lee's pen, spring spontaneously to her lips, therefore "Count Peter Boutourline at Tagantcha," to whom the story was told, may be pardoned for an enthusiastic urgency to see it in print, which appears to have conquered her judgment. She puts the story of Mrs. Oke of Okeburst in the mouth of an artist commissioned to paint her portrait. Mr. Oke has forewarned the artist that Mrs. Oke is "awfully strange." Unfortunately, he had no conception of the awful strangeness of the gentleman whom he invited to Okehurst, in order to have Mrs. Oke perpetuated on canvas. No sooner does the artist set foot in the most perfect specimen of an old English manor house, than he discovers that the hall is like nothing but the inside of a ship's hull. The moment he closes the door of his room he "stretches himself in an arm-chair and tries to focus the extraordinary imaginative impression" the house had given him. Focussing an impression seems to be an accomplishment worth trying for, for he says the sensation is "a special kind of voluptuousness, peculiar and complex and indescribable, like the half-drunkenness of opium or hashish, and which, to be conveyed to others in any sense as I feel it, would require a genius subtle and heady, like that of Baudelaire." In hashish ecstasy he sees Mrs. Oke, whom he instantly describes as "a singular being, the most marvellous creature quite that I have ever met—a wonderful elegance, exotic, far-fetched, poignant." To cold reason Mrs. Oke appears an intolerably disagreeable, ghoulish person, gone mad on the romantic history of a remote ancestress whom she resembles. Yet her madness is sanity compared with the mental condition of a man who raves about the beauty of a bamboo figure, shoulders high and decidedly stooped, a big forehead, a snub nose, hollow cheeks, cropped hair, "in the eyes a strange whiteness," in the gait "something of the peacock and something of the stag; but above all, it was all her own." The concluding assurance is comforting. Mrs. Oke is dead, and to all the anxieties of life is not added the dread that round any corner we may meet such another. We may feel tolerably sure, too, that the author has reached the climax of self-complacent contempt for common sense and intelligibility, that Count Peter Boutourline will see his folly, and will not insist on sharing with the public what other tales may have been told him, on firelit evenings, in the living voice.

'The Old Order Changes' is in substance a protest against political Liberalism and Radicalism in England. The Liberals are labelled half-hearted and timorous; the Radicals are stigmatized as nothing better than hypocrites and toadies. Comparatively, Mr. Mallock declares Socialism to be a divine idea, and finds that Socialistic leaders, whooping up a mob to fling stale eggs at harmless gentlemen who adorn a club window, are the victims of effervescent inspiration. The attempt to combine two dissimilar forms of literary expression, political disquisition and romance, is no nearer success than many that have preceded it. The people have no vitality; they are mouthpieces for the author's ideas, or targets for his satire, while argument loses the force of direct, compact statement. Nevertheless a man with Mr. Mallock's positive convictions can hardly write feebly in any form on a subject which he has studied from all sides, and his intellectual gifts of satire and caricature must always tell. Here, he is at times suggestive, at times brilliantly witty, but never so satisfactory as in works avowedly devoted either to instruction or to entertainment. He prompts the reflection (if prompting is necessary to any one) that civilization must cease to rest on squalor and misery, and goes so far as to indicate a less shameful basis.

The scheme he outlines is originated by his heroine, Miss Consuelo Burton. She is a damsel of loftiest lineage, whose conscience is stirred by a pronunciamiento of Foreman, the Socialist, and urged to activity by the enlightened discourse of a Roman Catholic priest to whom it is given to speak the last word of modern thought. The scheme flashes from her brain in dazzling perfection, taking the shape of modern monasteries where none shall be rich or poor, where all shall be good, and labor and virtue their own reward. Mr. Mallock knows that such a solution of a practical difficulty is rank nonsense, and ought to know that the serious presentation of it belittles his reputation as a serious thinker. Miss Burton's own contribution to the monastic scheme is the destruction of a heap of maiden literary efforts in prose and verse. The heroism of this sacrifice is touching, though its utility is less obvious. However, the priest thought a great deal of the scheme. Miss Burton's aristocratic circle of searchers for truth straightway fell in love with it, and though not one was moved by the exaltation of the moment to become a pioneer of the industrial-religious order, all applauded with well-bred vehemence. It was the straw that determined Mr. Carew to ask Miss Burton to marry him.

The delineation of Carew goes to show that the keenest sense of the ridiculous is no safeguard against unconscious perpetration of absurdity. He is an animate tradition dating back to the Saxon heptarchy. His blood is derived from all that is noblest in several European nations. A doubt of his right to sixty-four quarterings worries him sorely, but he finds some relief in the acquaintance of an old woman who knows that he is entitled to 128. He glories in possession of an "historic consciousness," and yet he cannot escape the pressure of his time. He moons about from one mediæval castle to another (his cousins are lavish of mediæval castles), pondering on "that greatest of modern questions—not how to reconcile the people with their present lot, but how to make their lot one with which they shall be willing to be reconciled." When not pondering alone in a Bluebeard closet, furnished with a number of desks, the use for which we cannot imagine, he is translating Karl Marx with the priest, or discussing the "question" with congenial feudal lords and ladies. He decides that he is called to sustain the vanishing dignity of his order, and to persuade the people contentedly and joyfully to do their duty in the state of life to which it has pleased God to call them. The disagreement between his scheme and Miss Burton's is evident, and the method of harmonization adopted by the

two when made one would make very interesting reading. In conscious satire, Mr. Mallock has done nothing in this novel half so amusing as is the serious portrait of his hero. The sketch of Mr. Japhet Snapper passes the bounds prescribed by taste. It is going a little too far to say of a man whose real personality is so thinly disguised that "his desire to abolish the aristocracy is only a fermentation of his desire to lick their shoes."

The author of 'A Fortnight in Heaven' has not added anything to the weight of his political theories and forecasts by the allegorical form in which he has cast them. Thoughtful people don't want the bait of romance or allegory to lure them to thinking; thoughtless people resent what they look upon as a stealthy attack on their secure inanity. All that Captain Grizzle sees in Jupiter is the author's vision of the worlds to come, of the wonders and horrors that may be. The development of utilitarian science is the greatest of wonders; the development of Chicago and apotheosis of Mayor Harrison make the culminating horror. The description of the state of affairs in Jupiter, at the time of Captain Grizzle's advent, shows the logical issue of the application of socialistic principles, and is a *reductio ad absurdum* of the craze for remedial legislation and indefinite extension of governmental powers. Though the matter of the book could have been more appropriately expressed in the shape of a political pamphlet, Capt. Grizzle's Jupiterian wanderings and observations are by no means uninteresting. His lecture on mundane affairs is a clever, concise statement of conspicuous political and social difficulties, but Mallock's hero, Carew, would have speedily demolished the lecturer's emphatic assertion that class distinctions, "heritable inequalities," lie at the very root of all our distressing complications.

England, Scotland, and Ireland: a Picturesque Survey of the United Kingdom and its Institutions. By P. Villars. Translated by Henry Frith. With six hundred illustrations. Geo. Routledge & Sons. 1887. Large 8vo, pp. xiv, 222, 277, 184, and 6 pp. of index.

THIS huge and heavy book is really in three volumes, and is paged accordingly, but has only one title-page. The least the publishers could do is to present each buyer of it with title-pages for possible volume ii, and volume iii, in case of separate binding. As for the index and the contents, they are already divisible. Not that they would be much missed; the table of contents is most brief, and the index a mere list of geographical names. This is the more to be regretted because the book is one of really surprising accuracy, both as to facts and as to the way in which general impressions are recorded and conveyed. If this is merely a translation of a book written in a foreign language by a foreigner and for the use of foreigners, it is an extraordinary production. We have no means of knowing how far this English edition has been modified from the original text.

Omissions, of course, are allowed the author almost indeterminately; his is not a guide-book in name, which must needs, one would say, refer to every item however briefly, nor a dictionary for ready reference, but a book to be read; and what is described is described at length with abundant detail and discursive wealth of allusion. At least, that is the scheme; exceptions there may be, as where the British Museum is allowed only a page and a half, which cannot be called full discussion of that subject. There is also here a slight discrepancy: no mention is made (pp. 115-116) of an actual but only of a possible future separation of the collections of the Museum; but on page 120 the Natural History Museum is named as "transferred from the British Museum to Kensington," and a cut of the new building is given on page 121. But the remarks upon the Museum are just; and all that follows—the brief description and analysis of the other museums and collections of the capital—is very much to the purpose. It is to be observed that the book is especially differentiated from a guide-book, no doubt by deliberate choice, in that the "sights" are not so much dwelt upon as certain other matters of interest—commercial, social, industrial, and political. Thus there is as much space given up to the London newspapers, their separate histories and biographies, "with portraits" (that is, facsimiles of one-third or one-quarter of the first page), and as much to the English "home" as existing in London family life and domestic service, as there is to the museums above named, with all their prodigious attractiveness.

It may be well to name some of the errors which a very careful examination has revealed. The reader will see how sound a book it is in which only such mistakes are discoverable. On page 27 complaint is made that St. Paul's Cathedral cannot be seen, and the reader is sent to Blackfriar's Bridge for a view-point; but certainly the view from Cannon Street to the southeast ought first of all to be had. Page 36, not "the sword of St. George and the cross of St. Paul," but the other way. Page 107, the stone under the seat of the coronation chair in Westminster Abbey is mentioned only as having served Jacob for a pillow, and its more recent history is ignored. On page 130 are remarks upon the danger of having a powder magazine "in the very centre of the Park"—but who knows of there being any powder in it, at any recent epoch? Page 218, the Crystal Palace at Sydenham is not at all "on the model of the exhibition of 1851," although in the main a rebuilding of the Hyde Park structure; two immense transepts were added to that, which greatly enlarged it and changed its plan, and it was again much modified by a fire in 1866 and subsequent reparations. Page 4 of "The Provinces": the "man of landed property" who is appointed sheriff is not quite such a victim to arbitrary power as represented in the words "he cannot refuse to exercise his functions," etc. No doubt he would be fined a sum not exceeding £500 if he should refuse; but then the victim is not selected with a view to collecting the fine—he will have consented before he is "pricked," as the phrase is. On page 12, for Beauchamp (pronounced *Beechum* or *Beecham*) the spelling given, "Bitchamm," is clearly left unchanged from the original, as it is well calculated to convey the sound to a French ear. Page 259, it is an error to say that Salisbury Cathedral is the only one whose history we know "from its foundation to the present time." Probably what is referred to is the exceptional way in which Salisbury was built, consecutively, from the original plans, without stoppage or important change of design, and within a space of about forty years; that is, indeed, remarkable! And in a similar case there is a very muddled statement about Canterbury Cathedral, concerning which it is in no sense accurate to say, "begun in 1070, finished about 1500"; in fact, the next page tells how some of the "finishing," viz., the whole north tower of the west front, was built in 1840. There is an error in the "plan-guide" of London, page 5 of first part, where the dotted line of the City limits takes in the Tower; that citadel is outside of the City, and doubt is thrown on the whole boundary by this one mistake.

To come to matters of less tangible and verifiable nature, the London markets are not explained quite fairly. Covent Garden is a deal less delightful than our author thinks, though perhaps not as bad as *Punch* would have it. Smithfield was so very dreadful before the present market was built, only fifteen years ago, that really its past condition ought to have been alluded to as a contrast to the present tranquillity and decency. Leadenhall and other markets are not mentioned at all. Queen Elizabeth was hardly (p. 104) "a zealous Protestant." The account of the English "Constitution" (so called because it is not a constituted thing at all, but "a codeless myriad of precedent") is wonderfully good to find in a few pages of a popular book; but it should be added as explanatory of what is said of the Cabinet, on page 90, that anybody may belong to the Cabinet, and not certain Ministers only. The chief Secretaries must needs belong to it, but the other high officials may or not be called upon by the Premier to consult with him in this informal gathering, of whose meetings no record is kept. Thus the Chancellor of the Duchy of Lancaster sometimes is and sometimes is not a member, and once at least Lord John Russell (for it was before he was made a peer) was a member of the Cabinet, though holding no office. When, in an English almanac, one sees after fourteen or fifteen names of Ministers the words "the above form the Cabinet," that means that at present, for a few months or years, and until the next change, general or individual, those particular officials are in the Premier's advisory committee, chosen by himself for reasons of his own; and that is all it means. At Eton College (London, p. 213) the boys are not called oppidans in a lump; the scholars on the Foundation of Henry VI. are known as King's scholars. These are chosen by competitive examination, which any subject born in the kingdom may enter, and at the completion of the course they may enter another competitive examination for a certain number of scholarships at King's College, Cambridge University. Sixty or seventy boys are at one time the recipients of this splendid gift. The five hundred or more Etonians who are not King's scholars are called "oppidans" because living in the *oppidum*. These affect to despise the King's scholars, who are presumably cleverer and poorer than themselves. Finally, as to the errors and omissions, one cannot but regret that the author, who saw clearly the anomalous position of the Isle of Man, should not have explained more fully the status of the Channel Islands, and should have left unnoticed that of the two groups, the Orkney and Shetland Islands. So far as criticism on architectural monuments goes, our author is generally judicious; he gets out of difficult places cleverly. But it is a little hard on the reader to tell him that the cast-iron Houses of Parliament building is "the most beautiful structure in London." Even if *modern* were inserted after "most," it would be a sad blunder.

So we specify the faults we find, but the general excellence of the book we can only state generally. Travellers in the British Islands should take it with them, for all it is so big a book. The six hundred illustrations are nearly all useful. The views of buildings, interiors and exteriors, in town and country, near at hand and far in the landscape, are of singular accuracy in the impressions they give of the originals, and nearly all go well with text and with one another.

George Fuller: His Life and Works. With illustrations. Boston: Houghton, Mifflin & Co. Privately published. 1886.

THE memorial which the friendship of the few who knew George Fuller well has raised to his memory, was at once merited by the rare artistic nature of the man, and needed to make him known according to that merit, because his life and genius were so unobtrusive, and his art so subtle and ideal, that to the mass of lovers of art it might well pass unappreciated and almost un-

noticed. Had his lot been cast among the influences and associations of a growing and true art, and the education derived from them been adequate to his native powers, Fuller would have shown himself in the front rank of the painters of whatever school that might have been. As it was, with the elements of the noblest art in him, he passed most of his life struggling with problems and methods which in Titian's studio he would have solved and mastered before he was sixteen. A better example of the purely artistic type of mind than his, America has never produced, and his life-work is but another proof of the law that the higher the native power the more imperious is the need of a thorough and correct education to bring out its best results. True genius will often struggle with technical ignorance, and so far overcome it as to attain to expression of its character, and have results which, like those of Fuller's work, will keep the author's place on the roll of honor; but the greatest genius that has ever lived, growing up in artistic solitude, without the advantages of sound early artistic education, will never do itself complete justice or be more than a crippled development of its proper individuality. Self-taught is always (taking possibilities into consideration) ill-taught; and the freedom of expression of his ideals which Fuller hardly attained, even in his last years, would have come with proper education before the ripening of his mental powers. It is impossible to judge from what he has left—subtle, purely ideal, and fine in its art as it is—what he might have done had he been from youth in the midst of men working rightly and teaching soundly.

The nonsense that is talked among us of the necessity or even possibility of developing our art out of our material surroundings, and so making a real American art, may even find expression in eulogiums of George Fuller, but will be none the less nonsense. What the multitude take for art, which is in general simply the telling of a story of some kind so that the more or less foolish of the multitude shall be amused or made pathetic over it, may be peculiarly American, and may be (so far as the multitude is concerned) very bad, but in any case it is not art. It may be the vehicle of art, as in Fuller's case it was; and the few subjects in which he attacked the real which lay about him showed that he, like all other great and original artists, knew how to make it the vehicle of art. But this art, which was in the nature of the man, was never what it might have been, and would have been had he been a Venetian of A. D. 1550.

It was necessary to know Fuller personally in order to know how noble an artistic nature his was, and to estimate his possibilities. Then one felt how unflinching was his devotion to his art, how free from any shadow of mercenary feeling, and how uncompromising in his pursuit of his ideals. Those who only know the pictures he has left, know his attained measure of success; but those who knew the man, know how far he came short of what he saw and aimed at, and with early training of a right kind would have approximately attained. He had a right perception of the true nature of art; an organization of the highest degree of sensitiveness, tremulously impressible to beauty; a solid tenacity of purpose and unflinching artistic honesty. And with these qualifications of an artist of the highest grade, he struggled, with no ordinary technical native abilities, to work his way through the difficulties of art, not without a degree of success, but always with evident struggle, and never with complete triumph. By constitution he belonged to the class of Titian and of Millet; by achievement, to that of Allston and of Watts. His career proves, if anything, that though America may produce artistic natures of the highest stamp, it is not and probably will not be for generations capable of educating them to their highest development—not only no more, but really much less, than it can train great masters in music. The only place where art education is possible is where art is to be seen—where, if there are not great artists at work, at least their great work is to be studied; and the true art university is where one can live in their influence and train one's self to their methods of seeing and working. The short and few extracts from the diaries of Fuller while in Europe show how he felt this; but they show, too, that he had become so individualized and nationalized at once, that it would have been impossible for him to have remained in Europe at the age at which he went there.

BOOKS OF THE WEEK.

Adams, O. F. Post-Laureate Idyls, and Other Poems. Boston: D. Lothrop & Co.
Almanach de Gotha. 1887. B. Westermann & Co.
Bigg, Dr. C. The Christian Platonists of Alexandria. Macmillan & Co. $1.50.

Champagne
ANALYZED.

Champagne, with a minimum of alcohol, is by far the wholesomest and possesses remarkable exhilarating power.

THOMAS KING CHAMBERS, M.D., F.R.C.P.,

Honorary Physician to H. R. H. the Prince of Wales.

Having occasion to investigate the question of wholesome beverages, I have made chemical analyses of the most prominent brands of Champagne.

I find G. H. Mumm & Co.'s Extra Dry to contain in a marked degree less alcohol than the others. I therefore most cordially commend it not only for its purity, but as the most wholesome of the Champagnes.

R. OGDEN DOREMUS, M.D., LL.D.,

Prof. Chemistry, Bellevue Hospital Med. College, N. Y.

Champagne, whilst only possessing the alcoholic strength of natural wines, is useful for exciting the flagging powers in case of exhaustion.

F. W. PAVY, M.D., F.R.S.,

Lecturer on Physiology at Guy's Hospital, London.

Champagne containing the smallest percentage of spirits is the most wholesome.

JOHN SWINBURNE, M.D.,

Former Health Officer of Port of New York.

BOOKS OF THE WEEK 550

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each payer, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

	Scale of Agate lines.
On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.	—
A column (140 lines), $20 each insertion; with choice of page, $27.	5
A page (3 columns), $60 each insertion; with choice of position, $80.	—
Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.	10
Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.	15

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,700 copies. The Subscription List is always open to inspection.
